JOURNAL

OF THE

ASIATIC SOCIETY OF BENGAL.

VOL. LXXIV., PART ~~H.~~ ~~Extra Number~~, 1906.

Materials for a Flora of the Malayan Peninsula.—By SIR GEORGE KING, K.C.I.E., LL.D., F.R.S., late Superintendent of the Royal Botanic Garden, Calcutta, and J. S. GAMBLE, C.I.E., F.R.S., late of the Indian Forest Department.

No. 16.

The present contribution commences with an account of the genus *Psychotria*, which concludes the Natural Order *Rubiaceæ*. In addition, it contains accounts of the Natural Orders *Valerianææ* and *Compositæ* (prepared by Sir G. King); *Stylidiææ*, *Goodenoviææ*, and *Campanulacææ* (prepared by Mr. Gamble); *Vacciniacææ* and *Ericacææ* (Sir G. King), *Epacrideææ* and *Plumbaginææ* (Mr. Gamble). For the new genera and species proposed in these Orders the authors are jointly responsible. The account of the Order *Monotropææ* has been supplied by Lieut.-Col. Prain, F.R.S., Superintendent of the Royal Botanic Garden, Calcutta; and that of the Order *Gentianææ* has been added, having been drawn up by Mr. C. B. Clarke, F.R.S., late President of the Linnean Society of London. It is somewhat out of its proper sequence, but has been included, as the descriptions were ready for publication.

In addition, therefore, to the account of the Rubiaceous genus *Psychotria*, with 29 Malayan Peninsular species, of which 11 are new to science, this fasciulus contains accounts of the Malayan members of 11 Natural Orders, including 48 genera and 81 species, of which 2 genera and 17 species are new to science.

Nat. Ord. LIX. RUBIACEÆ.

53. PSYCHOTRIA, Linn.

Shrubs or small trees, erect or occasionally climbing or twining rarely herbs. *Leaves* opposite, rarely in whorls of 3 or 4. *Stipules* free in pairs, or connate, often with glands or hairs, deciduous or persistent. *Flowers* rather small, in terminal, rarely axillary, cymes

corymbose or fascicles, bracteolate or not, never involucre (in the Malayan species). *Calyx-tube* short; the limb persistent in part or deciduous. *Corolla-tube* straight, short; the throat naked or hairy; the lobes of the mouth 5, rarely 4 to 6, valvate in bud. *Stamens* as many as the corolla-lobes, inserted on the throat or mouth; anthers linear or obtuse, attached dorsally near the base to short or long filaments. *Ovary* 2-celled; style long or short, bifid; ovules often cuneiform, solitary, erect from the base of each cell. *Fruit* small, baccate or drupe-like, ovoid globose or oblong, smooth or ridged, composed of two plano-convex, 1-celled, 1-seeded pyrenes; or didymous and separating into two cocci. *Seeds* plano-convex, the ventral surface grooved, or plane, the dorsal smooth, ridged or sulcate; testa thin, albumen hard; embryo small, basal; cotyledons broad, thin; radicle inferior.—**DISTRIB.** Species about 550; tropical or sub-tropical.

Scandent :—**Flowers 4-merous :—**

Panicles lax; leaves elliptic- or oblong-lanceolate .. 1. *P. laxiflora*.

Flowers 5-merous :—

Seeds with 4 ridges on the dorsal surface, the ventral surface plane :—

Flowers sessile in small capitula at the ends of the branches of the cymes :—

Leaves ovate to oblong-elliptic, 1.75 to 2.5 in. broad; inflorescence puberulous 2. *P. morindiflora*.

Leaves narrowly elliptic, less than 1.25 in. broad; inflorescence coarsely pubescent 3. *P. Maingayi*.

Flowers pedicellate in cymosely branched cymes :—

Leaves elliptic-oblancoate to elliptic, the midrib sometimes pubescent on the lower surface, otherwise glabrous; main-nerves 7 to 10 pairs; petioles .4 to .75 in. long; fruit .25 in. long 4. *P. sarmentosa*.

Leaves narrowly elliptic-oblong, main-nerves 4 to 6 pairs; petioles .4 to .8 in. long; fruit .35 in. long .. 5. *P. Kunthii*.

Leaves broadly obovate or sub-ovate; main-nerves 5 to 10 pairs; petioles .5 to 1.5 in.; fruit .4 in. long .. 6. *P. penangensis*.

Seeds with 8 ridges on the dorsal surface, the ventral surface plane :—

Flowers pedicellate, in cymosely branched paniculate cymes; fruit narrowly ellipsoid 7. *P. Scortechinii*.

Flowers on short pedicels in globular cymes at the ends of the branches of the panicles :—

Leaves and stems glabrous; fruit subglobose, .2 in. long 8. *P. pilulifera*.

Leaves and stems and inflorescence rusty-pubescent .. 9. *P. ovoides*.

Seeds with more than 4 ridges on both dorsal and ventral surfaces 10. *P. Ridleyi*.

Flora of the Malayan Peninsula.

- Seeds faintly ridged on the dorsal surface, the ventral surface with a shallow groove 11. *P. polycarpa*.
- Erect shrubs, usually small:—
- Flowers 4-merous:—
- Leaves with a strong pale intra-marginal nerve 12. *P. calocarpa*.
- Flowers 5-merous:—
- Flowers shortly pedicellate, in dense globular cymes at the ends of the long-peduncled branches of a terminal umbellate cyme; leaves deciduously puberulous, with 9 to 18 pairs of main-nerves; fruit .3 in. long; seeds 4-ridged on the dorsal surface, slightly concave on the ventral 13. *P. multicaupulata*.
- Flowers sub-sessile, in short condensed dichotomous sessile axillary cymes; leaves with scurfy pubescence and 8 to 11 pairs of main-nerves; seeds 5-ridged on the dorsal and broadly grooved on the ventral surface 14. *P. tortilis*.
- Flowers in a terminal umbellately branching cyme:—
- Seeds with a single dorsal ridge, the ventral surface plane:—
- Leaves quite glabrous:—
- Leaves 6 to 10 in. long; main-nerves 12 to 15 pairs 15. *P. Griffithii*.
- Leaves usually under 6 in. long, main-nerves 8 to 10 pairs 16. *P. angulata*.
- Leaves adpressed-pubescent, 6 to 12 in. long 17. *P. Helferiana*.
- Seeds with a single dorsal ridge, the ventral surface with a groove; leaves 5 to 8 in long, quite glabrous, main-nerves 7 to 8, rarely 10 pairs 18. *P. montana*.
- Seeds with 5 ridges on the dorsal surface, the ventral surface plane:—
- Leaves glabrous:—
- Leaves oblong-elliptic to oblanceolate-elliptic, 3.5 to 8 in. long; fruit .25 in. long 19. *P. viridiflora*.
- Leaves softly pubescent:—
- Leaves elliptic to elliptic-oblong, the bases cuneate rounded or cordate, 3.5 to 5 in. long; fruit .25 to .3 in. long 20. *P. Birtiana*.
- Leaves elliptic, the upper surface glabrous except the midrib, 5 to 7 in. long; fruit .45 in. long 21. *P. fulva*.
- Seeds 5-ridged on the dorsal surface and 2-grooved on the ventral; leaves glabrous on the upper surface, their margins crenulate 22. *P. fulvoidea*.
- Seeds with 5 ridges on the dorsal surface and 1 ridge on the ventral; leaves glabrous, usually oblanceolate 23. *P. stipulacea*.
- Seeds 4-ridged on the dorsal surface, plane on the ventral:—
- Leaves elliptic, tapering equally to each end, 9- to 10-nerved; calyx-lobes very long caudate-acuminate 24. *P. Curtisi*.
- Leaves obovate-oblong or obovate-oblanceolate, 10- to 14-nerved; calyx-lobes short, broad, blunt 25. *P. rhinocerotis*.

Flora of the Malay Peninsula

Seeds with 4 ridges on the dorsal surface and a faint groove on the ventral; leaves elliptic or elliptic-lanceolate, 12- to 18-nerved. 26. *P. malayana*.

SPECIES IMPERFECTLY KNOWN.

Psychotria Wrayi, No. 27.
inequalis, No. 28.
condensa, No. 29.

1. *PSYCHOTRIA LAXIFLORA*, Blume Bijdr. 964. Scandent or epiphytic, glabrous except the inflorescence; young branches slightly thicker than a crow-quill, terete, dark-coloured, brown, shining. *Leaves* membranous, narrowly elliptic or oblong-lanceolate, much acuminate, the base cuneate; both surfaces olivaceous-brown when dry, the lower the paler, midrib distinct; main-nerves 4 to 6 pairs, faint, curved, ascending; length 2 to 4 in.; breadth .5 to 1 in.; petiole .15 to .2 in. long. *Stipules* forming a tube from .15 to .3 in. long, sharply toothed. *Panicles* solitary, terminal, lax, more than half as long as the leaves, on naked peduncles about 1 in. long; branches cymose, with small acute bracteoles at their bases, puberulous. *Flowers* .15 to .2 in. long, puberulous, in cymes of three at the ends of the branchlets; their pedicels short, with broad acute caducous bracteoles at their bases. *Calyx* shortly funnel-shaped, the mouth sub-truncate or obscurely 4-toothed. *Corolla* longer than the calyx, broadly clavate in bud, funnel-shaped; the mouth with 4 broad obtuse lobes, throat sericeous. *Anthers* 4, elliptic, blunt, sub-sessile. *Fruit* clavate-ellipsoid, with 8 vertical ridges (2 of them double), glabrous; seeds with 4 bold ridges on the dorsal surface; the ventral surface quite flat. Miq. Fl. Ind. Bat. II. 187.

SINGAPORE: *Ridley* 13, 4828. JOHORE: *Ridley*. PERAK: *King's Collector* 4117, 8428; *Wray* 110.—DISTRIB. Sumatra, *Forbes* 1297, 1309, 1710, 2466, Java, *Koorders* 23550b.

2. *PSYCHOTRIA MORINDÆFLORA*, Wall. Cat. 8438 A.B.C. in part. A woody climber, 15 to 20 feet long, glabrous except the puberulous inflorescence; young branches thinner than a goose-quill, dark brown when dry, terete, somewhat thickened at the nodes, the internodes minutely lenticellate and faintly striate. *Leaves* coriaceous, ovate to elliptic, sometimes oblong-lanceolate, shortly and rather bluntly acuminate, the base slightly cuneate or rarely rounded; upper surface olivaceous-greenish when dry, the lower purplish-brown; the midrib channelled on the upper surface, prominent on the lower; main-nerves 6 to 8 pairs, rather straight, spreading, thin but rather distinct on both surfaces when dry, length 3 to 4.5 in.; breadth 1.75 to 2.5 in.; petiole

·2 to ·5 in. *Stipules* caducous, leaving a pale narrow scar between the petioles. *Cymes* terminal, about 2 in., rarely 3 in. long; the branches compressed and angled, scurfy-puberulous, two of them springing from the base, the other three umbellate at the apex of the main axis, each bearing at its apex a dense, many-flowered, minutely bracteolate capitulum less than ·5 in. in diam. *Flowers* ·2 in. long, sessile. *Calyx* cupular, the mouth with 5 small blunt teeth. *Corolla* twice as long as the calyx; the mouth with 5 deep oblong blunt lobes; throat densely sericeous. *Anthers* 5, short, elliptic, basifixed on stout filaments. *Style* cylindric, thickened upwards, stigma of 2 broad lobes. *Fruit* short, compressed ovoid-elliptic, with 8 vertical ridges (2 of them double) crowned by the small calyx, 25 in long and 15 in. in diam. from front to back; seeds with 4 dorsal ridges; ventral surface plane. Hook. fil. Fl. Br. Ind. III. 166 *Psychotria*? Wall. Cat. 8355.

PERAK: *King's Collector* 2585, 2665; *Scortechini* 1826, *Wray* 4001. PENANG: *Wallich*; *Curtis* 478.

3. *PSYCHOTRIA MAINGAYI*, Hook. fil. Fl Br Ind. III 166. A slender woody climber; young branches half as thick as a goose-quill, pubescent, ultimately pale and glabrous. *Leaves* thickly membranous, narrowly elliptic, caudate-acuminate, the base much narrowed; both surfaces glabrous, when dry pale olivaceous, the upper rather the darker; main-nerves about 6 pairs, indistinct on both surfaces like the midrib; length 2 to 3·25 in.; breadth ·65 to 1·2 in.; petiole ·1 to ·2 in, slender. *Stipules* cartilaginous, persistent, connate into a tube ·15 in. long with a few hairs at the truncate and toothed or acute apex. *Cymes* axillary, on slender, compressed, coarsely pubescent peduncles shorter than the leaves, few-branched. *Flowers* sessile, bracteoles linear. *Calyx* much longer than the pubescent ovary, widely campanulate; the lobes ovate-triangular, caudate-acuminate, spreading. *Corolla* unknown. *Fruit* broadly ellipsoid, with 8 deep vertical grooves, pale, nearly glabrous when ripe, ·2 in. long

SINGAPORE: *Maingay* (K.D) 926; *Ridley* 6924.

4. *PSYCHOTRIA SARMENTOSA*, Blume Bijdr 964 Scandent; woody, young stems thinner than a goose-quill, pale, glabrous. *Leaves* thinly coriaceous, elliptic-oblongate to elliptic, acute or shortly and abruptly acuminate, much narrowed at the base, edges slightly recurved; both surfaces pale brown tinged with olivaceous when dry, minutely reticulate; the upper glabrous, the lower sometimes pubescent only on the stout midrib; main-nerves 7 to 10 pairs, curving slightly upwards, faint; length 2·5 to 4 in.; breadth 1 to 1·75 in., petioles ·4 to ·75 in., winged above. *Stipules* broad at the base, the apex caudate-acuminate.

Cymes terminal, puberulous, shorter than the leaves, on short peduncles, cymosely branched; the branches angled, spreading, many-flowered; bracteoles minute, linear. *Flowers* about .15 in. long, puberulous outside, on short pedicels. *Calyx* campanulate, with 5 short triangular teeth. *Corolla* villous at the base in the interior. *Fruit* ellipsoid, .25 in. long, with 10 vertical ridges (2 of them double). *Seeds* with 4 dorsal ridges, the ventral surface plane. DC. Prod. IV. 522; Wight. Ic. 1038; Thwaites Enum. Pl. Ceyl. 148; Kurz For. Fl. Burm. II. 14; Hook. fil. Fl. Br. Ind. III. 165. *P. obovata*, Wall. Cat. 8380. *Grumilea Junghuhniana*, Miq. Fl. Ind. Bat. II. 296. *Psychotria* sp., Wall. Cat. 8382, 8352 ?, 8384.

SINGAPORE: Ridley 2874, 2875, 9112. MALACCA: Griffith (K.D.) 3043. PERAK: King's Collector 4967, 7572. PENANG: King 1346; Curtis 951, 2781.—DISTRIB. Burma, Wallich; Helfer (K.D.) 3041, &c.; Indian Peninsula; Ceylon; Malay Archipelago; Andaman Islands.

VAR. *pachyphylla*, King & Gamble. *Leaves* thickly coriaceous, shining, greenish when dry, 3 to 4 in. long; fruit .25 in. long, sub-globular.

PENANG: Ridley 9363; Curtis 2215.

5. *PSYCHOTRIA KUNSTLERI*, n. sp., King & Gamble. A glabrous epiphyte with slightly angled stems thinner than a goose-quill, pale yellowish when dry. *Leaves* succulent, glossy and bluish-green when fresh, but yellow on both surfaces and dull when dry, narrowly elliptic-oblong, rarely oblong-oblancheolate, gradually and equally tapering to each end, the midrib bold, channelled on the upper surface; main-nerves 4 to 6 pairs, spreading, very indistinct; length 3 to 5.5 in.; breadth .8 to 1.4 in.; petioles .4 to .8 in. long. *Stipules* forming a cartilaginous persistent cup with an entire mouth, about .1 in. long. *Cyme* solitary, umbellate, terminal, longer than the leaves (the naked peduncle of 2 to 3 in. being included), lax, from 2 to 4 in. broad; branches spreading, dividing near their apices into umbellate cymes; bracteoles few, linear, acute. *Flowers* not seen: on basally bracteolate pedicels as long as themselves. *Fruit* .35 in. long, ellipsoid, deeply 10-grooved, crowned by the rather large remains of the 5-toothed calyx, 10-ridged. *Seeds* dorsally 4-ridged, the ventral surface flat.

PERAK. *Scortechini*; King's Collector 1886, 4953, 6588; Wray 2230.—DISTRIB. Sumatra, Forbes 2823.

6. *PSYCHOTRIA PENANGENSIS*, Hook. fil. Fl. Br. Ind. III. 175. A shrubby epiphyte or climber, 8 to 12 feet long, all parts except the inflorescence glabrous; young branches slightly compressed, thinner than a goose-quill, dark-coloured. *Leaves* thinly coriaceous, broadly elliptic-obovate or sub-ovate, shortly and abruptly triangular, acuminate.

nate, much narrowed at the base into the broad petiole; both surfaces brown when dry, the upper slightly olivaceous; the midrib broad, channelled on the upper surface, main-nerves 5 to 10 pairs, spreading, thin, distinct on the lower surface; length 3 to 4.5 in.; breadth 1.5 to 2.5 in.; petiole .5 to 1.5 in. long, slightly winged above. *Stipules* broadly ovate, sub-acute or blunt, sub-tubular, sometimes bifid, .2 to .4 in. long. *Cymes* umbellate, solitary or terminal, pedunculate, as long as or longer than the leaves (including the compressed naked 1 to 2 in. long peduncle); primary branches long, spreading; the ultimate umbels with broad-based subulate unequal bracteoles. *Flowers* .2 to .25 in. long, sessile or on short pedicels; bracts .25 in. long. *Calyx-tube* obconic, its teeth triangular. *Corolla* longer than the calyx, shortly and widely tubular, deeply divided into 5 broad lobes thickened near the apex, the apex itself sharp and inflexed, glabrous inside except for the ring of hair in the throat at the insertion of the short filaments. *Anthers* elliptic, blunt, entire. *Fruit* ellipsoid, compressed, with 10 obtuse vertical ridges (2 of them double), glabrescent, crowned by the rather large calyx; length .4 in., breadth .25 in. *Seeds* 2, plano-convex, the dorsal surface with 4 blunt ridges, the ventral surface plane.

MALACCA: *Mangay* (K.D) 920. SINGAPORE: *Ridley* 2870. PERAK. *Scortechini* 2034; *King's Collector* 3049, 4591, 10723. SELANGOR *Ridley* 7425. PANGKORE: *Curtis* 1621.

7. *PSYCHOTRIA SCORTECHINII*, n sp., King & Gamble. A climber, all parts glabrous; young branches pale brown, thicker than a crow-quill, terete, smooth. *Leaves* membranous, ovate-lanceolate or narrowly elliptic, acuminate, the base narrowed or rarely rounded; both surfaces brown when dry (the lower slightly paler), the midrib prominent, main-nerves 5 or 6 pairs, curved, spreading, not prominent; length 2.5 to 4 in.; breadth 1 to 1.5 in.; petiole .15 to .2 in. *Stipules* oblong, acute, connate at their bases, .15 to .2 in. long, caducous. *Cymes* paniculate, solitary, terminal, rarely axillary, spreading, lax, cymosely branched, in flower as long as or nearly as long as the leaves, in fruit longer, the branches bracteolate, angled, divaricating. *Flowers* on the ultimate branchlets in threes, .15 in. long, on short pedicels, each with a bractecole at the base. *Calyx* cupular, with 5 short acute teeth. *Corolla* longer than the calyx, cylindric, with short triangular lobes, the throat with tufts of yellowish hairs between the 5 stamens. *Anthers* on short filaments. *Style* cylindric, stigma 2-lobed. *Fruit* narrowly ellipsoid, tapering to each end, sometimes clavate, slightly compressed, 8-ridged (2 being double), crowned by the calyx, .35 in. long and .2 in. in diam. *Seeds* with 3 broad dorsal ridges, ventral surface plane.

PERAK: *Scortechini* 311, 404, 426; *King's Collector* 897, 2566, 5373.

This closely resembles *P. laxiflora*, Bl., but has 5-merous flowers and longer, less clavate fruit.

8. *PSYCHOTRIA PILULIFERA*, n. sp., King & Gamble. A small tree or climber; all parts except the inflorescence glabrous; young branches about as thick as a crow-quill, terete, pale brown when dry. *Leaves* coriaceous, narrowly elliptic, much tapered to both ends; both surfaces olivaceous when dry, the lower slightly the paler; main-nerves 6 or 7 pairs, inconspicuous, the midrib bold beneath when dry; length 2·5 to 3·5 in.; breadth ·75 to 1 in.; petiole ·35 to ·4 in. long, slender. *Inflorescence* a terminal, few-branched, puberulous panicle of condensed 8-10-flowered globular cymes. *Flowers* and their short pedicels minutely tomentose. *Calyx* shortly campanulate, the mouth with 5 spreading triangular acute lobes. *Corolla* tubular; the lobes oblong, broad, with small inflexed apices. *Anthers* 5, attached to the throat by short filaments surrounded by coarse hair. *Fruit* sub-globose, with 10 bold vertical ridges (2 of them double), crowned by the small calyx, ·2 long and ·15 in. in diam. *Seeds* with 3 bold ridges on the dorsal surface; ventral surface plane.

PERAK, at elevations of 3,000 to 5,000 feet: *Wray* 287, 398, 434, 946, 3870.

9. *PSYCHOTRIA OVOIDEA*, Wall. Cat. 8383. A slender woody climber, 20 to 40 feet long; stems thinner than a goose-quill, densely rusty-pubescent. *Leaves* with recurved margins, coriaceous, ovate- or elliptic-lanceolate, shortly acuminate, the base cuneate or rounded, sometimes minutely cordate; upper surface olivaceous when dry, glabrous, the main-nerves depressed; the lower brown, pubescent on the stout midrib and 5 to 7 pairs of prominent curved ascending main-nerves, puberulous on the interspaces; length 1·5 to 2·5 in.; breadth ·85 to 1·25 in.; petioles ·15 to ·25 in. long. *Stipules* connate, ovate-lanceolate, ·25 in. long, caducous. *Cymes* ·75 to 2 in. in diam., trichotomous, solitary, terminal, rusty-pubescent, on angled peduncles ·5 to 1 in. long. *Flowers* about ·15 in. long, on short pedicels, crowded in dense cymes at the ends of the branches and mixed with linear bracteoles. *Calyx* campanulate, with 5 spreading acute teeth. *Corolla* twice as long as the calyx, salver-shaped, with 5 lobes, the tube villous inside. *Fruit* ovoid-globose, ·15 in. long, the apex crowned by the calyx, the sides with 6 faint vertical ridges. *Seeds* faintly 3-ridged on the dorsal surface; the ventral surface broad, flat. Hook. fil. Fl. Br. Ind. III. 166.

SINGAPORE: *Wallich*, *Seeman* 2348. MALACCA: *Mainyay* (K.D.) 923; *Ridley* 97, 8407.

10. *PSYCHOTRIA RIDLEYI*, n. sp., King & Gamble. A small shrub; all parts glabrous except the inflorescence; stems half as thick as a goose-quill, terete, greenish when dry. *Leaves* membranous, oblong-to elliptic-oblancheolate, the apex abruptly and very shortly acuminate, the base much narrowed, both surfaces pale olivaceous when dry, the midrib rather prominent, the upper sometimes with scattered minute, adpressed white hairs; main-nerves 7 to 9 pairs, slightly curved, spreading, faint on both surfaces; length 3 to 5.5 in., breadth 1.25 to 2.25 in.; petioles .4 to .8 in. long, winged near the apex. *Stipules* broadly ovate, subacute, .1 in. long. *Cyme* on a peduncle about 1 in. long (longer in fruit), corymbosely branched, the bracts at the forks linear-lanceolate. *Flowers* in cymules of three, everywhere canescent, on short pedicels bibracteolate at the base. *Calyx* campanulate with elongated tube, the mouth with 5 erect ovate-triangular lobes. *Corolla* longer than the calyx; the tube short, slightly villous at the base near the insertion of the broad sub-sessile anthers; the 5 lobes broadly ovate, acute. *Fruit* ovoid-ellipsoid, 12-ridged, crowned by the small calyx, .3 to .4 in. long. *Seeds* many-ridged on both dorsal and ventral surfaces.

SINGAPORE. *Ridley* 48, 10818. JOHORE: *Ridley* 6472. MALACCA on Mt. Ophir, *Hullett* 811; *Goodenough* 1363.

11. *PSYCHOTRIA POLYCARPA*, Hook. fil. Fl. Br. Ind. III. 165 A climber, glabrous except the inflorescence; young branches thinner than a goose-quill, terete, when dry dark-coloured. *Leaves* coriaceous, ovate- or obovate-lanceolate to obovate- or ovate rotund, the apex in the narrower forms shortly and bluntly acuminate, in the broader abruptly and bluntly apiculate; both surfaces olivaceous when dry, the upper somewhat shining, the lower dull and darker, the midrib prominent on both; main-nerves 5 or 6 pairs, spreading, faint on both surfaces; length 2 to 3 in.; breadth .75 to 1.75 in.; petioles .3 to .6 in. *Stipules* very short, connate to form a collar, caducous. *Panicles* large, umbellately cymose, longer than the leaves (sometimes very much so), their branches numerous, spreading, puberulous, with minute bracteoles at the divisions. *Flowers* .15 in. long, numerous, in ultimate cymules of 2 or 3, shortly pedicellate. *Calyx* thick, minutely pubescent, shortly campanulate or sub-cupular, the mouth with 5 acute teeth or subentire. *Corolla* longer than the calyx, salver-shaped, its 5 lobes spreading, lanceolate, acute, the throat sericeous, anthers 5, elliptic. *Fruit* ellipsoid, tapered to the base, and the apex crowned by the rather large remains of the calyx; obscurely ridged; .15 in. long and .1 in. in diam., sometimes sub-globular, the epicarp somewhat pulpy. *Seeds* slightly convex and faintly ridged on the dorsal surface, the ventral with a broad

shallow groove. *P. obovata*, Wall. Cat. 8380A. *Grumilea polycarpa*, Miq. Fl. Ind. Bat. II. 295.

SINGAPORE: *Ridley* 2029. MALACCA: *Griffith* (K.D.) 3042; *Main-gay* (K.D.) 924; *Hullett* 402. JOHORE: *Ridley* 4090, 11160. PENANG: *Curtis* 1095. PERAK: *Wray* and *King's Collector* many numbers. DISTRIB.—JAVA, *King*; *Forbes* 1061; *Koorders* 28043b.

12. *PSYCHOTRIA CALOCARPA*, Kurz in Journ. As. Soc. Beng., 1872, II. 315. A glabrous shrub 2 to 4 feet high; young branches thinner than a goose-quill, dark-coloured when dry. Leaves thickly membranous, oblong-oblancoelate or oblanceolate, shortly caudate-acuminate at the apex, much attenuate at the base, the edges sometimes broadly crenate; both surfaces olivaceous when dry, the midrib and nerves broad, distinct and pale; main-nerves 10 to 12 pairs, slightly curved, spreading and interarching to form a bold pale intramarginal nerve 1 to 1.5 in. from the edge; length 5 to 8 in.; breadth 1.65 to 2.5 in.; petiole .75 to 1.25 in., slightly winged near the apex. Stipules broadly triangular, acuminate, membranous, sometimes bifid, 2 in. long. Cymes terminal or axillary, sessile or shortly pedunculate, shorter than the petioles, about 1.25 in. across and .5 in. long, branched from near the base, the branches compressed, trichotomous; the bracteoles lanceolate, acuminate. Flowers .2 in. long, on short pedicels. Calyx with a short cylindric tube and 4 longer oblong blunt sub-erect concave lobes. Corolla exceeding the calyx, narrowly campanulate, bluntly 4-lobed, the throat densely sericeous, otherwise glabrous. Fruit sub-globose or ovoid, sub-compressed; the epicarp fleshy, glabrous, rugulose when dry; .3 in. in breadth and rather less in length, the persistent calyx-lobes small. Seeds large, the dorsal surface faintly 1-ridged, the ventral deeply grooved. Kurz For. Fl. Burm. II. 9; Hook. fil. Fl. Br. Ind. III. 173. *P. asiatica*, Wall. in Roxb. Fl. Ind. ed. Carey & Wall. PERAK: *Ridley* 7199; *Wray* 2200; *King's Collector* 1930, 2348, 6798, 10772. *Scortechini*. MALACCA: *Hervey*.—DISTRIB. Himalaya, Assam, Burma.

This plant is very common in the lower Himalaya, Assam, and Burma. In the Flora of British India it is described as herbaceous, but the Malayan specimens are all woody. The leaves are always readily distinguished, when dry, by the pale broad main-nerves and by the very conspicuous intra-marginal nerve. In Malaya the plant is glabrous, but in the Indian specimens the under surfaces of the leaves are deciduously puberulous.

13. *PSYCHOTRIA MULTICAPITATA*, n. sp. King & Gamble. An erect

much-branched shrub 3 to 7 feet high, young branches thinner than a goose-quill, slightly compressed, swollen at the nodes, pale, deciduously puberulous. *Leaves* thinly membranous, greenish when dry, broadly obovate-lanceolate, oblong or elliptic, abruptly and shortly caudate-acuminate, the base narrowed to the rather short petiole, upper surface quite glabrous; the lower scurfy-puberulous on the broad midrib and 9 to 13 pairs of curved spreading main-nerves, length 5 to 10 in., breadth 2.5 to 4 in., petiole .75 to 1.15 in. *Stipules* free, broadly triangular, 1.5 in long. *Cymes* terminal, solitary, peduncled, about 2 in long (including the peduncle) and the same in breadth, umbellately branched from near the base, the ultimate branches numerous, bearing terminal many flowered globular minutely bracteolate cymules, about .5 in in diam, the common peduncle about an inch or more long, the branches shorter, all puberulous. *Flowers* on short puberulous pedicels, ovoid in bud, about 1.5 in long when expanded. *Calyx* cupular, with 5 or 6 triangular acute sub-erect teeth. *Corolla* longer than the calyx, the tube cylindric and, like the throat, densely white-sericeous inside, lobes of the limb short, triangular, deflexed. *Anthers* bifid at the base. *Style* thick, bifid, longer than the corolla. *Fruit* ellipsoid obovoid, 10-ridged, crowned by the small calyx, glabrous, .3 in long. *Seed* dorsally with 4 faint ridges, ventrally somewhat concave.

PERAK *Scortechium* 214, 291, *Kmg's Collector* 436, 867, 2862, 5402, 7380, 7513, 10559

14 PSCHYOTRIA TORTILIS, Blume Bijdr 958. Stem woody below, erect, 6 to 18 in high, not branched, cinereous, 4-angled, sparsely covered with short coarse scurfy hairs. *Leaves* membranous, broadly elliptic or ovate-elliptic, the apex acute or subacute, narrowed from below the middle to the petiole, upper surface when dry dark green, the lower pale, glaucous, minutely lepidote, the 8 to 11 pairs of slightly curved spreading main-nerves covered with minute short coarse deciduous dark-coloured hairs, length 4 to 6 in., breadth 1.75 to 3 in., petioles .5 to 2 in., compressed, scurfy pubescent. *Stipules* broadly triangular, much acuminate, bifid, 1.5 to 3 in long. *Cymes* solitary sessile, axillary, dichotomous, many-flowered, condensed, .5 in to 1 in long and as much broad. *Flowers* 1.5 in long, on short ebracteolate pedicels. *Calyx* campanulate, with 5 triangular spreading teeth, covered with coarse hair. *Corolla* longer than the calyx, narrowly campanulate, with 5 ovate acute lobes, hairy like the calyx. *Anthers* 5, sessile, oblong, blunt, included. *Style* shorter than the calyx, stigmas short, linear, divergent. *Fruit* crowned by the small calyx-lobes, reniform, pale with numerous short vertical brown streaks, and stiff short white hairs, 1 in broad and less in length, the dorsal surface of each of the two,

cartilaginous cocci with 3 bold ridges. *Seeds* bluntly 5-ridged on the dorsal, broadly grooved on the ventral surface. DC. Prod. IV. 520; Hook. fil. Fl. Br. Ind. III. 169. *P. microcarpa*, Wall. Cat. 8344. *Streblota tortilis*, Korth. Kruidk. Arch. II. 246.

18. PSYCHOTRIA MONTANA, Blume Bijdr. 960. A stout glabrous shrub; young branches half as thick as a goose-quill, angled, brown when dry. Leaves thinly membranous, on rather long petioles, elliptic or elliptic-oblong, acuminate, the base cuneate; both surfaces greenish or olivaceous-brown when dry, the lower the paler; main-nerves 7 to 8 pairs (rarely 10 pairs) curving upwards, pale and bold like the midrib on the lower surface, faint on the upper; length 5 to 8 in.; breadth 1.75 to 3.5 in.; petioles .4 to 1.25 in., winged near the apex. Stipules connate by their short broad bases, the apices caudate-acuminate, curved. Cymes terminal, paniculate, on angled peduncles .5 to 1.25 in. in length; branches spreading, angled, bearing numerous shortly pedicelled flowers in cymes of three. Flowers .25 in. long. Calyx cupular with 5 broad spreading triangular teeth. Corolla with sub-campanulate tube having a broad band of hairs inside in the upper half; the lobes of the mouth 5, broad, acute, reflexed. Fruit ellipsoid-ovoid to ellipsoid, boldly 4-ridged, glabrous, .25 to .3 in. long. Seeds: the dorsal surface with a single ridge, the ventral deeply concave, grooved. DC. Prod. IV. 521; Hook. fil. 20 *PSYCHOTRIA BIRCHIANA*, n sp, King & Gamble. Herbaceous, woody at the base, all parts softly rusty-pubescent, stems 6 to 18 in high, thinner than a goose-quill, their pubescence crisped, dense, coarse, and entirely or partly deciduous. *Leaves* thickly membranous, elliptic to elliptic-oblong, sometimes sub-obovate, acute, the base rounded or minutely cordate or sometimes cuneate, both surfaces brown when dry, the lower sometimes paler and with fewer hairs, the midrib prominent and very hairy on both sides, the 10 to 12 pairs of rather faint little-curved spreading main-nerves less hairy than the midrib, length 3.5 to 5 in, breadth 1.5 to 2.25 in, petiole .5 to 1 in, covered with coarse tomentum mixed with ovate-acuminate scales. *Stipules* oblong-ovate, acuminate, .5 to .75 in long. *Cymes* pedunculate, solitary, terminal, spreading, 1.5 to 2 in across, and about as long, the branches spreading, bracteate at the divisions, the bracts lanceolate,

acute, reflexed, .2 or .3 in. long; the peduncle 1.5 to 2.5 in. long, scaly, tomentose; ultimate branches short, bearing at their apices dense capitules of small sub-sessile flowers, mixed with short broad bracteoles. *Flowers* about .1 in. long. *Calyx* cupular-campanulate, pubescent; the mouth wide and with 5 blunt, triangular, spreading lobes. *Corolla* exceeding the calyx, widely tubular, with 5 or 6 short inflexed teeth, glabrous inside, hairy outside. *Anthers* oblong, blunt at each end, the filaments short. *Fruit* ellipsoid, tapering equally to each end, boldly 10-ridged, somewhat compressed, crowned by the hairy calyx-lobes, otherwise sub-glabrous, .25 to .3 in. long and .2 in. across. *Seeds* with 5 dorsal ridges, the ventral surface plane.

PERAK, on Birch's Hill, elev. 4,000 feet: *Scortechini* 258; *Wray* 1; *King's Collector* 2134, 2950, 7348. SELANGOR: *Rudley* 7432.

The flowers are described as white, and the ripe fruit as cherry red. Named in honour of Mr Birch, a British civil officer, who was murdered by the aborigines in Perak.

21. *PSYCHOTRIA FULVA*, Buch.-Ham. ex. Wall. Cat 8366, excl B. A shrub; young branches thinner than a goose-quill, dark brown when dry, bearing a few scattered coarse hairs. *Leaves* thickly membranous, elliptic, shortly acuminate and tapering almost equally to the base; upper surface without hairs except a few on the midrib near the base, under surface with dark cinereous pubescence on the midrib and 15 to 18 pairs of sub-horizontal slightly curved main-nerves, length 5 to 7 in., breadth 1.75 to 3.5 in.; petioles 1.25 to 2.4 in., coarsely and deciduously pubescent. *Stipules* membranous, broadly oblong, the apex deeply and acuminately bifid, the edges coarsely ciliate; length about 1 in. *Cymes* pedunculate, axillary, trichotomous, the flowers in condensed capitular cymes at the ends of the short branches, enveloped when in bud in 2 or 3 large deciduous bracts; in fruit about 2 in. across and less in length; peduncles about 2 in. long; branches about .5 in. long, horizontal; all, like the short flower pedicels, coarsely rusty-pubescent. *Calyx* cupular, with 5 deep, spreading, narrow, acuminate lobes. *Corolla* not seen. *Fruit* narrowly elliptic, somewhat compressed, tapering slightly to each end, the apex crowned by the erect connivent calyx-lobes, boldly but somewhat unequally 12-ridged, glabrous, .45 in. long and .25 in. in diam. *Seeds* 5-ridged on the dorsal, the ventral surface flat. Hook. fil. Fl. Br. Ind. III. 169, excl. syn. *P. monticola*, Kurz. *Psychotria*, Wall. Cat. 8337; Griff. Notulæ, IV. 268; Ic. Pl. Asiat. t. 479, f. 2.

PERAK, On Ulu Batung Padang: *Wray* 1615.—DISTRIB. E. Bengal, *Griffith* (K.D.) 3022, 3034, 3035, 3036; Khasia, *Hook f. & Thoms.* 14.

P. monticola, Kurz, a Burmese plant, has been reduced to *P. fulva*, Buch.-Ham., but in my opinion it is quite distinct.

22. *PSYCHOTRIA FULVOIDEA*, n. sp., King & Gamble. A small shrub; young branches thinner than a goose-quill, dark-coloured, glabrous. *Leaves* membranous, narrowly elliptic, acuminate, crenulate, the base cuneate; upper surface glabrous, dark brown when dry, the lower reddish-brown; the midrib, nerves and reticulations rusty-pubescent, otherwise glabrous; midrib prominent on both surfaces, the 10 to 14 pairs of spreading, curving main-nerves slightly prominent on the lower; length 6 to 7 in.; breadth 2 to 2.5 in., petiole 1 to 1.8 in. *Stipules* membranous, ovate, caudate-acuminate, the edges irregularly serrate, ciliate, length about 1 in. *Cymes* axillary, trichotomous, condensed, about 2 in. broad when in fruit and 1.25 in. long, on deflexed, coarsely but shortly pubescent peduncles 3 in. long; their branches short, spreading, bracteate at the divisions and coarsely pubescent. *Flowers* condensed into globose capitulate cymes at the apices of the branches, sessile. *Calyx* narrowly campanulate, pubescent, with 5 erect acute teeth. *Corolla* unknown. *Fruit* narrowly elliptic, tapering to each end, the apex crowned by the short pubescent lobes, with 12 deep ridges and grooves, glabrous, .4 in. long and .2 in. in diam. *Seed* dorsally 5-ridged, ventrally 2-grooved.

PERAK: *Scortechini* 538.

This approaches *P. fulva*, but is a smaller plant, with crenulate leaves quite glabrous on the upper surface and nearly so on the lower.

23 *PSYCHOTRIA STIPULACEA*, Wall. in Roxb. Fl. Ind. ed. Carey & Wall. II. 164. A shrub, 1 to 2 feet high, all parts except the inflorescence glabrous; stems as thick as a goose-quill, brown when dry. *Leaves* membranous, broadly oblanceolate to elliptic, or oblong, abruptly and shortly acuminate, much narrowed to the base, both surfaces glabrous, when dry brown with a reddish tinge; midrib very stout, main-nerves 11 to 13 pairs, spreading, slightly curved, distinct on both surfaces; length 5 to 9 in.; breadth 2 to 4 in.; petioles .5 to 1.25 in. long, winged near the apex. *Stipules* large, sub-persistent, ovate, sometimes bifid, .75 to 1 in. long, and about .4 in. broad. *Cyme* usually solitary, corymbose, trichotomous, terminal, on a short peduncle, bracteate at the base, about 2 to 3 in. in diam.; its branches puberulous, bracts and bracteoles triangular. *Flowers* .15 in. long, on short pedicels, clustered in dense, cymose, capituliform cymes at the ends of the ultimate branches. *Calyx* campanulate, with 5 broad pubescent lobes, the tube glabrous. *Corolla* longer than the calyx, widely campanulate, 4- or 5-toothed. *Fruit* ellipsoid, sub-compressed, 10-ridged, crowned by the small calyx, .8 in. long, and .15 in. in diam. *Seed* dorsally 5-ridged, ventrally concave, with one central ridge. Wall. Cat. 8329; DC Prod. IV. 519; Hook. fil. Fl. Br. Ind. III. 167.

The corolla of this is larger than that of any other Malayan species of *Psychotria*, being about ·4 in. long when dry.

SPECIES IMPERFECTLY KNOWN.

27. *PSYCHOTRIA WRAYI*, n. sp., King & Gamble. A small shrub, glabrous except the inflorescence; young branches as thick as a swan's-quill, terete, dark-coloured when dry. *Leaves* coriaceous, oblanceolate-elliptic, shortly acuminate, gradually narrowed from about the middle to the short, partially winged petiole, both surfaces dark olivaceous-brown when dry, the midrib rather prominent, main-nerves 13 to 15 pairs, oblique, almost straight, thin but pale and rather distinct on the lower surface, indistinct on the upper; length 6 or 7 in.; breadth 2 to 2·5 in.; petiole about ·5 in., winged above. *Stipules* broadly ovate, sub-acute, the edges coarsely ciliate, ·5 in. long. *Cymes* terminal, on short peduncles, bracteate at the base, umbelliform, widely spreading, about 4 in. broad and only half as long; the branches 4-angled, sub-compressed, pubescent, divergent. *Flowers* crowded at the extremities of the branchlets, ·25 in. long, on short thick pedicels. *Calyx* deeply

cupular, with 5 broad, shallow blunt teeth. *Corolla* much longer than the calyx, widely tubular; lobes 5, blunt, broadly ovate, reflexed, the throat with a little short hair. *Anthers* 5, narrowly elliptic, blunt, on short filaments, almost basifixed, exerted by the reflexion of the lobes of the corolla. *Fruit* unknown.

PERAK: *Wray* 3959; *King's Collector* 2755.

28. *PSYCHOTRIA INEQUALIS*, n. sp., King & Gamble. A small unbranched shrub; the stem thinner than a goose-quill, deciduously puberulous, only a foot high, brown when dry. *Leaves* thickly membranous, those of a pair somewhat unequal in size, elongate-obovate, the smaller one oblong-elliptic, all abruptly and shortly acuminate, the base cuneate; upper surface glabrous, minutely pitted when dry; the lower with many coarse pale-brown, crisped, flattened hairs on the midrib and nerves, and a few pale appressed hairs on the interspaces; midrib broad and channelled on both surfaces, as are also the 10 to 13 pairs of pale ascending, slightly curved main-nerves, length 6 to 10 in.; breadth 2.5 to 5 in.; petiole .5 to .75 in., stout *Stipules* narrowly ovate, acuminate, pubescent, .65 in. long. *Cyme* solitary, terminal, 2 to 3.5 in. long (including the 1 to 2 in. peduncle), pyramidal, everywhere rusty-puberulous, the branches opposite, many-flowered, and with broad abruptly acuminate bracts; the lowest pair exceeding 1 in. in length, reflexed; branchlets divaricate. *Flowers* .1 in. long, on short stout pedicels. *Calyx* small, tubular; its lobes broadly triangular. *Corolla* not much longer than the calyx, its lobes linear with moniliform bluish hairs at their bases and on the throat. *Fruit* unknown.

PERAK: *Scortechini* 279.

29. *PSYCHOTRIA CONDENSEA*, n. sp., King & Gamble. A small woody shrub; young branches half as thick as a goose-quill, the nodes close together and slightly thickened, the internodes striate, at first scurfy-puberulous but afterwards glabrous. *Leaves* coriaceous, narrowly elliptic or elliptic-lanceolate, shortly acuminate, the base cuneate; upper surface when dry very dark brown, the lower paler and tinged with olivaceous, the midrib prominent and pale; the 5 or 6 pairs of oblique main-nerves visible beneath but not above; length 1 to 1.25 in.; breadth .3 to .5 in.; petiole .05 in. *Stipules* broadly triangular, acuminate, nearly .1 in. long. *Umbel* cymose, 3-branched, terminal, shorter than the leaves; each branch with 3 unequally pedicellate flowers. *Flowers* not seen. *Fruit* globular-ovoid, with 2 prominent furrowed vertical ridges and several obscure ones between them, crowned by the 5-toothed calyx; length .2 in.; breadth .15 in. *Seeds* with one prominent dorsal ridge, ventral surface flat.

PERAK: *Scortechini*.

Order LX. VALERIANEÆ.

Herbaceous (as regards the Indo-Malayan species). *Leaves* opposite, exstipulate, their bases often connected by an interpetiolar line or ridge; entire, pinnatifid or pinnate. *Flowers* sessile, in cymes, usually hermaphrodite but sometimes polygamous or diceious, bracteate. *Calyx-tube* adnate to the ovary, the limb in the flower small, in the fruit often enlarged or pappose. *Corolla* superior, gamopetalous, its tube cylindric or gibbous or spurred at the base; the limb with 3 to 5 imbricate lobes, often irregular. *Stamens* 1 to 4, on the tube, usually exerted. *Ovary* inferior with a single perfect, 1-ovuled cell, and 2 barren empty cells; style filiform; stigma 2- or 3-lobed or entire; ovule in the fertile cell pendulous from the apex of the loculus. *Fruit* indehiscent, dry, 1-seeded, the 2 barren cells enlarged or represented by narrow ridges. *Seed* pendulous, with very little or no albumen; *embryo* straight, radicle superior.—*DISTRIB.* About 350 species, in temperate climates, generally diffused, but absent from Australia and South Africa.

VALERIANA, Linn.

Perennial herbs. *Leaves* entire, pinnatifid or pinnate, the radical often undivided and with long petioles. *Flowers* in cymes, corymbosely paniculate; bracts small, oblong or linear, free or nearly so, persistent. *Calyx-limb* in flower obsolete, in fruit develop into a ring of from 5 to 15 feathery bristles, united at their bases into a short funnel-shaped tube. *Corolla-tube* funnel-shaped, its base often sub-gibbous; limb with 5 spreading lobes, both tube and limb pink or white. *Stamens* 3. *Ovary* 3-celled, only 1 cell containing 1 ovule, stigma sub-entire or shortly 3-fid. *Fruit* oblong, plano-convex, with 6 ribs, 1-celled; the 2 barren cells obsolete, crowned by the persistent pappose calyx.—*DISTRIB.* About 180 species in moist temperate regions.

VALERIANA HARDWICKII, Wall. in Roxb Fl. Ind., ed. Carey & Wall. I. 166. *Root* fibrous. *Stem* erect, 1 to 3 feet high, pubescent below, mostly glabrous upwards but pilose or barbate at the nodes. *Radical leaves* ovate, acute, on long petioles; *stem leaves* unequally pinnatifid, the segments 3 to 5, the upper the longest, all lanceolate or ovate-lanceolate and irregularly toothed. *Panicles* lax, often as much as a foot long, the branches dichotomous, with small subulate bracteoles at the forks; fruit hairy. Wall. Cat. 432, Pl. As. Rar. 39, t. 263, Don Prod. Fl. Nep. 159; DC. Prod. IV. 640; Clarke in Hook. fil. Fl. Br. Ind. III. 213. *V. Hardwickiana*, Roem. & Schult., Syst. I., Mant. 259. *V. tenera*, Wall. Cat. 435; DC. Mem. Valer. 16; Prod. IV. 640.

V. elata, Don Prodr. 159. *V. javanica*, Blume Bijdr. 919. *V. acuminata*, Royle Ill. Him. Bot. 241.

At high elevations on the central ridge in Perak, this is said to occur, but I have seen no specimens.

Order LXI. COMPOSITÆ.

Herbs or shrubs, sometimes scandent, rarely trees. *Leaves* alternate, rarely opposite or whorled; simple or sometimes compound exstipulate. *Florets* numerous, small, aggregated in centripetal heads, sessile on the dilated top of the peduncle (receptacle); the heads surrounded by an involucre of 1- or more-seriate, free or connate bracts; bracteoles none or reduced to paleate scales or bristles on the receptacle; individual florets all tubular (head discoid), or the outer or all ligulate (head rayed); all bi-sexual or the inner bi-sexual or male, the outer female or neuter; sometimes diœcious. *Sepals* connate in a calyx-tube, adnate to the ovary; limb none, or composed of hairs (pappus) or scales. *Petals* connate in a corolla of two forms: (a) tubular or campanulate, with 4-5-lobed limb; lobes valvate with marginal nerves; (b) ligulate with lobes elongated and connate in a strap-shaped or elliptic ligule. *Disk* epigynous. *Stamens* 4-5, inserted within the corolla-tube; filaments usually free; anthers basifixed, usually connate (syngenesious); connective produced upwards; cells simple or tailed at the base, pollen sub-globose, rough. *Pistil* an inferior 1-celled ovary; ovule solitary, basal, erect, anatropous, nucleus with one coat; style slender, normally 2-fid; the arms (sometimes) connate, linear or sub-terete, naked or pubescent externally or tipped by pubescent cones; the margins stigmatic. *Fruit* a dry indehiscent achene (cypsela). *Seed* erect; testa membranous; albumen none; embryo straight; cotyledons plano-convex; radicle short.—**DISTRIB.** Universal; genera about 1,000; species about 8,000.

Corollas of all the florets either tubular to near the mouth or the marginal row ligulate; style-arms long, distinct, or very short, or the style sub-entire in the sterile florets of heads with heterogamous florets; stems sometimes woody; leaves alternate or opposite; sap never milky:—

Florets red, purple, or white, never yellow; all similar (homogamous) and tubular, or rarely (*Elephantopus*) cleft laterally; involucre of bracts always more than 1-seriate; pappus present, usually setaceous, receptacle naked or rarely (*Ageratum*) paleaceous:—

Antthers cleft at the base and appendiculate at the apex; style-arms subulate, hairy; leaves alternate (*Vernoniae*):—

Heads distinct, many-flowered; pappus long, copious, cypselas ribbed 1. *VERNONIA*.

- Heads 1- or few-flowered, crowded into dense clusters resembling single heads; pappus chaffy 2. ELEPHANTOPUS.
- Anthers sub-entire at the base, either truncate or appendiculate at the apex; leaves opposite at any rate below (*Eupatorieae*):—
- Anthers truncate at the apex 3. ADENOSTEMMA.
- Anthers appendiculate at the apex:—
- Pappus paleaceous, receptacle sometimes paleaceous .. 4. AGERATUM.
- Pappus of slender hairs; receptacle always naked; bracts of involucre 4 with sometimes a small outer one; scandent 5. MIKANIA.
- Florets, if homogamous and tubular, yellow; if heterogamous, at least those of the disk yellow; or if none of the florets yellow (*Emilia*) then with the bracts of the involucre 1-seriate
- Anthers appendiculate at the apex (*Asteroidae*).—
- Receptacle naked, smooth, or pitted; sometimes, when pitted, the edge of the pit fimbriate:—
- Bracts of involucre in two rows.—
- Anthers sub-entire at the base; florets all tubular, those of the disk purple, of the ray filiform, yellowish or white; pappus none or of 2 bristles, heads small in lax paniced cymes, bracts of involucre in two series; erect herbs 6. DICHROCEPHALA.
- Bracts of the involucre many-seriate, leaves alternate:—
- Anthers obtuse and entire at the base; florets of disk tubular with wide limb; those of the ray filiform-tubular or tubular only at the base, expanding into small yellowish ligules; pappus copious and silky, heads in dense corymbose panicles; climbers .. 7. MICROGLOSSA.
- Anthers cleft at the base; style-arms of hermaphrodite flower filiform, linear, or obtuse, or those of the sterile flowers undivided (*Inuloideae*).—
- Flower-heads medium-sized; separate, solitary, or in corymbose or paniculate cymes, not in globose clusters, if clustered the cypselas with copious soft pappus:—
- Herbs; bracts of involucre narrow; flowers not corymbose:—
- Anther-cells tailed at the base, the tails of adjacent anthers confluent 8. BLUMEA.
- Anther-cells sagittate at the base, not tailed or connate.. .. 9. LAGGERA
- Shrubs; bracts of involucre broad; flowers corymbose 10. PLUCHEA
- Flower-heads small, clustered in dense ovoid or globose masses; herbs with winged stems; pappus none 11. SPHERANTHUS.
- Bracts of the involucre 1-seriate, sub-equal, free or united, with sometimes a few short outer bractlets

(*calyculus*) at their bases; heads homogamous; anther-cells sub-entire at the base; receptacle naked (*Sensicionida*):—

Leaves alternate; pappus of fine hairs, style-arms of hermaphrodite flowers truncate or obtuse, penicillate or with a hairy tip:—

Heads ebracteate; florets purple 12. *EMILIA*.

Heads bracteolate; florets yellow 18. *GYNURA*.

Receptacles paleaceous; anthers sub-entire at the base; bracts of involucre 1- to many-seriate; heads usually radiate, heterogamous; style-arms truncate or appendiculate, or those of the sterile florets entire; pappus of 2 to 4 arms or paleaceous or absent; leaves at the base of the stem usually opposite, those higher up opposite or alternate (*Helianthoidæ*):—

Pappus of only 4 bristly awns, or cup-like or absent:—

Cypselas all thick, or those of the ray-florets 3-angled and those of the disc laterally compressed; pappus cup-like or composed of 2 to 3 stiff chaffy or bristly arms, with or without intermediate smaller scales or altogether absent; leaves usually opposite:—

Inner bracts of the involucre embracing and enclosing the cypselas of the fertile ray-florets; pappus absent, outer bracts of involucre 5, glandular 14. *SIEGESBECKIA*.

Inner bracts of the involucre all flat, scales of receptacle flat, very narrow, usually few; disk-florets 4-5-fid, ligules small; pappus absent, or if present shortly 2-awned; outer bracts of involucre numerous 15. *ECLIPTA*.

Scales of the receptacle concave or complicated more or less enclosing and embracing the disk florets —

Cypselas not winged, compressed or 8-5-angled, ray-florets yellow with large ligules; disk-cypselas with 1 or 2 short deciduous awns; leaves all opposite 16. *WEDELIA*.

Cypselas of the disk-florets ciliate, winged on the margins, laterally compressed; heads small; leaves always opposite 17. *SPILANTHES*.

Cypselas more or less depressed from the top; pappus of 2 (rarely 3 or 4) bristles or absent:—

Outer bracts of the involucre almost equal; herbaceous; inner bracts separate, almost resembling the scales of the receptacle; ray-florets fertile; leaves opposite:—

Cypselas flat, their margins lacerate and winged; pappus composed of bristles 18. *STENOBRELLA*.

Outer bracts of the involucre few, small; inner bracts connate below, membranous:—

- Cypselas not beaked; leaves opposite, simple to pinnatisect 19. *BIDENS*.
- Pappus of membranous scales; heads radiate; leaves opposite:—
- Scales of pappus feathery, fringed; heads medium-sized 20. *TRIDAX*.
- Anthers inappendiculate at the apex; receptacle (in our species) not paleaceous; pappus absent or reduced to a raised rim, rarely scaly and short; leaves usually alternate (*Anthemideae*):—
- Flower-heads discoid, heterogamous, pappus absent —
- Florets of the circumference very numerous; cypselas flat or concave at the top; flower-heads globose or hemispheric, sub-sessile, bracts of involucre in 2 series, spreading in fruit 21. *CENTIPEDA*.
- Florets of the circumference few; heads very small, in racemes or panicles; cypselas ellipsoid or obovoid, rounded at the apex 22. *ARTEMISIA*.
- Corollas of all the florets flatly expanded from a tubular base, ligulate, their apices 5-toothed; leaves radical or cauline and alternate, never opposite; stem always herbaceous, fistulose; sap milky (*Cichorieae*):—
- Pappus of simple hair-like bristles, at least in the central florets; florets yellow, cypselas fusiform or oblong, with glabrous or puberulous ribs 23. *CREPIS*.
- NOTE.—The above key is taken mainly from "Bengal Plants," by Lieut.-Col. D. Prain, F.R.S., Superintendent, Royal Botanic Garden, Calcutta.

1. *VERNONIA*, Schreb.

Herbs, shrubs, climbers or small trees. *Leaves* alternate, penninerved, entire or dentate. *Heads* axillary or terminal, solitary or in cymes or panicles, homogamous; flowers often few, but very rarely solitary. *Involucre* ovoid, globose or hemispheric, as long as or shorter than the flowers; bracts in many series, the inner longest. *Receptacle* naked or pitted, sometimes with short hairs. *Corollas* all equal, tubular, slender; lobes 5, narrow. *Anther-bases* obtuse, sagittate. *Style-arms* subulate, acute, hairy. *Cypselas* striate, ribbed or angled, rarely terete, truncate at the apex; pappus of many hairs, usually in two rows, the inner hairs thin and slender, the outer sometimes stout and compressed, persistent or deciduous.—*DISTRIB.* About 500 species, mostly American.

- A large shrub or small tree; leaves sub-coriaceous; involucre bracts obtuse 1. *V. arborea*.
- Herbaceous annuals; leaves membranous; involucre bracts acuninate:—
- Heads few, .35 in. in diam., in long-peduncled cymes.. .. 2. *V. chinensis*.

Heads numerous, 2 to 25 in. in diam., in loose terminal corymbose cymes 3. *V. cinerea*.

1. *VERNONIA ARBOREA*, Buch.-Ham. in Trans. Linn. Soc. XIV. 218. A tree, 30 to 60 feet high; young branches as thick as a goose-quill or thinner, at first covered, like the under surfaces of the leaves and branches of the inflorescence, with short rusty tomentum, sometimes glabrous or glabrescent. *Leaves* sub-coriaceous, entire, elliptic ovate or ovate-oblong, acute or shortly acuminate, the base rounded or cuneate; upper surface glabrous, or nearly so, except the midrib, the reticulations minute and distinct; main-nerves 8 to 14 pairs, spreading, interarching, bold and distinct on the lower surface, more faint on the upper; length 3.5 to 6 in.; breadth 1.75 to 2.75 in.; petioles .75 to 1.25 in., pubescent. *Heads* 2- to 5-flowered, collected in large open terminal panicles much longer than the leaves. *Involucral bracts* few, small, oblong, obtuse, less than half as long as the flowers, pubescent, concave, persistent. *Corolla* glabrous, bluish. *Cypselas* not conspicuously ribbed, short, truncate; pappus in a single row, tuberculate, white tinged with ochraceous, persistent. DC. Prod. V. 22; Kurz For. Fl. Burm. II. 80; Clarke Comp. Ind. 23; Hook. fil. Fl. Br. Ind. III. 239. *Vernonia javanica*, *Blumeana* and *celebica*, DC. l.c. 21, 22; Miq. Fl. Ind. Bat. II. 9, 10. *Eupatorium celebicum* and *javanicum*, Blume Bijdr. 903 *Conyza acuminata* and *arborea*, Wall. Cat. 3034A and 3074.

MALACCA: Griffith. SINGAPORE: Lobb; Ridley 2735, 2739, 9478; Maingay (K.D.) 948, 949, 950. PENANG: Curtis 2, 926. NEGRI SEMBILAN: Ridley 10087. SELANGOR: Ridley. PERAK: Wray 2240, 2442; King's Collector, many Numbers; Scortechini.—DISTRIB. Ceylon, Malay Archipelago, Philippines, China.

2. *VERNONIA CHINENSIS*, Less. in Linnæa, VI. 674. An erect annual with divaricate, softly puberulous to tomentose, angled branches. *Leaves* alternate, sessile or petiolate, membranous, ovate elliptic elliptic-lanceolate or oblanceolate, narrowed at the base, sub-serrate or entire. *Heads* few, .35 in. in diam., in lax, few-branched, axillary and terminal, open puberulous cymes, on slender peduncles longer than the leaves, 15- to 30-flowered. *Involucral bracts* not numerous, lanceolate, awned or acute, usually at first pubescent outside, inside glabrous, shining, 1-nerved; longer than the glabrous or glabrescent corollas. *Cypselas* less than 1 in. long, 4- or 5-ribbed, glabrous. *Pappus* scanty, white. Clarke Comp. Ind. 78; Hook. fil. Fl. Br. Ind. III. 235. *V. albicans*, DC. in Wight Contrib. 6; Prod. V. 26 (in part). *Cyanopsis pubescens* and *C. villosa*, DC. Prod. V. 69. *Conyza chinensis*, Lamk. Dict. II. 83 (not of Linn.). *C. punctulata*, Wall. Cat. 2995. * *Eupatorium menthaefolium*, Wall. Cat. *Cynanthillium villosum* and *C. pubescens*, Blume

Guin. 384. *Cyanopsis decurrens*, Zoll.

In all the provinces, in waste places near cultivation.—DISTRIB. All tropical countries.

2. ELEPHANTOPUS, Linn.

Perennial rigid herbs. *Leaves* alternate, sessile, penninerved, entire or dentate, mostly radical. *Heads* homogamous, each containing 1 to 5

flowers, and collected into ovoid or globose clusters, surrounded by several large leafy bracts. *Involucre-proper* compressed, its component bracts oblong, acute, about 8, dry, stiff, unequal, alternately flat and conduplicate; receptacle naked. *Flowers* all equally 4-lobed, and cleft on one side, and with the lobes spreading in a somewhat palmate manner. *Anthers* obtusely sagittate at the base. *Style-arms* subulate. *Cypselas* truncate, 10-ribbed; bristles of pappus few, rigid, shining, slender and dilated below or chaffy.—**DISTRIB.** 10 or 12 species, chiefly tropical American—one cosmopolitan.

ELEPHANTOPUS SCABER, Linn. Sp. Pl., 814. Stems dichotomous, from a few inches to 2 feet high, terete, finely strigose. *Leaves* membranous, the radical ones obovate, oblong to elliptic-oblong, tapering to the short petiole, the edges dentate or crenate, up to 6 in. in length and 1.25 to 2.5 in. broad; the cauline few, smaller, sessile, both sets scabrid on the upper surface and finely strigose on the lower; main-nerves 6 to 8 pairs in the cauline, more numerous in the radical leaves, all slightly prominent on the lower surface. *Collective heads* hemispheric, .5 to .75 in. in diam., solitary, terminal, on long peduncles. *Bracts* of the conjoined heads 3, leaf-like, about .5 in. broad, broadly ovate or reniform, apiculate, nervose and pubescent behind; bracts of the involucre-proper shining, glabrous; pappus of 5 shining tuberculate bristles, dilated at the base. Wall. Cat. 2979; DC. Prod. V. 86; Roxb. Fl. Ind. III. 445; Don Prod. 169; Wight Ic. 1086; Clarke Comp. Ind. 28; Hook. fil. Fl. Br. Ind. III. 242; Prain Bengal Plants, 590.

In all the provinces, in cultivated places.—**DISTRIB.** In most tropical countries.

3. ADENOSTEMMA, Forst.

Herbs, glandular-pubescent or glabrous. *Leaves* mostly opposite, petiolate. *Heads* homogamous, in lax corymbose cymes; involucre campanulate; its bracts numerous, sub-2-seriate, narrow, herbaceous, sometimes connate; receptacle flat, naked. *Corollas* all equal, tubular, regular, with short tube and campanulate 5-toothed limb. *Anthers* truncate, with glandular apiculus, their bases obtuse. *Style-arms* elongate, dilated near the apex. *Cypselas* obtuse, 5-ribbed, glandular; pappus of 3 to 5 short rigid, often clavate hairs, joined at their bases by a narrow ring.—**DISTRIB.** Species 5 or 6 American, 1 cosmopolitan.

ADENOSTEMMA VISCOSUM, Forst. Char. Gen. 20. An erect, rarely decumbent annual, slender or robust, glabrous; pubescent or viscidly pubescent. *Leaves* membranous, sessile or petiolate, opposite or the upper alternate, from linear to broadly ovate, acute sub-acute cuneate or cordate at the base, the edges serrate crenate or entire, the upper surface usually smooth but sometimes rugose; length from 2 to 6 in.;

petioles varying in length *Heads* 3 to 4 in in diam, in lax corymbose, pedunculate cymes *Involucral bracts* oblong, obtuse or acute, glabrous, glandular or scabrid *Corollas* white, pubescent near the mouth, styles much exserted, the arms clavate *Cypselas* usually warted, crowned by a glandular ring, bearing pedicellate lobed glands DC Prod V. 111, Clarke Comp Ind 28, Hook fil Fl Br Ind III 242, Prain Bengal Plants, 591

In all the provinces, but not abundant in any of them —DISTRIB The tropics generally

In the Flora of British India, III 242, Sir Joseph Hooker recognises seven varieties of this widely distributed and variable species And to one or other of these he reduces the following eleven species of De Candolle *A fastigiatum* DC Prod V 111, *A leucarpum*, *A Roylei*, *A elatum*, *A latifolium* l c p 112 *A macrophyllum*, *A parviflorum*, *A reticulatum*, *A viscosum* *A maduense* *A erectum* l c p 113 He also reduces here the following *Ageratum aquaticum*, Roxb Fl Ind III 415 *A strictum*, Bot Mag t 2410 *Lavania fastigiata*, *macrophylla* and *parviflora* Blume Bijdr pp 905 and 906 and the following Nos of the Wallichian Catalogue viz, *Lavania erecta*, 3218, *carnosa*, 3219, *alba*, 3220, *rugosa* 3221, *viscida* 3222

4 AGFRATUM, Linn

Erect herbs *Leaves* opposite in the lower part of the stem alternate in the upper *Heads* in panicles or corymbs, homogamous *Involucre* narrowly campanulate, its bracts in 2 or 3 series, linear, subequal, receptacle convex, naked or with deciduous scales *Corollas* all tubular, equal, regular, the limb 5-cleft *Anthers* with slight apical appendages their bases obtuse *Style arms* elongate, obtuse *Cypselas* 5 angled, pappus of 5 short, free or connate scales, or of 10 to 20 narrow, unequal scales —DISTRIB About 20 species, all probably American, several introduced in the Tropics of the Old World

AGERATUM CONIZOIDES, Linn Sp Pl 839 Annual, 1 to 2 feet high, everywhere with sparse white rather soft pubescence *Leaves* membranous, ovate, sub acute, the base broad and sub truncate, sometimes cuneate, the edges coarsely crenate or dentate both surfaces greenish when dry, the upper sparsely hispid, the lower glabrous, boldly reticulate, main-nerves about 2 or 3 pairs, ascending, curved, the lower one branching, length 1 to 3.5 in *Heads* 2.5 in in diam, in terminal or axillary corymbose cymes *Involucral bracts* shorter than the flowers, narrowly lanceolate, acute, 3-nerved, puberulous *Corollas* pale blue or white. *Cypselas* black, pappus of 5 shining, spreading scales, with broad, often serrate bases DC Prod V 108 Clarke Comp Ind 30, Wall Cat 3176, Hook fil Fl Br Ind III 243, Prain Bengal Plants, 591 *A. cordifolium*, Roxb Fl Ind III 415; Wall. Cat 3177

In all the provinces, in cultivated places.—DISTRIB. The tropics generally.

5. MIKANIA, Willd.

A twining herb (in Indo-Malaya). *Leaves* opposite, petiolate. *Heads* small, in spikes racemes or panicles, homogamous, usually 4-flowered. *Involucre* oblong, its bracts 4, narrow, sometimes with a small outer one; receptacle small, naked. *Corollas* all equal, regular, tubular, the tube narrow; the limb campanulate, 5-fid. *Anthers* appendiculate, the base obtuse. *Style-arms* long, acute. *Cypsels* with truncate apices, 5-angled; pappus with one or more rows of scabrid hairs, often connate at the base.—DISTRIB. About 60 species, all in the warm parts of America and Africa except the following.

MIKANIA SCANDENS, Willd. Sp. Pl. 1743. A glabrous or puberulous climber; young branches less than half as thick as a goose-quill, brown and striate when dry. *Leaves* membranous, on long petioles, ovate, acuminate; the base broad, cordate, often almost sagittate, the edges sinuate; main-nerves a single pair, ascending from the base and branching outwards; length 1 to 2 in.; breadth .6 to 1.25 in.; petioles .5 to 1 in., slender. *Heads* narrow, 4-flowered, in lax corymbose cymes, on slender peduncles much longer than the leaves, peduncles and branches angled when dry, puberulous. *Scales of involucre* chaffy, narrowly oblong, obtuse. *Cypsels* glabrous; pappus reddish. DC. Prod. V. 199; Clarke Comp. Ind. 34; Hook fil. Fl. Br. Ind. III. 244; Prain Bengal Plants, 592. *M. volubilis* and *M. chenopodifolia*, Willd. l.c. 1745; DC. l.c. 199 and 201. *Eupatorium scandens*, Linn.; Jacq. Ic. t. 169.

In all the provinces, common.—DISTRIB. British India, Malay Archipelago, Tropical Africa.

6. DICHROCEPHALA, DC.

Annuals, with alternate toothed lyrate or pinnatifid leaves. *Heads* small, heterogamous, globose or hemispheric, not rayed, in panicles; *Outer florets* ♀, in many rows, slender, fertile, rigid, 2-3-toothed or cleft. *Disk-florets* ♂, fertile, narrow, 4- or 5-toothed. *Anthers* with truncate bases. *Style-arms* of ♂ florets short, flattened, the tips lanceolate; pappus none or (in the ♂) of 2 minute bristles.—DISTRIB. Species 5, Asiatic and African.

DICHROCEPHALA LATIFOLIA, DC. in Guill. Archiv. Bot. II. 518. An annual weed, 12 to 24 in. high, erect or spreading, glabrous pubescent or villous. *Leaves* very variable, ovate lanceolate or obovate, entire pinnatifid or lyrate, with the terminal lobe broadly ovate and coarsely

toothed; length 1 to 4 in.; petioles .25 to 1.25 in. Heads about .15 in. in diam., globose, on pedicels many times longer than themselves, in lax, few-branched, cymose panicles. Ray-florets ♀, filiform, obscurely 2-3-toothed, white. Disk-florets ♂, 4-cleft, yellow. Cypselas very small, smooth, with a callous margin, and often with 2 small bristles. DC. in Wight Contrib. 11, Prod. V. 372; Wight Ic. 1096; Clarke Comp. Ind. 36; Hook. fil. Fl. Br. Ind. III. 245. *D. gracilis* and *D. sonchifolia*, DC. l.c. 371, 372. *Cotula sinapifolia*, Roxb. Hort. Beng. 63, Fl. Ind. III. 437; Wall. Cat. 3237. *C. bicolor*, Roth Cat. Bot. II. 116. *C. latifolia*, Pers. Syn. II. 464. *Grangea latifolia*, Lam. Ill. t. 699. *Hippia bicolor*, Smith in Rees Cyclop. XVIII. *Ethulia integrifolia*, Don Prodr. 182.

PERAK: *Scortechini*.—DISTRIB. British India, tropical and sub-tropical Asia and Africa.

7. MICROGLOSSA, DC.

Slender shrubs, often scandent. Leaves alternate, entire. Heads small, heterogamous, collected in large corymbose panicles. Ray-florets ♀, in 1 or more series, fertile, the ligule minute, white. Disk-florets few or many, ♂, fertile, tubular, with dilated 3- to 4-fid limb. Involucre campanulate, composed of several series of narrow bracts, the outer shorter. Receptacle flat, naked or nearly so. Corolla, the ligulate or ray ones narrow, about as long as the style; those of the disk (the tubular) longer. Anthers with obtuse bases, entire. Style-arms of the ♀ flattened; their tips long, lanceolate. Cypselas angled; pappus hairs numerous, slender, silky, in one or two series, somewhat unequal — DISTRIB. About 6 species, Asiatic and African.

MICROGLOSSA VOLUBILIS, DC. Prod. V. 320. A sub-scandent shrub; branches half as thick as a goose-quill, ridged, glabrous. Leaves membranous, ovate-lanceolate, acuminate, the base cuneate or rounded, the edges obscurely toothed; both surfaces brown when dry, glabrous, the lower sometimes slightly pubescent; main-nerves 4 or 5 pairs, little curved, ascending, prominent beneath; length 1.5 to 2 in.; breadth .65 to 1.25 in.; petioles .25 to .4 in., slender. Heads .35 in. in diam., on short peduncles, crowded in dense corymbose terminal cymes, much longer than the leaves. Cypselas compressed, 4-angled, puberulous; pappus copious, reddish, much longer than the minute achenes. Clarke Comp. Ind. 57; Kurz For. Fl. Burm. II. 82; Hook. fil. Fl. Br. Ind. III. 257. *Conyza volubilis*, Wall. Cat. 3057. *Erigeron pycnifolius*, Benth. Fl. Hongk., 176.

PERAK: *Ridley* 2890; *Wray* 2472. PENANG: *Walluch* 3057. —DISTRIB. British India, Burma, Malay Archipelago, China.

8. BLUMEA, DC.

Herbs, annual or perennial, glandular-pubescent or woolly. *Leaves* alternate, rarely entire, usually lobed or toothed. *Heads* in paniculate cymes, rarely in racemes, heterogamous, disciform, yellow or purplish. *Ray-florets* in several series, ♀, fertile, filiform, 2- or 3-toothed. *Disk-florets* ♂, few, fertile, with slender tube and 5-toothed limb. *Involucre* ovoid or campanulate; its bracts in several rows, narrow, acute, herbaceous, the outer smaller, receptacle flat, naked. *Anthers* with sagittate bases produced into small slender tails. *Style-arms* of the hermaphrodite flower flattened or filiform, rarely connate with the nearest anthers. *Cypselas* small, sub-terete or angular, with or without ridges; pappus hairs in a single row, slender, often caducous.—**DISTRIB** About 60 species, in tropical and sub-tropical Asia, Africa, and Australia.

1 BLUMEA CHINENSIS, DC. Prod. V. 444. Scandent; young branches half as thick as a goose-quill, glabrous, much striate and dark brown when dry. *Leaves* membranous, elliptic or oblong-elliptic, acuminate or acute, narrowed to the rounded base, the edges with remote, narrow, small sharp teeth, or sub-entire; both surfaces glabrous, the upper dark-brown and shining, the lower paler and tinged olivaceous; main-nerves 4 or 5 pairs, curved, ascending, thin but distinct on the lower surface, faint on the upper; length 2.25 to 3.25 in.; breadth .85 to 1.4 in.; petiole .2 to .3 in. *Heads* .35 in. across, sessile, in small pedunculate axillary cymes, 3 in. long, diminishing upwards to .75 in. in length; the peduncles and their branches everywhere pubescent, sometimes a small cyme with 2 to 4 heads in the same axil as a longer one. *Involucral bracts* of the outer two series short, ovate-lanceolate, blunt, densely pubescent, those of the inner two twice as long

(or more), linear-lanceolate, acuminate, puberulous or almost glabrous, 1-nerved, longer than the copious white pappus; corolla-lobes hairy; receptacle and *cypselas* silky, white. Hook. fil. Fl. Br. Ind. III. 268. *Conyza chinensis*, Linn. Sp. Pl. 862; Blume Bijdr. 898. *B. longispina*, Zoll et Morr. Syst. Verz. 121. *C. serici-vestita*, Wall. Cat. 2996b. *Baccharis nitida*, Wall. Cat. 3043.

VAR. *riparia*, King & Gamble. Young leaves and stems somewhat hairy; main-nerves of leaves 3 to 4 pairs, depressed on the upper surface. *Blumea riparia*, DC. Prod. V. 444; Clarke Comp. Ind. 85. *Conyza riparia*, Blume Bijdr. 899

PERAK: King's Collector 1214; Scortechini.—DISTRIB. Java, Borneo.

2 *BLUMEA BALSAMIFERA*, DC. Prod. V. 466. A shrub, 6 to 12 feet high; young branches nearly as thick as a goose-quill, tomentose, striate. Leaves thickly membranous or sub-coriaceous, elliptic-lanceolate, coarsely and unequally serrate dentate or sub-entire, acute or sub-acute, narrowed at the base; upper surface dark olivaceous-green, minutely tomentose or strigose, the lower surface with dense silky cinereous-yellowish tomentum; main-nerves 7 to 10 pairs, curved, ascending, faint on both surfaces, but especially on the lower; length 2 to 3 in.; breadth .75 to 1.5 in.; petioles .2 to .75 in. long, the longer ones often with lateral auricles; in the lower part of the branches the leaves often much larger. Heads sub-cylindric, sessile, or on short pedicels, arranged in large, lax, and spreading or dense, often leafy, corymbose or paniced, axillary and terminal tawny-tomentose cymes. Involucral bracts linear, acuminate, densely tomentose; hermaphrodite florets very numerous in the centre, narrowly tubular; receptacle naked. *Cypselas* 10-ribbed, silky; pappus copious, red. Clarke Comp. Ind. 89; Kurz For Fl. Burm. II. 82; Hook. fil. Fl. Br. Ind. III. 270; Prain Bengal Plants, 598. *Conyza balsamifera*, Linn. Sp. Pl. ed. II. 1208; Wall. Cat. 2998; Roxb. Fl. Ind. PENANG: Deschamps.—DISTRIB. British India, Malay Archipelago, China.

4. *BLUMEA WIGHTIANA*, DC. in Wight Contrib. 14. An erect, little-branched herb, 1 to 3 feet high, covered everywhere with silky white, scanty or copious, soft, sub-adpressed hairs; stem terete, about as thick as a goose-quill at the base, striate, brown, and nearly glabrous (from the fall of the hairs) when old. *Leaves* diminishing in size from below upwards, thickly membranous, obovate-oblong or elliptic-obovate, the apex acute or sub-acute, gradually narrowed from about the middle to the short petiole; the edges with a few irregular coarse teeth, sometimes slightly lobed; both surfaces olivaceous-brown when dry, and clothed, but especially the lower, with adpressed, short white pubescence; main-nerves 4 or 5 pairs, curved, ascending, faint on both surfaces; length 1.25 to 3 in.; breadth .5 to 1.25 in.; petioles from .1 to .25 in. long or even more, sometimes auricled about the middle. *Heads* paniculate, about .3 or .4 in. across, axillary, solitary or in pairs (reduced cymes), or 4 to 6 in very short rounded axillary cymes on peduncles of varying length, but always short, the upper few inches of the stem crowded by a dense mass of cymes. *Involucral bracts* in several rows, diminishing in size outwards, the inner linear, somewhat longer than the pappus, all pubescent and 1-nerved; receptacle naked. *Outer florets* very numerous, their corollas very slender. *Inner florets* about 4, much wider than the outer. *Cypselas* small, puberulous; pappus in a single row, white. DC. Prod. V. 435; Clarke Comp. Ind. 74; Kurz in Journ. As. Soc. 1877, II. 156 (excl. syn. *hymeno-*

phylla); Hook. fil. Fl. Br. Ind. III. 261. *B. trichophora*, *parvifolia*, and *phyllostachya*, DC. l.c. 436, 437, 438. *Conyza lactucifolia*, *paniculata*, *bifoliata*, and *Wightiana*, Wall. Cat. 3088 (*in part*), 3090A, 3091, 3093. *Erigeron molle*, Don Prod. 172.

PENANG and SINGAPORE: By roadsides, not common.—DISTRIB. British India and Ceylon, Malay Archipelago, tropical Australia and Africa.

5. *BLUMEA LACERA*, DC. in Wight Contrib. 14. An erect herb, 2 to 3 feet high; stems at the base nearly as thick as a goose-quill, adpressed-pubescent. *Leaves* thickly membranous, oblanceolate obtuse or sub-acute, much narrowed to the petiole, the edges unequally and remotely dentate; both surfaces olivaceous when dry, the lower somewhat the paler and with thin, pale pubescence; the upper glabrous, sub-scabrid; length 1·5 to 2 in.; breadth ·5 to 1 in.; petiole ·3 to ·5 in. long. *Heads* ·3 in. across, sub-sessile or sessile, in small rounded crowded cymes, on slender ebracteate axillary peduncles, 1 to 2·5 in. long, subtended by small leaf-like bracts, and occupying the upper half of the stem. *Involucral bracts* linear-oblong, tomentose, about as long as the pappus; receptacle naked. *Heads* 4 in. across, sessile or nearly so, in a lax, shortly-branched, leafy, cymose, pubescent panicle, 12 to 18 in. long. *Involucral bracts* nearly uniform, linear, acuminate, 1-nerved, puberulous, as long as the pappus. *Receptacle* slightly convex, naked. *Cypselas* narrowly oblong, glabrous, not ribbed; pappus in a single row, white. DC. Prod. V. 436; Clarke Comp. Ind. 76; Hook. fil. Fl. Br. Ind. III. 263. *B. Musra*, DC. l.c. 435. Deless. Ic. Sel. IV. t. 23. *B. villosa*, Schultz-Bip. in Pl. Hohenack. n. 2a. *Conyza lacera*, Roxb. Fl. Ind. III. 428; Wall. Cat. 3082. *C. thyrsiflora*, *villosa*, and *Musra*, Ham.; Wall. Cat. sub 3082, 3083, 3095. *C. lactucifolia*, DC. l.c. 435; Wall. PERAK: *Scortechini* 141, 1430. SINGAPORE: *Cantley*; *Hullett* 227.—DISTRIB. British India, Ceylon, Malay Archipelago, China, tropical Africa.

6. *BLUMEA MEMBRANACEA*, DC. Prod. V. 440. A rigid erect herb, 1 to 2 feet high; stem at the base half as thick as a goose-quill, minutely pubescent from base to apex, terete, striate. *Leaves* thinly membranous, oblanceolate, much tapered to the base, sub-sessile, the apex acute, the edges coarsely and often irregularly dentate, sometimes lobulate; both surfaces pale olivaceous-brown when dry, the lower paler, sparsely strigose; main-nerves 7 to 9 pairs, spreading, faint on both surfaces; length 2 to 3·5 in.; breadth ·8 to 1·5 in.; the leaves of the upper part of the stem smaller and bract-like. *Heads* ·25 in. in diam., sessile or sub-sessile, in spikes several inches long, from the

axils of small leaf-like bracts, arranged in a narrow pseudo-panicle occupying the upper half of the stem. *Involucral bracts* linear, acuminate, pubescent, 1-nerved, as long as the inner pappus. *Corollas* very narrow; receptacle naked. *Cypselas* small, glabrous; pappus white, in two rows, the outer very short. Hook. fil. Fl. Br. Ind. III. 265. *B. hymenophylla*, DC. l.c. 440. *Conyza membranacea* and *hymenophylla*, Wall. Cat. 3019, 3038. *C. vinens*, Wall. Cat. 3037D. *C. diffusa*, Roxb. Fl. Ind. III. 429.

PENANG: *Curtis* 2759; *Deschamps.*—DISTRIB. British India, Malay Archipelago.

9. LAGGERA, Schultz.-Bip.

Annual or perennial herbs. *Leaves* alternate, often rigid and decurrent. *Heads* paniced or axillary, heterogamous, disciform. *Outer flowers* ♀, in several rows, fertile, filiform, the mouth minutely toothed. *Disk-flowers* ♂, in several rows, fertile, tubular, 5-fid. *Involucre* campanulate; bracts many-rowed, narrow, often rigid, the outer shorter; receptacle flat, naked. *Anthers* 2-lobed or sagittate at the base, the auricles obtuse or acute, often unequal, not tailed or connate with the adjoining anthers. *Style-arms* of the hermaphrodite flowers and the pappus as in *Blumea*.—DISTRIB. 9 or 10 species, in tropical Africa and British India.

LAGGERA FLAVA, Benth. in Gen. Pl. II. 290. A glabrous or puberulous herb, 6 to 30 in. high; stems striate, simple or corymbosely branched. *Leaves* membranous, shining, glabrous; the radical sometimes on short petioles; the cauline sessile; the lower cauline oblong, acute, cordate and sub-amplexicaul at the base; the upper cauline smaller and narrower than the lower, lanceolate; all sharply and unequally toothed; main-nerves about 8 pairs, distinct, like the wide reticulations. *Heads* few, .25 in in diam., on slender peduncles; receptacle glabrous; corollas yellow; anthers sagittate. *Cypselas* minute, glabrous. *Clarke* Comp. Ind. 90; Hook. fil. Fl. Br. Ind. III. 270. *Blumea flava*, DC. Prod. V. 439. *Erigeron falcatum*, Don Prod 172, Kurz in Journ. As. Soc. Beng., 1877, II. 191 (*excl. syn.*). *Conyza fasciculata*, Wall Cat. 3017.

PENANG. *Wallich.*—DISTRIB. British India.

This has not been collected within our area since Wallich's time.

10. PLUCHEA, Cass.

Shrubs or herbs, tomentose or glutinous. *Leaves* alternate, dentate or rarely entire, sometimes pinnatifid. *Heads* usually small, in terminal corymbose cymes, or large and sub-solitary, heterogamous, disci-

form, white yellow, or lilac. *Outer florets* ♀, in several series, fertile, filiform. *Disk-florets* ♂, few, sterile, tubular and 5-fid. *Involucre* broadly ovoid or campanulate; its bracts few or in many rows, imbricate, ovate or lanceolate, dry, rigid; receptacle flat, naked. *Corollas* of the ♀ flowers filiform, shorter than their own styles, their apices with 3 teeth; *corollas* of the ♂ flowers regular, tubular, the limb slightly widened, 5-cleft. *Anthers* sagittate at the base, their basal auricles tailed. *Style-arms* of the ♂ flowers filiform, entire or bifid. *Cypselas* small, 4- or 5-angled. Hairs of *pappus* slender, rigid, in a single series, free, or (in the sterile cypselas) connate in groups.—DISTRIB. About 30 species, tropical and sub-tropical.

PLUCHEA INDICA, Less.; DC. Prod. V. 451. A low shrub, glabrous or nearly so; stems smooth, terete. *Leaves* membranous, obovate or oblanceolate, the apex obtuse or acute, acuminate or apiculate, narrowed to the base; edges dentate, serrate or sub-serrate; both surfaces olivaceous-brown when dry, glandular; main-nerves 3 to 6 pairs, curving upwards, bold beneath; length .5 to 2.75 in.; breadth .3 to 1.25 in.; petioles .1 in. to .4 in. long. *Heads* .25 in. in diam., in compound terminal puberulous corymbose cymes, much longer than the leaves, involueral bracts few, rather broad, obtuse. *Florets* of the disk 3, those of the ray numerous. *Cypselas* minute, ribbed, nearly glabrous; pappus scanty, spreading, reddish-white. Wight Ill. t. 131; Clarke Comp. Ind. 93, Hook. fil. Fl. Br. Ind. III. 272; Prain Bengal Plants 600. *P. foliosa*, DC l.c. 451. *Conyza corymbosa*, Roxb. Fl. Ind. III. 426; Wall. Cat. 3009. *C. indica*, Miq. Fl. Ind. Bat. II. 58. *Baccharis indica*, Linn.

11. SPHÆRANTHUS, Linn.

Annual herbs with spreading branches. *Leaves* alternate, toothed, decurrent. *Flower-heads* proper, small, heterogamous, disciform, sessile, on a common receptacle, bracteate or not, and forming solitary, globose, or ovoid, a head-like terminal cluster, usually bearing at its base an involucre of a few empty bracts. *Outer florets* ♀, few or many, fertile, slender; *inner* solitary or few, ♂, fertile or sterile; involucre narrow, its bracts dry, narrow, unequal, acute; receptacle small, naked; pappus none. *Florets*: ♀ with filiform, minutely 2-3-toothed corollas; ♂ with regular corollas with thickened tube and 4-5-toothed limb. *Anthers* with sagittate bases acute or tailed. *Style* of ♂ florets with filiform arms or entire. *Cypselas* oblong, sub-

compressed, without pappus.—DISTRIB. About 8 species, tropics of Asia, Africa, and Australia.

SPHERANTHUS AFRICANUS, Linn. Sp. Pl. 1314. Annual, glabrous or pubescent, the stem and branches with long decurrent, entire wings. *Leaves* membranous, oblanceolate, acute or sub-acute, with a small bristle-point at the apex, the base narrowed and confluent with the wing of the branch, the edges bristle-serrate; length 1 to 3 in.; breadth .25 to 1.25 in. *Clusters of heads* globose, .3 to .4 in. in diam., pedunculate, their involucre few, scarious, rounded or jagged, not imbricate; the peduncles .25 to .4 in. long, glabrous, with a wing widening at the base. *Female florets* about 15, gibbous. Hook. fil. Fl. Br. Ind. III. 275; Prain Bengal Plants, 601. *S. africanus* and *S. microcephalus*, Willd. Sp. Pl. III. 2395. *S. microcephalus*, DC. Prod. V. 360; Clarke Comp. Ind. 97. *S. indicus*, Willd. l.c. 2394; Roxb. Hort. Beng. 62, Fl. Ind. III. 446. *S. africanus*, Wall Cat. 3179 (*in part*).

12. EMILIA, Cass.

Annual or perennial herbs, glabrous or hairy, often glaucous, sometimes sarmentose. *Leaves* alternate, radical, crowded, petiolate, entire, toothed or lyrate-pinnatifid; cauline few, stem-clasping. *Heads* on long peduncles, solitary or loosely corymbose, ebracteolate at the base, homogamous, discoid, yellow or red; florets all ♂, fertile, tubular, the limb elongate and 5-toothed. *Involucre* cylindric; its bracts in a single series, equal, free or cohering, striate; *receptacle* flat, naked. *Style-arms* sub-terete, their apices short and obtuse, or long and acute. *Cypselas* sub-terete, or 5-ribbed or -angled; pappus hairs numerous, white, silky.—DISTRIB. Species 14 or 15; all Indo-Malayan and tropical African.

EMILIA SONCHIFOLIA, DC. Prod. VI. 302. Annual, usually erect, sometimes diffuse and sarmentose, 12 to 30 in. high. *Leaves*: the lower lyrate-pinnatifid or sinuate-dentate, rarely elliptic, glabrous or puberulous, sometimes scaberulous, 1.5 to 4 in. long; petioles variable but rarely exceeding an inch in length; cauline leaves much smaller, hastate or linear-hastate, dentate, sessile and auriculate, more or less stem-clasping. *Heads* .4 in. long and the same in diam. when expanded, on long ebracteate or scantily bracteate peduncles, collected in lax terminal long pedunculate spreading corymbs. *Involucre* nearly as long as the purple florets, ecalyculate; its bracts linear-oblong, sub-

acute. *Cypselas* truncate at each end, minutely hairy. DC. in Wight Contrib. 24. *E. sonchifolia*, vars. α and β , Clarke Comp. Ind. 174. *Calcalia sonchifolia*, Linn. Sp. Pl. 835; Roxb. Fl. Ind. III. 413; Don Prod. 180; Wall. Cat. 3144. *E. glabra*, Heyne in Wall. Cat. 3145. *Gynura ecalyculata*, DC. l.c. 298. *Prenanthes sarmentosa*, Wall. Cat. 3262E. *E. scabra*, DC. l.c. 303; Wight Ic. 1123. *E. mucronata*, Clarke Comp. Ind. 175.

SINGAPORE: *Hullett* 240. PENANG: *Deschamps*; *Scortechini*; *Stolickza*.—DISTRIB. British India, Malay Archipelago, China.

VAR. *minor*, King & Gamble. Little more than a foot high, lower leaves broadly ovate, truncate at the base, on long narrow winged petioles.

PERAK: *King's Collector* 301. PENANG: in Klang and Batu Gajah jungles: *Deschamps*.

In this variety the terminal lobe only of the leaf is developed, the lower part being long and narrow like a petiole.

13. GYNURA, Cass.

Succulent herbs, rarely undershrubs, sometimes climbers, glabrous or hispid. *Leaves* alternate, entire, toothed or pinnatisect. *Heads* solitary or in corymbs, bracteolate at the base, homogamous, disciform, yellow or purplish. *Florets* yellow: all the σ tubular, fertile (rarely a few of the outer ones more slender and ρ) the limb 5-toothed. *Involucre* cylindric or sub-campanulate; the bracts 10 or 12, in a single series, narrow, equal; their margins scarious; receptacle flat, pitted or shortly fimbriate. *Anthers* with bases entire or sub-auricled. *Style-arms* slender; their apices long, slender, subulate, hispid. *Cypselas* narrow, many-ribbed, hairs of pappus copious, in many series, slender, white.—DISTRIB. Species about 20, Asia, Africa, and Australia.

Scandent; leaves subentire or slightly dentate, petiolate .. 1. *G. sarmentosa*.

An erect herb, leaves always boldly dentate and often pinnatisect or pinnatifid, sessile and often sub-amplexicaul or auriculate .. 2. *G. bicolor*.

1. GYNURA SARMENTOSA, DC. Prod. VI. 298. Stem and branches loosely twining, glabrous except the puberulous peduncles, thinner than a goose-quill, pale brown and striate when dry. *Leaves* succulent, elliptic to elliptic-lanceolate, acute or acuminate, the base cuneate, the edges subentire or slightly dentate, both surfaces brown when dry, glabrous; main-nerves 4 or 5 pairs, spreading, faint on both surfaces; length 1 to 3 in.; breadth $\frac{1}{4}$ to 1 in.; petioles of the lower leaves $\frac{1}{15}$ to $\frac{1}{4}$ in.; the small upper leaves often sessile. *Heads* few, $\frac{1}{65}$ to $\frac{1}{75}$ in. long, and as much in diam., on slender puberulous

pedicels usually in scanty, lax, long-peduncled, axillary and terminal cymes longer than the leaves; bracteoles of the panicle and of the calyculus at the base of the involucre few, small, linear. *Involucre* spreading little, its bracts narrowly oblong, subacute or blunt, glabrous; their edges scarious, nearly as long as the florets. *Cypselas* small, brown, with 10 puberulous ribs; pappus white. Hook. fil. Fl. Br. Ind. III. 335. *G. Finlaysonianana*, DC. l.c. 299; Deless. Ic. Sel. IV. t. 55. *Cacalia cylindrifolia*, *reclinata*, and *Finlaysonianana*, Wall. Cat. 3150, 3151, 3162. *Sonchus volubilis*, Rumph. Herb. Amb. V. t. 103 f. 2.

In all the provinces, common.—DISTRIB. Malayan Archipelago; Siam; Philippines.

2. *GYNURA BICOLOR*, DC. Prod. VI. 299. Herbaceous, 2 or 3 feet high, glabrous or sparsely and minutely glandular-hairy on the upper part; stems erect, branched, about the thickness of a quill near the base, boldly striate when dry. *Leaves* pinnatisect or pinnatifid, the lobules acutely dentate; the terminal lobe narrow and acuminate, narrowed at the base into a petiole varying in length from .5 to 1 in.; the upper sessile and often auriculate at the base, or shorter and narrowly obtuse with large teeth; length 2.5 to 5 in.; breadth .4 to 3 in. *Heads* about .5 in. long, less in diam. Involucral bracts narrow, with scarious margins and acute often recurved tips. *Cypselas* very slender, much ribbed, sub-glabrous; pappus copious, white, tinged with pink. Hook fil. Fl. Br. Ind. III. 335. *Cacalia bicolor*, Roxb. Fl. Ind. III. 412; Salisb. Hort. Parad. t. 25; Bot. Regist. t. 110.

SINGAPORE: *Ridley* 1618. JOHORE: *Ridley* 2741; *King*. PERAK: *Wray* 1445, 3599. PENANG: *Deschamps*. MALACCA: *Griffith* (K.D.), 3235.—DISTRIB. China, Moluccas.

14 SIEGESBECKIA, Linn.

Glandular-pubescent herbs. *Leaves* opposite, toothed. *Heads* in leafy panicles, heterogamous, sub-radiate, yellow or white. *Ray-florets* ♀, in a single series, fertile, the corollas short-tubed, with 2-3-fid limb or a short, broad ligule. *Disk-florets* ♂, fertile, or the inner ones sterile; the corollas regular, tubular, the limb campanulate and 5-fid or narrow and 3- to 4-toothed. *Involucre* campanulate or hemispheric, the bracts few, herbaceous, glandular, the outer usually 5, spatulate, spreading; the inner enclosing the ray-florets. *Receptacle* small; the pales membranous, concave. *Anthers* with entire bases. *Style* of ♂ *florets* with short, flattened, sub-acute arms. *Cypselas* obovoid-oblong, often incurved, their apices obtuse;

pappus none.—DISTRIB. Six species, one cosmopolitan, tropical and sub-tropical, the others South American and African.

SIEGESBECKIA ORIENTALIS, Linn. Sp. Pl. 900. An erect annual, 1 to 3 feet high, branching, the lower branches opposite, everywhere clothed with pubescence, often glandular and crisped. *Leaves* membranous, opposite, the lower ovate sub-rhomboid, the upper ovate-lanceolate, dentate or crenate, passing into linear-lanceolate, and sometimes entire; all cuneate at the base; both surfaces olivaceous when dry; the upper scabrid, hispid, the lower more softly hairy; main-nerves 3 or 4 pairs, curved, spreading; length 1 to 4 in.; petioles very short or absent. *Involucre* with the outer bracts longer than the inner. *Cypselas* black, the outer enclosed in the glandular involucreal bracts. Boiss. Fl. Orient. III. 250; DC. Prod. V. 495; Wight Ic. 1103; Wall. Cat. 3182; Hook. fil. Fl. Br. Ind. III. 304, Prain Bengal Plants, 607. *S. glutinosa*, Wall. Cat. 3182. *S. brachiata* and *S. orientalis*, Roxb. Fl. Ind. III. 432. *Minyranthes heterophylla*, Turcz. in Bull. Soc. Imp. Nat. Misc. 1851, I. 181.

In all the provinces, near habitations.

15. *ECLIPTA*, Linn.

Strigose or hirsute annuals. *Leaves* opposite. *Heads* small, axillary or terminal, pedunculate, heterogamous, rayed. *Ray-florets* ♀, sub-2-seriate, fertile or sterile, ligulate, small, entire or bifid, white rarely yellow. *Disk-florets* ♂, fertile, tubular, 4–5-fid. *Involucre* hemispheric or broadly campanulate; its bracts sub-2-seriate, herbaceous, the outer large and broad; receptacle flat or nearly so, the outer pales enclosing several florets; the inner ones narrow, sometimes absent. *Anthers* with obtuse, almost entire, bases. *Style-arms* flattened, with short triangular or obtuse appendages. *Cypselas* of the ray narrow, triquetrous, sometimes barren; those of the disk stouter, somewhat compressed laterally, the apex entire, toothed or 2-aristate.—DISTRIB. 7 species in South America and Australia, and 1 cosmopolitan in the tropics.

ECLIPTA ERECTA, Linn. Mant. II. 266. An erect or diffuse branched slender herb, hirsute or strigillose. *Leaves* variable in form and size, sessile or with very short petioles; linear, oblong-lanceolate or narrowly elliptic; narrowed at both ends; main-nerves 3 or 4 pairs, spreading, faint; length 1 to 4 in.; breadth .2 to .5 in. *Heads* .3 to .4 in in diam., solitary or in pairs from the leaf-axils; the peduncles .25 to 1.5 in. long, when in pairs always unequal. *Involucreal bracts* equal to or longer than the flowers, unequal, ovate or obovate, apiculate. *Cypselas* scabrid, without pappus. Clarke Comp. Ind. 134; Hook.

fl. Fl. Br. Ind. III. 304; Prain Bengal Plants; 610. Lam. Ill. t. 687. *E. alba*, Hassk. Pl. Jav. Rar. 528; Clarke Comp. Ind. 134; Hook. fl. Fl. Br. Ind. III. 304. *E. marginata*, Boiss. Fl. Orient. III. 249. *E. prostrata*, Linn. Mant. II. 266; Roxb. Fl. Ind. III. 438. *E. prostrata*, *undulata*, and *parviflora*, Wall. Cat. 3209, 3210, 3213. *Verbesina alba* and *prostrata*, Linn. Sp. Pl. 902.

In all the provinces. In and near cultivated ground.—DISTRIB. The tropics generally.

16. WEDELIA, Jacq.

Hirsute or scabrid-pubescent herbs or undershrubs, sometimes scandent. *Leaves* opposite. *Heads* axillary or terminal, heterogamous, rayed. *Ray-florets* ♀, fertile, ligulate, spreading, entire, or 2-toothed at the apex. *Disk-florets* ♂, fertile or the inner sterile; the corolla tubular, regular, with elongate 5-toothed limb. *Involucre* campanulate or sub-hemispheric; its bracts sub-2-seriate, the outer 3 to 5 usually herbaceous, the inner dry; receptacle flat or convex, the pales enclosing the flowers. *Anthers* entire or sub-sagittate at the base. *Style* of ♂ florets, with acute arms hirsute at their tips. *Cypselas* cuneate-oblong or obovoid, thick, smooth or tubercled, laterally compressed or the outer triquetrous, tip rounded, margins obtuse or thickened; pappus none, or reduced to a toothed cup or ring, or sometimes of short scales with occasionally a few bristles.—DISTRIB. Species about 70, tropical and sub-tropical.

WEDELIA BIFLORA, DC. in Wight Contrib. Fl. Ind. 18. Scandent; stem and branches hispid-puberulous when very young, afterwards almost glabrous, obtusely 4-angled, grooved when dry. *Leaves* membranous, broadly ovate or ovate-subrhomboid to lanceolate, apex acuminate, edges coarsely serrate except at the broad, slightly cuneate base; both surfaces dull olivaceous green when dry, minutely reticulate, sparsely hispid-puberulous; main-nerves one large pair ascending from the base of the midrib to near the apex branching outwards and one or two smaller pairs from above the middle of the midrib, all distinct on both surfaces; length 2 to 4.5 in.; breadth 1.25 to 2.75 in.; petioles .75 to 1.5 in., those of the branches smaller. *Heads* about .5 in. in diam., solitary on a short peduncle .75 in. or less in length, or 2 to 4 on peduncles two or three times as long. *Involucral* bracts in two rows, oblong or ovate-lanceolate, apiculate, concave, scabrid-puberulous outside like the peduncles, often recurved. Ripe *cypselas* triquetrous, scaberulous, the apex with some hairs and several short bristles, one longer than the others. Hook. fl. Fl. Br. Ind. III. 306. *W. scandens*, Benth.; Prain Bengal Plants, 612; Clarke Comp. Ind. 136 (excl. syn.). *Woolstonia*

biflora and *W. scabriuscula*, DC. Prod. V. 546, 547. *W. biflora*, Wight Ic. 1108. *Verbesina biflora*, Linn. Sp. Pl. Ed. II. 1272. Wall. Cat. 3207 (in part). *V. dichotoma*, Wall. Cat. 3024 (in part). *Eclipta scabriuscula*, Wall. Cat. 3212 (partly). *Acmella biflora*, Spreng. Syst. III. 591.

On the sea coast, common.

17. SPILANTHES, Linn.

Annual herbs. *Leaves* opposite. *Heads* axillary or terminal, usually on long peduncles, heterogamous and rayed, or homogamous and disciform. *Ray-florets* ♀, in a single series, fertile, ligulate, white or yellow. *Disk-florets* ♂, fertile, tubular, with 4- or 5-fid limb. *Involucre* ovoid or campanulate, the bracts sub-2-seriate; receptacle convex, elongate, the pales enclosing the flowers often connate with the ovary into a stalk. *Anthers* with truncate entire or bifid bases. *Style-arms* of ♀ florets truncate. *Cypselas* of ray-florets triquetrous or dorsally compressed, the margins and angles usually ciliate; pappus none or of 2 or 3 bristles.—DISTRIB. About 40 species, chiefly tropical American.

SPILANTHES Acmella, Murr Syst. ed. XIII. 610. Erect or ascending, glabrous, branched, 1 to 2 feet long; the branches as thick as a crow-quill, striate, glabrous, pale brown when dry. *Leaves* membranous, ovate-lanceolate or elliptic, with sub-acute apex and cuneate base, the edges crenate serrate or entire; main-nerves a single pair, ascending; length .75 to 1.5 in.; petioles .1 to .3 in. long. *Heads* ovoid-conical, .35 to .5 in. long, on slender peduncles 1 to 2.5 in. long, solitary or in very lax panicles. *Involucral bracts* short, oblong, blunt or sub-acute, 3-nerved. *Ray-florets* minute. *Cypselas* sometimes marginate, scabrid or smooth; pappus of one or two bristles or absent. DC. Prod. V. 623; Prain Bengal Plants, 614; Wall. Cat. 3285; Clarke Comp. Ind. 138; Hook. fl. Fl. Br. Ind. III. 307. *S. calva*, DC. l.c. V. 625; Wight Ic. 1109. *S. pseudo-Acmella*, Linn.; DC. l.c. 625, and in Wight Contrib. 19; Wall. Cat. 3185. *S. oleracea*, Jacq. Hort. Vind II. t. 135; Roxb. Fl. Ind. III. 410, DC. l.c. 624. *Bidens fervida* and *B. fiza*, Lamk. Dict. I. 415, 416. *Cotula comca*, Wall. Cat. 3185. *Verbesina Acmella*, Linn. Sp. Pl. 901. *V. pseudo-Acmella*, Linn. l.c. 901.

MALACCA: Griffith (K.D.) 3186; Cuming 2361. PERAK: Scortechini 1400. PENANG: Deschamps.

18. SYNEDRELLA, Gaertn.

Annual branched herbs. *Leaves* opposite, petiolate, dentate. *Heads* small, axillary and terminal, heterogamous, rayed. *Involucre* ovoid or

oblong, its bracts few ; the outer one or two foliaceous, passing into the flat scarious pales of the small receptacle. *Ray-florets* few, ♀, ligulate, with short broad 2-3-toothed lamina. *Disk-florets* ♂, tubular, regular, the limb 4-toothed. *Anthers* syngenesious, their bases sub-entire. *Style-arms* of ♂ florets long, acute. *Cypselas* of ray-florets much compressed dorsally, smooth, their edges winged and with long teeth ; those of the ♂ few, narrower, compressed or trigonous often muricate ; pappus in both consisting of 2 (rarely more) bristles.—DISTRIB. Species 2, tropical American, 1 also Asiatic and African.

SYNEDRELLA NODIFLORA, Gaertn. Fruct. II. 456, t. 171, f. 7. An erect dichotomous annual with terete wiry glabrous branches thicker than a crow-quill ; all parts more or less scaberulous. *Leaves* membranous, opposite, petiolate, ovate, acute, the base cuneate, the edges serrate or crenate (sometimes obscurely so) ; main-nerves 3 or 4 pairs, the lower pair long and bold, the others short and faint ; both surfaces minutely and sparsely strigose, and greenish when dry ; length .75 to 3 in. ; breadth .3 to 1.25 in. ; petioles .1 to .4 in. often ciliate on the edges. *Heads* .25 in. in diam., axillary, solitary or in small clusters, usually sessile but sometimes on short peduncles, inner bracts of the involucre linear-lanceolate, shining. *Cypselas* of the inner flowers muricate, with 2 unequal hispid pappus hairs longer than themselves and than the corolla ; outer cypselas shorter, broader, smooth, black ; their edges winged, deeply toothed, pale. Hook. Exot. Flora, t. 60, Clarke Comp. Ind. 139 ; Hook. fil. Fl. Br. Ind. III. 308 ; Prain Bengal Plants, 615. *Verbesina nodiflora*, Linn. Amoen. Acad. IV. 290.

Near cultivation, common.

19. *BIDENS*, Linn.

Herbaceous, annual or perennial, sometimes scandent. *Leaves* opposite, entire, irregularly lobed or 1-2-pinnatisect. *Heads* small and corymbose or larger and sub-solitary, heterogamous and rayed. *Ray-florets* in one series, neuter or rarely ♀, fertile, the corolla ligulate, yellow or white, spreading, entire or somewhat toothed. *Disk-florets* ♂, fertile, tube, cylindric, limb shortly 5-fid ; occasionally homogamous from the abortion of the ray-florets. *Involucre* campanulate or sub-hemispheric, its bracts in two series, often slightly connate below ; the outer short herbaceous or long and leafy, the inner membranous ; receptacle flat or convex ; its pales narrow, little concave. *Anthers* entire or bluntly sagittate at the base. *Style* of ♂ florets with arms hirsute upwards and short acute or long apices. *Cypselas* dorsally compressed or somewhat tetragonous, linear or cuneiform, often narrowed but not beaked above ; pappus of 2 to 4 persistent,

retroscissely barbellate arms.—DISTRIB. About 120 species, chiefly American.

BIDENS PILOSA, Linn. Sp. Pl. 832. An erect, very variable, glabrous pubescent or pilose herb, 6 to 24 in. high; stems when dry 4-angled. *Leaves* 3-fid to 3-partite, or 2-3-pinnatifid, their segments broadly or narrowly ovate to lanceolate, serrate. *Heads* 3 to 4 in. across, on long stout petioles of varying length, terminal or axillary. *Ray-flowers* when present white or yellow, often absent. *Involucral bracts* shorter than the flowers, broadly oblong, with scarious margins. *Cypselas* black, compressed, long, narrow, slender, ribbed; pappus of 3 or 4 bristles shorter than the cypselas, pale brown.

VAR. 1 *pilosa* proper, Hook. fil. Fl. Br. Ind. III. 309; leaves 3-fid or 3-sect, their segments broadly or narrowly ovate or lanceolate, serrate. *B. pilosa*, Linn., DC. Prod. V. 597; Clarke Comp. Ind. 140, Prain Bengal Plants, 616. *B. leucantha*, Willd. *B. chinensis*, Willd., Wall. Cat. 3189 (*in part*). *B. tripartita* and *B. bipinnata*, Wall. Cat. 3187 (*in part*).

VAR. 2 *bipinnata*, Hook. fil. l.c. 309; leaves bipinnately compound, their segments ovate lanceolate or linear, entire lobed or toothed. *B. bipinnata*, Linn., Roxb Fl. Ind. III. 411. *B. chinensis*, Wall. Cat. 3189 (*in part*). *B. Wallachii*, DC. Prod. V. 598

VAR. 3 *decomposita*, Hook. fil. l.c. 310; leaves decompositely pinnatifid, segments linear, slender. *B. decomposita*, Wall. in DC. Prod. V. 602, Cat. 3188; Clarke Comp. Ind. 141 *excl. var. β*

In all the provinces in waste ground near cultivation, but not common.—DISTRIB. In all warm countries.

20. TRIDAX, Linn.

A perennial herb. *Leaves* opposite, pinnatisect, with few narrow segments. *Heads* solitary on very long peduncles, heterogamous, rayed. *Ray-florets* ♀, fertile, ligulate or bilabiate, the outer lip large 3-fid, the inner small and 2-fid or none. *Disk-florets* ♂, fertile, tubular, the limb elongate and 5-fid. *Involucral bracts* in few series, the outer short broad herbaceous, receptacle flat or convex; its scales membranous. *Antthers* with short acute auricles at their bases. *Style-arms* of the ♂ flowers hairy above, their apices subulate. *Cypselas* oblong or depressed-globose, silky; pappus of unequal aristate feathery bristles of 1.—DISTRIB. 7 species, tropical American, 1 being an introduced weed in the tropics of Asia.

TRIDAX PROCUMBENS, Linn. Sp. Pl. 900. Procumbent, with slightly branched stems as thick as a crow-quill. *Leaves* few, ovate-lanceolate, deeply and irregularly serrate, 5 to 2 in. long.

Heads .4 to .6 in. in diam., on slender erect solitary peduncles 3 to 8 in. long. *Cypselas* brown; pappus shining, white. DC. Prod. V. 679; Wall. Cat. 3197; Clarke Comp. Ind. 142; Hook. fil. Fl. Br. Ind. III. 311; Prain Bengal Plants, 618.

In cultivated and waste places: an introduction.

21. CENTIPEDA, Lour.

Annual or perennial herbs. *Leaves* alternate, entire or toothed. *Heads* small, axillary, sessile or racemose, heterogamous, disciform, yellow. *Outer florets* ♀, in many rows, fertile, their corollas minute, obscurely lobed. *Disk-florets* ♂, few, fertile, their corollas with short tube and campanulate 4-fid limb. *Involucre* hemispheric, its bracts in 2 series, spreading in fruit; receptacle naked. *Anthers* obtuse and entire at the base. *Style-arms* of ♂ flower short, truncate. *Cypselas* 4-angled, the apices obtuse, the angles hairy; the hairs sometimes hooked; pappus none.—DISTRIB. 43 species, Asiatic, Australian, and South American.

CENTIPEDA ORBICULARIS, Lour. Fl. Cochinch. III. 493. An annual prostrate herb with numerous thin rooting stems, glabrous or sparsely tomentose. *Leaves* obovate-oblong or cuneate, .2 to .5 in. long, sparsely toothed. *Heads* .1 to .15 in. in diam., globose, solitary, axillary, subsessile. *Florets*, ♀ minute, numerous, tubular, minutely 3-toothed; ♂ 10 to 12, 4-toothed. *Cypselas* with simple hairs. Hook. fil. Fl. Br. Ind. III. 317; Prain Bengal Plants, 620. *C. minuta*, Benth. in Bth. & Hook. fil. Gen. Pl. II. 230; Clarke Comp. Ind. 151. *Myriogyne minuta*, Less.; DC. Prod. VI. 139. *Cotula sternutatoria*, Wall. Cat. 3259. *C. minima*, Willd. Sp. Pl. III. 2170. *Dichrocephala Schmidii*, Wight Ic. 1610. *Artemisia sternutatoria*, Roxb. Fl. Ind. III. 423. *A. minima*, Linn. Sp. Pl. 849. *Sphæromorphæa centipeda*, DC. l.c. 140.

In all the provinces: by the sides of roads in cultivated ground, not common.

22. ARTEMISIA, Linn.

Herbs or shrubs, usually fragrant. *Leaves* alternate, 1- to 3-pinnatisect, serrate or entire. *Heads* small, numerous, racemose or paniced, solitary or in fascicles (never corymbose), heterogamous or homogamous, disciform. *Outer florets* ♀, in a single series, fertile, very slender, 2-toothed. *Disk-florets* ♂, fertile or sterile, the limb 5-fid. *Involucre* or l. sub-globose or hemispheric; bracts in few series, the outer shorter, their margins scarious; receptacle flat or convex, naked or hairy. *Anthers* with entire obtuse bases. *Style-arms* of the ♂ florets with truncate, usually penicillate, tips. *Cypselas* very minute, oblong,

ellipsoid or sub-obovoid, faintly striate; pappus none.—DISTRIB. About 240 species in the north temperate regions mostly of the Old World.

ARTEMISIA VULGARIS, Linn. Sp. Pl. 848. A small shrub; stems as thick as a goose-quill, brown when dry, sub-glaucous and with sparse white pubescence. *Leaves* membranous, varying much in shape and size, those near the base several inches long, large pinnatifid or bi-pinnatifid, the pinnules oblong, the ultimate lobes entire with sub-aristate apices, leaves of the stem diminishing in size upwards, lacinate, and passing near the apex into simple linear bracts less than 5 in. long; all glabrous on the upper surface and white adpressed-pubescent on the lower. *Heads* about 15 in long, cylindric or narrowly campanulate, sessile, solitary or in small clusters, in axillary sub-second spikes of varying length, the upper part of the stem forming a long spike. *Involucral bracts* only 5 or 6, broadly lanceolate or oblanceolate, the inner scarious. *Corollas* glabrous. DC. Prod. V. 112; Boiss. Fl. Orient. III. 371; Roxb. Fl. Ind. III. 420; Clarke Comp. Ind 161; Hook. fil. Fl. Br. Ind III. 325. *A. indica*, Willd.; DC. l.c. 114; Roxb. Fl. Ind. III. 419; Wight Ic. 1112; Wall. Cat. 3293. *A. dubia*, Wall. Cat. 3307; DC. l.c. 110. *A. myriantha*, Wall. Cat. 3297; DC. l.c. 112. *A. paniculata*, Roxb. Fl. Ind. III. 418. *A. leptostachya*, DC. l.c. 113. *A. grata*, Wall. Cat. 3294 (*in part*); DC. l.c. 114. *A. lavandulæfolia*, DC. l.c. 110.

In all the provinces, near cultivation, not common and probably introduced.—DISTRIB. Europe, Northern Asia, India, mountains of the Malayan Archipelago.

23. CREPIS, Linn.

Annual or perennial herbs, glabrous or hairy, hairs all simple. *Leaves* alternate, radical or cauline, the latter often stem-clasping, entire toothed or pinnatifid. *Heads* pedunculate, solitary, fasciculate or corymbose, yellow or red, homogamous, ligulate. *Involucre* cylindric or campanulate; bracts either multi-seriate and regularly imbricate, or the outer smaller and shorter than the single series of inner, base of midrib often thickened after flowering; receptacle flat, rarely concave, naked or shortly fimbriate. *Corollas* ligulate, with broad 5-toothed apices. *Anthems* syngenesious, their bases sagittate, the auricles acute or shortly setaceous. *Cypselas* more or less fusiform or oblong, rarely short and cylindric, often slender, glabrous or scaberulous, 10- to 20-ribbed, the apex narrowed or beaked; pappus usually copious, short or long, the hairs simple, soft, usually silvery, rarely brownish and stiff or brittle.—DISTRIB. Species about 10, chiefly in the northern regions of the Old World.

CREPIS JAPONICA, Benth. Fl. Hongk., 194. Annual; glabrous or puberulous; stems one or more from the same root, 6 to 18 in. high. Radical leaves oblanceolate, runcinate-pinnatifid or sinuately toothed, 1 to 2.5 in. long, usually on petioles .5 to 1.5 in. long; cauline leaves few, much smaller and often sessile. Heads .2 in. long and .3 in. in diam. when expanded, on short, slender pedicels with linear minute bracteoles at their bases, collected at the apices of the long, slender stems in compact or lax corymbose cymes. Involucres shorter than the florets, their bracts in two rows, the outer very short; the inner 6 or 7, narrowly oblong, blunt, with narrow hyaline margins and dark, thickened midribs. *Cypselas* .1 in. long, contracted below the apex, but not beaked, compressed, with many smooth or puberulous ribs, equal to or shorter than the soft, white pappus. Hook. fil. Fl. Br. Ind. III. 395; Prain Bengal Plants, 627. *C. lyrata*, Clarke Comp. Ind. 253. *Youngia lyrata*, Cass., Thw. Enum. Pl. In all the provinces, near or in cultivated ground.

Order LXII. STYLIDIEÆ.

Herbaceous plants, rarely undershrubs. Leaves radical or scattered or fasciculate on the stem, more or less subverticillate, entire, often small and narrow, no stipules. Flowers in terminal racemes or thyrsoid or corymbose panicles, irregular, perfect, pedicels bracteate. *Calyx-tube* adnate to the ovary; limb 2-lipped, upper lip 3-, lower 2-flowered. *Corolla* gamopetalous, 5-lobed, 4 lobes spreading, the fifth (lip) smaller, irregular, the lobes imbricate. *Stamens* 2, parallel, inserted on a glandular disk surmounting the ovary; filaments connate with the style into a column; anthers sessile on the column, the cells sub-confluent. *Ovary* inferior, 2-celled; style entire or divided into two stigmas; ovules many in each cell, on axile placentas on the middle of the dissepiment, anatropous. *Fruit* a 2-celled capsule, sometimes 1-celled by the suppression of the septum, the valves cohering at the base. *Seeds* minute, numerous, sub-globose; albumen fleshy; testa thin, embryo minute, next the hilum.—**DISTRIB.** Species about 100, Australian, with a few in tropical Asia, New Zealand, and Antarctic America.

STYLIDIUM, Sw.

Herbs, with the habit leaves and inflorescence of the Order. *Calyx-lobes* 5, bilabiate. *Corolla* irregularly 5-lobed, 4 lobes sub-erect in pairs, the fifth smaller, recurved. *Stamens* in an elongate column, often recurved or reflexed, especially when irritated. *Ovary* 2-celled, stigma entire.—*DISTRIB.* 85 Australian species and 3 Indian or Malay.

STYLIDIUM TENELLUM, Swartz in Gesellsch. Nat. Berl. Mag. 1807, 51. t. 2, fig. 3, not of Br. A small erect herb; stem simple, leafy, glabrous, 4 to 8 in. high, dichotomous, compressed. *Leaves* scattered, alternate, oblong or oblong-obovate, lower ones broader 2 to 3 in. long, upper ones narrower, getting gradually smaller upwards and passing gradually into bracts; nerves of lower leaves 3, from the base. *Flowers* sessile, 2 to 5, alternate; bracts minute, linear. *Calyx* bilabiate, upper 3-, lower 2-lobed, lobes linear. *Corolla* irregularly 5-lobed, 4 lobes erect linear, the fifth recurved, spatulate. *Staminal column* exsert, stamens 2, anthers 2-celled, connivent. *Ovary* inferior, elongate, 2-celled, many-seeded, stigma entire. *Capsule* 2-celled, 2-valved, .5 to 7 in long, seeds minute, papillose. DC. Prod. VII. 336; Hook. fil. and Th. in Journ. Linn. Soc. II. 8; Miq. Fl. Ind. Bat. II. 571, Kurz in Flora, 1872, 304. *S. roseum*, Kurz in Journ. As. Soc. Beng. XLV ii 137, XLVI ii 212; Clarke in Hook. f. Fl. Br. Ind. III 420.

PENANG: Ridley 7103. PROVINCE WELLESLEY, at Butterworth G. King. MALACCA: Swartz.—*DISTRIB.* Eastern Bengal and Burma, in Dacca, Chittagong and Mergui.

S. uliginosum, Swartz, is recorded in Fl. Br. Ind. as from "MALACCA *sic* H. J. and T.", as we have seen no specimens, we consider it sufficient to record the fact. In Miq. Fl. Ind. Bat. it is *S. Kunthii*, Wall, that is recorded from Malacca, and it seems more likely that this is right as Griffith obtained it at Mergui.

Order LXIII. GOODENOVIÆ.

Shrubs, undershrubs, but chiefly herbs, juice not milky. *Leaves* alternate or radical, rarely opposite, entire dentate or occasionally pinnatifid; stipules none. *Flowers* hermaphrodite, axillary or in terminal spikes, racemes or panicles, regular or irregular, bracts and bracteoles occasionally present. *Calyx* with the tube adnate to the ovary or free; lobes 5, sometimes very small, sometimes connate in a ring or obsolete. *Corolla* gamopetalous, inserted on the calyx, usually white, yellow or blue, rarely red; lobes 5, valvate, usually induplicate-winged. *Stamens* 5, alternate with the corolla-lobes, inserted on the

disk crowning the ovary; free or connate in a ring around the style; anthers 2-celled, the cells parallel, dehiscent longitudinally and introrsely. *Ovary* 1-2-celled; style simple with a cup-shaped sheath including the stigma; ovules 1 or many in each cell, erect or ascending, rarely pendulous, inserted on the dissepiment or central. *Fruit* an indehiscent drupe or a capsule with 2 or 4 valves usually dehiscent irregularly. *Seeds* albuminous; testa thin crustaceous or thick and hard; embryo erect in the axis of the fleshy albumen, the radicle inferior.—**DISTRIB.** Over 200 species, mostly Australian, a few in New Zealand, Antarctic America, the Pacific Islands, or on the coasts of tropical Asia, Africa, and the West Indies.

1. *SCÆVOLA*, Linn.

Herbs, undershrubs or shrubs. *Leaves* simple, alternate, rarely opposite, entire or toothed. *Flowers* axillary, solitary or in dichotomously branched cymes, sessile or pedicellate. *Calyx* with the tube adnate to the ovary, turbinate, ovoid or globose; limb short, annular or 5-lobed, sometimes obsolete. *Corolla* oblique, split to the base behind, lobes sub-equal or the two uppermost shorter, at length digitately patent. *Stamens* free. *Ovary* 2-celled, with solitary erect ovules in each cell, or 1-celled with 1-2 erect ovules; sheath cupular; stigma truncate or divaricately 2-lobed. *Fruit* an indehiscent drupe, exocarp thin or fleshy, endocarp hard and woody rarely crustaceous. *Seeds* solitary, embryo smooth, cotyledons sometimes broader than the inferior radicle.—**DISTRIB.** About 60 species, 2 Asiatic, 8-10 of the Pacific Islands and the coasts of Asia, 1 extending to the coasts of Africa and the West Indies, the rest Australian.

SCÆVOLA KOENIGII, Vahl Symb. III. 36 (1794). An evergreen large glabrous shrub with stout stem and branches, soft spongy pith and coarse fibrous wood. *Leaves* alternate, sessile, obovate-oblong, obtuse at apex, decurrent at base, 3 to 6 in. long, about 2 in. broad, entire or obscurely crenate, more or less fleshy when green, membranous when dry, silky pubescent on both sides or somewhat glabrous on the upper surface, tufted hairy in the axils; midrib stout, prominent, broad, main-nerves 10-12 pair, slender, arching upwards and joining near the margin, secondary nerves few slender, reticulations many, indistinct. *Flowers* white, in axillary few-flowered dichotomous pubescent cymes shorter than the leaves; bracts small, subulate, about .1 in. long; common peduncle .5 to .6 in. long; pedicels .1 to .2 in. long; bracteoles 2, similar to the bracts. *Calyx-tube* adnate to the ovary, .2 in. long, densely villous; lobes .2 to .3 in. long, linear-lanceolate or spatulate, ciliate, pubescent, enlarged in fruit. *Corolla-tube* .7 to .8 in.

long, narrow, pubescent without, villous within, lobes valvately induplicate-winged, 25 to 4 in long, lanceolate, prominently veined, villous-hairy within *Stamens* erect, free, inserted around the ovary-sheath, 75 in long, filaments thin, anthers ovate, intorse, cells parallel, connective produced above with short divergent lobes *Ovary* 2-celled, crowned with the oblong bifid stigma which is surrounded by a long fringed sheath, ovules 1 in each cell, erect *Fruit* a 2-celled ovate-globose succulent drupe, 3 to 5 in in diam, depressed above, ribbed, endocarp bony Lamk Ill t 124, fig 2 DC Prod VII 505, Hook f and Th in Journ Linn Soc II 8 Hook f Bot Mag t 2732, Blume Bijdr 730, Miq Fl Ind Bat II 580 Kurz in Journ As Soc Beng XLVI n 212, For Fl II 84, Clarke in Hook f Fl Br Ind III 421, Trimen Fl Ceyl III 54, Cooke Bomb Flora, II 69, Benth Fl Austr IV 86 *S sericea*, Forst, DC lc 506 Blume Bijdr 750, Miq Fl Ind Bat II 581 *S Taccada*, Roxb Hort Beng 15, Fl Ind I 527, DC lc 505, Dalz and Gibs Bomb Fl 134, Ham in Trans Linn Soc XVII 250 Wall Cat 1314, Wight Ill t 137 *S Lobelia*, Ham in Trans Linn Soc XVII 250, De Vriese Goodenov 20-26 and in Ned Kruidk Arch II 20, not of Linn *S Plumieri*, Blume Bijdr 730, not of Vahl *S montana*, Lab Seit Austr Caled 41, t 42, DC lc 506 *S velutina*, Presl in Rel Haenck II 57, DC lc 506 *S Bela Modagam*, Rœm and Sch Syst V 163, DC lc 505 *S Leschenaultii*, DC lc 506 *S macrocalyx* De Vriese Gooden 26, tab 3 figs 1-4 *S chlorantha* and *S Lambertiana*, De Vriese, lc 27, 28 *S lutea*, Hance in Walp Ann II 1054 *Lobelia frutescens*, Linn Fl Zeyl 148 *L Taccada*, Gærtn Fruct I 119, tab 25, fig 5 *L Plumieri*, Burm Fl Ind 186, not of Linn *Cerbera Salutaris*, Lour Fl Cochinch 136 *Buglossum litorum*, Rumph Herb Amb IV 116 t 51 "*Bela Modagam* Rheede Hort Mal IV t 59

Order LXIV CAMPANULACEÆ

Herbs, undershrubs, rarely shrubs, erect or climbing, often with milky juice *Leaves* alternate or rarely opposite, entire toothed or rarely lobed, no stipules *Inflorescence* axillary or terminal, flowers solitary, racemose or paniculate, bracts small bracteoles none (present in *Sphenoclea*) *Calyx-tube* adnate to the ovary, limb few- or many

lobed or ⁴-partite, lobes usually persistent in fruit, valvate or imbricate in bud. *Corolla* gamopetalous, tubular, rotate or campanulate, superior, sometimes bilabiate; lobes as many as those of the calyx, valvate or induplicate-valvate, sometimes 1, 2, or all free to the base. *Stamens* equal in number to the corolla-lobes and alternate with them; inserted on the epigynous disk or (in *Sphenoclea*) on the corolla-tube; filaments free or connate in a tube; anthers linear, oblong or ovate, free or connate in a tube, 2-celled, the cells parallel, dehiscing longitudinally and introrsely. *Ovary* usually inferior, 2-5- rarely more-celled; placentas axile, many ovuled; style simple, clavate, within the staminal tube; stigma-lobes as many as the ovary-cells; ovules anatropous, erect horizontal or pendulous. *Fruit* capsular or baccate, crowned by the persistent calyx-lobes, dehiscing vertically or laterally, or indehiscent. *Seeds* very many, small, albuminous; testa thin, coriaceous; embryo erect, radicle inferior.—**DISTRIB.** Over 1,000 species, scattered throughout the globe, chiefly in temperate regions.

Tribe I. LOBELIÆ. Corolla 2-lipped, cleft dorsally to the base; anthers connate.

Fruit a capsule, 2-valved at the summit	1. LOBELIA.
---	----	----	-------------

Tribe II. CAMPANULÆ. Corolla regular; anthers free or imperfectly connate

Flowers solitary, peduncled	2 CAMPANULÆ
Flowers in a dense scorpioid spike	3. PENTAPHRAGMA.
Flowers in a dense cylindric spike	4. SPHENOCLEA

1. LOBELIA, Linn.

Herbs of various sizes, sometimes very small, sometimes erect and very tall; undershrubs or shrubs. *Leaves* alternate, usually toothed. *Inflorescence* either 1-flowered, in the axils of leaves or bracts, or in a terminal leafy raceme; bracteoles very small or none. *Calyx-tube* adnate to the ovary, turbinate, hemispheric, obovoid or rarely oblong-linear; limb 5-partite or 5-fid, lobes often unequal. *Corolla* oblique, 2-lipped; upper lip 2-, lower 3-partite or -lobed. *Staminal tube* free from the corolla or adnate only at the base; anthers with 2 lower tipped with bristles, 3 upper naked, or else all penicillate. *Ovary* inferior, 2-celled; placentas hemispheric; ovules numerous; stigma shortly bifid. *Capsule* loculicidally 2-valved within the calyx-tube. *Seeds* very many, minute, ellipsoid, compressed or trigonous.—**DISTRIB.** About 200 species, throughout the world, though scarce in Europe and Western Asia.

LOBELIA AFFINIS, Wall. Cat. 1311. A prostrate often rooting herb with much-branched stem, pubescent or glabrate. *Leaves* ovate-

rotundate, acute at apex, rounded or truncate or cordate and more or less decurrent at base, 5 to 2 in long, 5 to 15 in broad, mucronate-dentate or -crenate, membranous, usually strigosely hairy on the nerves especially beneath, sometimes nearly glabrous, midrib slender, main-nerves 4-6 pairs, petiole 3 to 6 in long, more or less winged by the decurrent margins of the blade, strigosely hairy. *Flowers* single, on slender pedicels about 6 to 1 in long, bracts minute, pedicels usually deflexed in fruit. *Calyx-tube* adnate to the ovary, ribbed, strigose, obconical, lobes 5 linear spreading, 1 to 2 in long, pilose. *Corolla* purple, 2 to 25 in long, 2 upper lobes falcate lanceolate, 3 lower connate, teeth short. *Staminal tube* as long as or longer than corolla, anthers all penicillate. *Ovary* 2 celled, style long, stigma bifid, lobes rounded, recurved, ovules many. *Capsule* ribbed, strigose. *Seed* small, ellipsoid trigonous. MALACCA: *Griffith*.—DISTRIB. Swampy places and wet fields, and along river banks in tropical regions of both hemispheres.

Order LXV VACCINIACEÆ

Shrubs or small trees, often epiphytic, with stems swollen at the base. *Leaves* alternate or in pseudo-whorls, entire dentate or serrate, evergreen, ex-stipulate. *Flowers* in terminal or axillary racemes, or solitary and axillary, hermaphrodite, usually regular; pedicels 1-bracteate and also often with 2 bracteoles, often articulate beneath the ovary. *Calyx* campanulate or cupular, the tube adherent to the ovary, its limb persistent on the fruit, usually 5-toothed. *Corolla* tubular (sometimes inflated), campanulate or globose, 5-toothed or 5-lobed, usually imbricate, deciduous. *Stamens* 10, epigynous, inserted at the base of the corolla-tube; anthers opening by apical pores, or often produced into 2 tubes, opening by slits, filaments flattened, free or connate by their bases. *Ovary* inferior, crowned by an epigynous disk, 5-celled or falsely 10-celled; style cylindric, stigma simple; ovules many (rarely few), the placentas axile or pendulous from the upper inner angle of each cell. *Fruit* baccate, rarely dry, 5- or falsely 10-celled. *Seeds* numerous or few (rarely only 1) in each cell, small, compressed, albuminous. Species about 350, natives chiefly of cold and temperate regions throughout the world.

Corolla long and tubular or campanulate, with long segments —

Calyx tube terete

1 AGAPETES

Calyx tube 5-winged or 5 angled

2 PENTAPTERYGIIUM

Corolla small, campanulate or ovoid its lobes short

3 VACCINIUM

1 AGAPETES, D Don

Shrubs, often epiphytic, the stems often much swollen near the base. *Leaves* usually coriaceous, alternate, sometimes in pseudowhorls, from linear to elliptic, entire or toothed, sessile or with short petioles, often glandular near the base. *Flowers* axillary, solitary, corymbose or in fascicles the pedicel often thickened or articulate under the ovary, bracts small. *Calyx* globose, the limb with 5 persistent teeth or lobes. *Corolla* tubular or campanulate, the limb with short or long lobes, red, but often with transverse marks or with greenish white lobes. *Stamens* 10, usually with short filaments, *anthers* oblong, each with 2 long apical processes, opening by pores or slits, often spurred behind. *Disk* pulvinate, often lobed. *Ovary* 5 celled or falsely 10-celled. *style* cylindric. *stigma* capitate, *ovules* numerous. *Berry* globose, nearly dry or succulent, 5 or 10-celled, sometimes opening by pores round the disk within the calyx teeth. *Seeds* numerous, ellipsoid, testa lax — *DISTRIB* 30 species, mostly Himalayan, a few Malayan

AGAPETES GRIFFITHII Clarke in Hook f Fl Br Ind III 449
An epiphytic shrub, 3 to 15 feet long, with a tuberous stem, young branches half as thick as a goose quill, terete, glabrous. *Leaves* thinly coriaceous, oblong lanceolate to ovate lanceolate, always caudate-acuminate, the base rounded both surfaces pale olivaceous-brown when dry, glabrous, minutely reticulate, main nerves 5 or 6 pairs, curved, ascending, faint on both surfaces. length 3.5 to 6 in., breadth 1 in. to 2.65 in., petiole 1.5 in. long or under. *Flowers* 3 to 4 in. long axillary, always on slender pedicels four or five times as long as themselves, with 1 or 2 narrow bracteoles near the base, glabrous, axillary, solitary, in pairs or in lax racemes. *Calyx* 1 to 2 in. long (enlarging in fruit), campanulate, with 5 deep spreading triangular lobes. *Corolla* 2.5 in. long, tubular campanulate, the mouth with 5 triangular suberect acute lobes. *Anthers* inserted at the base of the corolla tube, linear, with 2 long apical beaks dehiscing longitudinally, and 2 posteriorly projecting curved spurs. filaments shorter than the anthers, hairy. *Fruit* globular, glabrous, crowned by the small inflexed calyx lobes. *Seeds* about 20, compressed, tubercled, black.

MALACCA Griffith PERAK at elevations of 2,800 to 4,000 feet, Way 1071, King's Collector 3831, 6363, 8051, Ridley 5532, Scortechini

2. PENTAPTERYGIUM, Klotsch.

Shrubs, often epiphytic and with stems much thickened at the base. *Leaves* alternate, ovate or lanceolate, sub-entire or toothed, coriaceous, often with glands at the apex of the petiole. *Flowers* axillary, solitary, fascicled or corymbose; the pedicels thickened near the apex, cupular and jointed under the ovary, bracts small. *Calyx-tube* large, tubular, with 5 wings or prominent angles; its lobes 5, enlarged in fruit. *Corolla* tubular, the mouth with 5 short lobes, coloured red or yellow, and often transversely marked. *Stamens* 10, epigynous, the filaments short; anthers elliptic, produced into 2 long beaks, opening by apical pores or slits, and often spurred behind. *Ovary* 5-celled or spuriously 10-celled, style cylindric, often exserted; stigma sub-capitate, ovules very numerous. *Fruit* baccate, 5-winged or 5-ribbed, 5-celled or spuriously 10-celled. *Seeds* numerous, ellipsoid. —*DISTRIB.* About 6 species, natives of Eastern Himalaya, Khasia, Malay Peninsula.

PENTAPTERYGIUM SCORTECHINII, n sp., King & Gamble. A sarmentose shrub, 4 to 10 feet long, growing on rocks or trees; young branches somewhat thinner than a goose-quill, terete, glabrous, pale brown when dry. *Leaves* thickly coriaceous, ovate to ovate-rotund, the apex blunt or sub-acute, the base broad and rounded but sometimes slightly emarginate, the edges much recurved when dry, upper surface shining, glabrous, pale olivaceous-brown, the lower darker; midrib strong, deeply depressed on the upper surface, prominent on the lower; main-nerves about 4 pairs, spreading, the two lower much the larger, all curved, mostly depressed on the upper surface and prominent on the lower, length 1·75 to 3 in., breadth ·8 to 2 in.; petioles ·25 to 4 in. *Flowers* 1 in long, few together, in axillary or terminal corymbs; their pedicels about ·6 in. long, with 1 or more linear bracts at the base. *Calyx* inflated, tubular, narrowed towards the mouth, glabrous, lobes of the mouth triangular, acute, erect, the lower half of the tube attached to the ovary. *Corolla* inserted on the concave disk of the ovary, slightly exserted from the calyx, tubular, inflated towards the middle; lobes of the mouth short, lanceolate, reflexed, tube with rufous pubescence outside, glabrous within; style cylindric, glabrous, slightly exserted. *Fruit* unknown.

PERAK, at elevations of about 4,500 feet *King's Collector* 8152; *Wray* 210; *Scortechini* 309.

3. VACCINIUM, Linn

Shrubs, sometimes epiphytic. *Leaves* usually small, alternate, but sometimes in pseudo-whorls, from lanceolate to ovate, entire or serrate.

Flowers usually small, axillary or terminal, in racemes fascicles or corymbs rarely solitary, usually bracteate and bracteolate. *Calyx-tube* globose, its teeth 4 or 5, small. *Corolla* urceolate, tubular or ovoid, 5-lobed, pink white or greenish-yellow. *Stamens* 8 or 10, free, inserted near the base of the corolla-tube; anthers oblong, with two apical cylindric tubes dehiscing by terminal slits, sometimes appendiculate at the base (apical tubes very short in one or two species). *Disk* cushion-shaped, convex, sometimes lobed. *Ovary* 4- or 5-celled, or falsely 8-10-celled; style cylindric, stigma simple; ovules few or several in each cell. *Fruit* a more or less globose berry, crowned by the persistent calyx-lobes, 5-celled or falsely 10-celled. *Seeds* small, 1 or more in each cell, ellipsoid, compressed; testa firm, smooth — **DISTRIB.** Species about 140, in the Northern Hemisphere or on mountain ranges in the tropics.

Leaves broadly elliptic, ovate-rotund or oblanceolate, the apex broad, sometimes minutely apiculate but never acute, very coriaceous. —

Leaves under .75 in. in length, elliptic or obovate-elliptic; corolla 3 in. long, tapering to the mouth; a small glabrous tree or bush. 1. *V. Scottchani*

Leaves under 1 in. in length, ovate or elliptic; corolla 2 to 25 in. long, the mouth wide, truncate; an epiphytic shrub, glabrous except the scurfy branches. 2. *V. microphylla*.

Leaves elliptic, their apices sub-obtuse, the base truncate or minutely cordate, 1 to 1.35 in. long; flowers enveloped in large deciduous bracts. 3. *V. glabrescens*.

Leaves broadly oblanceolate or spatulate, much narrowed to the base. 4. *V. viscofolium*.

Leaves obovate-elliptic, slightly narrowed to the apex but never acuminate, coriaceous; flowers .35 in. long, in axillary racemes. 5. *V. Teymanni*.

Leaves elliptic to elliptic-oblong, sub-acute acute or acuminate :—

Leaves entire :—

Leaves glabrous —

Leaves coriaceous. —

Leaves with 4 or 5 pairs of main-nerves; flowers .2 in long, in axillary and terminal racemes mouth of corolla entire or obscurely toothed; a shrub or small tree; anthers with short broad beaks. 6. *V. bancanum*.

Leaves with 3 pairs of main-nerves; corolla 2 in long; its mouth with 5 short, broad, recurved lobes; beaks of anthers truncate, shorter than the cells, epiphytic. 7. *V. Kunstleri*.

Leaves sub-coriaceous, their main-nerves 3 pairs; flowers .35 in. long, beaks of anthers more than twice as long as the cells; epiphytic. 8. *V. Hasseltii*.

Leaves pubescent or puberulous beneath —

Leaves coriaceous, oblong-lanceolate or elliptic-lanceolate, with very long caudate acuminate apices, under surface pubescent or puberulous

9 *V. acuminatissimum*.

Leaves serrate (sometimes faintly so) sub-coriaceous, glabrous, flowers 3 in. long; beaks of anthers twice as long as the cells

10. *V. malaccense*.

1 *VACCINIUM SCORTECHINII*, n. sp., King & Gamble. A small tree or large shrub; young branches rather thicker than a crow-quill, dark and much angled when dry, glabrous. *Leaves* small, coriaceous, elliptic or obovate-elliptic, the apex rounded, the base slightly cuneate, the edges much recurved; upper surface olivaceous-brown, shining when dry; the lower brown, dull, faintly reticulate; sparsely scaly; main-nerves a single pair, rarely 2 pairs, curving upwards, converging at their apices, faint on both surfaces, the midrib depressed on the upper surface, prominent on the lower; length 3 to 4.5 in.; breadth .25 to .35 in., petiole very short. *Flowers* about 35 in long, solitary, axillary, their pedicels less than 1 in. long, minutely bracteate at the base, pubescent like the outside of the calyx and corolla. *Calyx* campanulate, the 5 teeth triangular, acute, erect. *Corolla* about .3 in. long, cylindric, inflated below and tapering to the mouth; the lobes short, broad, blunt, erect or reflexed. *Stamens* 10, each with 2 apical truncate beaks shorter than themselves, but no basal processes, filaments longer than the anthers, hairy. *Ovary* with a flat top, 5-celled, each cell with several ovules. *Style* cylindric, nearly as long as the corolla, pubescent in its lower third, otherwise glabrous. *Fruit* globular, crowned by the inflexed calyx-lobes, tomentose, many-seeded, seeds not compressed.

PERAK *Scortechium*, Wray, at elevations of 6,000 and 6,700 feet, 888 and 356, King's Collector 8028.

By the fall of the leaves, in the axils of which they are produced, the flowers appear as if they were in racemes. This closely resembles *V. buxifolium* and *V. coriaceum*, Hook. fil., of which figures are given in Hook. Ic. Pl. t 891 and 892, but this has much narrower flowers and broader leaves than either.

2 *VACCINIUM MICROPHYLLUM*, Blume Bijdr. 851. Epiphytic on tall trees, a small much-branched shrub, young branches as thick as a crow-quill, with small black deciduous scurf. *Leaves* coriaceous, ovate or elliptic, the apex and base blunt, the former sometimes with a minute apiculus; upper surface bright olivaceous and shining when dry, the lower pale-brown and dull, both faintly reticulate when dry; main-nerves usually a single pair, curving upwards from the base of the midrib and passing to near the apex a little inside the edges, depressed like the midrib on the upper surface when dry, but very faint on the lower;

length 5 to 75 in , breadth 3 to 5 in , petioles about 05 in long, hairy
Flowers 2 to 25 in long, axillary, usually solitary, decurved , pedicels
 05 in long, or less *Calyx* inferior, about 2 in across, flat, deeply
 divided into 5 broadly triangular, sub-acute, spreading lobes *Corolla*
 glabrous, widely cylindric-campanulate, deeply cut into 5 broadly
 triangular acute or sub-acute erect lobes *Stamens* 10, from the base of
 the corolla , anthers oblong, each with an apical process shorter than
 itself but with no basal appendage , filaments shorter than the anthers,
 curved, expanded at the base *Ovary* superior, broad with flat apex
Style cylindric, as long as the corolla , stigma capitate , ovules few in
 each cell *Fruit* globular, surrounded by and adherent to the calyx,
 2 in in diam Miq Fl Ind Bat II 1063 *Diplycosia microphylla*,

3 *VACCINIUM GLABRIFRONS*, n sp, King & Gamble Epiphytic,
 young branches rather thicker than a crow-quill, dark-coloured when
 dry, minutely pubescent *Leaves* coriaceous, elliptic, the apex sub-
 obtuse, the base sub truncate and minutely cordate , upper surface dark
 olivaceous brown when dry, reticulate, smooth, shining , lower surface
 brown when dry, minutely pubescent like the petiole (glabrescent when
 old) , main-veins 3 or 4 pairs, pinnate, ascending, rather straight,
 length 1 to 1.35 in , breadth 6 to 1 in , petiole under 1 in long
Racemes solitary, terminal, 3 or 4 times longer than the leaves, bearing
 at the base of each flower a large lanceolate pubescent deciduous bract
 4 in long and about 2 in broad at the middle *Fruit* sub-rotund or
 ellipsoid, baccate, softly and minutely pubescent, crowned by the
 inflexed triangular calyx teeth, 2 in long and 15 in in diam , 5-celled,
 each cell with several angled seeds

PERAK *Scortechini* (without number)

4 *VACCINIUM VISCIFOLIUM*, n sp, King & Gamble Young
 branches half as thick as a goose quill, striate and pale-brown when
 dry *Leaves* very coriaceous, broadly oblanceolate or spatulate, the
 apex very blunt, narrowed from below the middle to the short flattened
 petiole, the edges slightly recurved , upper surface olivaceous when
 dry, the lower bright brown, both glabrous , main-nerves 2 or 3 pairs,
 originating from the midrib near its base, ascending, little curved, very
 prominent like the midrib on the upper surface but faint on the lower,
 length 2 to 2.75 in , breadth 8 to 1.25 in , petioles about 1 in *Racemes*
 terminal and axillary, often forming, from the fall of the leaves, pseudo-

panicles several times longer than the leaves. *Flowers* not seen. *Fruit* on curved deflexed peduncles, .5 in. in length, globular, baccate, .2 in. in diam., crowned by the persistent disk and by the 5 minute triangular calyx-teeth, 10-celled, the cells with more than one small angled seed.

PERAK : *Scortechini* 405 ; *Wray*, at an elevation of 6,700 feet, 328

VAR *minor*, King & Gamble. Leaves only 1.2 to 1.6 in. in length, their 3 or 4 pairs of nerves not so much from the base of the midrib ; racemes not much longer than the leaves, fruit only .15 in. in diam ; pedicels under .2 in. long.

PERAK, at elevations of 5,000 feet : *Scortechini* 404, *King's Collector* 8020.

5 VACCINIUM TEYSMANNI, Miq. Fl. Ind. Bat II. 1062. A medium-sized tree ; young branches somewhat thinner than a goose-quill, dark-coloured and striate when dry. *Leaves* coriaceous, broadly obovate, often almost rotund-obovate or elliptic, rarely oblanceolate, the apex obtuse or rounded, rarely retuse or sub-acute, the base cuneate and merging in the broad, sometimes glandular petiole ; both surfaces glabrous and faintly reticulate, upper olivaceous when dry, shining, the lower dark-brown, the midrib broad on both ; main-nerves 4 to 6 pairs, curving upwards and anastomosing freely, more prominent on the upper than on the lower surface ; length 2.5 to 3.5 in ; breadth 1.25 to 2.25 in ; petiole .2 to .4 in. long. *Racemes* slender, often longer than the leaves, axillary and extra-axillary, their rachises somewhat compressed and angled, often puberulous ; pedicels slender, curved, minutely bracteolate or ebracteolate at the base, .15 to .2 in. long. *Flowers* .35 in long, their pedicels .15 in. long, decurved or not, puberulous like the outside of the calyx. *Calyx* less than .1 in. long, campanulate, with 5 acutely triangular spreading teeth. *Corolla* white, puberulous, narrowly cylindric, tapering slightly to the mouth ; lobes 5, very short, spreading or reflexed. *Stamens* 8 or 10, included or sub-exserted ; anthers narrowly oblong, with 2 long apical spurs, but without basal appendages, shorter than the tapering hairy filaments. *Ovary* hemispheric, deeply grooved ; style as long as the corolla, grooved, stigmas 5, very short, linear. *Capsule* unknown.

PERAK : On Gunong Bubu, at elevations of 4,500 feet, *Scortechini* 428, 443 ; *Wray* 1117, 3909, *Curtis* 3703.—DISTRIB. Java

6. VACCINIUM BANCANUM, Miq. Fl. Ind. Bat. Suppl 587. A small tree ; young branches twice as thick as a crow-quill, deciduously puberulous, pale and angled when dry. *Leaves* coriaceous, elliptic to elliptic-oblong, the apex sub-acute acute or acuminate, the base

cuneate ; both surfaces yellowish-brown when dry and rather dull, the lower reticulate ; the edges slightly recurved or not ; main-nerves 4 or 5 pairs, ascending, slightly curved, faint on both surfaces ; length 1 to 2·5 in. ; breadth ·5 to ·8 in. ; petioles ·1 in. long. *Racemes* axillary and terminal, twice as long as the leaves, their rachises puberulous, angled when dry. *Flowers* ·2 in. long ; their pedicels slender, decurved, ·1 to ·2 in. long, puberulous, minutely bracteolate at the base. *Calyx* puberulous, cupular, ·15 in. across, deeply divided into 5 triangular sub-acute spreading lobes. *Corolla* ovoid or ovoid-globulose, with truncate, wide, entire, wavy or obscurely toothed mouth, puberulous outside. *Stamens* 10, shorter than the corolla and inserted at its base ; anthers short, broad, with 2 short, trumpet-shaped, curved apical processes, opening by wide pores, and, at the base of these processes behind, 2 curved, slender filamentous spurs ; the filaments longer than the anthers, flattened, tapering from the base upwards, pubescent. *Ovary* depressed, bearing a slightly convex 10-grooved disk and many hairs. *Fruit* 2 to ·25 in. in diam., depressed-globular, crowned by the inflexed calyx-lobes, minutely pubescent, 5-celled, seeds numerous, triangular, reticulate, shining. Clarke in Hook. f. Fl. Br. Ind. III. 454. *V. exaristatum*, Kurz in Journ. As. Soc. Beng., 1873, Pt. II. 96 ; 1877, Pt. II. 215 ; For. Fl. Burm. II. 91.

PERAK, at elevations of from 5,000 to 6,500 feet. Wray 328, 1528, 3912 ; King's Collector 7018. MALACCA : Mount Ophir, Moxon, Mairgay (K D.) 699 —DISTRIB. Bangka

7. *VACCINIUM KUNSTLERI*, n. sp., King & Gamble Epiphytic, everywhere glabrous ; young branches one-third of the thickness of a goose-quill, dark and striate when dry. *Leaves* coriaceous, lanceolate or narrowly elliptic, the apex acuminate, the base much narrowed, the edges slightly recurved, both surfaces brown when dry, the upper tinged with olivaceous and reticulate ; main-nerves 3 pairs, ascending, little curved, slightly prominent on the upper surface only ; length 2 to 2·5 in. ; breadth ·5 to ·65 in. ; petioles ·1 to ·15 in. long. *Racemes* about as long as the leaves, axillary, minutely bracteolate at the base of the flowers. *Flowers* ·2 in. long, their puberulous pedicels slender, ·1 to ·15 in. long. *Calyx* cupular-campanulate, about 0·5 in. long, the limb spreading, wavy, with indistinct broad lobes. *Corolla* tubular-ovoid, ·15 to ·2 in. long, the mouth with 5 broad, blunt, short recurved lobes. *Stamens* 10, slightly shorter than the corolla or as long ; anthers small, oblong, each with 2 short, diverging, apical truncate processes, but with none at the base ; filaments three times as long as the anthers, tapering, flattened and hairy below, cylindric above. *Ovary* 5-celled, with several ovules in each cell, depressed, disk slightly convex with radiating

grooves, style slightly exserted, hairy below, stigma small *Fruit* globular, 2 in in diam

PERAK, on Maxwell's Hill, elevation 3,500 feet *Scortechini* 39, 428, *King's Collector* 8415

This closely resembles *V. bancanum*, Miq, but it is an epiphyte. Its leaves, moreover, are narrowly elliptic or lanceolate, and they have only 3 pairs of main nerves. The flowers of this are puberulous and the mouth of the corolla, instead of being entire has 5 broad, short, recurved lobes. The apical processes on the anthers are also of a different shape from those in *V. bancanum*.

8 *VACCINIUM HASSELTII*, Miq Ann Mus Lugd Bat I 40 An erect shrub, young branches twice as thick as a crow quill, dark-coloured and angled when dry, glabrous. *Leaves* elliptic to elliptic-oblong, thinly coriaceous, glabrous, the apex acuminate (often caudately so), upper surface olivaceous brown, the lower paler, main nerves 3 pairs, very slightly curved and erect or ascending, the lower pairs passing almost to the apex, faint but distinct on both surfaces, some of the nerves transverse, the others vertical, length 1.5 to 2.5 in, breadth .6 to 1.25 in, petioles 2 to 2.5 in long, slender. *Racemes* axillary and terminal, usually slightly longer than the leaves, their rachises at first puberulous but ultimately glabrous, bracteolate. *Flower* pedicels slender, curved or straight, about 15 in long. *Calyx* shortly cupular, with 5 spreading, broad, sub acute or blunt teeth. *Corolla* about 35 in long, sub cylindrical, narrowing upwards to the mouth, the lobes 5, broad, blunt, erect or reflexed, very short, each bearing a small tuft of hairs. *Stamens* 10, as long as the corolla, anthers oblong, with 2 apical beaks more than twice as long as themselves but with no basal appendages, the filaments shorter than the beaks but longer than the anther-cells, broad and hairy at the base. *Ovary* much compressed, surmounted by a large, much corrugated disk, style as long as the corolla, tapering, boldly ridged. *Fruit* globular, smooth, glabrous, 3 in in diam, crowned by the minute calyx lobes. *V. bancanum*, Miq, var *angustifolium*, Scheff

Order LXVI ERICACEÆ

Shrubs, trees, or perennial herbs *Leaves* alternate or in pseudo-whorls, ex stipulate, entire or serrate *Flowers* in racemes or fascicles or solitary, pedicels bracteate and sometimes bi bracteolate *Flowers* regular or (in *Rhododendron*) slightly irregular, hermaphrodite, sometimes dimorphous *Calyx* free or (in *Diplycosia*) sometimes adnate to the ovary, with 5 rarely 4 or 6, teeth or lobes *Corolla* hypogynous, persistent or deciduous, campanulate cylindric or urceolate, with 4 or 5 (rarely 6 to 10) imbricate or contorted, rarely valvate teeth or lobes (polypetalous in *Pyrola*) *Stamens* hypogynous or slightly attached to the base of the corolla, 10 or sometimes 5, 8, or 20 (in *Diplycosia* sometimes epigynous) filaments free or united into a tube by their bases, anthers 2 celled basi or dorsi fixed, dehiscing by apical pores or slits, the cells often prolonged into apical tubes, sometimes dorsally spurred *Disk* various annular or convex, crenate or lobed, sometimes absent *Ovary* 5 celled (rarely 4 to 16 celled), style slender, cylindric, stigma capitate or plane entire or shortly lobed *Ovules* numerous, rarely few, on placentas in the inner angles of the cells or pendulous from the upper corner *Fruit* capsular, 5 celled, many seeded, sometimes appearing baccate from the adherence of the enlarged succulent calyx *Seeds* many small, angled or compressed albuminous, the testa often loose —DISTRIB About 1,200, in all parts of the world

Fruit capsular —

Capsule 5 valved loculicidal

Calyx surrounding the capsule succulent in fruit —

Anthers with 2 horns at the apex

1 GAULTHERIA

Anthers not horned on the apex

2 DIPLYCOSIA

Calyx not succulent in fruit

3 PIERIS

Capsule 5 to 20 celled septicidal calyx not succulent in fruit, anthers dehiscing by pores

4 RHODODENDRON

Fruit baccate

5 PERNETTIOPSIS

1 GAULTHERIA, Linn

Erect or procumbent shrubs rarely epiphytic *Leaves* coriaceous, persistent, alternate, serrate or serrulate, pinnately serrate *Flowers* small, occasionally dimorphic, in axillary or terminal racemes, or axillary and solitary, bracteate and bi bracteolate *Calyx* with 5 teeth or lobes, enlarged, succulent and coloured in fruit and enclosing the capsule, and often with 2 simple or connate bracteoles at its base *Corolla* ovoid-

tubular or campanulate, greenish-white or reddish, the mouth with 5 spreading or recurved imbricate lobes. *Stamens* 10, included, attached to the base of the corolla; anthers produced at the apex into 2 tubes, and often also with 1 or 2 dorsal spurs; filaments dilated at the base, usually pilose (in some flowers the stamens small and the anthers without appendages). *Ovary* 5-celled, sometimes 5-lobed; style cylindric; stigma simple; ovules many in each cell. *Capsule* 5-celled, dehiscent loculicidally from the apex, enveloped in the succulent calyx; seeds many, minute, sub-globose, angled.—*DISTRIB.* Species about 80, mostly American, a few in the mountains of India and Malaya, a few also in Australia and New Zealand.

Leaves elliptic or oblong-elliptic, sub-acute	..	1. <i>G. fragrantissima</i> .
Leaves broadly ovate, caudate-acuminate	..	2. <i>G. leucocarpa</i> .

1. *GAULTHERIA FRAGRANTISSIMA*, Wall. in As. Research. XIII. 397, with figure. A shrub; young branches twice as thick as a crow-quill, 3-angled, glabrous, pale brown when dry. *Leaves* thickly coriaceous, elliptic or oblong-elliptic, sub-acute, the base cuneate, the edges crenate-serrate; both surfaces pale brown when dry and dull, strongly reticulate, the upper always glabrous, the lower with sparse black scales and occasionally a few scattered hairs; length 1·5 to 2·25 in.; breadth ·75 to 1·2 in.; petioles 15 to ·2 in. *Racemes* axillary, usually longer than the leaves, slender, many-flowered; pedicels ·15 in. long, deflexed, each with a small triangular acute bract at its base and two broader connate ones above its middle. *Flowers* ·2 in. long. *Calyx* campanulate, with 5 deep triangular lobes, puberulous, ·05 in. long or less at first, persistent and increasing to ·2 in. with age. *Corolla* ·15 in. long, widely tubular, the mouth contracted and with 5 short blunt lobes. *Stamens* 10, anthers elongate, included, the apex with 2 deeply bifid apical horns; filaments flattened at the base. *Fruit* depressed-globular, with 5 deep grooves, ·15 in. in diam., minutely pubescent, crowned by the long, persistent, slightly clavate, cylindric style, many-seeded. DC. Prod. VII. 593; Wall. Cat. 765, Wight Ic. 1196; Bot. Mag. t. 5984; Clarke in Hook. f. Fl. Br. Ind. III. 457. *G. fragrans*, Don Prod. 151. *G. punctata*, Blume Bijdr. 850; DC. l.c. 593; Miq. Fl. Leschenaultii*, DC. l.c. 593; Wight Ill. t. 141c, and Ic. 1195. *Andromeda flexuosa*, Moon Cat. Pl. Ceyl. 35. *A. katagherensis*, Hook. Ic. Pl. t. 246. *Leucothoe* (?) *katagherensis*, DC. l.c. 606.

PERAK, on the summit of Gunong Batu Pateh: Wray 879, 1580; *Scortechini* 405 (in part).—*DISTRIB.* British India, Ceylon, Sumatra, Java.

2. *GAULTHERIA LEUCOCARPA*, Blume Bijdr. 856. A slender climber; young branches as thick as a crow-quill, smooth, glabrous, pale-brown when dry. *Leaves* thinly coriaceous, broadly ovate, shortly rather abruptly and sharply caudate-acuminate, the base broad, emarginate or sub-cordate; edges minutely crenate-serrate; upper surface olivaceous-brown when dry, much and boldly reticulate, the nerves minutely hairy; lower surface pale-brown, reticulate, glabrous; main-nerves 2 to 4 pairs, much curved, ascending, distinct on both surfaces; length 2 to 4 in.; breadth 1 to 2 in.; petioles .15 to .2 in. long. *Racemes* slightly supra-axillary, shorter than the leaves, their rachises compressed, glabrous or pubescent, flower-pedicels rather less than .1 in. long in flower, twice as long in fruit, each with a small ovate concave bract at its base. *Flowers* .3 in. long; their pedicels rather more than .1 in. long, deflexed, puberulous, ebracteolate. *Calyx* less than .1 in. long, puberulous, campanulate, with 5 small spreading sub-acute triangular lobes. *Corolla* sub-cylindric, widest at the base and gradually tapering to the mouth, teeth of the mouth very short, blunt, erect. *Stamens* 10; anthers linear, beaked, shorter than the densely hairy tapering filaments. *Ovary* inferior, depressed-hemispheric, crowned by a thick, very concave, marginally grooved disk; style cylindric, tapering to the apex, glabrous. *Fruit* closely adnate to the calyx-tube, 5-celled, many-seeded. Miq. Fl. Ind. Bat. II 1056; Beccari Malesia, I 213.

PERAK, at elevations of 5,000 to 6,700 feet: *Wray* 360, 1573, 4101; *Scortechum* 1348; *King's Collector* 8025.—DISTRIB. Java, Sumatra.

2. *DIPLYCOSIA*, Blume.

Epiphytic shrubs, glabrous or setose, evergreen. *Leaves* coriaceous, alternate, entire or ciliate-serrate. *Flowers* small, axillary, solitary, on pedicels bracteolate at the base. *Calyx* with 5 teeth or lobes, free or half superior, accrescent in fruit, with 2 basal bracteoles connate into a calyculus. *Corolla* campanulate or urceolate, with 5 slightly imbricate recurved lobes. *Stamens* 10, as long as the corolla, and inserted at its base, quite included or with the tips of the anthers exerted; anthers elongate, oblong, produced at the apex into two straight valvularly-dehiscing tubes, but without dorsal appendages. *Disk* cupular, 10-lobed. *Ovary* 5-celled; style filiform; stigma simple; ovules in the cells numerous, attached to axile placentas. *Fruit* superior or half-superior, included in the succulent accrescent calyx, 2-celled, dehiscing by 5 valves, many-seeded. *Seeds* minute, cuneate; testa lax, reticulate; albumen fleshy; embryo axile, cylindric.—DISTRIB. Species about 14, all Indian or Malayan.

Leaves 2 to 5 in. long:—

Calyx-lobes broad, blunt	1. <i>D. latifolia</i> .
Calyx-lobes triangular, acute	2. <i>D. heterophylla</i> .
Leaves 1·5 to 2 in. long	3. <i>D. erythrina</i> .

1. *DIPLYCOSIA LATIFOLIA*, Blume Bijdr. 858. A small glabrous epiphytic shrub; young branches half as thick as a goose-quill, pale and angled when dry. *Leaves* thickly coriaceous, elliptic, the apex shortly and obtusely acuminate, the base cuneate or somewhat rounded, the edges recurved; both surfaces pale yellowish-brown when dry, the upper shining, the lower dull, the midrib bold, much raised on the lower surface, slightly depressed on the upper, main-nerves 2 or 3 pairs, curving upwards, the lower pair usually longer than the others, none of them very prominent on either surface, but more so on the lower than on the upper, reticulations obsolete, length 3 to 5 in.; breadth 1·35 to 3 in.; petioles ·2 to ·3 in. long. *Flowers* ·2 in. long, in axillary fascicles of 3 or 4; their pedicels slender, ·1 to ·15 in. long, inserted 3 or 4 together on minute tubercles surrounded by several small bracts. *Calyx* cupular, ·1 in. across, with 5 broad, spreading, obtuse, ciliolate lobes. *Corolla* ·25 in. long, narrowly campanulate, contracted into a short tube at the base, the limb deeply divided into 5 ovate subacute lobes, closely embracing the ovary. *Stamens* 10, included, anthers narrowly oblong, each with two short apical truncate beaks but no basal processes; the filaments slender in their upper halves, the lower halves dilated and cohering into a tube. *Ovary* 5-celled, the apex broad, concave; style cylindric, about as long as the corolla, stigma small, capitate. *Fruit* 5-celled; seeds numerous, elongate, black, closely enveloped by the persistent corolla. Miq Fl. Ind. Bat. II. 1055.

PERAK, at elevations of 6,700 feet Wray 364, 909. 2204; *Scortechini* 339; *King's Collector* 6797, 8023. SELANGOR: *Rudley* 7556.—
DISTRIB. Java.

2. *DIPLYCOSIA HETEROPHYLLA*, Blume Bijdr. 858. A shrub; young branches as thick as a crow-quill, coarsely rusty-pilose at first, afterwards sub-glabrous, when dry pale and angled. *Leaves* coriaceous, elliptic oblong-elliptic or lanceolate, acute or acuminate at apex and base, the edges recurved; both surfaces olivaceous-brown when dry, the upper sub-reticulate and shining, the lower dull and not reticulate; main-nerves 1 pair following the edge from base to apex, distinct and depressed like the midrib on the upper surface, indistinct on the lower; length 2 to 4 in.; breadth 1 to 2 in., petiole rather more than 2 in. long. *Flowers* axillary, fascicled, rarely solitary, about ·15 in. long, bearing under the calyx 2 broadly reniform, acute, spreading concave bracts.

Calyx campanulate, with 5 broadly triangular erect lobes, closely applied to the fruit *Corolla* widely campanulate, 2 in long, the teeth 5, broad, blunt, short, reflexed *Fruit* superior, sub-rotund, smooth, many seeded, crowned by the fluted style, seeds oblong, concave, compressed, numerous

PERAK *Scortechini*

3 *DIPLYCOSIA ERYTHRINA*, King & Gamble A small tree, 10 to 20 feet high, young branches twice as thick as a crow-quill, glabrous, pale brown when dry, angled *Leaves* thickly coriaceous, elliptic, the apex obtuse or sub-acute, the base acute, the edges recurved, both surfaces when dry pale brown, the upper tinged with olivaceous, not reticulate, quite glabrous, main nerves 2 to 3 pairs, ascending, rather straight, faint on both surfaces, length 1.5 to 2 in, breadth .75 to 1 in, petioles 1 in long, stout *Racemes* terminal, nearly twice as long as the leaves, with a large narrowly elliptic leaf like bract 4 to 6 in long, and 1 to 2 in broad at the base of each flower pedicel, pedicels decurved, 1.5 in long in the flower, rather more than twice as long in the fruit *Flowers* 4 in long *Calyx* 2 in long, campanulate, with 5 spreading triangular acute lobes *Corolla* .35 in long, cylindric, narrowed towards the throat, glabrous, the mouth with 5 short, broad, blunt, recurved lobes *Stamens* 10, slightly exerted, anthers broadly oblong, with neither apical nor basal appendages, the filaments three times as long, broadening towards the base, pubescent *Ovary* inferior, its disk convex, hairy, style slightly exceeding the corolla, cylindric, stigma small, capitate *Fruit* oblong-globose, 2 in in diam, surmounted by the inflexed calyx lobes, sub glabrous, pericarp leathery, cells 5, each with several angular seeds *Vaccinium erythrinum*, Hook. Bot Mag t 4688

4. RHODODENDRON, Linn.

Shrubs or trees, often aromatic often scaly. *Leaves* coriaceous, entire, alternate, rarely sub-opposite or in false whorls, often clustered near the ends of the branches. *Flowers* in terminal fascicles or pseudocorymbs, rarely solitary or axillary, bracts broad, usually caducous, bracteoles linear. *Calyx* persistent, 5-lobed, rarely cupular, sometimes small or obsolete. *Corolla* campanulate, salver-shaped or funnel-shaped, the tube long or short, the limb 5- to 10-lobed. *Stamens* usually 10 but sometimes 5 or 18, anthers oblong, dehiscing by terminal pores. *Ovary* 5- to 20-celled; style long or short, filiform; stigma capitate; ovules numerous in each cell. *Capsule* short or elongate, always woody, 5- to 20-celled, septicidally dehiscent, the valves separating from the placentas from above downwards. *Seeds* numerous, ellipsoid, albuminous, the testa often crested or tailed at one end or at both.—DISTRIB. Species about 160, in mountainous parts of Europe, Asia, and North America.

Corolla widely campanulate, tubular only at the base:—

All parts glabrous, leaves not glaucous and without scales;

capsule 1 to 1·5 in long 1. *R. javanicum*.

Lower surfaces of leaves glaucous, the nerves and reticulations hairy; capsule 5 in. long 2. *R. Wrayi*.

Corolla narrowly campanulate or funnel-shaped, the tube inflated upwards and passing gradually into the limb; flowers

·85 to ·85 in. long.—

Leaves obovate, ·6 to 8 in., and rarely as much as 1 in. long.—

All parts glabrous except the inflorescence 3. *R. pauciflorum*.

All parts more or less scaly 4. *R. perakense*.

Leaves elliptic to elliptic-rotund, from 1·25 to 2 in. long 5. *R. Scortechinii*.

Corolla salver-shaped, the tube much longer than the limb:—

Tube of corolla from 1·25 to 1·6 in. long, and about ·15 in. in diam from base to apex. leaves sub-sessile, whorled, sparsely scaly or glabrous 6. *R. jasminiflorum*.

Tube of corolla 2 in. long, 25 in wide near the base, widening to 4 in. or more near the mouth, petioles 35 to 5 in long

Tube of corolla ·6 in. long and about 2 in. in diam; petioles

·4 to 6 in long 8. *R. malayanum*.

Species imperfectly known 9. *R. dubium*

1. RHODODENDRON JAVANICUM, Benn. Pl Jav. Rar. p 85, t. 19. An epiphytic shrub, 3 to 8 feet long, all parts glabrous, esquamose, young branches rather thinner than a goose-quill. Leaves thinly coriaceous, elliptic or elliptic-oblong, tapering to the acute apex and base; both surfaces brown when dry (the lower rather the lighter), shining, the midrib very prominent; main-nerves about 8 or 10 pairs, interarching rather far from the edge, faint on the upper surface, obsolete on the lower, the intermediate nerves almost as prominent; length 3·5 to 5·5 in.; breadth 1·25 to 2 in., petioles 3 to ·75 in. long. Umbels terminal, 5- to 7-flowered, enveloped in bud in broadly ovate apiculate bracts; pedicels ·5 to 1·5 in.; bracteoles linear. Calyx cupular, less than ·1 in. deep, the mouth wavy. Corolla red, widely campanulate, 1·25 to 1·5 in. long; the tube widely funnel-shaped, cylindric at the base; the limb 1·25 to 1·5 in. wide, with 5 large, broad, blunt spreading lobes. Stamens 10, shorter than the corolla-limb, the filaments slender; the anthers oblong. Ovary glabrous or slightly scaly (hairy in var. *Teysmanni*); style shorter than the stamens, clavate, hemispheric. Capsule narrowly cylindric, 1 to 1·5 in. long, and only 25 in. in diam., glabrous, slightly ridged, crowned by the whole or part of the style. DC. Prod. VII. 721; Bot. Mag. t. 4366; Fl. des Serres (1847), t. 293; Miq. Fl. Ind. Bat. II. 1057; Miq. in Ann. Mus. Lugd. Bat. I. 42, t. 1B; Clarke in Hook. f. Fl. Br. Ind. III. 463. *Vireya javanica*, Blume Bijdr. 2 RHODODENDRON WRAYI, n sp, King & Gamble A bush, young branches as thick as a goose quill, at first sparsely scaly, ultimately glabrous Leaves very coriaceous, elliptic or sub obovate elliptic, the apex sub acute, the base rounded, the edges recurved when dry, upper surface dark brown when dry, glabrous, the midrib much depressed, lower surface white glaucous, with short hairs on the minute reticulations, the main nerves, and the bold midrib, main-nerves 6 to 12 pairs spreading curved, rather dark-coloured and conspicuous on the lower surface invisible on the upper, length 1.75 to 3.5 in, breadth .85 to 1.5 in petioles 4 to 8 in long, stout, scaly Umbels terminal, 8 to 12 flowered, unequal, 5 to 7.5 in long, scaly Flower buds enveloped in obovate oblong apiculate bracts, the inner tomentose externally, the outer glabrous, all deciduous Calyx cupular, 5 toothed, less than 1 in deep Corolla glabrous, white, tinged with pale pink and spotted in the throat, widely campanulate from a tubular base about 1.25 in long, and rather more in breadth at the mouth, lobes of the limb 5, broadly ovate, spreading Stamens 10, filaments shorter than the corolla, glabrous, anthers oblong Ovary hairy, style glabrous, longer than the stamens stigma hemispheric, lobed Capsule only 5 in long and about half as much in diam, not apiculate, tomentose ridged, 5 celled

PERAK, at from 3,500 to 7 000 feet Wray 322, 886, 1569, *Scortechini*

3 RHODODENDRON PAUCIFLORUM, n sp, King & Gamble A small shrub, all parts except the inflorescence glabrous, young branches as thick as a crow quill, smooth Leaves coriaceous, obovate, rarely rotund obovate, the apex broad, usually minutely retuse, the base much narrowed, the edges recurved, upper surface olivaceous, the lower brown when dry, the midrib stout and prominent on the lower surface, depressed on the upper (when dry), main-nerves 3 or 4 pairs, distinct on both surfaces, length 6 to 1 in, breadth 4 to 6.5 in, petioles less than 1 in long Flowers 1 or 2, terminal, their pedicels pubescent, 2.5 to 6 in long, with 1 or 2 loose sheathing deciduous bracts at their bases Calyx cupular, about 1 in long, obscurely toothed Corolla

bright red, infundibuliform-campanulate, .2 to .3 in. wide at the throat and from .5 to .85 in. long; the limb spreading, .5 to .75 in. across, divided into 5, broad, blunt lobes, the tube .35 to .5 in. long. *Capsule* unknown.

PERAK, on Gunong Batu Pateh at an elevation of 4,500 feet: *Wray* 231; *Scortechinii* 345B.

4. RHODODENDRON PERAKENSE, n. sp., King & Gamble. Epiphytic; a small shrub with very scaly young branches as thick as a crow-quill. *Leaves* very coriaceous, obovate or broadly oblanceolate, obtuse, much narrowed to the base, the edges recurved, upper surface olivaceous when dry, at first with a few large scales but ultimately glabrous, reticulate, the midrib depressed; lower surface dark brown, with persistent large dark scales in pits, the midrib very thick and prominent; main-nerves 2 (rarely 3) pairs, spreading, very prominent on the under surface, and, like the midrib, with persistent large dark scales, length .6 to .8 in.; breadth .3 to .4 in., petioles about .1 in. long. *Umbels* terminal, 3- to 5-flowered, covered in bud by broad rounded deciduous bracts with ciliate edges; pedicels 25 to .3 in. long, slightly scaly. *Flowers* .35 to .4 in. long. *Calyx* shallow, cupular, its edges wavy. *Corolla* bright yellow, narrowly campanulate, the mouth with broad, slightly spreading lobes. *Stamens* not exerted; filaments glabrous, anthers short. *Ovary* sub-glabrous, style not exerted; stigma clavate, truncate. *Capsule* .3 in. long, dehiscing by 5 straight untwisted valves.

PERAK, at an elevation of 7,000 feet: *Wray* 1574.

5. RHODODENDRON SCORTECHINII, n. sp., King & Gamble. Shrubby, epiphytic or terrestrial, when the latter sometimes sub-arboreous; young branches half as thick as a goose-quill, smooth, terete. *Leaves* very coriaceous, elliptic to elliptic-rotund or obovate, the apex obtuse and sometimes faintly notched, the base cuneate, the edges recurved; upper surface dark olivaceous-brown when dry, glabrous, shining, depressed-reticulate; lower surface of a uniform warm brown, not reticulate, pitted and minutely scaly; main-nerves 4 to 6 pairs, spreading, depressed on the upper surface, and raised on the lower (sometimes very much so); midrib much depressed on the upper surface and prominent on the lower (when dry); length 1.25 to 2 in.; breadth .8 to 1.25 in.; petioles .1 to .15 in. long, scaly. *Umbels* terminal, 4- to 6-flowered; the pedicels unequal, .5 to 1 in. long (longer in fruit). *Flowers* about .75 in. long. *Calyx* short, cupular, with many rounded lobes. *Corolla* yellow (sometimes very pale), .75 in. long, widely flared, the mouth about .6 in. across, with 5 deep, broadly spreading lobes, the outer surface with many dark-

coloured scales *Stamens* about 8, slightly or not at all exerted, filaments glabrous, anthers elliptic, small. *Ovary* scaly, *style* slightly exerted, glabrous, *stigma* clavate hemispheric, lobed *Capsule* 5 in. long, scaly, shortly apiculate, 5-valved, the valves not twisted in dehiscence.

PERAK, at elevations of 5,000 to 7,000 feet *Scortechini* 401B, 753, *Wray* 311, 1572, 3840, *Cantley*

6 RHODODENDRON JASMINIFLORUM, Hook Bot Mag t 4524 Usually epiphytic, a small shrub, only a few feet high, young branches somewhat less than half as thick as a goose-quill, glabrous *Leaves* in whorls, thickly coriaceous, almost sessile, broadly elliptic to elliptic-rotund, the apex acute, the base rounded and minutely cordate, upper surface when dry pale olivaceous-brown, sometimes with a few small loose scales, the 5 to 7 pairs of spreading main-nerves slightly distinct and (like the midrib) depressed, the lower darker brown, not olivaceous, the nerves very faint but the midrib pale and prominent, length 1.25 to 3 in, breadth 1 to 1.5 in, petiole 1 in long *Umbels* terminal, 8- to 20 flowered, the pedicels filiform, .75 to 1 in long, scaly and hairy, bracteoles membranous, broad, glabrous, .25 to .5 in long *Calyx* a shallow toothed cup, less than 1 in deep *Corolla* white, salver-shaped, the tube narrowly cylindric, sparsely scaly or glabrous outside, about 1.5 in in diam and 1.25 to 1.6 in long (when dry), the limb one-third as long, spreading, with 5 deep, broad, obovate-obtuse or rotund lobes *Stamens* 10, the filaments shortly exerted, thin, pubescent, anthers short, broad *Ovary* 5 celled, pubescent, style longer than the corolla tube, pubescent, stigma depressed capitate, grooved *Capsule* about .75 to 1 in long, narrowly sub-cylindric, much apiculate, ridged, its valves recurved to the base and often twisted *Lemaire*, *Jard Fleur* t 41, *Illust Hortie* (1859) t 203, *Clarke* in *Hook f Fl Br Ind III* 463, *Miq Fl Ind Bat II* 1059

7 RHODODENDRON LONGIFLORUM, Lindl in Journ Hort Soc II 88 with figure Epiphytic, 3 to 6 feet high, young branches half as thick as a goose-quill, densely scaly like the petioles *Leaves* coriaceous, usually elliptic oblong, sometimes elliptic or oblanceolate, subacute, acute, much narrowed to the base, upper surface when dry olivaceous-brown, coarsely and widely reticulate with broad black scales, indistinctly on the depressed midrib, the 5 to 7 pairs of spreading main-nerves faint, lower surface brown, uniformly covered with black at their scales, ultimately glabrous, the main-nerves indistinct but *Corolla*

stout and prominent; length 2·25 to 3·5 in.; breadth ·8 to 1·5 in.; petioles ·35 to ·5 in. long, stout. *Umbels* terminal, 5- to 7-flowered; flower-pedicels ·5 to ·8 in. long, scaly or glabrous. *Flowers* about 2 in. long, glabrous outside, narrowly sub-campanulate, almost salver-shaped. *Calyx* small, cupular, with wavy edges, under ·05 in. deep. *Corolla* red, infundibuliform; its tube about ·25 in. wide near the base but expanding gradually to about 4 in. or more near the mouth, about three times as long as the broadly bluntly 5-lobed limb. *Stamens* 10, the filaments slender, pubescent, slightly exserted; anthers short, blunt. *Ovary* densely hairy like the style; stigma clavate. *Capsule* unknown. Fl. des Serres, V. p. 477-480f.

PERAK: *Scortechini* 385, 553, 1409; *King's Collector* 1864, 5181.—
DISTRIB. Borneo, Sumatra.

8. RHODODENDRON MALAYANUM, Jack in Mal. Misc II. n. 7, 17. An erect straggling shrub, 3 to 15 feet high, all parts more or less glandular and scaly; young branches less than half as thick as a goose-quill. *Leaves* narrowly elliptic or lanceolate, the apex and base acute or sub-acute, the edges recurved when dry, upper surface shining, glabrous, and olivaceous when dry, the 5 to 8 pairs of main-nerves faint, slightly depressed, the midrib much depressed and often scaly; the lower of a deep uniform brownish-cinereous colour and with numerous dark scales, the nerves obsolete but the midrib bold and prominent; length 1·75 to 3·25 in.; breadth ·75 to 1·25 in.; petioles ·4 to ·6 in. long, covered with large black scales. *Umbels* terminal, 3- to 5-flowered. *Flowers* ·8 in. long, their pedicels ·25 to ·35 in. long, slender, scaly. *Calyx* cupular, 5-toothed, less than ·05 in. deep. *Corolla* red, glabrous, ·8 in. long (when dry), salver-shaped, the tube about 2 in. in diam. when dry, about ·6 in. long, the limb about 5 in. across when dry, with 5 broad, blunt, cuneate lobes. *Stamens* 10, their filaments glabrous. *Ovary* 5-celled; style slightly exserted from the throat of the corolla, glabrous; stigma clavate. *Capsule* about 1 in. long, slender, ridged, the valves much recurved, twisted. Hook. Journ. Bot. I. 369; DC. Prod. VII. 725; Bot. Mag. t. 6045; Beccari Malesia, I. 205; Clarke in Hook. f. Fl. Br. Ind III. 463. *R. tubiflorum* and *R. celebicum*, DC. l.c. 725; Miq. in Ann. Mus. 9. RHODODENDRON DUBIUM, n. sp., King & Gamble. A shrub or small

tree; young branches rather thinner than a goose-quill, pale brown when dry, slightly pubescent. *Leaves* coriaceous, glabrous, oblong-elliptic, the apex sub-acute, narrowed from about the middle to the acute or rounded base; both surfaces dull brown when dry and minutely reticulate, the lower pale; main-nerves 15 to 18 pairs, slightly curved, spreading, indistinct on the upper surface, rather distinct on the lower; the midrib very bold and prominent on the lower surface, faint and depressed on the upper; length 3.5 to 6 in.; breadth 1 to 2 in.; petiole .75 to 1 in. long, stout. *Umbels* shortly stalked, 3- to 8-flowered; flower-pedicels unequal, .75 to 1.35 in. long, stout, glabrous. *Flowers* unknown. *Calyx* cupular, .1 in. deep, the mouth wavy. *Ovary* densely rufescent-pubescent. *Capsule* .4 to .7 in. long, rusty-pubescent, very slightly ridged, dehiscing by 5 straight valves, crowned by the persistent pubescent style.

PERAK, at an elevation of 3,400 feet: Wray 233, 460: *Scortechium* 367.

5. PERNETTYOPSIS, King & Gamble, nov. gen.

Small rigid epiphytic shrubs. *Leaves* alternate, on short hispid petioles, minutely sub-crenulate, coriaceous, persistent. *Flowers* solitary or in pairs, axillary, with 2 (rarely 3) rather large bracts at their bases forming an involucre, pedicels decurved in fruit. *Calyx* larger than the corolla, rotate, deeply 5-partite, persistent and unchanged in fruit. *Corolla* urceolate or ovoid, glabrous, the mouth constricted and with 5 short reflexed teeth. *Stamens* 10, free, included, the filaments slightly attached by their somewhat dilated bases to the bottom of the corolla-tube. *Anthers* short, inappendiculate at the back or base, oblong, the apices prolonged into 2 long porously dehiscing tubes. *Ovary* faintly 5-lobed, 5-celled, style columnar, stigma simple; ovules numerous, the placentas on the inner angles of the loculi. *Berry* globose, 5-celled. *Seeds* minute, compressed, numerous, angled, testa crustaceous.—DISTRIB. Species 2, both Malayan.

Calyx densely rusty-tomentose	1	<i>P. malayana</i> .
Calyx glabrous except the tips of the lobes	2	<i>P. sub-glabra</i> .

1. PERNETTYOPSIS MALAYANA, n. sp., King & Gamble. Epiphytic; a bush a foot or two in height; young branches half as thick as a goose-quill, sparsely clothed near their apices with flat adpressed black bristles less than .1 in. long. *Leaves* thickly coriaceous, rotund, obovate to elliptic, the apex broad, minutely apiculate, the base slightly narrowed; upper surface olivaceous-brown when dry, shining, the midrib and main-nerves deeply depressed, the reticulations less so; lower

surface pale dull-brown, with sparse pits, each bearing a short adpressed dark hair, the edges wavy, sub-serrate and adpressed-ciliate; main-nerves 2 or 3 pairs, curving upwards and inwards and interarching, thick but faint on the lower surface; length 1.25 to 2 in.; breadth .75 to 1.35 in.; petioles .1 to .2 in., adpressed-bristly. *Flowers* solitary or in pairs, .4 or .5 in. long, axillary, pedicellate, the pedicels .3 to .4 in. long, twice as long (or more) in fruit, densely rusty-tomentose and recurved when young, erect and less woolly when old. *Involucral bracts* usually 2, thick, about 2 in. long, broad, glabrous inside, rusty-tomentose outside. *Calyx* larger than corolla, rotate, deeply divided into 5 lanceolate, somewhat spreading, lobes; rusty-tomentose outside and sub-glabrous inside. *Corolla* a little shorter than the calyx, glabrous, ovoid-globular, its mouth contracted and with 5 short reflexed teeth. *Stamens* 10, shorter than the corolla, and inserted near its base; *anthers* oblong, broad, cordate and inappending at the base; the apex prolonged into 2 white apically porous tubes; filaments short, bent. *Ovary* sub-globular, laxly and deciduously tomentose, 5-celled; ovules numerous, oblong-concave, attached by the middle to the axillary placentas; style cylindric, slightly grooved, twice as long as the corolla. *Fruit* a berry with scanty pulp, blue when ripe, the seeds red.

PERAK, at elevations of about 6,500 feet, on the summit of Gunong Batu Pateh: *Scortechini* 402, *Wray* 312.

2. *PERNETTYOPSIS SUB-GLABRA*, n. sp., King & Gamble. A small, rigid, epiphytic shrub, young stems slightly thicker than a crow-quill, with a few adpressed bristles near the ends, otherwise glabrous. *Leaves* coriaceous, sub-rotund to elliptic-rotund, minutely apiculate; upper surface dull-brown, minutely reticulate, glabrous, the lower reddish-brown, with a few small adpressed hairs with black bases; main-nerves 3 or 4 pairs, curving upwards, deeply depressed on the upper surface like the midrib, less so on the lower; the edges minutely sub-serrate and sparsely adpressed-ciliate; length .8 to 1.5 in.; breadth .75 to 1.25 in.; petiole .15 to .25 in. long, adpressed-bristly. *Bracts* under the flower 2 or 3, broad, rusty-pubescent externally like the pedicel. *Calyx* longer than the corolla, rotate, with 5 deep lanceolate spreading lobes, glabrous except the rusty-pubescent tips. *Corolla*, stamens, ovary, and style as in *P. malayana*. *Fruit* unknown.

PERAK, at elevations of 5,000 feet. *Scortechini* 752; *King's Collector* 7407.

Order LXVII MONOTROPEÆ

[By D PRAIN]

Leafless, erect, white or coloured root parasites, stems herbaceous, scaly, simple or forked. *Flowers* solitary on the stem or branches, regular, hermaphrodite. *Sepals* usually resembling the scales, 2 to 6, often deciduous. *Petals* 3 to 6. *Stamens* 6 to 12, hypogynous, 2 seriate, filaments filiform or flattened, anthers 2 celled, or by confluence 1-celled. *Ovary* superior, globose or fusiform, 1 to 6 celled, style cylindric, stigma peltate, ovules very many on axial or parietal placentas. *Fruit* capsular, loculicidally 4- to 6 valved, or indehiscent and baccate. *Seeds* very many, minute, testa often loosely sacculate embryo very minute, solid.—**DISTRIB** Genera 9, in dense woods, mostly in temperate regions, all in the northern hemisphere

1 CHEILOTHeca, Hook fil

Small herbs, with erect, simple or forked, white or coloured stems, branches 1 flowered. *Sepals* 3 to 5, narrowly oblong like the uppermost stem scales. *Petals* 3, erect, obtuse. *Stamens* 6, anthers linear, cells 2, confluent at the apex, dehiscing by marginal slits or pores. *Ovary* fusiform, 1 celled, narrowed into the cylindric style, stigma globose conic, usually slightly lobed, placentas 6, parietal, 2 fid, the segments covered throughout by numerous ovules. *Fruit* fleshy, indehiscent, baccate.—**DISTRIB** Species 2, Indo Chinese and Malayan

1 CHEILOTHECA MALAYANA, Scott in Hook fil Icon Plant, XVI t 1564. A root-parasite in dense forest, stem herbaceous, erect simple or 2- to 3 forked, 6 to 9 in high, stoutish. *Scales* ovate oblong, obtuse, imbricated, gradually increasing upwards, lurid purple (*Scortechini*) or waxy white (*Kunstler*). *Flowers* terminal on stem and branches, 1 in long, hidden inside the uppermost scales, and bright yellow (*Kunstler*), or with the tips of the petals exserted and white (*Scortechini*). *Sepals* 5, resembling the uppermost scales, imbricate, linear-oblong, obtuse or sub-acute, glabrous. *Petals* 3, rather larger than the sepals, rounded-cucullate at the apex, externally glabrous, internally more or less pilose. *Stamens* 6, filaments pubescent or pilose, alternately somewhat shorter and longer, anthers short, innate, hippocrepiform, cells confluent at apex, dehiscing by marginal pores. *Ovary* narrowly fusiform, stigma obscurely 4 lobed, placentas 6, parietal. *Fruit* white, fleshy, baccate, 75 in across, tipped by the persistent remains of the stout style. Prain in Journ As Soc Beng LXXIII 2, 205

PERAK, in heavy jungle at about 3,500 feet elevation : *Scortechini* ; *Kunstler* 2715.

According to the field notes recorded by these two careful collectors the specimens gathered by Kunstler differ from those obtained by Scortechini ; in the latter the scales were lurid purple and the flowers were white, in the former the scales were waxy white and the flowers bright yellow. The petals in Kunstler's plant are sparingly minute within and the anthers are nearly twice as long. In other respects, however, the two plants are identical, and the doubt that one feels in connection with the two is not so much as to whether they are conspecific, as it is as to whether this Malayan *Cheilotheca* be really specifically separable from the species from the Khasia Hills upon which Hooker originally based the very distinct genus *Cheilotheca*. The only very tangible differences are that in the Khasia plant only 3 to 4 scales can be with propriety considered sepals, whereas in the Malayan one the number of sepals, as apart from the upper scales or bracts, is 5, and that in the Khasia plant the anthers are long, like linear lips on each side of the connective, whereas in the Malayan plant the anthers are much shorter and distinctly hippocrepiform. The fruit appears to be quite indehiscent, and thus deviates from the fruit in other genera of *Monotropea*, which, so far as is known, is always loculicidally dehiscent.

Order LXVIII EPACRIDÆ.

Shrubs or small trees. *Leaves* alternate, rarely sub-opposite or pseudo-verticillate, articulated with the branches, sometimes fascicled or imbricate, coriaceous or rigid, persistent, entire, with parallel longitudinal nerves ; ex-stipulate. *Flowers* hermaphrodite, solitary and axillary or terminal, spicate or racemose, generally white or red, usually bracteate and usually 2-bracteolate, the bracteoles similar to the sepals. *Calyx* 4- to 5-partite, the segments coriaceous, striate, imbricate, persistent. *Corolla* 4- to 5-fid, monopetalous, deciduous or sometimes marcescent ; the tube short or long, often cylindric or funnel-shaped ; the lobes short or long, erect, patent or recurved, imbricate or valvate, persistent. *Stamens* 5, rarely 4, hypogynous or epipetalous, the filaments short or long, filiform or flattened, free ; the anthers dorsifixed, oblong, dehiscent along their whole length by a single slit, 1-celled or spuriously 2-celled. *Disk* cupular, annular or of simple or bifid scales equal in number to the carpels. *Ovary* globose or ovoid, 1- to 10-celled ; style terminal, short or long, filiform ; stigmas punctiform, discoid or lobulate, sometimes annular or indusiate ; ovules in each cell solitary, pendulous, rarely erect ; or many on a central placenta. *Fruit* drupaceous, with 2 to 5 1-seeded pyrenes ; or a many-seeded capsule. *Seeds* small, with fleshy albumen, testa membranaceous ; embryo axile, orthotropous, smooth ; cotyledons short ; radicle elongate, near the hilum.—**DISTRIB.** About 320 species, nearly all Australian, a few in

New Caledonia and New Zealand, the Pacific Islands, or the Malay Archipelago.

LEUCOPOGON, Br.

Shrubs, erect or prostrate, branching, rarely trees. *Leaves* various, sessile or petiolate, striate-nerved. *Flowers* small, white, in axillary or terminal spikes or racemes, the rachis ending in an imperfect flower; bract 1, bracteoles 2 to 3 under the calyx. *Calyx* 5-partite. *Corolla*-tube funnel-shaped or campanulate; lobes 5, valvate in bud, patent or upper part recurved, hairy within. *Stamens* fixed to the top of the corolla-tube, filaments short, filiform, anthers dorsifixed, included or semi-exsert, linear or oblong. *Ovary* 2- to 5-celled; style short or elongated, terminal; stigma sub-capitate; ovules solitary in each cell, pendulous. *Fruit* drupaceous, with a crustaceous or bony endocarp, 1- to 5-celled, cells 1-seeded. *Seeds* small.—*DISTRIB.* About 130 species, all but about 20 Australian, the rest in New Zealand, the Pacific Islands, and the Malay Archipelago.

LEUCOPOGON MALAYANUS, Jack in Mal. Misc. I. v. 20, and Hook. Bot. Misc. II. 71. A small branching shrub, reaching 3 to 6 feet in height, branches grey, marked by the scars of fallen leaves, branchlets very leafy; branch-buds elongate, supported by imbricate parallel-veined ciliate deciduous scales. *Leaves* alternate, sessile, stiff, entire, narrowly lanceolate, acute and mucronate at apex, 1.5 to 2.5 in. long, 3 to 5 in. broad, shining and convex above, dull or glaucous beneath. ciliate when young; midrib none, nerves very close, slender, longitudinally parallel, in old leaves scarcely visible. *Flowers* in short axillary 3- to 7-flowered spikes, .5 in. long, the last flower imperfect; rachis villous, sometimes flexuose; bracts ovate, recurved, bracteoles 2, ovate, acute, ciliate, closely embracing the calyx. *Calyx*-lobes 5, crustaceous, elliptic-oblong, .125 in. long, ciliate. *Corolla* campanulate, .1 to .2 in. long; lobes 5, .1 to .15 in. long, spreading, villous within. *Hypogynous scales* 5, minute, free, obtuse. *Stamens* 5, short, alternate with the corolla-lobes, filaments inserted near the top of the anthers, anthers curved, pendent, opening longitudinally; pollen globose. *Ovary* 5-celled, ovule 1 in each cell, oblong, style erect, .05 in. long, villous; stigma sub-globose. *Fruit* a 5-celled baccate drupe, .1 to .2 in. in diam., each cell 1-seeded. *Seeds* not seen. Wall. Cat 3720, Wall in Roxb Fl. Ind., ed. Carey and Wall. II. 301; G. Don Gen. Syst. III. 777; DC. Prod. VII. 744; Miq. Fl. Ind. Bat. II. 1052; Kurz in Journ. As. Soc. Beng. XLVI. ii. 217, and For. [By C. B. CLARKE.]

Herbs, erect, twining, or floating; glabrous except *Microphium*. *Leaves* entire; those of the lower main stem opposite except in the floating plants. *Inflorescence* in 2- to 3-divided cymes, or peduncles 1-flowered. *Flowers* symmetric in calyx, corolla, stamens (except in *Canscora*). *Calyx* tubular or campanulate; lobes 4 to 5 (or by accident (?) 6), oblong or linear. *Corolla* gamopetalous, tube long or short; lobes as many as calyx-segments, usually dextrorsely contorted in the bud. *Stamens* as many as the corolla-segments, all perfect (except in

Canscora); filaments on the corolla-tube; anthers of 2 parallel cells. *Ovary* 1- (or imperfectly 2-) celled; of 2 carpels, superior or stalked or slightly inferior; style linear or oblong; stigma capitate or shortly 2-lobed; placentas parietal, sometimes much intruded, partly coalescing in the axis; ovules very many. *Capsule* dehiscent or indehiscent, not rarely becoming more or less succulent, seeds many, albuminous.—**DISTRIB** Species 700; found in all countries.

Erect herbs; lower stem leaves (often all the leaves) opposite —

Glabrous; corolla blue	1	EXACUM
Pubescent all over	2	MICRORRHIZUM
Glabrous; corolla rose-coloured or white . . .	3	CANSOCORA

Twine; corolla narrow, more than 1 in. long .. . 4. CRAWIURIDIA

Floating (or creeping on mud); leaves round-ovate —

Peduncles solitary, from the axil of a long-petioled leaf	5	VILLARISIA.
Peduncles clustered, from the axil of a sessile leaf .	6	LIMNANTHEUM.

1 EXACUM, Linn.

Glabrous erect herbs. *Leaves* opposite, usually 3- to 5 nerved. *Flowers* panicle, 4- to 5-merous. *Calyx* deeply lobed. *Corolla* rotate, tube globose, lobes ovate or oblong, blue or white. *Stamens* attached in the corolla throat; anthers large, of two oblong cells, which open first by terminal pores or short slits. *Ovary* more or less completely 2-celled; style linear; stigma sub-capitate. *Capsule* globose, septically 2-valved, seeds numerous, minute, cuboid.—**DISTRIB.** Species 30, whereof 20 Indian, the others in China, Malaya, Africa.

Stem 1 to 4 feet; corolla-lobes $\frac{1}{2}$ in. long, azure blue ..	1	<i>E. tetragonum</i>
Stem 4 to 12 in., corolla-lobes $\frac{1}{2}$ to $\frac{1}{4}$ in. long, pale blue ..	2	<i>E. pedunculatum</i> .

1. EXACUM TETRAGONUM, var. β *stylosa*, C. B. Clarke in Hook. fil. Fl. Br. Ind. IV. 95. *Stem* 1 to 4 feet, quadrangular. *Leaves* 5 by 1 in., sessile, lanceolate, 3- to 5-nerved. *Panicle* many-flowered, bracts at its divisions .25 to .5 in. long, linear, flowers 4-merous, or rarely 5-merous. *Calyx-lobes* .25 in. long, ovate acuminate. *Corolla-lobes* .5 in. long, broadly elliptic acute, full azure-blue. *Anthers* .2 in. long, straight. *Style* .5 in. long. *Capsule* globose, .25 in. in diam. *E. stylosum* (sp.), Griseb. in DC. Prod. IX. 46. *E. chronioides*, Griseb. Gent. 109, in DC. Prod. IX. 45. *E. Horsfieldianum*, Miq. Fl. Ind. Bat. II. 556. *E. sulcatum*, C. B. Clarke in Journ. Linn. Soc. XIV. 425 (not of Roxb.). *E. tetragonum*, Vidal Fl. Filip. 191.

SINGAPORE. Lobb 473.—**DISTRIB.** From Burma to Borneo and the Philippines.

2. EXACUM PEDUNCULATUM, Linn. Sp. Pl. ed. I. 112; ed. II. 163.

Stem 4 to 12 in., quadrangular, often much-branched. *Leaves* 1·5 by ·5 in., sub-sessile, elliptic or lanceolate, 3 nerved. *Panicle* usually compound, many-flowered; lower bracts similar to the leaves, by degrees smaller, to the upper less than ·25 in. long; flowers 4-merous. *Calyx-lobes* 17 to ·2 in. long, ovate, acute, winged. *Corolla-lobes* ·25 to ·35 in. long, pale blue. *Anthers* ·12 in. long, dehiscing finally half-way down. *Capsule* globose, ·17 in. in diam. DC. Prod. IX. 46; Hook. fil. Fl. Br. Ind. IV. 97; Trimen, Fl. Ceyl. III. 182. *E. pedunculare*, Arn. in Ann. Sc. Nat. ser. 2, XI. 176, Wight Ic. t. 336. *E. sulcatum*, Roxb. Fl. Ind. ed. Carey & Wall I. 415, DC. Prod. IX. 46 (*syn. excl.*).

SINGAPORE. Lobb 358.—DISTRIB. From Oudh and Bengal to Ceylon and Pegu.

2. MICRORPHIUM, C. B. Clarke, gen. nov.

A pubescent erect herb, repeatedly branched. *Leaves* alternate except a few distant opposite pairs on the main stem. *Flowers* numerous, solitary, pedicelled, in unilateral repeatedly branched cymes. *Calyx* short-cylindric, terete, sub-2-lipped, almost leathery, lobes 5, short. *Corolla* small; tube campanulate, lobes 5, equal, dextrorsely contorted in the bud. *Stamens* 5, equal, perfect; anthers exsert, cells oblong, parallel, dehiscing by a slit their whole length. *Ovary* 1-celled; placentas intruded, style linear, stigma sub-capitate. *Seeds* very small, ovoid, not angular.—DISTRIB. Species 1, Malayan.

1. MICRORPHIUM PUBESCENS, C. B. Clarke, sp. nov. *Stem*, leaves, inflorescence, calyx covered with a short thick grey pubescence. *Stem* (upper part seen) 14 in. long, the lower part with opposite pairs of leaves (and branches) 2·5 in. apart, all the other numerous stem-divisions and leaves alternate. *Leaves* of the main stem ·75 by ·35 in., elliptic, entire, obtuse, narrowed at base; petiole 0 to ·1 in. long; the other leaves similar but smaller. *Pedicels* ·25 in. long. *Calyx* ·2 in. long, opening at first in two lips, one emarginate 2-nerved, the other ovate 3-nerved. *Corolla-tube* broad, lobes short, round, soon reflexed over the calyx-margin. *Capsule* ovoid, 2 in. long, dry; seeds 200 μ in diam. *Pollen* globose, 25 μ in diam.

KEDAH. Curtis 2528. "Height 1 to 2 feet; petals white; anthers yellow" (Curtis).

3. CANSORA, Lam.

Herbs, dichotomously branched, glabrous or very nearly so. *Leaves* opposite. *Flowers* mostly cymose. *Calyx* large, membranous, tubular, often winged; teeth much shorter than the tube. *Corolla-tube* cylindric, lobes 4, unequal (except in *C. pentanthera*). *Ovary* 1-celled;

placentas intruded; style linear, lobes 2, hemispheric. *Capsule* 2-valved or breaking up irregularly. *Seeds* very small, polyhedral.—DISTRIB. Species about 25, extending from Africa through South-east Asia to Australia.

One stamen only perfect; corolla irregular	1. <i>C. diffusa</i> .
All stamens perfect; corolla regular	2. <i>C. pentanthera</i> .

Sub-genus 1. EU-CANSCORA. Calyx 4-toothed. Corolla sub-bilabiate. Stamens 4; 1 larger perfect, 3 shorter smaller or obsolete.

1. CANSCORA DIFFUSA, R. Brown, Prodr. (1810) 451 in Obs. Erect annual, 4 to 20 in., much branched upwards. *Leaves* 1·5 by 5 in., lanceolate or elliptic, 3-nerved, often petioled, upper smaller. *Cyme* diffuse; lower bracts at its divisions ·5 in. long, ovate, upper much smaller. *Calyx* $\frac{1}{2}$ in long; teeth lanceolate-linear. *Corolla* rose-coloured; tube $\frac{1}{8}$ in., lobes $\frac{1}{8}$ in. *Capsule* oblong, as long as the calyx. DC. Prod. IX. 64, Benth. Fl. Austral. IV. 372; Hook. fil. Fl. Br. Ind. IV. 103; Trimen Fl. Ceyl., III. 184. *Exacum diffusum*, Willd. Sp. Pl. I. 637. *Orthostemon erectum*, R. Br. Prod. 451; DC. l.c. 63. *O. Hugelinii*, DC. l.c. 63. *Pladera virgata*, Roxb. Fl. Ind. ed. Carey & Wall. I. 417; Hook. Bot. Misc. III. 88 t. 25.

SINGAPORE: Lobb 345. A common species, extending from East Tropical Africa throughout India to Australia and the Philippines.

Sub-genus 2. PENTANTHERA. Stamens 5 (or 6), equal, anthers all similar, perfect. Corolla-lobes 5 (or sometimes 6), equal, dextrorsely contorted in the bud.

2. CANSCORA PENTANTHERA, C. B. Clarke, sp. nov. A slender under-shrub, 18 in. high, glabrous except the minutely gland-puberulous (young) petioles; stem terete with many opposite branches. *Leaves* opposite, 3 by 1 in., ovate-lanceolate, acuminate, attenuate at the base; petiole 0 to ·2 in. *Cymes* loosely, repeatedly dichotomous, often carrying 10 flowers, bracts at the divisions similar to the leaves, but gradually smaller, becoming sessile, a few pairs connate into perfoliate bracts. *Flowers* solitary, ·5 in. long, on pedicels ·12 to ·5 in. long. *Calyx* 35 in. long, membranous; tube triquetrous, narrowly 3-winged, ovoid-cylindric, lobes less than one-third the length of the tube, ovate, imbricate, apiculate. *Corolla* white (*Ridley*); tube as long as the calyx, lobes 5 (or not rarely 6), oblong-elliptic, equal, sub-erect, contorted dextrorsely (*sensu Lanneano*) in the bud. *Stamens* 5 (or 6 in the 6-lobed corolla), equal, perfect; filaments inserted in the upper part of the corolla-tube from which the erect anthers are half-exsert; anther-cells 2, oblong or linear-oblong, opening by longitudinal slits, pollen 25 by 20 μ , ellipsoid, irregularly longitudinally striate. *Ovary* oblong, when young thin,

almost succulent; placentas much intruded; style linear, with 2 round stigmatic lobes. *Capsule* broad-ellipsoid, crustaceous, almost succulent (dehiscence not clear); style persistent; seeds 300 μ in diam., ovoid, somewhat angular, brown.

PERAK, Waterloo: *Robertson* 9088. SELANGOR: Sua Batu, *Ridley*; Gua Batu, *Ridley* 8218. KEDAH: Langkau, *Curtis* 2516.

THIS species, the only one in the sub-genus, differs in the aestivation of the corolla, the number of the stamens, the anthers all equal, the persistent style, from the characters assigned to *Canscora*.

4. CRAWFURDIA, Wall.

Glabrous twiners. *Leaves* opposite, petioled, 3-nerved. *Flowers* showy, axillary. *Calyx* tubular; teeth 5 (or 4), long, often very long. *Corolla* long, tubular-funnel-shaped; lobes 5, short. *Stamens* 5 on the corolla-tube; anthers oblong. *Ovary* stalked, 1-celled, placentas parietal; style linear, stigmas 2, short-oblong. *Fruit* globose or ellipsoid, berried or capsular; seeds many, 2- (or imperfectly 3-) angled.—DISTRIB. Species 10–12, extending from India to Manchuria

1. CRAWFURDIA BLUMII, G. Don Syst. IV. 200. *Stem* often 3 to 4 feet long. *Leaves* (blade) 1.5 by .75 in., ovate-lanceolate, acute, entire; base rounded or narrowed; petiole .35 in. *Flowers* axillary, solitary, sub-sessile, or the pedicel .25 to 1.5 in. long. *Calyx* narrow, angular; tube .2 in. long, teeth .25 in. long, linear. *Corolla* 1.25 to 1.5 in. long, light purple. *Fruit* .6 in. long, ellipsoid, purple, succulent. *Seeds* imperfectly 3-angular, angles (or 2 of them) often narrowly winged. Miq. Fl. Ind. Bat. v. II. 561 (*Blume*). *C. trinervis*, Hassk. Cat. Hort. Bogor 128, in Tidjch. Nat. Gesch. X. 126. *Tripterospermum trinerve*, Blume Bijdr. 849, Griseb. in DC. Prod. IX. p. 121. [Cf. C. B. Clarke in Fl. Br. Ind. IX. p. 107, sub *Crawfordia* affini, Wallich.]

PAHANG, 7,000 feet alt. . Wray 1570.—DISTRIB. Sumatra, Java.

5. VILLARSIA, Vent.

Floating, glabrous herbs. *Leaves* long-petioled, ovate, entire or sinuate. *Peduncles* solitary, 1- (or many-) flowered. *Calyx* deeply 5-lobed. *Corolla* broadly campanulate; tube short, lobes sub-rotate. *Stamens* 5; filaments filiform, on the corolla-tube; anthers sagittate. *Ovary* 1-celled; style short; stigma of 2 small lobes; placentas parietal. *Capsule* globose, 1-celled, 4-valved at the apex; seeds several (or numerous).—DISTRIB. Species 12, in Africa or in Australia, except the following Malay species.

1. VILLARSIA AURANTIACA, Ridley MS. A small herb; stems 2 in.

long, with leaves and peduncles at the nodes. *Leaves* all long-petioled, .35 in. in diam., widely excavated at the base, ovate, margin sinuate; petiole .5 to 2 in. long. *Peduncles* solitary, 1 to 2 in. long, ebracteate, 1-flowered. *Calyx* .17 in. long, lobes oblong. *Corolla* .35 in. in diam.

PAHANG: Kwala Pahar, Ridley.

This example shows no fruit, and the flowers are not in a state for dissection. This collection has been supposed to be near *Limnanthemum parvifolium*, Griseb., which has smaller flowers, with the peduncles (several) clustered in the axil of a sessile leaf. This plant of Ridley appears to come near the Swan River *Villarsia violifolia*, F. Muell.

6 LIMNANTHEMUM, S. P. Gmel.

Peduncles several in the axil of a nearly sessile leaf. *Capsule* thin, breaking up irregularly, otherwise as *Villarsia*.—DISTRIB. Species 20, dispersed throughout the Tropical and Temperate Zones

1. LIMNANTHEMUM PARVIFOLIUM, Griseb in DC. Prod. IX. 141. *Stem* 3 to 8 in. long, slender, with distant nodes. *Leaf* 75 in., round, ovate, excavated at base, gland-dotted on the under surface; petiole scarcely .08 in. *Peduncles* clustered, 0 to 25 in. long. *Calyx-lobes* .08 in. long, lanceolate, acute. *Corolla-lobes* .17 in. long, white, fimbriate. *Capsule* .17 in. long, ellipsoid, sessile, about 10-seeded, seeds smooth but with capitate papillæ sparsely irregularly scattered. Hook. fil. Fl. Brit. Ind. IV. 132, Trimen, Fl. Ceyl. III. 189

SINGAPORE. *Cuming* 2280 (in Mus. Brit.)—DISTRIB. Malabar, Ceylon, Chittagong to Tavoy.

VOL LXXIV., PART II—Extra Number, 1905

Materials for a Flora of the Malayan Peninsula.—By SIR GEORGE KING, K.C.I.E., LL.D., F.R.S., F.L.S., late Superintendent of the Royal Botanic Garden, Calcutta, and J. SYKES GAMBLE, Esq., C.I.E., M.A., F.R.S., F.L.S., late of the Indian Forest Department.

No. 17.

This contribution embraces the Natural Orders *Myrsinaceæ*, *Sapotaceæ*, *Ebenaceæ*, *Styraceæ*, *Oleaceæ*, which are given under the joint names of the authors, the actual descriptions having been prepared by Sir George King for the *Ebenaceæ* and by Mr. J. S. Gamble for the rest

The 5 Natural Orders comprise 24 genera and 221 species. There are no new genera, but the number of new species reaches 103.

Order LXX. MYRSINACEÆ.

Trees, shrubs (erect or climbing), or undershrubs, generally evergreen. *Leaves* usually alternate, sometimes opposite, entire dentate or crenate, often dotted with pellucid round or linear resinous glands. *Stipules* none. *Flowers* regular, usually small, white or reddish; hermaphrodite or occasionally polygamo-diœcious; generally in panicles, racemes or umbels. *Calyx* inferior (in *Mæsa* adnate to the ovary), 4-6-lobed, the lobes valvate or imbricate, sometimes enlarged in fruit, persistent, often marked with glandular dots or lines. *Corolla* 4-5-lobed; the tube usually very short, sometimes wanting, lobes twisted to the left in the bud, usually overlapping to the right, rarely

valvate, often gland-dotted or -striate. *Stamens* opposite to the corolla-lobes and equal to them in number, free or adnate to the lobes or in an inner ring, generally erect; filaments long or short; anthers opening by slits, usually introrsely, sometimes septate as in *Ægiceras* and *Ardisia littoralis*, sometimes with terminal openings as well, free or adherent by their edges; the connective often thickened and produced, sometimes glandular; staminodes sometimes present, though not in Malay species. *Ovary* globose, ovoid or oblong, free (in *Mæsa* adherent to the calyx-tube), 1-celled, narrowed into or surmounted by the style; style filiform or columnar, stigma usually simple; ovules few or many, inserted on or immersed in a free usually globose central placenta. *Fruit* usually small, globose (in *Ægiceras* linear, curved, acuminate); epicarp fleshy, mesocarp crustaceous, endocarp membranous, separable; usually one- rarely several-seeded (as in *Mæsa*), indehiscent. *Seeds* usually globose, hollowed at the base: in *Mæsa* many and angled; albumen pitted or ruminate; embryo transverse, cylindric; radicle usually elongate — **DISTRIB.** Tropical or sub-tropical regions of both hemispheres, chiefly in Asia and South America; genera 32, species upwards of 900 (according to Mez Monog. *Myrsinæ*).

Calyx-tube adnate to the ovary; fruit many-seeded (Tribe I. **MÆSÆ**)

Trees or shrubs; calyx 2-bracteolate; flowers in simple or compound racemes 1. **MÆSA**.

Calyx tube free from the ovary, fruit one-seeded (Tribe II. **EUMYRSINÆ**) —

Fruit round, anther-cells usually opening by slits, rarely septate —

Corolla-lobes imbricate in bud —

Flowers in axillary or lateral fascicles; trees or shrubs . . . 2. **MYRSINÆ**

Flowers in racemes or panicles; climbing plants, rarely shrubs 3. **EMBELIA**.

Corolla-lobes valvate in bud, flowers in paniculate spike like racemes, small shrubs with parallel-veined leaves . . . 4. **LARISIA**.

Corolla lobes contorted in bud. —

Anthers sagittate, rarely septate, corolla lobes overlapping to the right 5. **ARDISIA**

Anthers sagittate lanceolate, the connective produced in a membranous wing, corolla-lobes overlapping to the left . . . 6. **ANISTROPHÆ**

Fruit elongate, cylindric, long-pointed; anthers markedly septate 7. **ÆGICERAS**.

1. **MÆSA**, Forsk.

Trees or shrubs, erect or straggling. *Leaves* entire, dentate or serrate, usually pellucid-punctate, sometimes with resinous lines. *Flowers* hermaphrodite or unisexual, in terminal or axillary racemes, the pedicels bracteate. *Calyx* bibracteolate, 4-5-lobed; lobes persistent,

imbricate, the tube adnate to the ovary, sometimes with resinous lines *Corolla* shortly campanulate, 4-5-lobed, the lobes usually as long as the tube or rather shorter, rounded with inflexed tips, sometimes resinous-lineate *Stamens* 4 or 5 inserted on the corolla tube, filaments short, anthers introrse, oblong-cordate *Ovary* adnate to the calyx-tube, style short, stigma small, entire or shortly 3-5-lobed, ovules numerous, placenta globose *Fruit* small, dry or fleshy, ovoid or subturbinate, crowned with the persistent style, many seeded *Seeds* numerous, angular, immersed in hollows of the placenta, and arranged around it with hexagonal surfaces, embryo small, oblique or transverse, cotyledons narrowly ovate—**DISTRIB** Species over 100 (according to Mez), chiefly in the tropical regions of the Old World, a few in Australia and the Pacific Islands, all the Malayan species belonging to sub-genus *Eumæsa*, Mez

Leaves entire —

Flowers in large terminal leafy panicles, branches of the inflorescence pubescent

1 *M macrothyrsa*

Flowers in large axillary or pseudo terminal panicles of racemes, branches of inflorescence glabrous

2 *M lamentacea*

Leaves faintly lobed —

Leaves very slightly dentate almost coriaceous under 3 in long, midrib and main nerves very prominent, inflorescence as long as or only a little shorter than leaves

3 *M impressinervis*

Leaves membranous, over 4 in long —

Leaves pale when dry under 3 in broad, distantly dentate, inflorescence longer than the petiole

4 *M striata*

Leaves dull green when dry, over 4 in broad, inflorescence scarcely longer than the petiole

5 *M pahangiana*

Leaves prominently dentate

6 *M indica*

1 *MÆSA MACROTHYRSA*, Miq Fl Ind Bat. Suppl 573 (1862) A slender climbing shrub reaching 30 to 50 feet in length, branches brown, somewhat angled and flexuose, striate *Leaves* entire, chartaceous, elliptic, shortly bluntly acuminate at apex, rounded at base, smooth and dull on both surfaces, 3 to 4 in long, 1 5 to 2 in broad, midrib prominent, impressed above, main-nerves 5 to 7 pairs, distant, starting from the midrib at about 60° and curving upwards, secondary nerves and reticulations indistinct, petiole 5 to 7 in long, channelled above by the decurrent margins of the blade *Inflorescence* a large leafy terminal many-flowered tripinnate panicle, the branches rusty pubescent, pedicels about 0.25 in long, supported by a slightly shorter ovate acute bract, and bearing 2 similar bracteoles below the flowers *Calyx* superior, cupular, lobes 4, occasionally 5, rounded, denticulate, 0.4 in long, gland-dotted, tube very short *Corolla* dull white or pink, longer than calyx, tube as long as lobes, lobes 4 or 5, rounded, often with

small lobules between, denticulate, with about 3 to 4 glandular lineoles. *Stamens* inserted near the base of the corolla-tube; anthers globose; filaments about twice as long as anthers. *Ovary* rounded, depressed, crowned with a short cylindric style and obtusely 3-4-lobed stigma. *Fruit* very small, .05 in. in diam., globose, glabrous, faintly striate, crowned about one-third of the way down with the persistent calyx-teeth. *Seeds* very minute, angled. Scheff. Myrs. 29; Mez Monog Myrs. 49. *M. floribunda*, Scheff. Myrs. 18. *M. Korthalsiana*, Scheff. Myrs. 18 (?)

PERAK: Wray 2684; Scortechini 122, 1655; King's Collector 725, 2722, 3777, 4968, 5326.—DISTRIB. Sumatra, Korthals, Beccari 887; Borneo, de Vriese, Teysmann.

We have always found the flowers tetramerous, as described by Miquel and Scheffer. Mez describes them as either 4- or 5-merous. This is a well-marked species on account of its large terminal inflorescence, whose pubescent branches easily distinguish it from those occasional forms of *M. ramentacea* which have part of the inflorescence pseudo-terminal

2. *MÆSA RAMENTACEA*, Wall. in Roxb. Fl. Ind. ed. Carey & Wall. II. 231 (1824). A large shrub or small tree, usually branched from the base and sending out many straggling or climbing branches often 30 to 40 feet long or more, branchlets smooth, somewhat striate when dry. *Leaves* entire, chartaceous, ovate-lanceolate or elliptic, acuminate at apex, rounded or cordate at base; 3 to 8 in. long, 1 5 to 4 in. broad; smooth on both surfaces and generally shining above, midrib prominent, often impressed above, main-nerves slender, distant, 5 to 10 pairs, starting at 45° with the midrib and curved upwards, secondary nerves and reticulations not apparent: petiole .3 to .5 in. long, slightly winged by the decurrent margins of the blade, which are often connivent above. *Inflorescence* axillary or sometimes pseudo-terminal, glabrous, many-flowered, consisting of more or less closely packed racemes arranged in bipinnate panicles, shorter or longer than the leaves; pedicels 1 to .15 in. long, slender, supported by a minute lanceolate bract and with 2 very minute ovate-lanceolate bracteoles below the flower; buds minute, globose, depressed at top. *Calyx* superior, cupular; tube very short, about .025 in. long; lobes 5, ovate, faintly ciliate, as long as the tube. *Corolla* .075 in. long, lobes half the length, ovate or ovate-reniform, edges undulate, with a few brown glandular lineoles. *Stamens* short, longer in ♀ flowers, inserted a little below the top of the tube; anthers rounded, filaments as long as the anthers, dorsifixed. *Ovary* in ♀ flowers adnate to the base of the calyx-tube, style short, stigma minutely 4-lobed, ovules many. *Fruit* globose, .1 to .15 in. long, crowned with the persistent teeth of the calyx; seeds minute, angled,

albuminous, embryo small, transverse. A. DC. in Trans. Linn. Soc. XVII. 139, Prod. VIII. 77; Scheff. Myrs. 15; Miq. Fl. Ind. Bat. II. 1006; Kurz in Journ. As. Soc. Beng. XLVI. ii. 220; For. Fl. II. 99; Clarke in Hook. f. Fl. Br. Ind. III. 508; Koord. & Val. Bijdr. V. 218; Mez Monog. Myrs. 27; Prain Beng. Pl. 642. *M. ovata*, A. DC. l.c. 138, t. 4, Prod. l.c. 77; Scheff. Myrs. 14. *M. lanceolata*, Don Prod. 148. *M. acuminata*, *missionis*, and *glabra*, DC. Prod. l.c. 77, 78, 82. *M. sumatrana*, Scheff. Myrs. 15. *Bæobotrys ramentacea*, Roxb. Hort. Beng. 16, Fl. Ind. I. 558; Wall. Cat. 2322. *B. ovata*, Wall. Cat. 2324. *B. glabra*, Roxb. Fl. Ind. I. 560. *B. fragrans*, Wall. Cat. 2323. *B. (?) missionis*, Wall. Cat. 6523.

* KEDAH: Langkawi, Curtis 2554, 3409. PENANG: Wallich 2324, Mangay (K D.) 1001; J. Scott, G. King; Phillips; Deschamps. PERAK: Scortechini 382A, 606B, 628; Wray 1286, 1291, 1912, 2363, 2787; King's Collector 171, 1222, 1909, 2788, 3883, 4144, 4281, 4497, 4915, 5088, 5113; Curtis. PAHANG: Ridley 2175. JOHORE: Lake & Kelsall 4035; G. King. SINGAPORE: Schomburgk 91; Lobb 324; T. Anderson 126, Ridley 2064, 2805; Goodenough 1644; Hullett 38, 56, 885, 887.—DISTRIB. Eastern Bengal and Burma, Andaman and Nicobar Islands, Sumatra, Java, Borneo.

We follow Mez in not keeping up the var. *ovata*. The large mass of material available shows clearly that in shape of leaf and in inflorescence the variation is regular, and that the form with cordate long-acuminate leaves passes gradually into that with ovate broad short-acuminate leaves, and that similarly the inflorescence changes. A monstrous form with moss-like inflorescence similar to those often seen in India on *M. Chama* and other species, is not uncommon.

3. *MÆSA IMPRESSINERVIS*, King & Gamble, n. sp. A bush or small tree, branches half as thick as a goosequill, glabrous, pale brown, and prominently longitudinally wrinkled when dry. Leaves thinly coriaceous, elliptic, shortly acuminate at apex, cuneate at base, entire or very faintly dentate only near the apex, margins recurved when dry, reticulate and shining above, dull and paler beneath; 3 to 3·5 in. long, 1·25 to 1·75 in. broad; midrib prominent, impressed above, main-nerves 7 or 8 pairs, also prominently impressed above and prominently raised on the lower surface, arching upwards to meet near the margin; secondary nerves few, inconspicuous as are the reticulations, petiole ·2 to ·25 in. long, bordered by the decurrent edges of the blade, which are almost connivent above. Inflorescence an axillary raceme, simple or with one short branch near the base, 1·5 to 2·5 in. long, and so shorter

than the leaves; pedicels slender, .1 in. long, with a .06 in. long subulate bract at the base and 2 similar bracteoles beneath the flower; buds nearly globose. *Calyx* superior, .05 in. in depth, cupular, with 5 imbricate broad incurved concave glabrous lobes. *Corolla* rotate with 5 imbricate rounded broad lobes, .1 in. deep; tube rather longer than lobes. *Stamens* 5, inserted on the base of the corolla, anthers globular; filaments flattened, longer than the anthers. *Ovary* inferior, depressed, surmounted by a flattened lobed stigma, 1-celled; ovules many, cuneate, on a central basal placenta. *Fruit* unknown.

PERAK: Gunong Bubu, at 5,000 feet elevation; Wray 3850, 3886.

4. *MÆSA STRIATA*, Mez Monog. Myrs. 42 (1901). A shrub or small tree; branches smooth, reddish, with scattered lenticels. *Leaves* membranous; rather variable, elliptic or elliptic-oblong, rounded or acuminate at apex, bluntly acute and sometimes unequal at base, entire or undulate or broadly dentate, especially on the upper half, pale green when dry, glabrous except for a few occasional stiff hairs on the midrib beneath, striate with many faint very slender lineoles, 4 to 7 in. long, 2.5 to 3 in. broad, midrib angular, prominent beneath, main-nerves 7 to 8 pairs, slender, secondary nerves and reticulations faint and irregular; petiole slender, 4 to 1 in. long, channelled above. *Inflorescence* of axillary racemes, simple or joined in a sub-sessile panicle, rarely over 2 in. long, pedicels very slender, .05 to .1 in. long, with a subulate bract at base, half their length, and 2 acute bracteoles under the flower. *Calyx* superior, about .1 in. deep, lobes 5, imbricate, ovate, rounded, about 4-striate, edges hyaline; tube as long as lobes. *Corolla* as long as calyx, rotate, .1 in. in depth; lobes 5, imbricate, rounded, crenate, glabrous. *Stamens* 5, inserted near the base of the corolla; anthers ovate, slightly divaricate; filaments 2 to 3 times as long as anthers. *Ovary* inferior, depressed, rounded; style short cylindrical, stigma 4-lobed; ovules many, cuneate, on a central basal placenta. *Fruit* round, .1 to .15 in. in diam., smooth, faintly ribbed, crowned by the persistent calyx-lobes and style.

PENANG at Paya Trobong, Curtis 2857. PERAK: King's Collector 2287.—DISTRIB. Sumatra, Forbes 1260, 1287, 1315, 1376.

5. *MÆSA PAHANGIANA*, King & Gamble, n. sp. Apparently a shrub; branches round, smooth, dark brown when dry. *Leaves* membranous, rhomboid-obovate, acuminate at the apex, rounded cuneate at base, faintly crenate especially in the upper half; glabrous on both dull surfaces; 7 to 8 in. long, 4 to 4.5 in. broad; midrib slender, prominent beneath; main-nerves distant, 8 to 9 pairs, at about half a right angle with the midrib, sometimes branched; secondary nerves few and like the reticulations indistinct; petiole slender, .8 to 1 in. long. *Inflores-*

cence a simple axillary raceme, as long as or slightly longer than the petiole, pedicels slender, about 1 in long, supported by a minute subulate bract below and with two similar bracteoles below the flower *Calyx* superior, cupular, with a very short tube and 5 triangular imbricate teeth 6 in long, glabrous, hyaline at the edges and very faintly brown glandular *Corolla* as long as calyx, lobes 5 imbricate, glabrous, rounded, somewhat crenate, with 2 to 3 prominent brown glandular lineoles, tube half the length *Stamens* nearly as long as corolla, inserted near its base, filaments about twice as long as the anthers, anthers emarginate, cells somewhat divaricate *Fruit* globose with a conical tip surrounded by the remains of the corolla and the persistent calyx, and surmounted by the short persistent style, ribbed, 125 in in diam, glabrous

PAHANG at Tanjong Antan, Ridley 2175A

Only one specimen is unfortunately available, and that in fruit with only remains of flowers

6 *MUSA INDICA*, Wall in Roxb Fl Ind ed Carey & Wall II 230 (1824) A shrub reaching 4 to 6 feet in height, branchlets brown, smooth, lenticellate *Leaves* chartaceous, elliptic or elliptic oblong, acuminate, rounded or acute at the base, repand dentate, about 3 teeth to each main nerve, 3 to 7 in long, 2 to 3 in broad, midrib very prominent, often broad, main nerves 8 to 12 pairs, others closely reticulate, glandular striæ long, prominent, petiole 5 to 1 in long, channelled above by the decurrent bases of the blade *Inflorescence* of simple or compound axillary racemes, much shorter than the leaves, usually 1 to 3 in long, pedicels slender, 05 to 1 in long, longer in fruit, bracts subulate, in flower as long as pedicels, bracteoles 2, minute *Calyx* superior, with 5 imbricate lobes, which are ovate, ciliate, striate, about 04 in long, almost acute or rounded at apex *Corolla* as long as calyx, lobes denticulate, glandular striate, tube as long as lobes *Stamens* inserted at base of corolla-tube; anthers ovate, cells divaricate, filaments dorsifixed, rather longer than anthers *Ovary* rounded, style short cylindric, stigma obtuse, ovules many *Fruit* round, smooth, striate, 15 in long, crowned at the summit by the persistent calyx lobes and the remains of the stigma *Seeds* angular A DC. in Trans Linn Soc XVII 134, Prod VIII 80 (*in part*), Wall Cat 2318 E, Clarke in Hook f Fl Br Ind III 509 (*in part*), Koord & Val Bijl V 222, Mez Monog Myrs 29 *Baobotrys indica*, Roxb Hort Beng 16, Fl Ind I 557

SINGAPORE. Ridley 253.—DISTRIB. Java, Celebes, Borneo.

2. MYRSINE PORTERIANA, Wall. Cat. 6525 (1829). A shrub or small tree; branches grey, rough; branchlets slender, angled when dry, leaf-buds lanceolate. Leaves chartaceous, entire; oblong-lanceolate, bluntly acute and slightly emarginate at apex, cuneately narrowed at base, glabrous, glandular dotted, especially along the margin, and often glandular-lineolate, black or greyish when dry; 1.5 to 3.5 in. long, .75 to 1.25 in. broad; midrib prominent beneath, impressed above; main-nerves 8 to 12 pairs, the lowest pair running parallel to the midrib and there joined by the rest, not always easily seen; secondary nerves few, slender, reticulations minute; petiole slender, .2 to .4 in long, channelled above by the decurrent and almost connivent, slightly fimbriate, edges of the blade. Flowers in compact sessile umbels on the summit of a short thick cone-like bracteate arrested branch about .1 to .3 in. long; bracts ovate, bracteoles oblong, blunt, ciliate, pedicels angled .1 in long; flower-buds ovate, flowers greenish-white, usually diœcious, 5-merous. Calyx-lobes ovate acute, .05 in long, ciliate, marked with prominent dark round or lineolate glands; tube as long as lobes. Corolla-lobes oblong obtuse, .1 to .15 in long, minutely pubescent on the margins, marked by prominent dark rounded and lineolate glands, connate to one-fourth of their length, revolute in flower. Stamens inserted on the corolla, the filaments and lower half of the anthers adnate with it, those of ♂ flowers ovate apiculate, those of ♀ flowers sagittate; in open flowers exsert, longer than the revolute lobes. Ovary ovoid, glabrous, ♂ flowers with a short straight style, ♀ flowers with an oblique style and oblique folded stigma. Berry globose, glabrous, .1 in. in diam., dark blue when fresh, pale when dry, striate from the elongated vertical glands. A. DC. in Trans. Linn. Soc. XVII. 106, Prod. VIII. 95. *M. capitellata* var. *avenis*, Clarke in Hook. f. Fl. Br. Ind. III. 512 (*in part*). *Rapanea Porteriana*, Mez Monog. Myrs. 358.

3 EMBELIA, Burm

Small trees or shrubs, usually climbing, often extensively *Leaves* alternate, entire dentate or serrulate, usually glandular, petiole often margined *Flowers* in axillary or terminal racemes, simple or paniculate white or pink, hermaphrodite or polygamo dioecious *Calyx* free 4-5 lobed, persistent the lobes rounded or ovate *Corolla* 4-5 lobed, the lobes imbricate or contorted, tube none or short *Stamens* 4 to 5 filaments short or elongate, inserted on the corolla, anthers ovate oblong, obtuse or acute staminodes none *Ovary* ovoid, globose or conical, style short, stigma capitate, ovules few, inserted on a sub globose placenta *Fruit* a small drupe, globose, 1 seeded, crowned by the persistent style *Seed* ovoid hollowed at the base albumen pitted, embryo transverse, curved —DISTRIB About 60 species, in the tropical regions of the Old World

Inflorescence terminal or terminal and axillary paniculate —

Petals free (Sect I EMBELIA) —

Leaves membranous or chartaceous —

Main nerves of leaves slender not prominent —

Petals sparingly villous anthers with a cluster of black warts behind 1 *L. Ribes*

Petals densely villous anthers with only small glandular warts behind —

Leaves elliptic 1 5 to 2 in broad shortly acuminate 2 *E. canescens*

Leaves oblong, 7 5 in broad long but obtusely acuminate 3 *E. dasythyrea*

Main nerves of leaves prominent —

Branches slender, leaves lanceolate acuminate, flowers densely villous 4 *E. Scortechinii*

Branches stout leaves suddenly acuminate, flowers glabrous or slightly pubescent only 5 *E. penanquana*

Leaves coriaceous —

Panicles long leaves moderately thick —

Leaves acute or cuneate at base, main nerves conspicuous, bracteoles as long as the pedicels 6 *E. pergamenea*

- Leaves rounded or cordate at base, main-nerves very prominent, bracteoles shorter than the pedicels 7. *E. coriacea*.
 Panicles short, stout, leaves very thick 8. *E. angulosa*.
 Petals joined at the base into a tube (Sect. II. *GREENACHERIA*):—
 Leaves rusty-villous beneath, bracts of the inflorescence short, inconspicuous 9. *E. Lampani*.
 Leaves pubescent or nearly glabrous beneath, bracts of the inflorescence long, often leafy, conspicuous 10. *E. amentacea*.
 Inflorescence axillary.—
 Inflorescence paniculate, axillary, 1 to 2 in. long (Sect. III. *PATTARA*) 11. *E. Ridleyi*.
 Inflorescence much shorter than the leaves, on very short racemose branchlets with many bracts (Sect. IV. *MICREMBELIA*):—
 Flowers tetramerous, leaves coriaceous 12. *E. Myrtilus*.
 Flowers pentamerous, leaves chartaceous 13. *E. parviflora*.
 SPECIES IMPERFECTLY KNOWN: 14 *E. lucida*. 15. *E. macrocarpa*.

1. *EMBELIA RIBES*, Burm. Fl. Ind. 62. t. 23 (1768). An evergreen climbing shrub; branches pale brown, with thick bark studded with conical protuberances, branchlets pale brown, smooth, lenticellate. *Leaves* entire, chartaceous, elliptic or elliptic-lanceolate, obtusely acuminate at apex, cuneate at base; glabrous above, glabrous or minutely pubescent beneath, glandular dots scattered, sometimes obscure, margin generally recurved, 2 to 3 in. long, 1 to 1.5 in. broad; midrib slender, prominent below, generally impressed above, main-nerves obscure, irregular, slender, 12 to 14 pairs, parallel at first then curved upwards to join near the margin; secondary nerves many faint, reticulations very obscure; petiole 3 to 5 in. long, bordered by the crisped edges of the decurrent blade. *Inflorescence* a large terminal leafy 3-pinnate grey- or rusty-pubescent panicle of racemes, the branches at first turning upwards, afterwards nearly at right angles with the rachis; bracts leafy, smaller by degrees upwards; bracteoles subulate, shorter than the slender pedicels, .05 in. long; buds small, globose; flowers white. *Calyx-lobes* very minute, about .025 in. long, triangular-acute, ciliate, with few glandular dots, tube as long as lobes. *Corolla-lobes* free, elliptic, rounded at top in ♀, more acute in ♂, .05 in. long, ciliate, sparingly villous-pubescent, apex incurved, with few prominent glandular dots. *Stamens* inserted on the corolla-lobes, about half-way up in ♂, lower down in ♀, shorter than the lobes; anthers short, ♂ with parallel, ♀ with divaricate, cells, both with a long black mass of glandular warts behind at the insertion of the dorsifixed filaments. *Ovary* ovoid, glabrous; style short, stigma capitate in ♂, peltate and larger in ♀. *Berry* globose or sometimes pyriform, red or black, glabrous, succulent, wrinkled when dry, aromatic, .1 to .15 in. in diam., crowned with the persistent style and

stigma. Retz. Obs. iv. 24; Lamk. Ill. t. 133; Roxb. Fl. Ind. i. 586; Wall. Cat. 2304; A. DC. in Trans. Linn. Soc. XVII. 129, Prod. VIII. 85 (part); Scheff. Myrs. 38; Miq. Fl. Ind. Bat. 3. *EMBELIA DASYTHYRSA*, Miq. Fl. Ind. Bat. Suppl. 573 (1862). A slender climbing shrub; branches minutely pubescent, striate, with prominent raised lenticels; branchlets dark, slender, rusty-villous. *Leaves* entire, chartaceous, oblong or elliptic-oblong, bluntly acuminate at apex, rounded at base; glabrous above, glabrous except on the midrib beneath, glandular dots scattered, obscure; 1.5 to 2 in. long, about .75 in. broad; midrib prominent beneath, villous, impressed above, main-nerves 10 to 12 pairs, irregular, arching upwards to meet near the margin, secondary nerves few, slender, reticulations obscure; petiole .1 to .2 in. long, channelled above. *Inflorescence* a long, 3-pinnate, leafy panicle of long slender many-flowered racemes, rachises minutely pubescent; bracts leafy, bracteoles subulate, minute, much shorter than the .1 in. long very slender pedicels, buds globose shaggy, flowers grey. *Calyx-lobes* minute, about .03 in. long, triangular, ciliate; tube shorter than lobes. *Corolla-lobes* free, ovate-spatulate, about .06 in. long, black-gland-dotted, densely covered with short moniliform hairs. *Stamens* less than half the length of the corolla-lobes, inserted at the base, anthers reniform, with inconspicuous glandular warts on the back at the insertion of the dorsifixed filaments, which are almost shorter than the anthers. *Ovary* ovoid, style very short, stigma in ♂ small capitate, in ♀ peltate, large. *Berry* red or black, .15 in. in diam., globose or slightly pyriform, wrinkled when dry, tipped by the persistent style and stigma. Scheff. Myrs. 42; Mez Monog. Myrs. 305.

PERAK Wray 1924, *Scortechini* 498, King's Collector 776, 4103, 4375, 5102, 5762, 6640, 8588, 10024, 10701, clinging to trees in dense jungle at low levels SELANGOR Ridley 7572 SINGAPORE Hullett 118 —DISTRIB Bangka, *Teysmann* Hort Bogor No 3189, at Djeboes

Only one very poor specimen of the type (*Teysmann's*) is available, but from an examination of it and from Miquel's description it seems to be right to refer the Peninsular plant, which we had considered new to this species

4 *EMBELIA SCORTECHINII*, King & Gamble, n sp A climbing shrub (?), branches slender, ultimate branchlets reddish, rusty villous. *Leaves* entire, chartaceous, elliptic-lanceolate, long acuminate at apex, narrowed at base, glabrous above, grey-pubescent on the nerves beneath and with minute white scales, glandular dots obscure, 4 to 5 in long 1.5 to 2 in broad, midrib very prominent, impressed above main nerves about 8 pairs, prominent, slender, curving upwards to and along the margin, reticulations many, prominent on the upper surface petiole .2 in long, pubescent *Inflorescence* of slender rusty-villous panicles of long racemes, the panicles 7 to 10 in long, racemes 3 to 6 in, rachis hirsute, somewhat angular, bracts deciduous, bracteoles very minute subulate, buds very small, globose *Calyx lobes* ovate, rounded, very minute, the edges ciliate with long moniliform hairs, tube very short *Corolla lobes* oblong, acute, .05 in long, shaggy with long moniliform hairs *Stamens* shorter than the corolla lobes, anthers ovate, cordate, with two prominent papillose warts behind at the insertion of the dorsifixed very short filaments *Ovary* ovoid, style conical *Berry* not known

PERAK *Scortechini*

This interesting species is characterised by the abundant moniliform hairs on the flowers, longer and more conspicuous than in other species

5 *EMBELIA PENANGIANA*, Mez Monog Myrs 311 (1901) A climbing shrub, stem reaching about 1 in in diam, branches stout, ultimate branchlets red, striate, lenticellate *Leaves* entire, chartaceous, elliptic, shortly acuminate at apex, narrowly cuneate at base, glabrous, not gland dotted, 3.5 to 4.5 in long, 1.5 to 2 in broad, midrib prominent, impressed above, main nerves 10 to 12 pairs, irregular, slender, at about two-thirds of a right angle with the midrib at first then arching upwards to join near the margin secondary nerves similar but less prominent, reticulations many, petiole .5 in long, slender, edged by the crispate decurrent margins of the blade which are often connivent above *Inflorescence* a terminal 3 pinnate leafy panicle, 6 to 9 in long, of slender racemes rachis slightly pubescent, main branches at about half a right angle with rachis, peduncles about 1 in long, upper branches and branchlets usually at right angles, bracts lanceolate spatulate, leafy, deciduous,

bracteoles subulate, as long as or rather longer than the very short, under .05 in. long pedicels; buds very small, globose, flowers red. *Calyx-lobes* orbicular, glandular-ciliate, .05 in. long, connate to the middle, not gland-dotted. *Corolla-lobes* 5, free, ovate, rounded at apex, .075 to .1 in. long, slightly pubescent without, papillose within, not gland-dotted. *Stamens* of ♂ flowers equal to or longer than the corolla-lobes, of ♀ flowers shorter than them, inserted near the base of the lobes; anthers oblong, emarginate, with minute black warts behind at the insertion of the dorsifixed filaments. *Ovary* ovoid, glabrous, style very short, stigma peltate. *Berry* globose, red, tuberculate and corrugate, .1 in. in diam., fruiting pedicels as long as berry. *Embelia Ribes* var. *penangiana*, Oliv. in Hook. Ic. Pl. t. 1597.

PENANG: *Curtis* 306. PERAK: *Wray* 1375, 1409; *Scortechini*; *King's Collector* 3637, 10739.

A well-marked species, distinguished by the fairly prominent nerves of the leaves, the very short pedicels, and the absence of glandular dots.

6. *EMBELIA PERGAMACEA*, A. DC. Prod. VIII. 85 (1844). A slender climbing shrub; branches rather thick, branchlets wrinkled and angular when dry. *Leaves* entire, coriaceous; oblong-lanceolate, acuminate at apex, cuneate or acute at base; glabrous, shining above, pale beneath, margins recurved, glandular dots many, hardly prominent; 3 to 5 in long, 1.5 to 2 in. broad, midrib thick, impressed above, main-nerves slender 12 to 14 pairs, parallel but irregular, raised and conspicuous on the upper surface, leaving the midrib at about two-thirds of a right angle and joining near the edge in an intramarginal nerve, secondary nerves many, parallel to the main-nerves, reticulations obscure; petiole .3 in. long, angular, channelled above when dry by the crispate edges of the decurrent blade. *Inflorescence* a large terminal, pyramidal, 4-pinnate, nearly glabrous, leafy panicle with racemose branchlets and very numerous flowers; main rachis thick, flattened above, branches nearly at right angles to rachis as again are the branchlets, all angular; bracts ovate spatulate, leafy, bracteoles subulate acuminate as long as the pedicels, pedicels .05 in. long, somewhat longer in fruit; buds very small, globose, flowers light red. *Calyx-lobes* minute, about .04 in. long, broadly triangular, acute, glandular-ciliate, papillose on both sides, dotted with few large and small brown and black glands, tube as long as lobes. *Corolla-lobes* free, ovate-oblong, glandular-ciliate, glabrous without, papillose within, dotted in upper part only, .07 in. long. *Stamens* as long as or shorter than corolla-lobes, inserted half-way up, anthers ovate cordate, emarginate, black-warted behind at the insertion of the dorsifixed filaments. *Ovary* glabrous, ovoid; style thick very

short; stigma capitate. *Berry* globose, blue when ripe, wrinkled when dry, .06 in. in diam., crowned with the persistent style, gland-dotted. Miq. Fl. Ind. Bat. II. 1012; Scheff. Myrs. 34; Mez Monog. Myrs. 310. *Ardisia pergamacea*, Bl. fide A. DC.

PERAK: Curtis 2029; Wray 2001; King's Collector 3658, 4678, 6412.—DISTRIB. Java; Borneo.

This species closely resembles *E. coriacea*, but differs in the acuminate leaves, very shining above and prominently nerved; in the papillose calyx-lobes, petals dotted only in the upper part and bracteoles as long as the pedicels

7. *EMBELIA CORIACEA*, Wall. Cat. 2314 (1829). A climbing shrub, branches reaching 1.5 in. in diam.; branchlets reddish, twisted, somewhat angular, roughly lenticellate. *Leaves* entire, coriaceous, oblong or oblong-lanceolate, obtusely acute at apex, rounded or almost cordate or auricled at base; glabrous, more or less shining above, brownish beneath, glandular dots scattered, not prominent, margin sometimes incurved; 3 to 10 in. long, 1.5 to 4 in. broad; midrib thick, impressed above, main-nerves many, slender, not prominent, irregularly parallel, at about two-thirds of a right angle with the midrib, joining in an intramarginal faint nerve; secondary nerves many, slender, reticulations faint; petiole thick, 3 to .7 in. long, channelled when dry by the crispate edges of the decurrent blade. *Inflorescence* a large terminal 4-pinnate spreading leafy rusty-pubescent panicle with racemose branchlets and very numerous flowers; main rachis thick, somewhat flattened, branches nearly at right angles to rachis as again are the branchlets; bracts leafy, decreasing upwards, bracteoles minute, subulate, about half the length of the pedicels; pedicels .05 in. long; buds very small, globose, flowers grey. *Calyx-lobes* 5, minute, triangular, glabrous, dotted with very few (3 to 5 per lobe) brown or black glands; tube as long as lobes. *Corolla-lobes* free, 4-5, ovate, blunt, recurved, glabrous without, slightly papillose within, gland-dotted all over. *Stamens* shorter than the corolla-lobes, inserted on them about half-way up; anther-cells oblong, somewhat divaricate, with about 4 black warts behind at the insertion of the short filaments. *Ovary* ovoid, style very short, stigma capitate. *Berry* globose, smooth, .075 to .1 in. in diam., pale, prominently gland-dotted, wrinkled when dry, crowned with the persistent base of the style. A. DC. in Trans. Linn. Soc. XVII. 135, Prod. VIII. 87; Clarke in Hook. f. Fl. Br. Ind. III. 513; Mez Monog. Myrs. 313. *E. oblongata*, Miq. Fl. Ind. Bat. Suppl. 573; Scheff. Myrs. 34. *E. macrophylla*, Bl.; Scheff. Myrs. 36.

PENANG: Wallich 2314; Curtis 1047. PERAK: Curtis 1307, Derry 11712; Wray 2001, 2579, 3238; Scortechini 117, 255; King's Collec-

tor 2278, 3481, 4976, 5056, 5254, 5323, 6231, 6766, 7857, 10015, 10548. PAHANG: *Ridley* 5828. SELANGOR: *Ridley* 7662. MALACCA: *Maingay* (K.D.) 1018; *Ridley* 11135. SINGAPORE: *Ridley* 2812.—DISTRIB. Sumatra; Java; Borneo, *Beccari* 767, 878, 1189, 2561, 3922; *Haviland* & *Hose* 3469.

8. *EMBELIA ANGULOSA*, King & Gamble, n. sp. A climbing shrub; branches thick, branchlets wrinkled when dry, lenticels few. *Leaves* entire, coriaceous; ovate, obtuse, emarginate, glabrous, shining above, dull beneath, glandular dots pitted on both surfaces; 2 to 3.5 in. long, 1 to 2 in. broad; midrib very thick and prominent, impressed above; main-nerves 14 to 16 pairs, slender, irregular, leaving the midrib at nearly a right angle, then curved and joining near the margin, raised on upper surface; secondary nerves many, slender, reticulations obscure; petiole .2 in. long, channelled above and bordered by the crispate edges of the decurrent blade. *Inflorescence* a dense terminal glabrous stiff panicle about 4 in. long and broad, of racemes, the rachises sharply angled; bracts leaf-like, spatulate, bracteoles very small, subulate; pedicels .05 in. long, thick, angular, glabrous or minutely pubescent, equal to or shorter than the bracteoles; buds globose *Calyx-lobes* ovate, ciliate, minute, .03 in. long, not gland-dotted. *Corolla-lobes* free, ovate, acute, .075 in. long, nearly glabrous outside, papillose within. *Stamens* shorter than corolla-lobes, inserted one-third up, reniform, with inconspicuous black dots at the insertion of the short dorsifixed filaments. *Ovary* ovoid glabrous; style very short; stigma peltate. *Berry* red, ovoid, somewhat pyriform, ribbed and gland-dotted, glabrous, crowned with the remains of a cylindric style and capitate stigma. *E. coriacea*, Stapf in Trans. Linn. Soc. Ser. ii. IV. 200 (not of A. DC.)

PERAK: *Wray* 1524—on Ulu Batang Padang at nearly 5,000 ft.—DISTRIB. Borneo, *Haviland* No. 1152, on Mt. Kinabalu at 7,600 to 8,800 feet.

The description of the flowers is taken from Haviland's Borneo specimen, the rest from Wray's.

9. *EMBELIA LAMPANI*, Scheff. Myrs. 37 (1867). A slender climbing shrub, clinging to trees; branches reddish-brown, rough with strigose hairs, lenticellate; branchlets rusty-villous-hairy. *Leaves* chartaceous; oblong, obtuse or emarginate at apex, rounded or cordate at base; margins recurved, upper surface glabrous except on the midrib, lower surface rusty-villous, glandular dots many, scattered; 1.5 to 3.5 in. long, 1 to 1.5 in. broad; midrib impressed above, prominent below, villous on both sides; main-nerves many (up to 24 pairs), irregular, at about two-thirds of a right angle with the midrib, straight at first then curving

upwards to meet in a nerve more or less parallel to the margin; secondary nerves similar, reticulations many; petiole .1 to .2 in long, rusty-villous. *Inflorescence* of terminal panicles of pedunculate racemes 6 to 12 in. long, the branches often leafy, rachis and peduncles all rusty-villous; peduncles .5 to 7 in. long, pedicels slender, about .05 in. long, bracts few, leaf-like; bracteoles rather longer than the pedicels, lanceolate to spatulate; flowers small, buds globose, petals white, striate, tube red. *Calyx-lobes* 5-6, ovate, acute, ciliate on the edges, villous, dotted with few glands; tube as long as lobes, both together .05 in. long, longer in fruit. *Corolla* gamopetalous from one-third to one-half of its length, lobes oblong, obtuse, recurved, .1 in. long, sparsely gland-dotted. *Stamens* as long as or a little shorter than the corolla-lobes, inserted about half-way up, anthers oblong, dehiscing longitudinally, the back with black conspicuous glandular warts; filaments adnate to the corolla below point of insertion, slender, dorsifixed. *Ovary* rounded, glabrous, style cylindric, stigma peltate in ♀, slightly lobed in ♂. *Berry* globose, .1 to .15 in. in diam., black when dry, crowned with the persistent style, rugosely glandular. Clarke in Hook. f. Fl. Br. Ind. III. 514. *E. villosa*, Wall. Cat. 2313 (in part). *Grenacheria Wallichiana*, Mez Monog. Myrs 293, fig 49. *G. Lampani*, Mez l.c. 294

PENANG: *Curtis* 305, *G. King*. PERAK: *Wray* 95, 2784; *Scortechini* 231; *King's Collector* 2483, 4210, 6849, 8134. SELANGOR. *Ridley* 10224. MALACCA: *Maingay* (K D.) 1003. SINGAPORE *Ridley* 10417.—DISTRIB. Sumatra, Korthals, Borneo, Haviland & Hose.

Haviland and Hose's Borneo specimens have rather larger flowers than, and pedicels about twice as long as, those from the Peninsula (No. 2280).

10. *EMBELIA AMENTACEA*, Clarke in Hook. f. Fl. Br. Ind. III. 514 (1882). A slender climbing shrub; branches pale brown, velvety; branchlets cinnamomeous or rusty-villous. *Leaves* chartaceous; oblong or obovate-oblong, obtuse and sometimes emarginate at apex, rounded at base; upper surface sparsely pilose, under surface pubescent, pale bluish-green, glandular dots many prominent; 2 to 3 in. long, .75 to .1 in. broad; midrib impressed above, prominent below, villous on both sides; main-nerves few, 6 to 10 pairs, irregular, at about two-thirds of a right angle with the midrib, arching upwards, branching and joining in a nerve near the margin; secondary nerves similar but more slender, reticulations not prominent; petiole .15 in. long, villous, winged by the decurrent base of the blade. *Inflorescence* of terminal panicles of pedunculate racemes, the branches leafy, the leaves passing gradually into oblong or spatulate conspicuous bracts; peduncles 1 to 1.5 in. long, enlarged at base; pedicels .1 in. long, supported by linear subulate bracteoles twice their

length, so that when in bud the racemes have the appearance of catkins; flowers very small, buds globose. *Calyx-lobes* 5, acute, ciliate on the edges, gland-dotted, tube as long as lobes, both together .05 in. long. *Corolla* very shortly gamopetalous; lobes 5, ovate, obtuse, glabrous within, .05 in. long. *Stamens* very short, shorter than corolla-lobes, inserted about half-way up; anthers oblong, rounded, with black papillose warts on the back; filaments as long as anthers, dorsifixed. *Ovary* rounded, glabrous, conical above, style slender, stigma peltate. *Berry* globose, wrinkled when dry, .1 to .125 in. in diam., crowned with the persistent style and stigma, black when dry. *Grenacheria amentacea*, Mez Monog. Myrs 294.

PERAK: *Scortechini* 802, *Ridley* 7172 (part); *King's Collector* 5055, 6280, 6817, 8692—in open ground and in bamboo forests. SELANGOR: *Ridley* 7561, *Native Collector* 2802A, *Goodenough* 10555. MALACCA: *Griffith* (K.D.) 3548.

Mez suggests that this may be a young state of *Grenacheria Walluchiana*. He apparently saw only Griffith's specimen. The abundant material now available clearly shows that Clarke correctly considered it as separate. The curious catkin-like young inflorescence and the more sparse leaf-venation distinguish it.

11. *EMBELIA RIDLEYI*, King & Gamble, n. sp. A climbing (?) shrub; branchlets light brown, wrinkled. *Leaves* chartaceous; oblong, acute at apex, rounded at base; glabrous, glandular dots scattered obscure, margin somewhat recurved; 4 to 7 in. long, 1.5 to 3 in. broad; midrib thick, prominent below, main-nerves prominent below, about 12 pairs, curving upwards and meeting in a looped intramarginal nerve; secondary nerves and reticulations faint; petiole .5 in. long, thick. *Inflorescence* an axillary panicle of racemes, the branches curved, distant; rachis .5 to 1 in. long, that of racemes shorter, bracteoles minute, triangular; racemes about .5 in. long. *Calyx-lobes* 4 or 5, ovate, gland-dotted, very small. *Corolla* and rest not seen.

SINGAPORE: *Ridley* 6324. It seems to come near to *E. floribunda*, Wall.

E. Tsjeriam-Cottam, A. DC. is quoted by Mez as extending from India southwards to Singapore, but we have seen no specimens from our region.

12. *EMBELIA MYRTILLUS*, Kurz in Journ. As. Soc. Beng. XL. ii. 67 (1871), and For. Fl. II. 104. A small climbing shrub (Wray); branches rough, somewhat corky, with large lenticels; ultimate branchlets densely rusty-villous. *Leaves* coriaceous, bifarious, broadly elliptic to almost orbicular, acute at apex with usually 3 terminal teeth, narrowed truncate or cordate at base; glabrous above, slightly villous on nerves beneath; glandular dots black, numerous, small, fewer large, scattered, especially

near the apex and along the margin, which is often recurved; .4 to .7 in. long, .3 to .6 in. broad; midrib prominent; main-nerves 6 pairs, arched upwards and joining in an intramarginal nerve; secondary nerves similar, reticulations prominent; petiole 1 in. long, villous. *Flowers* tetramerous, very small, in umbels or very short racemes on short axillary arrested branches, .1 to .15 in. long, shorter than the leaves; bracts minute, subulate. *Calyx-lobes* ovate, glandular ciliate, densely papillose within, .05 in. long, tube very short. *Corolla-lobes* free, oblong, rounded at apex, .1 in. long, glandular-ciliate on the edges, conspicuously marked with black, oblong or linear glands. *Stamens* longer than the corolla-lobes in ♂ flowers, shorter in ♀; anthers oblong, often cordate, with conspicuous warts at the insertion of the dorsifixed filaments which spring from the base of the petals. *Ovary* ovoid; style slender, stigma capitate, 4-cleft. *Berry* globose, red or black, .15 to .2 in. in diam., prominently gland-dotted, tipped with the persistent style and stigma. Clarke in Hook. f. Fl. Br. Ind. III. 516; Mez Monog. Myrs. 322 *Myrsine Myrtillus*, Hook. Ic. Pl. t. 825. *Samara Myrtillus*, Kurz in Journ. As. Soc. Beng. XLVI. ii. 223.

PERAK: *Scortechini* 762; *Wray* 1565, 3818, on Gunong Bubu and Gunong Brumber, at 5,000 to 7,000 feet. MALACCA: summit of Mount Ophir, *Griffith* (K.D.) 3542; *Lobb*; *Rudley*.—DISTRIB. Burma, *Griffith*.

13. *EMBELIA PARVIFLORA*, Wall. Cat. 2307 (1829). A slender climbing shrub reaching 60 feet in length, branches and branchlets densely rusty-villous, slender. *Leaves* chartaceous; distichous, ovate, obtusely acute at the apex, truncate at base; glabrous except on the midrib beneath, margin slightly recurved; glandular dots many, prominent, scattered, more numerous towards the apex; 7 to 1.5 in. long, .5 to .75 in. broad, midrib prominent beneath, impressed above; main-nerves 8 to 10 pairs, slender, curving upwards towards the margin; secondary nerves slender, many, reticulations prominent; petiole scarcely .05 in. long, rusty-villous, channelled above. *Inflorescence* of very short axillary few-flowered subumbellate racemes, ♂ 4–6-flowered with .15 in. long slender pedicels, ♀ 1–3-flowered with .05 in. slender pedicels; bracts in both minutesubulate; flowers pentamerous, buds globose. *Calyx-lobes* oblong, fimbriate-ciliate, .05 in. long, with few (about 6) large brown glands, glandular-villous without, tube very short, ciliæ moniliform. *Corolla-lobes* ovate, rounded, ciliate, .075 in. long, .05 in. broad, with few unequal-sized prominent brown glands. *Stamens* in ♂ flowers longer than corolla-lobes, in ♀ much shorter; anthers reniform, in ♂ apiculate and warted at back at the insertion of the dorsifixed, rather long filaments which spring from near the base of the corolla-lobes. *Ovary*

rounded, glabrous; style slender, curved, stigma peltate, at any rate in ♀. *Berry* globose, red, black when dry, smooth, .15 to .2 in. in diam., surmounted by the remains of the style and stigma. A. DC. in Trans. Linn. Soc. XVII. 130 (excl. var. β), Prod. VIII. 86: Scheff. Myrs. 44; Kurz For. Fl. II. 104; Clarke in Hook. f. Fl. Br. Ind. III. 515; Mez Monog. Myrs. 324. *Samanea parviflora*, Kurz in Journ. As. Soc. Beng. XLVI. ii. 223. *Celastrinea*, Griff. Itin. Notes 85, n. 1226.

PERAK: *Scortechini*; Wray 4194—at Maxwell's Hill, Larut, 3,500 feet; Curtis 2059—on Hijan Range; King's Collector 2342, 6992—from dense forests on high hills at 3,000 to 5,000 feet.—DISTRIB. Khasia and Naga Hills; Upper Burma, Griffith (K.D.) 3545, &c.; Sumatra.

IMPERFECTLY KNOWN SPECIES.

14. *EMBELIA LUCIDA*, Wall. Cat. 2315. *Leaves* 3 in. long, 1.25 in. broad, broadly oblong, suddenly narrowed at both ends, entire, glabrous, coriaceous. *Racemes* 1 in. long, axillary, simple, solitary or paired, rusty-villous. A. DC. Trans. Linn. Soc. XVII. 134, Prod. VIII. 87, Clarke in Hook. f. Fl. Br. Ind. III. 517; Mez Monog. Myrs. 396.

SINGAPORE: Wallich 2315.

15. *EMBELIA MACROCARPA*, King & Gamble, n. sp. A strong climber, branchlets thick, nearly black, rough. *Leaves* coriaceous; elliptic, obtuse or shortly acuminate at apex, almost rounded at base, glabrous, margin reflexed; 6 in. long, 3 to 4 in. broad; midrib rather slender; main-nerves irregular, distant, not prominent, about 8 pairs, secondary nerves slender, obscure as are the reticulations; petiole .7 to 1 in. long, thick, bordered above by the decurrent margins of the leaves. *Flowers* apparently on rather short, thick racemes from the branches. *Calyxlobes* 4, triangular, acute, gland-dotted, under .1 in. long. *Berry* large, .5 to .7 in. in diam., smooth, wrinkled when dry, globose, crowned with the short remains of the persistent style. *Seed* with many conspicuous pits. Rest not seen.

PENANG. at Marriot's Road, 1,500 feet, Curtis 1229.

The following Burmese species is here inserted, as it is found in Tenasserim and may occur further south in the Malay Peninsula.

EMBELIA GALLATLYI, King & Gamble, n. sp. Apparently a shrub; branchlets rounded, dark brown, lenticellate. *Leaves* ovate, acuminate at apex, truncate at base; prominently crenate dentate with blunt teeth and glands in the crenatures; glabrous on both surfaces, glandular dots few, chiefly near the margin; 1 to 1.4 in. long, .5 to .7 in. broad; midrib slender, impressed above; main-nerves 10 to 12 pairs; arching upwards to the crenatures; secondary nerves many, slender, reticulations prominent; petiole .1 to .2 in. long, channelled above, crispately edged. *Inflorescence* of axillary corymbose racemes, 10-12-flowered, rachis about 2 in. long, bracts minute subulate,

the whole minutely rusty-pubescent, pedicels slender. *Calyx-lobes* triangular acute .03 to .05 in. long, ciliate; tube as long as lobes or somewhat shorter. *Corolla-lobes* oblong-spathulate, .1 in. long, ciliate, minutely pubescent, sparsely gland-dotted. *Stamens* longer than corolla-lobes, .15 in., anthers oblong, cells parallel, not warted behind at the insertion of the long exsert filaments which spring from close to the base of the corolla-lobes. *Ovary* ovoid-conical, style short curved, stigma minute. *Berry* unknown

TENASSERIM: at Moolyet, 5,000 feet, *G. Gallatly* No. 407. *Gamble* No. 7906 from Mianimukh, Chittagong Hill Tracts, without flowers or fruit, is probably this species.

4. LABISIA, Lindl.

Small shrubs, with a creeping rhizome and erect stem, resembling *Pothos* in appearance. *Leaves* few, coriaceous, entire or denticulate, sessile or petiolate, the petiole often dilated, main leaf-nerves very many, at right angles to the midrib. *Flowers* hermaphrodite, minute, pink, in axillary spike-like panicles, bracts very small. *Calyx* minute, 5-lobed. *Corolla* 5-lobed, lobes ovate, induplicato-valvate in bud; tube very short. *Stamens* 5, wrapped in the corolla-lobes; filaments very short, anthers ovoid, introrsely dehiscent, no staminodes. *Ovary* globose, attenuated into a short style; stigma small; ovules few, immersed in a globose central placenta. *Fruit* small, globose, red, 1-seeded. *Seed* globose, hollowed at the base; albumen smooth; embryo cylindric transverse.—DISTRIB. About 4 species, all of the Malay Peninsula and Archipelago.

Leaves petiolate without decurrent wings.—

Leaf-blades elliptic-lanceolate, much longer than broad 1 *L. pumila* var. *lanceolata*.

Leaf-blades ovate or ovate-orbicular, nearly as broad as long. 2 *L. paucifolia*.

Leaves with winged petioles or sessile —

Wings very narrow, blade of leaf acuminate at both ends 1 *L. pumila*.

Wings broad. —
Leaves crenate, thin, main-nerves rather distant . . 1 *L. pumila*, var. *alata*.
Leaves entire, coriaceous, main-nerves very close and regular 3 *L. longistyla*.

1. *LABISIA PUMILA*, Benth. & Hook. f. Gen. Pl. II. 645 (1876). A semi-herbaceous undershrub, with rooting stems and leaves not jointed at their insertion but decurrent into them. *Leaves* bluish-green, elliptic-lanceolate, acuminate, narrowed at the base, and more or less decurrent on the petiole, crenately toothed, or sometimes nearly entire; blade 5 to 8 in. long by 1 to 2.5 in. broad; midrib thick, often rusty-pubescent; main-nerves extremely numerous, nearly at right angles to the midrib, parallel, slender, anastomosing towards the margin, and

then producing an elegant network; under-surface with brown glandular scales; petiole 1 to 3 in., enlarged at the base, often minutely rusty-pubescent. *Flowers* pink, in a spike-like, long-stalked, ferruginous-tomentose panicle of small corymbose bracteate clusters; peduncles of corymbs 1 in. long or shorter, sometimes none; bract linear-subulate, .05 to 1 in. long.; pedicels .05 to 1 in., slender, with minute bracteoles. *Calyx-lobes* triangular, acute, .025 in. long, densely glandular. *Corolla-lobes* ovate, with linear glands, glabrous. *Stamens* infolded in the corolla; filaments very short; anthers oblong-linear, apiculate, with several hard round or linear black warts on the back. *Ovary* rounded, pubescent, ending in a subulate angular style with minute notched stigma. *Fruit* a globose red berry, about .15 in. in diam., ribbed and with prominent elongate glands, surmounted by the persistent style. Mez Monog. Myrs. 171 (var. *genuina*). *L. pothoina*, Lindl. in Bot. Reg. 31. t. 48; Clarke in Hook. f. Fl. Br. Ind. III. 518; Stapf in Trans. Linn. Soc. Ser. 2, IV. 200; *Ardisia pumila*, Blume Bijdr. 688; A. DC. Prod. VIII. 137; Miq. Pl. Jungh. 199 and Fl. Ind. Bat. II. 1028; Scheff. Myrs. 92. *A. ? spicata*, Wall. Cat. 2273; A. DC. in Trans. Linn. Soc. XVII. 135.

2. *LABISIA PAUCIFOLIA*, King & Gamble, n. sp. A small semi-herbaceous undershrub, 10 to 15 in. high; the stems striate, round, minutely purplish-brown-pubescent, bearing rarely more than 3 to 4 leaves. *Leaves* long-petioled, the blade ovate or orbicular-ovate, rounded at top into a bluntly acute point, rounded at base and then very shortly decurrent; entire or very minutely crenate; 2.5 to 4 in. long, 1.5 to 3 in. broad; main-nerves slender, numerous, more or less parallel, joining near the edge; petiole 1 to 2 in. long, thickened at the base and decurrent into the stem. *Inflorescence* 1.5 to 2.5 in. long, consisting of axillary, short-peduncled, rusty-pubescent racemes, the flowers reflexed, single or in few-flowered sessile clusters; pedicels .05 to .1 in. long, with short subulate bracts of equal length. *Calyx-lobes* ovate-acuminate, covered without with numerous glands, .075 in. long, tube short, about half the length of lobes. *Corolla-lobes* oblong-acuminate, .125 in. long, glabrous. *Stamens* closely enfolded; filaments very short; anthers hastate, long apiculate, glandular warted behind, .1 in. long. *Ovary* rounded, pubescent; style about .04 in. long, angular, oblique; stigma minute, notched. *Fruit* a dark red berry, .1 in. in diam., striate and with oblong glands.

PERAK: *Scortechini*; Wray 4102; King's Collector 8078 In open forest at 3,000 to 5,000 feet.

Besides the characteristic leaves, the acuminate petals and hastate long apiculate anthers make this species recognisable, though the leaf-venation resembles that of *L. pumila*

3 *LABISIA LONGISTYLA*, King & Gamble, n. sp. An undershrub about 2 feet high; stem thick, rusty-brown, minutely pubescent. *Leaves* sessile, oblong, entire, rounded at apex and very slightly emarginate, decurrent below in a broad wing for about $\frac{1}{4}$ of their length; prominently glandular-pitted above and with rusty glandular scales below; 7 to 12 in. long, 3 to 4 in. broad; midrib very thick, prominent, glandular scaly; main-nerves at right angles to midrib, extremely numerous, straight, parallel, anastomosing towards the edge which is slightly recurved. *Inflorescence* a raceme-like rusty-pubescent panicle of single flowers or shortly peduncled few-flowered secund corymbs, 8 to 9 in. long, the main peduncle about 4 in.; corymb-peduncles curved, angled, .3 to .4 in. long; bracts very short, subulate; pedicels striate, about .15 in. long; bracteoles minute. *Calyx-lobes* ovate, acute, glandular without, tube rather shorter than lobes, together .06 in. long. *Corolla* and *stamens* unknown. *Ovary* rounded, pubescent, crowned by a

filiform .2 in. long style. *Fruit* a globose berry, with a conical top and the remains of the style, glabrous, striate with linear-oblong prominent glands.

PERAK: Wray 1590. SELANGOR: Curtis 3750, at 3,000 to 4,000 feet.

5. ARDISIA, Swartz.

Small trees, shrubs or semi-herbaceous undershrubs, evergreen, generally all parts with pellucid glands which often dry black. *Leaves* sessile or petiolate, membranous to coriaceous, entire crenate or serrate. *Flowers* regular, pedicellate, hermaphrodite; inflorescence various. *Calyx* inferior, 4-6-lobed, the lobes free or overlapping to the right; tube very open, as long as or shorter than the lobes. *Corolla* red white or spotted, often waxy in appearance, 4-6-lobed, the tube often very short; the lobes overlapping to the right, often twisted. *Stamens* equal in number to, and opposite to, the corolla-lobes, sometimes long and narrow, usually sagittate-lanceolate and apiculate, sometimes very small, fixed to the corolla-tube by filaments usually short and broad, generally opening by slits, occasionally by terminal pores, in *A. littoralis* septate; dehiscence always introrse. *Ovary* globose, sometimes narrowed into the style, more often almost depressed; style usually filiform, rather long; stigma punctiform; ovules few or many, immersed in a globose placenta. *Fruit* a globose, rarely obovoid, berry, usually surmounted by the remains of the style, fleshy, red or purple or black, often spotted; endocarp crustaceous; 1-seeded. *Seed* solitary, large, globose, hollowed at the base; albumen pitted or ruminant; embryo cylindric horizontal — **DISTRIB.** 200 to 250 species, all of tropical or sub-tropical regions in both worlds, scarce in Africa.

Leaves entire or crenate, never serrate —

Leaves entire, or if crenate without glands in the crenatures. —

Calyx-lobes not, or only slightly, overlapping to the right, usually small: —

Inflorescence lateral —

Inflorescence short-peduncled, shorter than the leaves (*A. PIMELANDRA*) —

Leaves entire; inflorescence on wood of current and past years: —

Leaves over 6 in. long; nerves conspicuous: —

Leaves nearly glabrous beneath;
main-nerves less than 20 .. 1. *A. pachysandra*.

Leaves densely tomentose beneath;
main-nerves more than 20 .. 2. *A. Teysmanniana*.

Leaves under 6 in. long:—

Leaves shining, nerves obscure;
flower-buds very short, rounded .. 3. *A. chrysophyllifolia*.

Leaves not shining, nerves conspicuous; flower-buds long, acuminate .. 4. *A. solanoides*.

Leaves crenate, inflorescence on wood of current year .. 5. *A. fulva*.

Inflorescence long-peduncled (II. AKOSMOS).—

Peduncles slender, under 1 in. long, pubescent; leaves membranous .. 6. *A. ferruginea*

Peduncles thick, 3 to 3.5 in. long, glabrous; leaves coriaceous.. .. 7. *A. lankawensis*

Inflorescence terminal:—

Style exsert in the bud (III. STYLARDISIA).—

Leaves membranous; inflorescence short, few-flowered .. 8. *A. andamanica*

Leaves chartaceous or coriaceous, inflorescence elongate, many-flowered.—

Leaves without a conspicuous intramarginal nerve.—

Calyx-lobes .05 in. long or under, usually glabrous —

Leaves coriaceous —

Leaves not thickly scaly beneath.—

Nerves of leaves obscure, leaves dark when dry .. 9. *A. tuberculata*.

Nerves of leaves prominent, leaves pale when dry .. 10. *A. ophurensis*.

Leaves thickly scaly beneath:—

Leaves broad; main-nerves very many, prominent, over 24 pairs .. 11. *A. labisæfolia*.

Leaves narrow; main-nerves fewer, obscure, 20 pairs .. 12. *A. montana*

Leaves chartaceous:—

Panicles slender, elongate, leaves usually small, main-nerves at about 60° to midrib .. 13. *A. sinuata*

Panicles rather thick, compact; leaves generally large, main-nerves at about 75° to midrib .. 14. *A. colorata*.

Calyx-lobes .2 in. long, ferruginous pubescent .. 15. *A. crassa*.

Leaves with a conspicuous intramarginal nerve .. 16. *A. platyclada*.

Style not exsert in the bud (IV. ACRAERDISIA).—

Branches of the inflorescence racemose; buds long, slender .. 17. *A. porosa*.

Branches of the inflorescence umbellate; buds short, conical .. 18. *A. divergens*

Calyx-lobes clearly overlapping to the right, usually large and broad.—

Inflorescence terminal (V. TINOPSIS):—

- Leaves under 6 in. long; panicle compact, pedicels slender, flowers rather small; berry globose, .2 in. in diam. .. 19. *A. sumatrana*.
- Leaves usually over 6 in. long; panicle spreading, pedicels stout, flowers large; berry depressed, over .25 in. in diam. .. 20. *A. lanceolata*.
- Inflorescence lateral (VI. *TINUS*):—
- Anthers septate; leaves coriaceous, obovate, inflorescence short 21. *A. littoralis*.
- Anthers not septate:—
- Leaves usually over 8 in. long.—
- Leaves 8 to 15 in long, elliptic, buds .25 in long 22. *A. Kunstleri*.
- Leaves 5 to 10 in. long:—
- Main-nerves at about an angle of 60° with midrib:—
- Buds .4 in. long or more; leaves coriaceous.—
- Buds conical; calyx-lobes rounded; raceme glabrous .. 23. *A. solanacea*.
- Buds rounded; calyx-lobes emarginate, raceme rusty-pubescent .. 24. *A. lurida*.
- Buds .8 in. long only, rounded; leaves chartaceous 25. *A. oxyphylla*.
- Main-nerves at only about 80° with the midrib; calyx-lobes emarginate .. 26. *A. Scortechinii*.
- Leaves usually under 6 or even 5 in. long:—
- Leaves few-nerved; inflorescence long, racemose 27. *A. pendula*.
- Leaves many-nerved; inflorescence short, 1-5-flowered 28. *A. Hullettii*.
- Anthers not known; leaves 7 to 10 in. long, under 2.5 in. broad; main-nerves at an angle of 80° with midrib in an elegant network with secondary nerves and reticulations .. 29. *A. oblongifolia*.
- Anthers not known; leaves elliptic or elliptic-ovate, acuminate, 4.5 to 6.5 in. long; calyx-lobes 4; inflorescence apparently terminal .. 30. *A. tetrasepala*.
- Anthers not known; leaves 3 to 5 in. long, under 1.5 in. broad, acuminate, flowers 2 .. 31. *A. biflora*.
- Anthers not known; leaves 4 to 6 in. long, .7 to .9 in. broad, linear-lanceolate; flowers in peduncled axillary umbellate racemes, about 5 to 8 32. *A. tahanica*.
- Leaves crenate, with glands in the crenatures (VII. *CRISFARDISIA*):—
- Calyx-lobes more or less gland-dotted:—
- Calyx-lobes oblong, obtuse or obtusely acute:—
- Calyx-lobes lingulate, over .25 in. long, sparsely dotted; inflorescence short; leaves lanceolate, more or less villous. .. 33. *A. villosa*.
- Calyx-lobes under .1 in. long, prominently

- dotted; inflorescence long; leaves oblong,
glabrous, pale 34 *A. virens*
- Calyx-lobes ovate, more or less acute —
Inflorescence axillary, racemose or umbel
late:—
Racemes or umbels in the axils of upper
leaves only —
Leaves over 5 in long, crenatures broad,
very shallow, rounded.—
Leaves membranous, pedicels slender 35 *A. Wrayi*
Leaves coriaceous, pedicels thick .. 36 *A. minor*
Leaves under 4 in. long, crenatures
narrow, almost dentate .. 37 *A. perakensis*
Racemes in the axils of all or nearly all
the leaves, crenatures narrow .. 38 *A. Meziana*
Inflorescence terminal or pseudo-terminal —
Inflorescence of a single sessile, umbellate
raceme; leaves 4 to 8 in long .. 39 *A. Ridleyi*
Inflorescence usually of panicle racemes;
leaves 2 to 4 in long .. 40 *A. crenata*
Calyx-lobes not gland dotted, inflorescence ter-
minal or pseudo terminal —
Branches of inflorescence short, not more than
1 in long; leaves 2 to 4 in long .. 41 *A. rosea*
Branches of inflorescence 2 to 3 in long,
leaves 4 to 6 in long .. 42 *A. longepedunculata*
Leaves acutely and prominently serrate occasionally
abortive (VIII. BLADRIA) —
Inflorescence long, reaching 6 to 8 in, leaves
large, nearly or quite sessile .. 43 *A. Mangayi*
Inflorescence short, under 2.5 in, leaves
petioled —
Inflorescence 1.5 to 2.5 in long; anthers
mucronate, leaves under 3 in long .. 44 *A. thesioides*
Inflorescence under 1.5 in long, anthers
emarginate, leaves over 4 in long —
Leaves and branchlets fulvous villous,
flowers pink, ovary and base of style
pubescent 45 *A. odontophylla* var *Lobbi*
Leaves and branchlets glabrous, flowers
white; ovary and base of style glabrous .. 46 *A. bambusetorum*

1 ARDISIA PACHYSANDRA, Mez Monog. Myrs. 97 fig. 14 A-E (1901)

A large shrub or small tree reaching to 40 to 50 feet high, and 6 to 10 in. diam.; branches with pale brown bark, marked with decurrent lines below the leaves or leaf-scars, branchlets thickly rusty-villous at the ends. Leaves membranous; oblong or slightly obovate, acute at apex, cuneate at base; glabrous above, except on the midrib which is sometimes minutely pubescent, glabrous or slightly pubescent beneath; entire, glands numerous near the margins; 6 to 10 in. long, 1.5 to 3 in broad; midrib thick, slightly impressed above, main-nerves

14 to 20 pairs, irregular, .4 to .5 in. apart, starting at an angle of about 60°, then slightly arching to and along the margin; petiole .4 to .6 in. long, pubescent, wrinkled, slightly channelled above. *Inflorescence* of small, axillary, sessile or shortly peduncled, umbels or corymbs; peduncles .1 in. long, flowers 6 to 8; pedicels slender, pubescent, striate, .4 in. long; bracts minute, subulate, densely pubescent, deciduous. *Calyx-lobes* ovate, rounded, pubescent, .2 in. long, slightly overlapping to the right, ciliate, gland-dotted especially near the tip. *Corolla-lobes* boat-shaped, broadly ovate, shortly acuminate, .3 in. long, glabrous, white, faintly nerved, dots very few, revolute in flower; tube short. *Stamens* a little shorter than corolla-lobes; anthers ovate, cuspidate-acuminate, much gland-dotted and warted at the back on the connective; filaments thick. *Ovary* rounded, glabrous, style subulate, as long as the anthers. *Berry* .2 to .4 in. in diam., globose, glabrous, pale. *Myrsine pachysandra*, Wall. in Roxb. Fl. Ind. ed. Carey & Wall. II. 297; Wall. Cat. 2284; A. DC. in Trans. Linn. Soc. XVII. 111. *Pimelandra Wallichii*, A. DC. in Ann. Sc. Nat. 2. XVI. 88; Prod. VIII. 106; Deless. Ic. Sel. V. 14. t. 31; Scheff. Myrs. 94; Miq. Fl. Ind. Bat. II. 1029; Clarke in Hook. f. Fl. Br. Ind. III. 531.

PENANG: Wallich 2284; Porter; Curtis 1156, 3164, 3181, 3737. MALACCA: Griffith (K.D.) 3597; Maingay (K.D.) 1006. PERAK: Wray 1358; King's Collector 5995, 7194.—DISTRIB. Borneo (?).

2. *ARDISIA TEYSMANNIANA*, Scheff. in Tijdschr. Ned. Ind. XXXI. 368 and in Flora 253 (1870). A large shrub or small tree; branchlets brown, with wavy longitudinal lines passing downwards from the sides of the bases of the petioles, lenticels numerous, innovations densely ferruginous-pubescent. *Leaves* entire, chartaceous; oblong or slightly obovate-oblong or oblong-lanceolate, acuminate at the apex, alternate and sometimes abruptly rounded at base; glabrous above, densely ferruginous-tomentose beneath; glands very numerous, small, evenly distributed over the whole under surface; 6 to 11 in. long, 1.5 to 3 in. broad; midrib thick, prominent beneath; main-nerves 25 to 30 pairs, .3 to .4 in. apart, starting at an angle of 60°, at first straight, then curving to meet in the margin in a looped nerve, raised beneath as are the few secondary nerves and the many oblique reticulations; petiole very thick, .5 to .6 in. long, usually bordered by the decurrent margins of the blade which are again revolute. *Inflorescence* of axillary pedunculate umbels or corymbs; peduncles in flower .1 to .2 in. long, in fruit sometimes up to .5 in., 4-5-flowered; pedicels slender, .4 in. long, densely rusty-pubescent, striate; bracteoles linear-subulate, deciduous. *Calyx-lobes* ovate, rounded, pubescent, .1 in. long, ciliate. *Corolla-lobes* ovate-acuminate, .2 in. long, softly

pubescent, glands inconspicuous, tube very short. *Stamens* nearly as long as corolla-lobes; anthers ovate, cuspidate-acuminate, concave and warted on the connective at the back, .175 in. long; filaments slender, .05 in. long, glabrous. *Ovary* rounded, glabrous; style slender, subulate, as long as stamens. *Berry* globose, slightly depressed, .3 in. in diam., black-gland-dotted, faintly ribbed. Mez in Monog. Myrs. 97. *Pimelaria* *Teysmanniana*, Hook. f. in Benth. & Hook. f. Gen. Fl. II. 64. *melandria Wallichii* var. *Teysmanniana*, Clarke in Hook. f. Fl. Br. Ind. III. 531.

MALACCA: *Maingay* (K.D.) 1007. SINGAPORE: *Cantley*; *Ridley* 2800, 5573, 6788.—DISTRIB. *Bangka*.

This species is easily distinguished from the former by having many more and much closer nerves to the leaves, and by the dense rusty tomentum.

3. *ARDISIA CHRYSOPHYLLIFOLIA*, King & Gamble, n. sp. A tree, branchlets reddish-brown, innovations densely ferruginous-pubescent. *Leaves* entire, coriaceous; oblong-lanceolate, obtusely acute at apex, narrowed at base; glabrous on both surfaces; glands scattered, visible on the under surface; 4 to 6 in. long, .75 to 1.25 in. broad; midrib thick, prominent; main-nerves many, more or less parallel, inconspicuous, meeting, with the secondary nerves, in a wavy intramarginal nerve, reticulations fine; petiole .4 to .5 in. long, glabrous, channelled above and edged by the decurrent margin of the blade. *Inflorescence* of small, axillary, sessile or shortly peduncled, umbels of up to about 12 flowers; pedicels slender, .2 in. long, ferruginous-pubescent; bracts minute, triangular; buds very short, rounded. *Calyx-lobes* 5, ovate, minutely ciliate, pubescent and scaly outside, dotted with many conspicuous golden glands, .05 in. long, tube a little shorter. *Corolla-lobes* ovate, concave, sparsely glandular, glabrous, .08 in. long; tube none or very short. *Stamens* a little shorter than the corolla-lobes; anthers ovate acuminate, black-gland-dotted behind; filaments short. *Ovary* rounded, glabrous, style subulate, .05 in. long. *Berry* globose, somewhat depressed, covered with round and elongate glands, .15 in. in diam.

PERAK. at Lower Camp, Gunong Pateh, 3,400 feet, *Wray* 483, 1118, 1182

4. *ARDISIA SOLANOIDES*, King & Gamble, n. sp. A small shrub, 3 to 4 feet high; branches slender, smooth, dark brown; branchlets glandular-hirsute, marked by obscure raised lines from the sides of the bases of the petioles. *Leaves* entire, membranous; elliptic, bluntly long caudate-acuminate at apex, attenuate at base; glabrous above, more or less glandular-hirsute beneath; glandular dots many, scattered, prominent; 2.5 to 3.5 in. long, .75 to 1.25 in. broad; midrib slender,

raised beneath ; main-nerves 8 to 9 pairs, raised, at an angle of 60° with the midrib, the lowest pair more oblique, nearly straight, meeting at about two-thirds of the way to the margin in a looped intramarginal raised nerve, reticulations obscure ; petiole .15 in. long, bordered by the decurrent margins of the blade. *Inflorescence* of sessile, axillary, umbellate, nearly glabrous racemes of about 4 to 6 flowers, racemes hardly .1 in. long ; bracteoles oblong-lanceolate, gland-dotted, .1 in. long ; pedicels slender, .3 to .4 in. long, slightly clavate ; buds conical, acuminate, .3 in. long ; flowers white with a blueish tinge. *Calyx-lobes* 4 to 5, very short, rounded, scarious and ciliate on the margins, gland-dotted. *Corolla-lobes* ovate below, caudate-acuminate above, twisted and reflexed in flower, .3 in. long, sparsely pale-glandular-punctate. *Stamens* nearly as long as corolla-lobes, lanceolate, membranous at tip, with two lines of glandular dots on the back of the connective. *Ovary* rounded ; style very slender, as long as stamens. *Berry* bright red, glossy, .25 in. in diam. when dry.

PERAK in dense jungle on rich soil, at 500 to 800 feet, *King's Collector* 4254.

This species very closely resembles *Antiotrophe caudata*, but is at once distinguished by the fact of the corolla-lobes overlapping to the right instead of to the left. The flowers somewhat resemble those of *Ardisia porosa*.

5. *ARDISIA FULVA*, King & Gamble, n. sp. Apparently a shrub ; branchlets rather thick, usually marked by raised lines descending from the bases of the leaves ; innovations densely tawny-villous ; leaf-buds lanceolate, densely pubescent. *Leaves* coriaceous ; elliptic-oblong or elliptic-lanceolate, shortly acuminate at apex, somewhat rounded at base ; glabrous or slightly scaly above, thickly tawny-villous beneath ; glandular dots few, scattered, obscure, in the areoles of the minor nerves ; crenate, especially in the upper two-thirds ; 4 to 7 in. long, 1 to 2 in. broad ; midrib slender ; main-nerves 20 to 24 pairs, irregular, arching upwards and joining in an intramarginal nerve ; secondary nerves slender, faint, reticulations curved, petiole .4 to .6 in. long, winged by the decurrent edges of the blade. *Inflorescence* of short 1 to 1.5 in. long, densely tawny-pubescent, drooping, corymbs in the axils of tawny, leaf-like, often nearly 1 in. long, bracts from the young branches below the end leaves ; peduncles about .7 in. long, slender, pedicels slender, up to .5 in. long ; bracteoles subulate, short, tawny ; buds ovate, .2 to .25 in. long. *Calyx-lobes* ovate, thin, villous without, ciliate, .1 to .15 in. long, marked with prominent black dots, recurved in flower ; tube short. *Corolla-lobes* obovate, obtuse, .2 to .25 in. long, oblique, unequal, marked by prominent round or oblong black dots, tube short. *Stamens*

a little shorter than the corolla-lobes, acuminate, with 2 rows of prominent black dots behind the anthers; filaments short. *Ovary* ovoid, surmounted by a short, .1 in. long, subulate style, glabrous. *Berry* .2 in. in diam., black when dry, ribbed.

KEDAH : on Langkawi Island, *Curtis* 2133. PENANG : *Ridley* 10216. PERAK : *Ridley* 8269.

6. *ARDISIA FERRUGINEA*, Mez Monog. Myrs 108 (1901). A shrub (?); branchlets slender, densely ferruginous-tomentose. *Leaves* membranous; linear- or oblong-lanceolate, bluntly acute at apex, rounded at base; glabrous or slightly rusty-scaly above, rusty-pubescent beneath; entire; glands not apparent; 3 to 4.5 in. long, .75 to 1 in. broad; midrib slender, nerves very faint; petiole .1 to 2 in. long, rusty-pubescent. *Stipules* small, linear-falcate. *Flowers* in densely ferruginous-pubescent, bipinnate panicles in the axils of upper leaves; peduncles .5 to .75 in. long; bracts linear subulate about .15 in.; pedicels slender, .1 to .2 in. long; bracteoles minute; buds conical. *Calyx-lobes* ovate, obtuse, ciliate, connate to rather over one-third, with wavy glandular dots. *Corolla-lobes* shortly connate at the base, broadly and obliquely ovate, short acuminate, gland-dotted. *Stamens* a little shorter than the corolla-lobes; anthers large, ovate, gradually acute, scarcely punctate; filaments very short. *Ovary* ovoid, glabrous, style slender

JOHORE : at Kampong Sunpai, *Lake & Kelsall* (*Ridley* 4032).

This species does not seem to differ very much from *A. Miqueliana*, Scheff. in Tijdsch Ned Ind XXXI. 367, in respect to leaves, but that species has terminal and not axillary flowers.

7. *ARDISIA LANKAWIENSIS*, King & Gamble, n. sp. A tree, branchlets smooth, glabrous, obscurely striate, with raised lines from the edges of the bases of the leaf-petioles. *Leaves* coriaceous, elliptic or elliptic-lanceolate, acuminate at apex, acute at base, glabrous; entire, glandular dots frequent near the margins; 3.5 to 5 in. long, 1.25 to 1.5 in. broad; midrib slender; main-nerves obscure, about 12 to 14 pairs, anastomosing near the margin, secondary nerves and reticulations similar; petiole .5 to .6 in. long, channelled above by the decurrent margins of the blade. *Flowers* pink, in long-peduncled, closely congested racemes in the axils of the uppermost leaves, peduncles 3 to 3.5 in. long, flattened, glabrous; pedicels .5 to .7 in. long, striate, slender; bracteoles minute, caducous. *Calyx-lobes* ovate, acute, ciliate, with many glands on the back, .075 in. long. *Corolla-lobes* ovate, acuminate, much gland-dotted, .25 to .3 in. long. *Stamens* a little shorter than the corolla-lobes, ovate-lanceolate, mucronate, dehiscing on the margins but more widely near the top. *Ovary* rounded, obscurely 5-lobed; style .2 in. long, twisted and

wrinkled. *Fruit* a depressed, obscurely 5-angled berry, .2 in. in diam., pericarp very smooth inside

KEDAH on Lankawi Island, *Ridley* 8313

8 *ARDISIA ANDAMANICA*, Kurz For Fl II, 108 (1877) and in Journ. As. Soc Beng XLVI ii 225 A small or medium sized evergreen shrub reaching 15 feet high and 2 in in diam, branches slender with reddish-brown bark, striate when dry, branchlets glabrous. *Leaves* entire, membranous, oblong lanceolate, narrowly long acuminate at apex, cuneate at base, glabrous on both surfaces but with many scattered glandular dots and occasional peltate scales, 3 to 6 in long, .75 to 1.75 in broad, midrib slender, main-veins about 20 pairs, very thin and inconspicuous, at about 60° with the midrib, at first straight then arching upwards to and along the margin, petiole 3 to 5 in. long, channelled above. *Inflorescence* a loose terminal panicle 2 to 3 in long, with few slender umbel like racemes on 3 to 5 in long, squarrose peduncles, pedicels slender, 3 in, bracteoles small, ovate, deciduous *Calyx-lobes* acute, triangular, .05 in long, minutely ciliate at the edges dotted with black glands, tube rather shorter than lobes *Corolla-lobes* ovate, acute, 15 in long, glabrous, with inconspicuous veins and few scattered round or oblong glands *Stamens* a little shorter than corolla-lobes, anthers ovate, apiculate, 1 in long, glabrous on the back or with few black glands, filaments .05 in *Ovary* rounded, glabrous, style filiform, long exsert, 15 in long *Berry* round or slightly pyriform, smooth, .3 in in diam Clarke in Hook f Fl Br Ind III 521, Mez Monog Myrs 110 *Ardisia nerufolia*, A DC Prod VIII 127 in part (not of Wall), Trans Linn Soc. XVII t 8 (*fig only*)

Ridley s 5510 from Kedah seems to be a form of this with smaller leaves and shorter calyx lobes but can hardly be separated as a second variety

34 ARDISIA VIRENS, Kurz For Fl II 575 (1877), and Journ As Soc Beng XLVI ii 226 A small glabrous shrub, branchlets slender, pale, somewhat compressed and twisted *Leaves* membranous, oblong or oblong lanceolate, acuminate at apex, cuneate at base, faintly

crisped-crenulate with large glands in the crenulations, pale and glabrous on both surfaces, glandular dots scattered, in the areoles of the reticulations, 4 to 6 in long, 1.5 to 2 in broad, midrib prominent, somewhat impressed above, main-nerves about 12 to 14 pairs, irregular and irregularly spaced, usually starting at an angle of about 60° with the midrib, at first straight, branching and joining in an intramarginal nerve close to the margin and passing through the crenature glands, secondary nerves many, slender, reticulations many, curved, petiole 4 to 6 in long, winged by the decurrent margins of the blade. *Inflorescence* an almost sessile terminal corymb, composed of long peduncled sub umbellate racemes, peduncles 1 to 1.5 in, pedicels 5 to 8 in long, buds conical 2.5 in long. *Calyx lobes* oblong, obtuse, thin, 0.75 in long, conspicuously dark brown gland dotted, tube short. *Corolla lobes* ovate, bluntly acuminate, oblique, unequal, conspicuously marked by few dark brown lines and dots, 3 in long, tube very short. *Stamens* shorter than corolla lobes, 2 in long, obtusely hastate anthers opening by broad longitudinal slits, conspicuously black gland dotted on back, filaments short. *Ovary* rounded, style slender, 2 in long. *Berry* globose, pale, somewhat depressed, 3 to 4 in in diam, conspicuously marked with round or oblong purple dots, somewhat fleshy. Clarke in Hook f Fl Br Ind III 524, Stapf in Trans Linn Soc Ser 2, IV 203, Mez Monog Myrs 147

PERAK Wray 1444 at 2,000 feet—DISTRIB Assam, Cachar, Manipur, Yunnan, Borneo

35 *ARDISIA WRAYI*, King & Gamble, n sp. A single stemmed treelet or shrub reaching 5 feet in height, but usually smaller, upper part of stem 2.5 in thick, brown, with spongy bark and scurfy scales, leaf buds glabrous, lanceolate acuminate. *Leaves* membranous, oblong lanceolate, long acuminate at apex, long cuneate at base, margins recurved, somewhat scaly on both surfaces, scurfy along the midrib beneath, glandular dots prominent scattered, broadly crenate, the crenatures shallow with large glands, deep green above, red or purple beneath, 6 to 10 in long, 1.5 to 3 in broad, midrib slender, main nerves 12 to 20 pairs, irregular in angle and distance, curving upwards to and along the margin where they or their branches end in the glands of the crenatures, secondary nerves few, reticulations many scarcely prominent, petiole 7 to 1.3 in long, somewhat flattened, bordered by the decurrent margins of the blade. *Inflorescence* of glabrous sub umbellate racemes from the axils of the uppermost leaves, usually crowded so as to present almost the appearance of a terminal cluster, peduncles usually 5 in long, occasionally shorter but often longer, even up to 2 in, flattened, racemes very short, much marked by the scars of very

caducous bracteoles, flowers 8 to 12, pedicels slender below, flattened above, twisted and curved, 3 to 4 in. long, buds ovoid *Calyx-lobes* ovate, acute, 1 in long, prominently black-gland-dotted *Corolla-lobes* waxy, reddish or purple, ovate, 15 to 2 in long, sparsely gland-dotted. *Stamens* nearly as long as corolla-lobes, filaments very short, thick, anthers ovate, acute, connective much gland-dotted on back *Ovary* rounded, style short, slender, glabrous *Berry* globose, red, rugose, 3 in in diam, prominently gland-dotted when dry

PERAK *Wray* 438, 2795, 3280, 4051, *Scortechini* 418, *King's Collector* 1888, 3631, 6938, 7514, in dense jungle on rich soil, both in low-level localities and up to 4,000 feet in the mountains, one specimen, rather more slender, thinner and more glabrous, from the top of rocks (K C 7514)

K C No 6938 from mountains at 3 000 to 4,000 feet, has the main nerves nearly at right angles to the midrib, while other specimens have it at 60° or even 45°, these are, however, intermediate and all that can be said is that the character is a variable one. The species seems to resemble the *A. macrocarpa* Wall., of Northern India, in its habit of growth

36 *ARDISIA MINOR*, King & Gamble, n sp. Apparently a short (12 to 18 in high) treelet or undershrub, lower part of stem with side rootlets, stem 2 to 25 in thick, rusty pubescent, dark brown *Leaves* coriaceous, elliptic, long caudate-acuminate at apex, attenuate or cuneate at base often unequally, margins recurved, very shallowly crenate, the crenatures with large prominent glands, glabrous on both surfaces but somewhat scaly, 5 to 7 in long, 2 to 25 in broad, midrib slender, main nerves about 15 pairs, starting at an angle of about 50° with the midrib, and thence straight to the margin where they or their branches end in the crenature glands, secondary nerves similar to the main nerves, reticulations oblique, all raised beneath when dry, petiole thick, rugose, rusty-pubescent, 7 to 1 in long, winged by the decurrent margins of the blade *Inflorescence* of very short, rusty-pubescent, umbellate racemes of about 5 to 6 flowers from the axils of the uppermost leaves, peduncle scarcely 2 in long, thick, racemes about 2 in long, bracteoles many, ovate or oblong, recurved, pedicels thick, 3 to 4 in long, flattened, recurved *Calyx-lobes* ovate acute, 1 to 15 in broad, glabrous, prominently gland-dotted, nearly free *Corolla-lobes* ovate acute, 2 in long, glabrous, dotted prominently with large black glands *Stamens* shorter than corolla-lobes, filaments very short, thick, anthers oblong acuminate, the connective gland-dotted at the back, 1 in long *Ovary* rounded, glabrous, style 1 in. long, subulate *Berry* not known.

PERAK *Scortechini*

Very near *A. Wrayi*, but differs especially in the coriaceous leaves and the shorter and much thicker pedicels

37 *ARDISIA PERAKENSIS*, King & Gamble, n sp A small bush, branchlets pale brown, smooth, wrinkled when dry, innovations densely rusty-glandular-pubescent *Leaves* membranous, elliptic lanceolate, long acute both at apex and base, nearly glabrous on both surfaces but with small peltate scales, young leaves rusty glandular pubescent, margin slightly recurved, shortly and shallowly crenate or nearly dentate except on the lower third and at the apex, glands in the crenatures present, obscure, glandular dots absent or very sparse, 2.5 to 4 in long, .75 to 1.25 in broad, midrib slender, main nerves about 16 pairs, rather irregular in angle and distance, meeting near the margin in an irregularly looped intramarginal nerve, reticulations many, transverse, all raised on lower surface, petiole slender, 2 to 4 in long, bordered by the decurrent margins of the blade *Inflorescence* of small, 2-3 flowered, rusty-glandular, pubescent, pedunculate umbels from the axils of upper leaves or of reduced bract like leaves, peduncles 3 in long pedicels 1 to 2 in long bracteoles ovate, minute, buds ovoid, pale pink *Calyx lobes* triangular ovate, acute, minutely pubescent and gland dotted, .05 in long *Corolla lobes* ovate, acute, 1 to 1.5 in long, glabrous, sparsely black gland dotted *Stamens* a little shorter than corolla-lobes, filaments almost none, anthers ovate, acute, 1 in long *Ovary* rounded, glabrous, style subulate, .075 in long *Berry* not known

PERAK at 300 feet in Upper Perak, *Wray* 3462

38 *ARDISIA MEZIANA*, King & Gamble, n sp A herbaceous under-shrub, 1 to 2 feet in height, stem 2 in in diam, bark soft, pale brown, upper parts and innovations rusty glandular pubescent *Leaves* chartaceous, elliptic obovate, shortly and abruptly acuminate at apex, cuneate at base, glabrous above, sparsely glandular pubescent beneath margins rather narrowly crenate dentate except in the lower third to half and at the acumination, recurved, glands in the crenatures obscure glandular dots many, scattered, inconspicuous, 3.5 to 5.5 in long, 1.5 to 2 in broad, midrib slender, main nerves 10 to 14 pairs, at an angle of about 60° with the midrib, at first straight afterwards curved upwards to anastomose near the margin, secondary nerves few, reticulations oblique, all more or less raised on both surfaces when dry, petiole 3 to 5 in long, somewhat thickened below, densely rusty-glandular-pubescent *Inflorescence* of very short, sessile, rusty glandular-pubescent racemes of about 6 flowers each, in the axils of the leaves all

down the stem, the racemes .1 to .15 in. long; bracteoles ovate, scarious, conspicuously black-gland-dotted and ciliate; pedicels short, .1 to .15 in. long, stout; buds ovoid; flowers waxy-white. *Calyx-lobes* 5, ovate, acute, ciliate, hyaline, with conspicuous black dots, .05 in. long, tube as long as lobes. *Corolla-lobes*, ovate, blunt, .1 in. long, conspicuously black-gland-dotted; tube very short. *Stamens* nearly as long as corolla-lobes; filaments short, thick; anthers ovate-lanceolate, long apiculate, the connective studded on the back with large black glands. *Ovary* rounded, style filiform as long as corolla. *Berry* not seen.

PERAK. on limestone rocks in open jungle at 500 to 800 feet, *King's Collector* 5838.

We have dedicated this well-marked species to C. Mez, whose Monograph of MYRSINÆ has done so much for the elucidation of the Natural Order, and whose study of *Ardisia* in particular has been of so much help to us.

39. *ARDISIA RIDLEYI*, King & Gamble, n. sp. A slender shrub or treelet, reaching 10 to 15 feet in height and about 1 in. in diam.; branchlets dark brown, slender, minutely ferruginous-pubescent; leaf-buds lanceolate, densely ferruginous-pubescent. *Leaves* membranous; oblong-lanceolate, long acuminate at apex, acuminate or somewhat rounded at base; prominently crenate, the crenatures usually regular, margin slightly recurved; glabrous on both surfaces; glandular dots few, scattered; 4 to 8 in. long, 1.25 to 1.75 in. broad, midrib slender; main-nerves about 12 pairs, at irregular angles and spaces, ending in the crenatures of the margin; secondary nerves and reticulations obscure; petiole .2 to .7 in. long, bordered by the decurrent margins of the blade. *Inflorescence* a 3-6-flowered, sessile, umbellate raceme in the axil of the uppermost leaf of the branchlets; raceme about .2 in. long; pedicels slender, .7 to 1.4 in. long, minutely rusty-pubescent; buds ovoid, acute. *Calyx-lobes* 5, broadly triangular, acute, .075 in. long, sparsely black-gland-dotted, rusty-pubescent. *Corolla-lobes* broadly ovate, acute, .15 in. long, glabrous, densely and closely black-gland-dotted. *Stamens* a little shorter than the corolla-lobes; filaments very short, thick; anthers oblong, hastate, mucronate, .1 in. long. *Ovary* rounded, glabrous, style slender, .05 in. long. *Berry* dark red, ovoid, apiculate, sparsely striate and gland-dotted, .25 to .3 in. in diam.

PERAK: in dense forest at 2,500 to 4,500 feet, *Wray* 209; *King's Collector* 5019. SELANGOR: *Ridley* 8534. SINGAPORE: *Ridley* 6434.

Very like *A. crenata* var. *angusta* but has broader and thinner leaves, differently nerved.

40. *ARDISIA CRENATA*, Roxb. Hort. Beng. 85 (1814), Fl. Ind. I. 583,

and Fl Ind ed Carey & Wall II 276 An evergreen small glabrous shrub, branchlets thick, somewhat fleshy, striate with faint lines decurrent from the bases of the leaves, leaf buds small, conical *Leaves* chartaceo-coriaceous, lanceolate to oblong lanceolate, acute or sub-obtuse at apex, acuminate narrowed at base, margins crispately crenate with glands in the crenatures, recurved, glabrous on both surfaces, glandular dots scattered in the areoles of minor nerves, sometimes prominent, often obscure, 2 to 4 in long, 75 to 15 in broad, midrib slender, main nerves 10 to 14 pairs, irregular, slender, arching upwards and joining in an intramarginal nerve close to the margin which passes through the crenature glands, secondary nerves similar but fainter, reticulations curved, petiole 2 in long, narrowly winged by the crisped edges of the decurrent blade *Inflorescence* of short, sessile or shortly peduncled, paniced racemes, springing from the branchlets just below the terminal pair of leaves, pedicels 2 to 4 in long, slender, longer and thicker in fruit, generally recurved, buds conical, 15 to 2 in long, flowers 4 or 5 merous, waxy pink or white *Calyx* lobes ovate, 05 to 1 in long, scarious at the edges, dotted with black glands in the middle, tube very short *Corolla* lobes rose pink, ovate oblong, bluntly acuminate, 2 in long, oblique, unequal, sparsely dotted with round or elongated glands, sometimes papillose at the base within *Stamens* shorter than corolla lobes, anthers ovate oblong, acute, with few glands on the back, filaments very short *Ovary* ovoid, surmounted by a twisted subulate slender style 15 in long *Berry* globose, 25 in in diam, scarlet, succulent obscurely striate, crowned by the persistent style Wall Cat 2262, Bot Mag t 1950, Clarke in Hook f Fl Br Ind III 524, Koord & Val Bijdr VI 190 *A glandulosa*, Bl Bijdr 690 (not of Roxb) *A crenulata*, Lodd Bot Cat t 2 (not of Vent) *A crispa*, A DC in Trans Linn Soc XVII 124 and Prod VIII 134, Scheff Myrs 72, Miq Fl Ind Bat II 1020, Kurz in Journ As Soc Beng XLVI ii 226 and For Fl II. 113, Mez Monog Myrs 144, fig 22 *A densa* and *A polysticta*, Miq Fl Ind Bat Suppl 575, 576 *Bladhia crispa*, Thunb Fl Jap 97, Kaempf Ic Pl Jap t 7

pyramidal panicle of long peduncled racemes, 5 to 6 in long and 6 to 9 in broad, branches and rachis all rusty pubescent, common peduncle about 1 in long, branch peduncles 2 to 3 in long, at right angles to the rachis and curved upwards, racemes about 5 in long, about 8-flowered, pedicels slender, somewhat clavate, twisted, 5 to 1 in long, bracteoles subulate, caducous, buds ovoid, acuminate *Calyx lobes* triangular, blunt, 0.5 in long, rusty pubescent, tube as long *Corolla lobes* pink, ovate, long acuminate, 2.5 in long, rusty pubescent within, not gland dotted, tube very short *Stamens* much shorter than corolla-lobes, anthers oblong, acute, filaments very short *Ovary* rounded, style subulate, 2.5 in long *Berry* purplish black, globose, 2 in in diam

PERAK at low levels, Wray 296

43 *ARDISIA MAINGAYI*, King & Gamble A "bush or small tree (Wray), "slender tree" (Scortechini), branchlets smooth, bark brown, pith rather small, innovations glandular-pubescent *Leaves* membranous, sub opposite or falsely whorled, elliptic obovate or obovate lanceolate, attenuately or abruptly acuminate at apex, attenuately cuneate at base, glabrous on both surfaces except for a few scattered glandular hairs, pale beneath margin finely toothed except on the lower third, the teeth caudate and glandular, 6 to 11 in long, 2 to 3.5 in broad, midrib slender above, thickened below, main nerves 15 to 20 pairs, irregular in angle and distance, but usually at about 50° with the midrib, straight for about half way and then curved to and along the margin, secondary nerves and reticulations very faint petiole none or very short, the base of the leaf almost half stem clasping *Inflorescence* of slender, 6 to 8 in long, sparsely glandular pubescent, panicles of long peduncled sub umbellate racemes, from the axils of upper leaves, of abortive leaves, or of the scars of fallen leaves below them, common peduncle slender, 2 to 3 in long, branch peduncles very slender, divaricate, 5 to 1.5 in long, supported by linear subulate 2 to 3 in long bracts, racemes 3 to 5 in long, 8-12 flowered, bracteoles small, subulate, pedicels slender, flattened above, buds ovoid acute *Calyx lobes* ovate, obtuse, 0.5 to 1 in long, recurved in fruit, minutely pubescent, ciliate on the margins *Corolla lobes* white, ovate, acute or acuminate, 1.5 in long, glabrous, gland-dotted *Stamens* much shorter than corolla lobes, filaments short, dilated at base, anthers oblong, bluntly mucronate, 1 in long *Ovary* rounded, glabrous, style slender, 0.5 in long *Berry* red, 3 in in diam, longitudinally ribbed when dry *A. odonto phylla*, Wall, var *Maingayi*, Clarke in Hook f Fl Br Ind III 526

PERAK Wray 304, 953, 1597, Scortechini 335, 339, Curtis

MALACCA: *Maingay* (K.D.) 1016, in the mountains about 4,500 feet and below.

Although Wray and Scortechini describe this more or less as a "tree," *Maingay's* specimen is that of a semi-herbaceous undershrub about 24 in. high, sending out roots from above the ground-level.

44. *ARDISIA THEÆFOLIA*, King & Gamble, n. sp. A small shrub reaching 3 feet in height; branchlets brown, smooth, the uppermost parts and innovations rusty-glandular-pubescent. *Leaves* chartaceous; elliptic, long acuminate at apex, acuminate at base; alternate or sub-opposite or falsely whorled; minutely glandular-pubescent on both surfaces, scaly beneath; margins recurved, finely toothed except on the lower third and on the acumination, the teeth erect, glandular; glandular dots very numerous and prominent on both surfaces; 2 to 3 in. long, .7 to 1.2 in. broad; midrib slender; main-nerves 10 to 14 pairs, close, curved upwards to near the margin, reticulations obscure; petiole .4 in. long, bordered by the decurrent margins of the blade. *Inflor-escence* a 1.5 to 2.5 in. long panicle with short racemose branches in the axil of a leaf or of a subulate .2 in. long linear abortive leaf between the leaves on the upper part of the branches; branches .5 in. long, slender, divaricate; bracteoles minute, linear; flowers 2 to 5 in each raceme, buds ovoid *Calyx-lobes* 5, rounded, .05 in. long, ciliate. *Corolla-lobes* 5, white, ovate, acute or obtuse, .15 in. long, gland-dotted. *Stamens* as long as corolla-lobes; filaments very short; anthers broadly oblong, mucronate. *Ovary* rounded, gradually produced in an erect or curved style, 1 in. long. *Berry* pyriform or nearly globose, .2 in. in diam., smooth, slightly ribbed when dry.

PERAK: on Ulu Batang Padang at 4,900 feet, *Wray* 1513; *Scortechini*.

45. *ARDISIA ODONTOPHYLLA*, Wall. Cat. 2279 (1829) (*not of* Lindl.), A. DC. Trans. Linn. Soc. XVII 125, t. VI., Prod. VIII. 135; Clarke in Hook f. Fl. Br. Ind. III. 525; Mez Monog. Myrs. 150. *A. pavonina*, Herb. Hamilt. *vide* DC. in Prod. l.c.—DISTRIB. India (Assam and Cachar).

VAR *Lobbu*, Clarke in Hook. f. Fl. Br. Ind. III. 526. An almost herbaceous undershrub reaching to about 2 feet in height, the stems rooting from nodes near the base; bark fleshy, pale brown, pith large; upper-part of stem densely fulvous-villous; leaf-buds small, short. *Leaves* membranous, sub-opposite; elliptic or elliptic-oblong or obovate-lanceolate, acute at apex, cuneate at base and sometimes slightly rounded, the margins sharply serrate except for a short distance near the base; glabrous above except on the hirsute midrib, rusty-tomentose beneath, the midrib and main-nerves usually ferruginous-

villous on the lower surface, glands scattered, not prominent, 4 to 8 in long, 1.5 to 3.5 in broad, midrib thick, prominent, main-nerves 8 to 12 pairs, prominent, irregular in distance and angle, curving upwards to and along the margin, secondary nerves few, reticulations transverse, petiole variable, stout, 4 to 1 in long, ferruginous villous, rarely glabrescent. *Inflorescence* of short (under 1 in long) lax, few flowered, pubescent, simple or compound, umbellate racemes, from the axils of leaves below the summit or of a linear subulate abortive leaf about 5 in long, peduncles slender, 5 to 2 in long, pedicels slender, 3 to 7 in long, recurved, bracteoles short, subulate, buds ovoid. *Calyx* lobes ovate, obtuse, ciliate, 1 in long, slightly pubescent marked with faint brown striæ, tube short. *Corolla* lobes pink, ovate, obtuse or bluntly acuminate, 1.5 to 2 in long, unequal, marked with many light brown linear and round glands, tube short. *Stamens* half the length of the petals, anthers broad, oblong, 1 in thick, emarginate filaments very stout. *Ovary* ovoid, gradually narrowed into a slender subulate style 1 in long, the top of the ovary and base of the style short pubescent. *Berry* globose, scarlet, fleshy, .25 in in diam, smooth.

PERAK *Wray* 2285, 2975 *King's Collector* 2583, 2978, 3053 7367
SELANGOR *Ridley* 7560 PAHANG *Ridley* 2270, 5825 SINGAPORE
Lobb 316, an undershrub of dense forests in wet localities

Ridley's Pahang specimens have smaller leaves and longer calyx lobes, with fewer flowered inflorescences, the whole plant more thickly tomentose villous but do not seem capable of separation.

46 *ARDISIA BAMBUSLORUM*, King & Gamble, n. sp. A small semi herbaceous shrub 1 to 2 feet high, stem pale brown about .25 in in diam bark spongy, pith large. *Leaves* membranous, oblong or oblong lanceolate or obovate-oblong, acute at apex, narrowly attenuate at base and slightly rounded glabrous on both surfaces, slightly scaly only beneath, glands few, scattered, chiefly near the margin, margins very finely and irregularly toothed, usually recurved, 4 to 6 in long, 1 to 1.5 in broad, midrib slender, main-nerves 8 to 10 pairs, starting at an angle of about 50° with the midrib, curved upwards, and often branching, to and along the margin, where they anastomose in a rough intramarginal nerve, secondary nerves few, reticulations oblique petiole 4 to 6 in long, channelled above. *Inflorescence* of lateral pedunculate racemes 1 to 1.5 in long supported by a linear abortive leaf 5 in long, peduncle 7 to 8 in long, raceme the same bracteoles small subulate about 1 in long, pedicels slender, clavate, 4 to 5 in long recurved, buds ovoid, flowers white.

Calyx-lobes 5, linear-oblong, acute, reflexed, .05 to .07 in. long, not gland-dotted. *Corolla-lobes* ovate-oblong, .15 in. long, dotted with elongated brown glands. *Stamens* shorter than the corolla-lobes; filaments short; anthers oblong, obtuse, emarginate, .1 in. long. *Ovary* rounded, glabrous; style slender, curved, .1 in. long. *Fruit* not seen.

PERIAK. in dense bamboo forest, King's Collector 10095.

This is scarcely more than a var. of *A. odontophylla*, but is recognised by the somewhat different leaves, white flowers, glabrous ovary and style, and the absence of fulvous tomentum.

6. ANTISTROPHE, A DC.

Slender shrubs, with puberulous branchlets. *Leaves* alternate, entire or dentate, lanceolate, acuminate, glandular, petiole margined. *Flowers* hermaphrodite, in sub-sessile axillary umbels or solitary, pedicels slender, bracts small. *Calyx* small, 5-lobed, persistent; lobes acute, imbricate. *Corolla* deeply 5-cleft; lobes lanceolate acuminate, overlapping to the left in bud. *Stamens* 5, inserted on the throat of the corolla; filaments short, anthers free, hastate-lanceolate, the connective produced upwards in a membranous tip, cells dehiscing longitudinally and introrsely. *Ovary* ovoid, attenuated in a filiform style, stigma punctiform; ovules many on a globose central placenta. *Fruit* a globose berry, pericarp coriaceous, endocarp chartaceous. *Seed* 1, albumen ruminated; embryo cylindric, transverse.—DISTRIB. Species 4, Indian and Malayan.

Inflorescence 1-2-flowered, glabrous; leaves caudate acuminate .. 1. *A. caudata*
 Inflorescence 4-6-flowered, hirsute; leaves short acuminate .. 2. *A. Curtisi*.

1. ANTISTROPHE CAUDATA, King & Gamble, n. sp. A shrub or small tree, branches smooth, divaricate, nearly glabrous, branchlets puberulous, with faint raised lines from the bases of the leaf-petioles; innovations rusty-pubescent. *Leaves* membranous, elliptic-lanceolate, caudate-acuminate at apex, attenuate or somewhat rounded at base; entire or undulate on the margins; glabrous on the upper, minutely puberulous or glabrous and with pale peltate scales on the lower, surface, glandular dots very many, scattered, prominent; 3 to 4 in. long, 1 to 2 in. broad; midrib slender, conspicuous below; main-nerves 8 to 12 pairs, prominent beneath, at an angle of about 60° with the midrib, arching upwards, forking and obscurely anastomosing near the margin, the lowest pair of nerves more oblique than the rest; secondary nerves short, slender, reticulations indistinct, petiole .1 to .2 in. long, edged by the decurrent margins of the blade which are almost connivent above. *Inflorescence* of short, axillary, usually only 1-2-flowered sub-

sessile umbels, with very minute bracts, pedicels slender, clavate, .4 in. long, buds conical, long acuminate, 3 in long, glabrous *Calyx-lobes* ovate, acute, .05 in long, ciliate on the edges, gland-dotted in two central lines *Corolla-lobes* ovate, long-caudate-acuminate, 3 in long, glabrous, dotted with few elongate glands *Stamens* inserted at the base of the corolla-lobes and nearly as long as them (.25 in), anthers sagittate-lanceolate with prominent rows of glands on the back, connective produced upwards in a membranous tip *Ovary* ovoid, glabrous, style subulate, .25 in long, very slender *Berry* globose, .25 in in diam, smooth, obscurely vertically striate

PERAK at Gunong Batu Pateh, 3,400 feet, *Wray* 456, 978, 3242, *Curtis* 3324

This species at first sight resembles *A. oxyantha*, A. DC., of North East India, but has smaller and differently veined leaves, with different glands and smaller flowers

2 ANTISTROPHE CURTISII, King & Gamble, n. sp. A shrub(?), branchlets round, rusty-glandular-hirsute, zigzag, with faint raised lines from the bases of the petioles of the leaves, innovations densely rusty glandular-hirsute *Leaves* membranous, elliptic or elliptic-oblong, acuminate at apex, rounded at base, entire, nearly glabrous above except on the midrib, sparsely rusty hirsute beneath, 3.5 to 5 in long, 1.5 to 2 in broad, midrib slender, raised beneath, main nerves about 10 pairs, at about an angle of 50° with the midrib, curved upwards, forked and broadly anastomosing near the margin, lowest pair not more oblique than the others, secondary nerves and reticulations obscure, petiole 2 in long, crispedly channelled above *Inflorescence* of densely rusty-hirsute, sub sessile, axillary, 4-6 flowered, umbellate racemes, 1 to 15 in long, bracteoles subulate, .05 in long, pedicels slender, 3 to 5 in long, buds caudate-acuminate, 3 in long *Calyx lobes* linear subulate, 1 in long, densely rusty hirsute *Corolla lobes* ovate at base, long caudate-acuminate, .3 in long, scarcely dotted, 3-5 nerved, sparsely hirsute without *Stamens* rather shorter than the corolla-lobes, connivent in a cone, anthers sessile, lanceolate sagittate, the back with 2 rows of prominent round or elongate glands, the connective produced in a blunt membranous tip *Ovary* ovoid, style slender, as long as anthers *Berry* not seen

1 **SIDEROXYLON MALACCENSE**, Clarke in Hook. f. Br. Ind. III 537 (1882). A large tree reaching 40 to 60 feet in height, branches pale brown, ultimate branchlets ferruginous pubescent, as are the leaf buds and young leaves. *Leaves* coriaceous, often, not always, crowded towards the ends of the branchlets, obovate oblong, rounded or shortly acute at apex, somewhat cuneate at base, deep green above, pale bluish green beneath, yellow when dry, densely rusty pubescent beneath when young, glabrous on both surfaces when old except for rusty hairs on the midrib and main nerves beneath, 6 to 8 in. long, 3 to 4.5 in. broad, midrib very thick and prominent, main nerves 8-14 pairs, very prominent, starting at about an angle of 60° with the midrib, parallel at first, ultimately arched upwards, reticulations not prominent, obliquely joining the main nerves, petiole 1 to 1.5 in. long, thick, enlarged at base, bordered above by the slightly decurrent margins of the blade. *Flowers* fasciculate, shortly pedicelled, in the axils of the leaves, above

the scars of fallen leaves or on the year-old wood below the leaves and shoots of the year; pedicels .1 to .2 in. long, rusty-tomentose. *Calyx-lobes* 5, imbricate, .15 to .2 in. long, densely rusty-pubescent without, rounded. *Corolla* tubular-campanulate, .15 in. long, absent in ♀ flowers; lobes very short, obtuse, imbricate. *Stamens* attached to the base of the corolla-tube; anthers ovate, apiculate, opening by side-slits; staminodes linear-lanceolate. *Ovary* thickly rusty-pubescent, flattened at top, obscurely 5-lobed, 5-celled; style cylindric. *Berry* fleshy, somewhat oblong, rounded, tipped with the persistent style, thickly covered with velvety orange-red tomentum and about .5 in. in diam. *Seeds* not accurately known.

PENANG: *Curtis* 1452. PERAK: *Wray* 136; *King's Collector* 6550. MALACCA: *Maingay* (K D.) 994; *Holmberg* 704. SINGAPORE: *Ridley* 6130, 6499; *Cantley* 89.

Mr. Cantley says that this tree gives the true "Daru-daru" or "Dedaru" wood of the Malay Peninsula.

2. *SIDEROXYLON MAINGAYI*, Clarke in Hook. f. Fl. Br. Ind. III. 536 (1882). A tree with rusty-pubescent branchlets and young shoots. *Leaves* membranous, crowded towards the ends of the branchlets; obovate, shortly acuminate at apex, cuneate at base, rusty-pubescent when young, glabrous when old or rusty-pubescent on the midrib and main-nerves, 4 to 8 in. long, 1.5 to 3 in. broad, midrib prominent, main-nerves 8 to 11 pairs, starting at an angle of nearly 60° to the midrib, at first parallel then arching upwards to near the margin, transverse reticulations more or less parallel; petiole 1 to 1.5 in. long, bordered by the decurrent margins of the blade. *Flowers* fasciculate, sessile or with very short pedicels, chiefly on the previous year's wood below the leaves and shoots of the year. *Calyx-lobes* 5, imbricate, rounded, rusty-pubescent without, .075 to .1 in. in diam. *Corolla* tubular-campanulate, as long as or rather shorter than the calyx, wanting in ♀ flowers, lobes very short, obtuse, imbricate. *Stamens* short; filaments slender; anthers ovate, staminodes linear-lanceolate. *Ovary* thickly rusty-pubescent, flattened at top, style cylindric. *Berry* fleshy, 1.5 in. in diam., ovoid or globular, full of guttapercha. *Seeds* 4, compressed, .7 in. long by 3 to .35 in. broad; rounded outside, nearly straight within, the long narrow oblong hilum covering nearly the whole margin, testa hard, shining, dark chestnut-brown; albumen firm, white; cotyledons plane, appressed, elliptic; radicle inferior.

NEGRİ SEMBILAN: *Ridley* 10084. MALACCA: *Maingay* (K.D.) 993; *Hervey*. SINGAPORE: *Ridley* 8928, 9223. •

The fruit description is chiefly taken from Maingay's notes in the Kew Herbarium.

3 *SIDEROXYLON DERRYANUM*, King & Gamble, n. sp. A tree, branchlets grey, uppermost appressed pubescent, innovations with nearly black hairs. *Leaves* chartaceous, elliptic, very abruptly short acuminate at apex, broadly cuneate at base, margins more or less recurved, glabrous above, densely silvery-pubescent beneath, 3 to 5.5 in long, 1.5 to 3 in broad, midrib prominent, impressed above, main nerves 12 to 18 pairs, parallel, starting at an angle of about 75° with the midrib, meeting near the margin in a faint intramarginal looped nerve, secondary nerves similar, rather prominent, reticulations few, obscure, petiole 3 to 5 in long, channelled above, pubescent with nearly black hairs. *Flowers* fascicled, about 5 together in the axils of the leaves or of the scars of fallen leaves, pedicels 2.5 in long, tawny-pubescent, buds oblong, conical. *Calyx lobes* 5, rounded, obtuse, the 2 outer thick very pubescent, the 3 inner somewhat scarious, pubescent only on the middle of the back. *Corolla* campanulate, 2 in long, tube 1.5 in long, glabrous within, with a few sparse hairs without, lobes 5, ovate imbricate, margins recurved. *Stamens* 5, short, inserted at the top of the tube, filaments conical, anthers ovate-cordate, dehiscing by side slits, staminodes subulate, glabrous. *Ovary* villous, obscurely 5 lobed, 5 celled, style very short, stigma obscurely 5 lobed. *Berry* oblong, dark blue, glabrous, the top flat and crowned with the remains of the style, 6–7 in long, 1 seeded. *Seed* oblong, 6 in long by 3 in in diam truncate obliquely at the base, testa thick light brown, striate, hilum rather small, sub basal, albumen thin cotyledons thick, radicle small.

PERAK *Derry-Curtis* 3641

The colour of the silvery under surface of the leaves is difficult to describe—it is sometimes dark and smoky looking.

4 *SIDEROXYLON FERRUGINEUM*, Hook & Arn Bot Beech Voy 266, t 55 (1841). A small tree, branches rough, ultimate branchlets ferruginous pubescent like the leaf buds and young leaves, branchlets with a raised line downwards from each leaf or scar of a fallen leaf. *Leaves* coriaceous, obovate or oblong lanceolate, rounded or bluntly acute at apex, attenuate at base, shining above, densely appressed ferruginous-silky beneath when young, ultimately nearly glabrous, 2.5 to 6 in long, 1 to 3 in broad, midrib prominent, main-nerves 10 to 12 pairs, fairly prominent, especially above, starting at about an angle of 60° with the midrib, at first nearly parallel then arching upwards to meet near the margin, secondary nerves similar, reticulations oblique, petiole 5 to 7 in long, the edges bordered by the decurrent margins of the blade, enlarged at base. *Flowers* fasciculate, shortly pedicelled, in the axils of

the leaves or above the scars of fallen leaves on year-old wood below the leaves and shoots of the year, pedicels 1 to 2 in long, covered like the obtuse buds with rusty tomentum *Calyx* lobes round, 0.25 to 0.75 in in diam, with scarious margins, closely imbricate, rusty-pubescent outside *Corolla* campanulate, 1 in long, tube short, lobes 5, imbricate, rounded, crenulate, sparingly pubescent near the base within, in ♀ flowers wanting or deciduous *Stamens* very short, attached to the corolla-tube above the base, filaments linear, anthers rounded, opening by marginal slits, staminodes subulate or somewhat hastate, acuminate *Ovary* depressed, obscurely 5 lobed, pubescent, stigma short, cylindric, with 5 minute punctiform styles *Berry* ovoid, shining 3.5 by 3 in, 1-2-seeded *Seeds* ovoid, 2.5 by 1.5 in, testa shining, dark brown, thick, hilum large, oblong, albumen thick, cotyledons flat A DC Prod VIII 178, Clarke in Hook fil Fl Br Ind III 537 *S. attenuatum*, A DC lc, Wight Ic t 1590, Kurz For Fl II 117, and in Journ As Soc Beng XLVI n (1877) 229 *Mimusops ? attenuata*, Wall Cat 4150

5 SIDI ROXYLON ILMUM, *Pierre*, *Burck* in Ann Jard Bot V 17, tab III. (1885). A small tree, branchlets thick, striate, brown, innovations ferruginous pubescent *Leaves* coriaceous, oblong-lanceolate, shortly acuminate at apex, narrowly acute at base, glabrous above, rusty-pubescent on the nerves beneath and on young leaves, margins recurved, 4 to 5 in long, 1 to 1.5 in broad, midrib strong, prominent, impressed above, main nerves 12 to 16 pairs, very prominent, about 2 to 3 in apart, starting at an angle of about 40° with the midrib, parallel, curved near and along the margin, reticulations transverse, very regular and prominent, petiole 1 to 1.5 in long, channelled above and bordered by the decurrent margins of the blade, rusty-pubescent *Flowers* fascioled, 4 to 6 together in the axils of the leaves, pedicels variable, 3 to 6 in long, rusty-pubescent, slender in flower, thickened in fruit *Calyx*-lobes 5, rounded, imbricate, 1.5 in long, densely rusty-pubescent, 3 outer thick, 2 inner more or less scarious on the margins *Corolla* campanulate, 1.5 in long, 5-lobed, glabrous within, slightly hairy without, tube rather short, lobes oblong, rounded. *Stamens* inserted on the top of the tube, filaments glabrous, anthers ovate-apiculate,

staminodes subulate, about 05 in long Ovary villous, style clavate, glabrous Fruit an oblong or somewhat obovoid berry, depressed at apex, glabrous, fleshy, supported by the somewhat enlarged persistent calyx-lobes, seed usually 1 Seed oblong, obtuse above, somewhat pointed below, little compressed, 6 in long, 25 in broad and thick, testa chestnut brown, shining, crustaceous, hilum linear, flat, occupying nearly the whole inner face of the seed, albumen thick, cotyledons leafy, flat, oblong, 3-nerved, radicle inferior, pointed *Chrysophyllum firmum*, Miq Fl Ind Bat Suppl 579

PENANG at West Hill, *Curtis*, 1575.—DISTRIB Bangka, *Teysmann*, Philippines

The Bangka specimens have the leaves up to 25 in broad, but in other respects we find no difference from *Teysmann's* type in the Penang plant

SPECIES IMPERFECTLY KNOWN

6 SIDERXYLON WALLICHIANUM, G Don Gen Syst IV 28 (1837) A tree (?), branchlets pale brown, ferruginous-villous as are the innovations Leaves chartaceous, elliptic obovate, obliquely acuminate at apex, cuneate at base, crowded towards the ends of the branchlets, 6 to 8 in long, 3 to 4 in broad, midrib thick, main-nerves 6 to 7 pairs, curved upwards, distant, reticulations prominent, petiole thick, densely tawny-pubescent Calyx lobes apparently 5, short, rounded, rusty pubescent Miq Fl Ind Bat II 1037 S (?) rugosum, Wall Cat 4158

The only sheet of this is in the type Herbarium of Wallich's plants with the Linnean Society of London The remains of flowers are very slight but they seem to show that the plant belongs to this genus The note a small plant growing on rocks—flowers white—from the hills' attached to the sheet seems to refer to some other plant, for the specimen itself has every appearance of having come from a tree

4 ISONANDRA, Wight

Trees with milky juice Leaves coriaceous, entire, alternate, penniveined, the main nerves and midrib prominent, the rest usually rather obscure Flowers small, in axillary shortly pedicellate clusters in the axils of present or fallen leaves Calyx of 4 segments, the two outer opposite, more or less valvate, the two inner also opposite, imbricate Corolla tubular, campanulate, lobes 4, much imbricate, somewhat twisted Stamens 8, sub-equal, attached near the base of the corolla, both opposite to and alternate with the lobes filaments short, anthers lanceolate, sagittate at base, extrorse, staminodes absent Ovary 4 celled, villous, style linear Berry somewhat small, ovoid or oblong with a fleshy pericarp Seed usually 1 only, scarcely flattened, testa thick, shining, crustaceous, hilum

lateral, long; albumen fleshy, cotyledons flat, radicle inferior.—DISTRIB. About 7 species, 6 of which in South India and Ceylon.

1. *ISONANDRA PERAKENSIS*, King & Gamble, n. sp. A small tree reaching 30 to 40 feet in height; ultimate branchlets, leaf-buds and young leaves appressed greyish-brown-pubescent. *Leaves* coriaceous; obovate-oblong, rounded at the apex, cuneate sometimes unequally at the base; the margins reflexed, glabrous and dull above, thickly brown-pubescent beneath; 2 to 3·5 in. long, 1 to 1·5 in. broad; midrib prominent; main-nerves 8 to 10 pairs at about 60° with the midrib, reticulations very inconspicuous, petiole ·2 to ·3 in. long, rather stout. *Flowers* fasciculate, on very short, ·1 in. long, thick, angular pedicels in the axils of upper leaves; buds ·15 in. long, obtuse, brown-appressed-pubescent. *Calyx* of 4 lobes, an outer pair and an inner pair, the outer valvate, the inner shining within, minutely ciliate, lobes ·15 in. long. *Corolla* 4-lobed, lobes rounded, about equal to the tube, together about equal to the calyx. *Stamens* 8, filaments thickened, anthers lanceolate, sagittate at base, extrorse. *Ovary* slightly hairy, conical, surmounted by a short linear style as long as the calyx; cells 4. *Berry* oblong, acute, smooth, 4 to 5 in. long. *Seeds* ellipsoid, acute at apex, scarcely flattened, 35 by ·15 in.; hilum large, oblong; testa dark brown, hard, smooth, shining; albumen fleshy; embryo large, cotyledons oblong.

PERAK at 1,000 to 1,500 feet elevation, King's Collector 7138.

DOUBTFUL SPECIES.

2 *ISONANDRA RUFA*, King & Gamble, n. sp. A small tree, reaching 20 to 30 feet in height and 4 to 6 in. in diam., younger branchlets and innovations densely ferruginous pubescent. *Leaves* membranous, obovate, long acuminate sometimes abruptly at apex, cuneate and finally more or less rounded at base; sparsely pubescent above when young, nearly glabrous when old; roughly pubescent beneath, especially on the nerves, 5 to 7 in. long, 1·5 to 2·5 in. broad, midrib prominent; main-nerves 8 to 10 pairs, irregularly distanced, at first at an angle of about 45° with the midrib, then arching upwards, secondary nerves and reticulations prominent; petiole ·3 in. long, slender, rusty-pubescent, channelled above, stipules very short, subulate, rusty-pubescent, very caducous. *Flowers* solitary or in pairs in the axils of the upper leaves or on the upper branchlets, very small, pedicels slender, ·25 in. long, recurved. *Calyx-lobes* 4, densely ferruginous-pubescent; 2 outer valvate, ovate, ·2 in. long; 2 inner imbricate, ovate, somewhat scarious and ciliate on the margins. *Corolla* tubular-campanulate; ·2 to ·25 in. long; tube slender, minutely

hairy without and near the mouth within, lobes 6 (?), linear oblong, 1 in. long, erect *Stamens* 6 (?), 1 in long, filaments very slender, villous, anthers ovate, penicillate-apiculate *Ovary* rounded, glabrous, style slender, curved, 2 in long. *Fruit* an oblong berry, about 1 in long and .5 in. broad *Seed* 1, testa thin, shining

PERAK *Scortechium* 159, *Kings Collector* 4550, in dense jungle at 500 to 800 feet.

In only one flower were any traces found of the corolla and stamens, and there seemed to be 6 corolla lobes instead of 4, and 6 stamens instead of 8. We consider it best, however, to leave the species here for the present and until better material is available

5 PAYENA, A DC

Trees with milky juice *Leaves* membranous or chartaceous, often silky beneath, stipules caducous *Flowers* fascicled, rather few together, in the axils of the leaves on the upper part of the branchlets, pedicellate *Calyx* lobes 4, the 2 outer usually valvate enclosing the 2 inner generally imbricate *Corolla* campanulate, tube broad, short, lobes 8, imbricate, in one or two series *Stamens* 16, inserted on the corolla tube, filaments short, anthers usually extrorse, ovate to linear, connective produced in an acumen, staminodes none *Ovary* villous, usually 8-celled, style linear subulate *Fruit* an oblong or ovoid fleshy berry, few-seeded *Seeds* oblong, usually somewhat compressed testa crustaceous, shining, hilum oblong or linear, conspicuous, albumen thin, cotyledons leafy, thin, flat, nearly as long and broad as the cavity of the seed, radicle inferior, generally rather conspicuous —*DISTRIB* About 6 to 7 species, found in the Malay Peninsula and Archipelago

Flowers large, reaching 75 in in length —

Leaves 6 to 9 in long, silky pubescent beneath . . . 1 *P. Mamegay*

Leaves 4 to 5 in long, glabrous on both surfaces . . . 2 *P. longipedunculata*

Flowers medium sized or small, under 75 in in length —

Flowers in fascicles near the ends of the branchlets, having the appearance of a terminal inflorescence —

Flowers moderate sized, berry obpyriform, acuminate at tip 3 *P. Havilandi*

Flowers small, berry oblong conical, truncate at tip . . . 4 *P. Laueri*

Flowers in fascicles in the axils of the leaves, never apparently terminal —

Leaves glabrous, pedicels slender, flowers small . . . 5 *P. lucida*

Leaves ferruginous pubescent, pedicels short, flowers rather large 6 *P. dasyphylla*

SPECIES IMPERFECTLY KNOWN

Leaves sessile 7 *P. sessilis*

Leaves petiolate —

Leaves under 4 in long, obovate or elliptic obovate, more or less obtuse .. .

8 *P. obtusifolia*

Leaves over 4 in long, oblong-lanceolate, acuminate

9 *P. selangorica*

1 *PAYENA MAINGAYI*, Clarke in Hook f Fl Br Ind III 547 (1882)
A large guttapercha yielding tree, reaching 80 feet in height and a considerable girth, branchlets dark brown, smooth, younger branchlets and innovations rusty-tomentose, leaf buds golden pubescent, scales 2 to 3 in long, lanceolate. *Leaves* chartaceous, oblong, acuminate at the apex sometimes caudately sometimes abruptly, cuneate at the base, glabrous above except on the midrib, covered beneath with a silky golden-brown pubescence, afterwards glabrate, 6 to 9 in long, 2 to 3 in broad, midrib prominent, minutely pubescent above or glabrous, main-nerves 20 to 25 pairs, 3 to 5 in apart, starting at an angle of about 70° with the midrib, at first parallel, ultimately ending in a looped intramarginal nerve, secondary nerves between the main nerves, obscure like the reticulations, petiole 1 in long, bordered above by the decurrent margins of the blade, stipules linear, subulate, 3 in long, golden-pubescent, quickly caducous. *Flowers* fascicled, 2 to 6 together in the axils of the leaves, pedicels slender, 75 in long, up to 1 in in fruit and then thickened, clavate, brown-pubescent. *Calyx* lobes 4, 4 to 5 in long, densely brown pubescent outside, outer pair valvate, ovate-acute, thick, inner pair imbricate, concave, keeled, acuminate, rather thin. *Corolla* white, campanulate, 6 to 8 in long, glabrous, tube about 2 in long, lobes 8, lanceolate, in 2 rows, the outer 4 enclosing the inner 4. *Stamens* 16, inserted on the top of the tube, 25 in long, filaments thick, anthers as long as filaments, ovate, extrorse, crowned by a long mucro formed by the produced connective, the mucro ciliate or truncate or bifid at the apex. *Ovary* ovoid, pubescent, tapering into a subulate 8 in long style, cells 8. *Fruit* an oblong, golden-pubescent or nearly glabrous berry up to 15 in long by 8 in broad, crowned by the remains of the persistent style, and supported by the persistent calyx lobes, seeds 1 to 2. *Seeds* oblong, convex on one side, somewhat concave on the other, 1 to 2 in long by 5 in broad and 2 in thick, testa light brown, shining, crustaceous, hilum conspicuous, slender, albumen thin, cotyledons oblong rounded, 8 in long by 225 in broad, radicle rather large, inferior. *Pierre* in Bull Linn Soc Par I 526. *Chrysophyllum* ? *molle*, Wall Cat 4161

PENANG *Curtis* 1565 PFRANK *Scortechini* 172, 346, *Wray* 3423, *King's Collector* 7223, 7918, in open jungle or rich soil from 300 up to 2,000 feet MALACCA *Griffith* (K D) 3610, *Maingay* (K D)

990, *Curtis* 3483 SINGAPORE *Ridley* 6239, 6497 *Curtis* says it is the "Taban Percha" of the Malays

The drawing of the flower in Engl & Prantl *Naturl Pflanzen Fam* IV : 132, fig 69 A-C seems a little doubtful. The identification of Wall Cat 4161 seems also doubtful, for *Paysona Mamqay* much resembles in leaf *Pala purum Guttu var oblongifolia*

2 *PAYENA LONGIPEDICELLATA*, *Brace MS* in *Herb Calc*. A tree, reaching 100 to 130 feet in height, branches slender, silvery-grey, innovations rusty pubescent. *Leaves* chartaceo-coriaceous, oblong or elliptic oblong, shortly acuminate at apex, rounded unequally at the base, glabrous on both surfaces, margins slightly recurved, 4 to 5 in long, 1.5 to 2 in broad, midrib slender, impressed above, main-nerves about 18 pairs, indistinct, starting at about 85° with the midrib, at first parallel, near the margin joined in an intramarginal looped nerve, secondary nerves nearly as prominent as main-nerves, often branching backwards, reticulations few, indistinct, petiole 7 to 8 in long, channelled above and bordered by the margins of the decurrent blade. *Stipules* small, ovate acute, rusty pubescent, very caducous. *Flowers* fascicled, 1-3 together, in the axils of lower leaves or of the scars of fallen leaves, pedicels 1 to 1.5 in long, slender, curved, striate when dry, clavate above, puberulous, flower buds conical, large. *Calyx* lobes 4, 2 outer valvate, ovate acute, thick, 5 in long, sparsely rusty pubescent, 2 inner lanceolate acuminate, concave, thickly keeled, 6 in long, densely tawny pubescent on the back. *Corolla* tubular-campanulate, 8 in long, tube 3 in long, glabrous, lobes 8, 4 outer enclosing 4 inner, ovate acuminate, glabrous. *Stamens* 16, inserted in 1 row, below the top of the tube but alternate ones covered by the others, filaments very short, slender, anthers 1.5 in long, ovate rusty hirsute, extrorse, the connective produced in a broad mucro divided in 2 diverging lobes at the tip. *Ovary* oblong, style a little longer than the corolla-lobes. *Fruit* not known.

PERAK *King's Collector* 2940 — *DISTRIB* Borneo, *Haviland* 3035

3 *PAYENA HAVILANDI*, *King & Gamble*, n. sp. A large tree (?), branchlets grey, slender, innovations appressed rusty pubescent. *Leaves* chartaceo-coriaceous, elliptic, abruptly acuminate at apex, attenuate usually unequally at base, glabrous above, glabrous beneath except on the midrib which is appressed-rusty-pubescent, margins recurved, 2.5 to 3 in long, 1.25 to 1.75 in broad, midrib slender, main-nerves 10 to 12 pairs, not very prominent, rather irregular, starting at about an angle of 60° with the midrib, meeting close to the margin in an intramarginal looped nerve, secondary nerves and reticulations scanty but prominent, raised beneath, petiole 4 to 5 in long,

channelled above and bordered by the decurrent margins of the blade, stipules small, ovate falcate, densely ferruginous pubescent *Flowers* fascicled, 3-4 together, in the axils of upper leaves or of terminal leafless branchlets, giving the appearance of a terminal corymbose inflorescence, pedicels 8 to 1 in long, densely rusty pubescent, recurved, buds ovate, 25 in long, obtuse *Calyx lobes* 4, outer pair rounded, thick, appressed pubescent to nearly glabrous, inner pair thinner, scarious, ciliate *Corolla* campanulate, 3 to 4 in long, longer than the calyx, glabrous, lobes 8, oblong, cordate at base, crenate or ciliate on the margins, veined, tube as long as lobes *Stamens* 16, usually in 2 rows, filaments slender, glabrous, anthers ovate, the connective broad and produced in a broad glabrous acumen, sharp in bud, flattened later on *Ovary* linear oblong, style slender, 5 in long *Fruit* an obpyriform fleshy berry, 15 in long and 75 in broad, surmounted by the persistent conical style, seed 1 *Seed* oblong, 1 in long, 6 in broad flattened, testa crustaceous, shining, chestnut brown, hilum narrow, elongated, albumen thick cotyledons broadly oblong, 5 in long, nerved, radicle rather large, nearly 15 in long

De Vriese says the gutta is only used for adulteration, but that Motley did not agree in this belief

VAR *glabrata*, King & Gamble. Lower surface of the leaves nearly glabrous, apex abruptly long acuminate, pedicels 8 to 1 in long, fruit nearly spherical

PERAK *Scortechini* 536 SINGAPORE at Selitan, Ridley 5644

7 *PAYENA sessilis*, King & Gamble, n sp. A tree (?), branchlets grey, rough, uppermost somewhat angular when dry. *Leaves* coriaceous, sessile, obovate, obtuse or emarginate, glabrous on both surfaces, margins recurved, 2 to 4 in long, 1 to 15 in broad, midrib prominent, raised on both surfaces, main nerves not prominent on the upper surface, raised on the lower, about 8 pairs, at about 50° with the midrib, straight but soon anastomosing with the prominent reticulations which are also raised on the lower surface, stipules ovate, acute or obtuse, glabrous, caducous. *Flowers* fascicled, 2 to 3 together, on small tubercles in the axils of upper leaves, pedicels slender, black, 5 in long, supported by small hard glabrous bracts. *Calyx lobes* in fruit 4, 2 in long, ovate acute, glabrous, rest of flower not seen. *Fruit* a globose glabrous berry, black when dry, prominently surmounted by the

persistent long curved style, cells apparently 4 to 6. *Seeds* oblong, obtuse at top, acute at base, 3 to 4 in long, rounded on the outer, straight on the inner side, hilum long, narrow, testa thin crustaceous, brown, albumen rather thin, cotyledons oblong, flat, 15 to 2 in in length, radicle rather large,

SINGAPORE *Ridley* 5076

8. *PAYENA OBTUSIFOLIA*, King & Gamble, n sp. A tree, branchlets stout, greyish-brown, prominently marked by the scars of fallen leaves and the tubercles of fallen flower fascicles, young branchlets and leaves rusty brown in colour. *Leaves* coriaceous, clustered at the ends of the branchlets, obovate or elliptic-obovate, obtuse, cmarginate or shortly acute at apex, cuneately attenuate at base, glabrous on the upper surface, rusty coloured and sometimes pubescent on the lower, 2.5 to 3 in long, 1 to 1.5 in broad, midrib stout, main nerves 10 to 12 pairs, starting at about 60° with the midrib, slightly curving upwards, inconspicuous above as are the reticulations, petiole 5 to 7.5 in long, channelled above by the decurrent margins of the blade. *Flowers* fascicled, 4 to 8 together (to judge by scars only) in the axils of the leaves, or of the scars of fallen leaves, pedicels 5 in long, clavate pubescent, buds about 3 in long, truncate. *Calyx-lobes* 4, 2 outer valvate, ovate-acute, 3 in long, pubescent, 2 inner imbricate, ovate, golden pubescent on the back, ciliate on the margins. *Corolla* not seen. *Ovary* ovoid conical, glabrous, 8 celled, style 3.5 in long, linear. *Fruit* not seen.

PERAK *Scortechini* 340

9. *PAYENA SILLANGORICA*, King & Gamble, n sp. A tree (?), branchlets dark brown, rough. *Leaves* chartaceo-coriaceous, oblong lanceolate, acuminate at apex, narrowly attenuate at base, glabrous above, slightly pubescent on the sides of the midrib beneath, 4 to 6 in long, 1 to 1.7 in broad, midrib prominent, impressed and keeled above, main nerves about 16 pairs, indistinct, parallel, at about 80° with the midrib, straight at first, anastomosing near the margin with the secondary nerves and reticulations, which are visible but not prominent. *Petiole* 5 to 7 in long, channelled above, enlarged at base. *Flowers* fascicled, 2 to 3 together, in the axils of the leaves, pedicels rather thick, 6 to 8 in long, striate, appressed, rusty pubescent. *Calyx-lobes* 4, outer pair valvate 3 in long, ovate acute, thick below, thinner above, inner pair ovate, 2.5 in long, scarious on the margins, both appressed, rusty pubescent, rest of flower not seen. *Ovary* pubescent, cylindrical depressed at top, fruit immature, seed apparently aluminous, with an elongated hilum.

SELANGOR *Ridley* 7387

6 *BASSIA*, Linn

Trees with milky juice *Leaves* coriaceous or chartaceous, often clustered at the ends of the branchlets, stipules caducous *Flowers* fascicled, in the axils of the leaves or of the scars of fallen leaves, pedicellate, pedicels frequently reflexed *Calyx lobes* 4, the 2 outer usually valvate, enclosing the 2 inner imbricate *Corolla* campanulate, tube broad, lobes 6 to 12, contorted in bud, erect in flower, imbricate *Stamens* twice the number of the corolla lobes or more, inserted in one or more rows on the corolla tube, filaments usually short, anthers generally lanceolate, laterally or extrorsely dehiscing, connective generally produced in an acumen, staminodes none *Ovary* villous, 4-12- (usually 6-8) -celled, style linear, subulate, more or less elongate *Fruit* a globose or oblong or ovoid berry, few seeded *Seeds* ellipsoid, usually compressed, testa crustaceous, shining, hilum oblong or linear, conspicuous, albumen none, cotyledons thick, fleshy, radicle small — **DISTRIB** About 40 species, found in India, Ceylon, the Malay Peninsula, and Malay Archipelago

In several of the species the fruit is unknown, and some of these may prove when it becomes available to belong to *Paysonia* which is hardly separable except by the important character of having albuminous seeds and leafy cotyledons

We have not followed Baillon and Engler in changing the name of this genus to *Illipe* as we agree in the opinions expressed by Drs. Trimen (*Flora of Ceylon*) and Cooke (*Flora of Bombay*) that the word *Illipe* was not intended by Konig to be employed as the name of a genus but was merely mentioned as being the vernacular name employed by the natives of Malabar for one of the species

|---|-------------------------|
| Flower buds large, newly 7 in long conical intramarginal nerve of leaves prominent pedicels thick, 1.5 to 2 in long | 1 <i>B. acutata</i> |
| Flower buds moderately large about 4 in long globose intramarginal nerve present pedicels short about 4 in long — | |
| Intramarginal nerve conspicuous leaves 10 to 14 in long | 2 <i>B. himpani</i> |
| Intramarginal nerve faint leaves 4 to 6 in long | 3 <i>B. himpani</i> |
| Flower buds moderately large 4 in long or rather less conical — | |
| Leaves large over 6 in long main nerves prominent — | |
| Pedicels over 1 in long leaves coriaceous silky pubescent beneath main nerves straight intramarginal nerve present connective of anthers penicillate | 4 <i>B. penicillata</i> |
| Pedicels under 6 in long leaves chartaceous sparsely pubescent beneath main nerves curved, no intramarginal nerve connective of anthers not penicillate | 5 <i>B. malaccensis</i> |
| Leaves moderate sized under 6 in long, main nerves not prominent | 6 <i>B. Curtissii</i> |
| Flower buds small under 3 in long, usually conical generally in many flowered fascicles — | |
| Pedicels usually under 3 in long — | |
| Pedicels and flower buds densely tawny pubescent, connective of anthers produced in a long point | 7 <i>B. laurifolia</i> |

- Pedicels and flower buds thinly rusty-pubescent, connective of anthers produced in a short ciliate point .. 8. *B. rupicola*.
- Pedicels 5 in long or longer —
- Flowers fascicled in the axils of upper leaves generally, rarely on old wood below them —
- Leaves glabrous, coriaceous, main nerves indistinct 9 *B. perakensis*
- Leaves grey-silky-pubescent beneath, almost coriaceous, main nerves distinct but not prominent .. 10 *B. argentea*
- Leaves only slightly pubescent beneath, chartaceous, main nerves very prominent .. 11 *B. Braccana*
- Flower fascicled chiefly in the axils of the scars of fallen leaves, on old wood —
- Leaves chartaceous, elliptic, main nerves prominent 12 *B. longistyla*
- Leaves coriaceous, oblong, main nerves not prominent —
- Main nerves of leaves (under 6 in long) curved upwards, but no intramarginal nerve, anther connective long apiculate .. 13 *B. cuprea*
- Main nerves of leaves (over 6 in long) meeting in an intramarginal nerve, anther connective shortly apiculate .. 14 *B. Motleyana*

SPECIES OF WHICH FLOWERS ARE IMPERFECTLY KNOWN

- Leaves under 5 in long, obovate, obtuse, greenish brown when dry .. 15 *B. cuneata*
- Leaves 5 to 7 in long, oblong lanceolate, greyish green when dry .. 16 *B. penangiana*
- Leaves 6 to 8 in long, obovate oblong, orange red when dry 17 *B. erythrophylla*

1 *BASSIA ARISTULATA*, King & Gamble, n sp. A tree, branchlets stout, brown, lenticellate. Leaves coriaceous, oblong, shortly and rather suddenly acute at apex, somewhat rounded unequally and then decurrent at base, glabrous on both surfaces except on the midrib beneath, margins slightly recurved, 6 to 10 in long, 3 to 4 in broad, midrib thick, prominent, impressed above. Main-nerves 24 to 28 pairs, conspicuous, parallel, 3 to 4 in apart, starting at about 75% with the midrib, scarcely curved, meeting in a conspicuous intra-marginal looped nerve, reticulations oblique, not prominent, petiole 1.5 to 2 in long, grooved above, much thickened below. Flowers fascicled, about 2 to 6 together, in the axils of the leaves or of the scars of fallen leaves, on very short tubercles, pedicels thick, 1.5 to 2 in long, densely golden pubescent, flattened under the flower, buds elongate, conical, nearly 75% in long. Calyx-lobes 4, 5 to 7 in long, the 2 outer valvate, triangular ovate, pubescent, the 2 inner imbricate, concave, ovate, pubescent. Corolla-tube short, 2 to 3 in long, funnel-shaped, densely pubescent inside, lobes 8 to 9, oblong lanceolate, 4 in long, pubescent without. Stamens many, up to 36, in 2 or 3 rows, lowest row about 8 to 9, second row 16 to 18, third row 8 to 9, inserted on the top of the corolla tube, filaments very short, pubescent, anthers

oblong, thin, 2 in long, opening along their edge, connective black, prominent ending in a long sharp awn, the anthers usually twisted half round Ovary silky-pubescent, flat at top, style glabrous about equal to corolla, cells 10 to 12 Fruit not known

PERAK at Goping, *Scortechini* 1984

Said by *Scortechini* to give a guttapercha

2 *BASSIA KINGIANA*, Brace MS in Herb Calc A tree, reaching 50 to 60 feet in height, and 10 to 15 in in diam, branchlets thick. Leaves coriaceous, dark green, obovate oblong, rounded and then shortly and abruptly acuminate at apex, cuneate at base, glabrous on both surfaces, margins slightly reflexed, 10 to 14 in long, 3.5 to 4.5 in broad, midrib very strong, prominent, main nerves about 20 pairs, conspicuous, 5 to 7 in apart, starting nearly at right angles to the midrib and curving upwards to meet in a conspicuous intramarginal looped nerve, secondary nerves few but prominent, reticulations distant, not numerous, petiole 2 in long, grooved above, swollen at base, and then conspicuously rugose when dry, stipules subulate acuminate from a broad base, very quickly caducous Flowers fascicled, about 3 to 5 together, on small tubercles above the scars of fallen leaves on the previous year's wood, pedicels recurved, thick, 4 in long, enlarged above, covered as also the calyx with appressed tawny pubescence buds globose, about 4 in long Calyx lobes 4, 4 in in diam outer 2 imbricate, rounded emarginate, thick inner 2 also imbricate, concave, ciliate on the margins Corolla tube funnel shaped, 15 in long, rusty hirsute without, pubescent within lobes 12 to 16, white much imbricate or in 2 rows, spatulate, ciliate on the margins, hirsute, 25 in long Stamens many 32 to 36, in 2 rows on the top of the corolla tube filaments 1 in long rather stout, densely hirsute, anthers linear oblong, 125 in long connective produced into a broad appendage, penicillate at tip in bud merely aristate Ovary rounded, villous, style thick, curved, pubescent 3 in long, with minute stigmatic lobes, cells about 8 Fruit a globose, thickly tawny pubescent, berry, 75 in in diam, surmounted by the long subulate persistent style, seeds 1 to 2 Seed not seen

PERAK *Kinny* Collector 3314, 3678, 7389, in open jungle at 300 to 500 feet SINGAPORE *Ridley* 6238, 6294

3 *BASSIA KUNSTLERI*, Brace MS in Herb Calc A tree with spreading branches, reaching a height of 30 to 40 feet and 10 to 15 in in diam, branchlets slender, grey, innovations rusty-pubescent Leaves chartaceous, obovate oblong or oblong, abruptly acuminate at apex, acuminate at base, glabrous on both surfaces, 4 to 6 in long,

1·5 to 2 in broad, midrib slender, prominent, main-nerves 15 to 20 pairs, starting at an angle of about 60° to the midrib and curving upwards to meet in a faint intramarginal looped nerve, secondary nerves and reticulations prominent, petiole slender, 1 to 1·5 in long, bordered above in its upper part by the decurrent margins of the blade, base enlarged, sometimes twisted. *Flowers* solitary or fascicled 2 to 3 together in the axils of the leaves, or above the scars of fallen leaves, pedicels thick, 3 to 4 in long, usually recurved, densely rusty- or golden-pubescent like the calyx-lobes and fruit, buds ovoid-orbicular about 4 in long. *Calyx-lobes* 4, 4 in long, outer valvate, ovate orbicular, inner imbricate, concave, somewhat emarginate, thin and ciliate on the edges. *Corolla* tubular campanulate, tube about 125 in long, glabrous on both sides, lobes 16, in 2 rows, very much imbricate, shortly spatulate, rounded at top, fimbriate on the margins, shortly pubescent within, 3-nerved. *Stamens* about 32, in 2 rows, mixed with long unicellular brown hairs, filaments thick, about 0·5 in long, anthers oblong, opening by marginal slits often twisted half round, connective conspicuous, produced in a sharp mucro. *Ovary* rounded, villous, style subulate, 5 to 7 in long, cells about 8. *Fruit* an ovoid densely pubescent brown berry, 8 to 1·1 in long, 1-2-seeded, surmounted by the persistent style. *Seed* ovoid, obliquely pointed below, rounded above, 7 in long, 4 in in diam, sometimes flattened on one side, testa thin, crustaceous, chestnut-brown, shining, hilum very large, obovate, albumen none, cotyledons thick, 5 in long, ovate, radicle small, pointed.

PERAK on Larut peak, at 500 to 2,600 feet, *King's Collector*, 3241, 3547, 3964, 6410. *Wray* 2643, 3201, *Curtis* 3694, *Ridley* 5536.

4. *BASSIA FENICILLATA*, King & Gamble, n. sp. A large tree, reaching 60 feet in height with a girth of 4 feet, ultimate branchlets and innovations densely ferruginous pubescent. *Leaves* coriaceous, oblong or somewhat obovate oblong, shortly and abruptly acute at apex, unequally rounded at base, glabrous above, thickly golden-silky-pubescent beneath when young, afterwards glabrate, margins recurved, 6 to 10 in long, 2·5 to 3·5 in broad, midrib thick, prominent, impressed and keeled above, main-nerves 24 to 28 pairs, conspicuous, parallel, 3 to 5 in apart in large leaves, starting at about 80° with the midrib, curved only near the margin to meet in an inconspicuous looped intramarginal nerve, secondary nerves many in large leaves, reticulations oblique, not prominent, petiole 1·2 to 1·5 in long, thickened below. *Flowers* fascicled, about 1 to 4 together in the axils of the leaves, on very short rusty-pubescent tubercles, pedicels 1 to 1·2 in long, slender, pubescent, buds conical. *Calyx-lobes* 4, sometimes 5, 4 in long; outer pair ovate-acuminate, densely rusty-pubescent, thick, inner pair,

sometimes 3, ovate acuminate, thinner, pubescent on the back, ciliate and more or less scarious on the margins *Corolla* campanulate, 4 in. long, tube nearly 2 in long, glabrous outside, densely ferruginous hairy within in the upper half, lobes 10 (?), lanceolate, acuminate, as long as tube *Stamens* 20 in 1 row, but the 10 opposite the corolla-lobes behind the 10 alternate with them, filaments 0.5 in long, hairy, anthers linear-sagittate, extrorse, the connective produced in a long penicillate acumen *Ovary* rounded, densely hairy, as is the lower half of the 7.5 in long slender style, cells 10 *Fruit* not known

PROVINCE WELLESLEY at Tassek Glugor, *Curtis* 3737, said to be common Vern name "Mingato"

In its leaves this species greatly resembles *B. aristulata*, but the slender pedicels, smaller flowers, acuminate calyx, and penicillate anthers at once distinguish it

5 *BASSIA MALACCENSIS*, King & Gamble A large tree (?), branchlets dark brown, rough, with prominent old leaf-scars, innovations nearly glabrous *Leaves* chartaceous or almost membranous, obovate or obovate oblong, obtuse or shortly and abruptly acute at apex, cuneate at base, glabrous above, sparsely and minutely pubescent beneath when young, glabrous when old, 6 to 12 in long, 4 to 6.5 in broad, midrib prominent, thick, main nerves very conspicuous, 14 to 16 pairs, parallel, in average leaves 5 in apart, in large ones often nearly 1 in, starting at an angle of 60° with the midrib, at once curving gently upwards to and along the margin, secondary nerves few, reticulations mostly transverse, not prominent, petiole 1 to 2 in long, slightly hoisted above to about half way down by the decurrent margins of the blade base much swollen, wrinkled *Flowers* fascicled 4 to 8 together in the axils of the leaves or of the scars of fallen leaves on rather thick pubescent tubercles, pedicels 4 to 6 in long, pubescent, buds when young rounded conical *Calyx lobes* 4, 2 outer valvate or slightly imbricate, ovate, bluntly acute or mucronate, rusty pubescent, 2.5 in long, 2 inner imbricate, ovate acute, margins sometimes scarious, sometimes ciliate, back thickly rusty pubescent, more or less keeled *Corolla* campanulate, tube very short, rarely 1 in long, with a short ring of hairs at the mouth inside, lobes 10-12, lanceolate obtuse, sub 2 seriate 2.5 to 3 in long, glabrous except for a few stiff hairs on *Stamens* 20 to 24 in 2 rows, the inner almost or quite sessile, alternate with the corolla lobes, the outer with short densely pubescent filaments longer than the inner ones, anthers narrowly lanceolate with long hairs, opening on the margins, connective produced in a long hair like acumen *Ovary* hairy, elongate, conical, style 2.5 in long *Fruit* a fleshy obovate-oblong berry with somewhat flattened top, surmounted

by the persistent base of the style and supported by the persistent calyx lobes, nearly 1 in long Seed 1, oblong, acute at the top, 7 in long, 35 in broad, and about 3 in thick, testa shining, crustaceous, chestnut brown, hilum 15 to 2 in broad, albumen none, cotyledons thick, inner face somewhat striate, radicle rather large, inferior *Payena malaccensis*, Clarke in Hook f Fl Br Ind III 547 *Keralephorus Wightii*, Maingay MS (not of Hassk)

MALACCA Griffith (K D) 3610, Mamjay (K D) 992 PERAK Wray 1229, *Sco'techini* 314 SINGAPORE *Indley* 2082, 2757, 5643, 6042, 6132, 6133 6498, 6499, 6500, 6531, 8078, 10159

Wray says this species gives only a sticky gutta in small quantities

6 *BASSIA CURTISII*, King & Gamble, n sp A tree, reaching 40 to 50 feet in height, branches greyish brown, strongly marked by the scars of fallen leaves and the prominent tubercles of fallen flowers innovations very slightly rusty pubescent, thick Leaves very coriaceous clustered at the ends of the branchlets, obovate or sometimes lanceolate obovate, obtuse emarginate or very suddenly and shortly blunt acuminate, glabrous on both surfaces, margins strongly recurved 4 to 6 in long, 1.25 to 2.5 in broad midrib stout, prominent main nerves not prominent 14 to 15 pairs, at an angle of about 70° with the midrib, 3 to 4 in apart straight, joined near the margin by a looped intramarginal nerve, secondary nerves prominent reticulations few all raised on the under surface petiole 7 to 1 in long, rather thick, bordered by the decurrent margins of the blade base swollen Flowers fascicled, many (10 to 12) together on prominent tubercles in the axils of the scars of fallen leaves below the leaf cluster and covering the branchlets densely for a distance of about 4 in pedicels 25 (buds) to 5 (flower) in long, somewhat angular decurved densely pale tawny pubescent buds ovoid conical Calyx lobes rounded, obtuse, densely tawny pubescent, 2 in long, the outer pair thick, the inner somewhat keeled, scarious on the margins Corolla campanulate rather longer than the calyx tube short glabrous except for the ring of hairs at the insertion of the stamens, lobes 8, oblong spatulate ciliate and hirsute at the tip Stamens 16, filaments short, slender, villous, anthers ovate acute the connective ending in a sharp conical acumen, extrorse Ovary rounded, villous style thick glabrous, stigma minute cells 8 Fruit an oblong berry, covered without with appressed golden pubescence, 5 to 7 in long 5 in broad, crowned with the persistent style and supported by the persistent calyx, seeds 1-2, placentas thin Seeds oblong, pointed at the ends testa crustaceous, shining hilum narrow, albumen none, cotyledons thick, fleshy, radicle small

PENANG: Curtis 1451, 3536. PERAK: Wray 512, Vern. "Gutta Gannu", Scortechini 1408.

This species comes near both to *B. Motleyana*, from which it differs in having more coriaceous leaves, larger flowers, and a pubescent fruit; and to *B. cuneata*, in which the leaves (judging from the poor specimens in Kew Herbarium) are thinner and the fruit larger and nearly glabrous, with more rounded seeds and a broad hilum.

7. *BASSIA LAURIFOLIA*, King & Gamble, n. sp. A tree reaching 60 feet in height and a diam. of 12 to 18 in.; branches spreading; branchlets pale brown, rather thick, innovations densely pubescent with yellowish-tawny hairs. *Leaves* chartaceous; obovate-lanceolate, gradually acuminate at apex, also at base; glabrous on both surfaces except on the sides of the midrib beneath; 5 to 10 in. long, 1.5 to 3.5 in. broad, midrib prominent, impressed and keeled above; main-nerves prominent, regular, 14 or 15 pairs, about 3 in. apart, starting at about 45° with the midrib, gradually curving upwards; reticulations obliquely transverse, faintly marked; petiole .75 to 1 in. long, slender, glabrous above, tawny-pubescent at base, bordered by the decurrent margins of the blade and marked above by the produced keel of the midrib, stipules linear-subulate, tawny-pubescent, nearly .5 in. long, very caducous. *Flowers* fascicled, about 6 together, on hairy tubercles in the axils of the leaves or of the scars of fallen leaves near the top of the branchlets, pedicels 4 to .5 in. long, usually recurved, densely tawny-pubescent, thicker in fruit; buds small, conical. *Calyx-lobes* 4, about .2 in. long, rather narrowly ovate; the outer pair obtuse; the inner acute, all densely tawny-pubescent without, glabrous within. *Corolla* campanulate; tube .05 in. long with a ring of hairs at the mouth inside, lobes 8, oblong-spathulate, 1 in. long, glabrous. *Stamens* 14 to 16, .1 in. long; filaments short, thickly hairy; anthers linear-sagittate, the connective produced in a long sharp acumen. *Ovary* rounded, glabrous; style slender, 3 in. long, cells apparently 8. *Fruit* a black glabrous oblong berry about .6 to .7 in. long and .4 in. broad. *Seed* 1, ovoid, .5 to .6 in. long, slightly compressed; testa thin, crustaceous, shining, dark brown, hilum broad, albumen none, cotyledons oblong, fleshy, about 3 in. long and nearly 2 in. broad; radicle inferior, rather large.

PERAK. on low ground, King's Collector 3104, 3718, 3720.

VAR. *obtusa*, King & Gamble. *Leaves* obtuse with an abrupt acumen. *Calyx-lobes* obtuse, thickened at tip. *Corolla-lobes* ciliate at the apex, glandular-striate; anthers and produced connective very hirsute.

PENANG: Curtis 159, 2254, 3589—a small tree, fairly common.

VAR. *parvifolia*, King & Gamble. *Leaves* smaller than in type;

innovations not tawny pubescent *Calyx-lobes* more rounded and glabrous, pedicels longer

KEDAH on Kedah Peak, *Ridley* 5506

Ridley's No 2678 from Tahan Woods, Pahang, is very near *B laurifolia*, but the pedicels are much longer and the calyx lobes not tawny pubescent The material is insufficient for description.

8 *BASSIA RUPICOLA*, King & Gamble, n sp A tree reaching 40 to 60 feet in height and 15 to 20 in in diam, branchlets dark grey, marked by the prominent scars of fallen leaves, innovations puberulous, leaf-bud scales ovate lanceolate, 25 in long *Leaves* coriaceous, obovate oblong, bluntly acute at apex, cuneately attenuate at base, dull and glabrous on both surfaces, 3.5 to 5.5 in long, 1.5 to 2 in broad, midrib thick, conspicuous, main nerves 8 to 10 pairs, starting at an angle of 45° with the midrib, then curving upwards, sometimes rather indistinct, about 4 in apart, reticulations many, obscure, obliquely transverse, petiole 5 to 1 in long, grooved above and bordered by the decurrent base of the blade, swollen below *Flowers* fascicled, about 5 together, in the axils of the leaves, on small tubercles, pedicels 15 in long, ferruginous pubescent like the calyx and buds (*calyx-lobes* 4, 2 outer valvate, 2 inner valvate or imbricate, ovate, 2 to 2.5 in long, all more or less recurved and ciliate at tip *Corolla* tubular campanulate, lobes and tube nearly equal, mouth of tube inside with a ring of soft ferruginous hairs, lobes oblong, ciliate at tip, sparsely hairy without, nerves spreading *Stamens* 16, inserted above the ring of hairs in the mouth of the tube, filaments slender, .05 in long, pubescent, anthers ovate mucronate, tip ciliate, extrorse *Ovary* ovoid, style curved, 3 in long, stigma flat, minute *fruit* not seen

PERAK in rocky creeks on Gunong Batu at 1,500 to 2,000 feet, *King's Collector* 7411

9 *BASSIA PERAKENSIS*, King & Gamble, n sp A tree reaching 60 to 80 feet in height and a considerable girth, branchlets thick, dark grey, prominently marked by the scars of fallen leaves and the tubercles on which the flower fascicles grew *Leaves* coriaceous, oblong or obovate oblong, shortly and abruptly acuminate at apex, acuminate narrowed at base, margins recurved, glabrous on both surfaces, 4 to 6 in long, 1.5 to 2.5 in broad, midrib stout, prominent, main nerves slender, indistinct, 14 to 18 pairs, starting at an angle of 50° with the midrib, parallel, straight at first, arching near the margin to join in an intra-marginal looped nerve which is also met by the secondary nerves between the main ones, reticulations faintly marked on both surfaces, petiole .75 to 1 in. long, rather thick, bordered above by the decurrent

margins of the blade, swollen below *Flowers* in fascicles of up to 10 to 12, on tubercles in the axils of the leaves or above the scars of fallen leaves on the previous year's wood, pedicels 5 to 6 in long, slender, flattened below the flowers, densely pubescent at first, afterwards nearly glabrous, recurved in fruit, buds small, conical *Calyx-lobes* 4, 2 in long, 2 upper ovate-acute, densely pubescent, valvate, 2 lower imbricate, also densely pubescent, ciliate on the margins, somewhat keeled, ovate-acute *Corolla* funnel-shaped, lobes 8, throat villous *Stamens* about 16, filaments short glabrous, anthers sagittate *Ovary* globose, villous, 8-celled, style 3 to 4 in long, stigma minutely lobed *Fruit* an ovoid densely pubescent berry about 7 to 9 in in diam, crowned by the persistent style, seeds 1-2 *Seed* ovoid oblong, 65 in by 35 in, acute at base, testa shining, chestnut brown, thin, crustaceous, hilum large, oblong, albumen none, cotyledons oblong, 45 in long, 25 in broad, radicle very small

PERRAK *King's Collector* 512, 3846, *Curtis* 3695, on the Larut hill up to 2,500 feet.

10 **BASSIA ARGENTEA**, Clarke in Hook f Fl Br Ind. III 545 (1882) (*not of de Vriese*) A large tree, branchlets rather thick, greyish brown *Leaves* coriaceous-chartaceous, elliptic or elliptic-oblong, abruptly acuminate at apex, acute and often unequal at base, glabrous above, shining grey-silky beneath when young, nearly glabrous when old, 4 to 7 in long, 2.5 to 3 in broad, midrib prominent, thick, main nerves 13 to 15 pairs, about 4 in apart, starting at about 60° with the midrib, at first straight then curving upwards, reticulations many, very oblique, petiole 1 in long, upper part bordered by the decurrent margin of the blade, swollen below and rugose *Flowers* fascicled in clusters of 6 to 10 in the axils of the leaves, or above the scars of fallen leaves, pedicels slender, about .5 in long, appressed pubescent, buds conical *Calyx-lobes* 4, outer and inner pairs both valvate, lobes ovate, .2 to .25 in long, acute, pubescent *Corolla* tubular campanulate, tube 1 in long, lobes 8 to 9, 15 in long, linear-oblong *Stamens* usually 24, in 3 rows, inserted on the top of the tube on a ring of rusty hairs, filaments very small or none, anthers ovate, densely hispid, black apiculate *Ovary* rounded, depressed above, villous, style 2 to 3 in long, villous half way up, subulate, stigma capitate, cells 8 to 10 *Fruit* not seen

MALACCA *Mamuy* (H D) 991, 1524, *Derry* 941

Bassia argentea de Vriese, seems to be a *Sideroxylon*, cf Burret & Koord & Val

11 **BASSIA BRACEANA**, King & Gamble, n. sp. A tree with spreading branches, reaching 50 to 70 feet in height and 10 to 20 in in diam., branchlets pale brown *Leaves* chartaceous, bright green, glossy,

oblong or elliptic-oblong, acuminate both at apex and at base, glabrous above, minutely pubescent on the nerves or in the axils of the nerves beneath, 4 to 8 in long, 2 to 3 in broad, midrib thick, impressed above, main nerves 14 to 18 pairs, regular, parallel, conspicuous, about 4 in apart, starting at about 60 with the midrib, arching upwards to join near the margin, reticulations oblique, slender but conspicuous, joining the main-nerves more or less horizontally, petiole 8 to 14 in long, grooved above and bordered by the decurrent margins of the blade, thickened and somewhat curved below. *Flowers* fasciculate, usually 4 to 7 together, in the axils of the leaves, or above the scars of fallen leaves on the last year's wood below, pedicels 4 to 6 in long, thickened above, otherwise slender, slightly pubescent. *Calyx* lobes 4, 15 to 25 in long, 2 outer opposite ovate rounded, enclosing the 2 inner concave rounded sometimes villate on the margins, sometimes slightly emarginate, all more or less golden pubescent without, enlarged after flowering. *Corolla* cream coloured, tube cylindrical, short about 1 in long only, lobes more or less spreading, 8 to 9, linear-oblong, 2 in long slightly twisted. *Stamens* 16 to 18, in 2 rows, inscribed on the top of the tube inside above a thick ring of tawny hairs, filaments very short, anthers ovate lanceolate, strigosely hispid, the connective ending in a long dark acumen. *Ovary* globose, glabrous, style 15 in long, stigmas very minute cells about 8. *Fruit* an oblong green fleshy berry, 8 to 1 in long crowned by the remains of the style seed usually 1 only. *Seed* ovoid, flattened, 8 in long, 5 in broad, and 25 in thick testa chestnut brown, shining, crustaceous, hilum elongate, pale, conspicuous, albumen none, cotyledons thick, 5 to 6 in long, ovoid, somewhat acute, radicle minute.

PFNANG *Curtis* 3063. P'RAK *King's Collector* 1846, 3195, 3275, 3740, 6447, 7584, 10412. *Scortechini* 314, 1483. *Wray* 1775, 2613, 2694.

VAR *lanceolata*, King & Gamble. *Leaves* narrower, more lanceolate acuminate, main nerves closer. *Flowers* more numerous in the fascicles and fascicles more numerous on the last year's wood. *Corolla* lobes often unequal in length, acute. *Anthers* with the acumen bifid.

P'RAK *Wray* 189, 1248, up to 3,400 feet.

13. *BASSIA LONGISPERA*, King & Gamble, n. sp. A large tree, reaching 80 to 100 feet in height, branchlets thick, dark greyish brown, innovations minutely pubescent. *Leaves* chartaceous, elliptic, shortly and rather abruptly acuminate at both apex and base, glabrous on both surfaces, 3.5 to 5 in long, 1.5 to 2 in broad, midrib slender, main nerves 12 to 14 pairs, leaving the midrib almost at right

angles and curving upwards to meet near the margin, secondary nerves somewhat prominent as are the reticulations, petiole 6 to 8 in. long, slender, grooved above. *Flowers* fascicled, often up to 10 together, on tubercles above the scars of fallen leaves on the last year's wood, pedicels slender, glabrous, 5 to 7 in long. *Calyx-lobes* 4, 15 to 2 in. long, ovate, somewhat acute, somewhat pubescent outside, the 2 outer enclosing the 2 inner. *Corolla* with very short (0.5 in long) cylindrical tube, lobes 8 to 9, rather spreading, oblong-lanceolate, obtuse or emarginate, prominently nerved, glabrous. *Stamens* 16 to 18, 2 in. long, inserted in 2 rows on the top of the tube above a short ring of tawny hairs, filaments 1.25 in long, slender, anthers ovate, 0.75 in long, apiculate, exserted. *Ovary* cylindrical, style 5 in long, surmounted by a minute rounded stigma. *Fruit* unknown.

PERAK *King's Collector* 2680 SINGAPORE *Ridley* 6498 (?)

This species comes very near to *B. Braccana*, but the anthers differ so much that we hesitate to join them.

13 *BASSIA CUPREA*, King & Gamble, n. sp. A tree reaching 60 to 70 feet in height, branchlets thick, brown, uppermost somewhat angular. *Leaves* coriaceous, oblong, obtuse or emarginate at apex, attenuate at base and somewhat unequal, glabrous above, sparsely hairy on the nerves beneath, otherwise glabrous, 4.5 to 6 in long, 2.5 to 3 in broad, of a coppery brown colour when dry, midrib very thick and prominent, main nerves 10 to 12 pairs, starting at an angle of about 50° with the midrib, curving upwards to and along the margin, reticulations visible but not strong, petiole thick, .75 to 1 in long, bordered above by the decurrent margin of the blade. *Flowers* fasciculate in the axils of the leaves or of the scars of fallen leaves, 2 to 5 or more in a fascicle, fragrant, pedicels 5 in long, pubescent, buds conical, 3 in long. *Calyx lobes* 4, .25 in long, 2 outer valvate, broadly ovate, shortly pubescent, 2 inner rounded concave, shallowly emarginate, ciliate and scarious on the margins, pubescent without. *Corolla* 4 in long, tube funnel shaped 1 in long, mouth densely brown-hirsute, lobes 8-9, erect or spreading 3 in long oblong, rounded at apex, long brown-silky pubescent on back, strigosely hairy within. *Stamen* 18 to 22, inserted on the mouth of the tube, filaments hairy, .05 in l., anthers ovate acuminate, 15 in long, the connective produced long usually curved acumen strigosely hirsute. *Ovary* oblong, glabrous 8-10 celled, ending in a style 5 in long surmounted by a minutely 9-10 lobed flat stigma. *Fruit* not seen.

PERAK *Scottichum* 1879

This species comes near to *B. Motleyana*, Clarke, but the flowers are much larger and different.

14 *BASSIA MOTLEYANA*, Clarke in Hook f Fl Br Ind III 546 (1882) An erect lofty tree of swampy places, branchlets dark brown, marked by prominent leaf scars. *Leaves* coriaceous, elliptic, shortly and abruptly acuminate at apex, cuneate at base, the two sides sometimes unequal, glabrous on both surfaces, 4 to 5 in long, 1.5 to 2.5 in broad, midrib prominent, raised above, main nerves 10 to 12 pairs, irregularly spaced, generally at about an angle of 60° with the midrib, meeting near the margin in a looped intramarginal nerve, secondary nerves prominent similar to the main-nerves, reticulations few, petiole 8 to 12 in long, rather thick, bordered by the decurrent margins of the blade. *Flowers* fascicled, many together (10 to 12), in the axils of the leaves or of the scars of fallen leaves below the terminal tuft, often fully clothing the branchlets for a distance of 6 in or more, pedicels slender, 1 to 7 in long, buds ovoid. *Calyx-lobes* 4, 1.5 to 2 in long, ovate, obtuse or somewhat acute, sparsely pubescent, the inner pair somewhat scarious on the margins. *Corolla* campanulate, 1.5 to 2 in long, tube short, about $\frac{1}{3}$ of the whole, lobes 8, 4 outer enclosing 4 inner, oblong-spathulate, obtuse at tip and ciliate ferruginous pubescent. *Stamens* 16, inserted on the top of the tube on a ring of long ferruginous hairs, filaments short, slender, anthers ovate lanceolate, short apiculate. *Ovary* rounded, villous, 3-8 celled, style 5 in long, thick, sparsely pubescent. *Fruit* an obovoid glabrous berry, acute at top and furnished with the remains of the persistent style, calyx lobes also persistent, 5 in long, 3 in broad, 1-2 seeded. *Seeds* oblong, acute at both ends, testa crustaceous, shining, albumen none, cotyledons fleshy, radicle small. Burck in Ann Jard Bot V 44. *Isonaniba Motleyana*, de Vries in Miq Journ Bot Neerl I (1861) 257.

MALACCA Griffith (K D) 3608, *Derry* 1026. **JOHORE** Ridley 6496. **SINGAPORE** Ridley 5645 5896. —**DISTRIB** Borneo (*vide* Burck)

De Vries says the milky juice gives a gutta of bad quality being more waxy and fragrant than that of other kinds.

VAR *Scortechinii*, King & Gamble. *Leaves* much larger, 6 to 8 in long, 2.5 to 3.5 in broad, main nerves 15 or 16 pairs. *Fruit* nearly globose—a dark green berry, shining when dry.

PERAK *Scortechinii*, at Port Weld, No 1550. *King's Collector* 5454 6735, on low, wet ground—a tree reaching 60 to 80 feet in height and 15 to 20 in in diam.

15 *BASSIA CUNEATA*, Bl Bijdr 675. A tree (?), branchlets dark brown, scarred, rather thick. *Leaves* coriaceous, clustered at the ends of the branchlets, greenish-brown when dry, obovate, obtuse emarginate or very shortly and abruptly acute at apex, cuneate at base,

glabrous, margins slightly recurved, 4 to 5 in long, 2 to 3 in broad, midrib stout, prominent, impressed above, main-nerves not prominent, about 20 pairs, nearly at right angles to the midrib, anastomosing near the margin with the secondary nerves, reticulations transverse, petiole 6 to 1 in long, bordered by the decurrent margins of the blade. *Flowers* in axillary fascicles as long as the petiole, not seen. *Fruit* a globose berry 75 to 1 in in diam, 1-3 seeded. *Seeds* 5 to 7 in long, 5 in broad and thick, ovoid, not compressed, pointed at both ends, testa crustaceous, chestnut brown, shining, hilum very broad (4 in), albumen none, cotyledons fleshy, semi ellipsoidal. *Miq Fl Ind Bat* II 1041, *A DC Prod VIII* 199, *Clarke in Hook f Fl Br Ind III* 546, *Koord & Val Bijdr I* 154.

The true guttapercha tree perhaps the most valuable of all the trees of the Peninsula. It was the Taban Gutta or Taban Merah. It has become very scarce in a wild state, but is now being much planted, so perhaps it may soon again become common (see also H C Hill Reports on Forest Conservancy in the Straits Settlements and the Federated Malay States and Burn Murdoch in 'Indian Forester' XXXI 30) 'Some Facts about Gutta Percha' Ridley in Trans Linn Soc III (1893) 317 says the tree was seen by him in several places in the Taban woods and that a considerable amount of guttapercha is collected there.

VAR *oblongifolia*. A large tree, stem reaching 80 feet in height and up to 2 feet in diam. Leaves larger than in the typical form, obovate oblong or lanceolate oblong, longer, abruptly acuminate, reaching 7 in in length and 3 in in breadth, rather more conspicuously golden pubescent. Flowers similar but a little larger, pedicels a little shorter. Fruit rather larger, less acute at top. *P. oblongifolium* Burck in Ann Jard Bot Brit V 25 tab V. *Isonandra Gutta* var *oblongifolia*, de Vries, Tuinbouw Flora (1856), III 226. *Isonandra Gutta*, var β *sumatрана*, Miq Fl Ind Bat II 1038, and Suppl 581.

PERAK *Curtis* 3637, 3725, *Wray* 535, *Munton King's Collector* 6175. JOHORE *Curtis* 3632—in open forest in the hills at 500 to 1,000 feet—DISIRIB Sumatra, Borneo. Gives guttapercha like the type.

We are unable to find sufficient characters for separating this as a species from *P. Gutta* as is done by Burck. The specimens available seem to point to a regular series of intermediates so that it can scarcely be even maintained as a variety. It is possible that *P. malaccense* and *P. formosum*, *Picrie* in Bull Soc Linn Par I 498, are both forms of *P. Gutta* but we have seen no specimens. *Beccari* in 'Nelle

Foreste di Borneo," p. 558, suggests the identity of the latter species with *P. oblongifolium*.

5. *PALAEQUIMUM OXLEYANUM*, Pierre in Bull. Soc. Linn. Par. I. 498 (1885), *non* Burck. A large tree; branchlets dark brown, marked by prominent scars of fallen leaves, innovations minutely ferruginous-pubescent. *Leaves* coriaceous; oblong-obovate, abruptly and shortly acuminate at apex, cuneately attenuate at base, glabrous above, densely appressed-golden-pubescent beneath, finally glabrate, margins recurved; 5 to 8 in. long, 2.5 to 3 in. broad, midrib prominent, thick, impressed above; main-nerves 14 to 18 pairs, irregular, sometimes branched, .4 to .5 in. apart, starting at an angle of about 60° with the midrib, curved near the margin to meet in a rather faint looped intramarginal nerve; secondary nerves few; reticulations few, horizontally transverse; petiole 1 to 1.5 in. long, somewhat thickened at base, minutely rusty-pubescent, channelled above and bordered for some distance by the decurrent margins of the blade; stipules minute, falcate, caducous. *Calyx-lobes* 6, 3 outer rather thicker than 3 inner, ovate, sub-acute, densely ferruginous-pubescent, .25 in. long. *Fruit* a nearly globose berry, 1 in. long and about .75 in. in diam. *Seeds* oblong; testa shining, crustaceous. *Dichopsis pustulata*, Hemsl. in *Herb. Kew*.

PENANG: *Curtis* 3582 PERAK *Curtis* 3631, 3638, 3724—on the hills up to 2,500 feet, *Wray* 511 (*part*), 590, *Douglas*, *Phallips*, SELANGOR. *Curtis* 3763, 3764. SINGAPORE. *Maingay* (K.D.) 983 No. 1948 quoted by Pierre), *Jas. Collins* (a pustulate form apparently diseased).

This species gives apparently the "taban sutra" or "taban putih" guttapercha, which is not one of the best quality

VAR *glabrata* King & Gamble. *Leaves* smaller, about 1.5 in. broad, glabrate beneath, rarely slightly golden-pubescent, *fruit* oblong, *branchlets* grey, very rough with scars of fallen leaves and flowers.

PERAK. *Wray* 511 (*part*), 518.

P. Oxleyanum, Burck Ann. Jard. Buit. v. (1886) 33, is a different plant altogether (see *Teysmann's* specimen in *Herb. Kew*)

6. *PALAEQUIMUM XANTHOCHYUM*, Pierre ex Burck in Ann. Jard. Bui' 30 (1885) A large handsome tree; the stem reaching 80 to 120 ft. height and 2.5 to 3 feet in diam.; branchlets dark brown, innovations rusty-pubescent; leaf-bud scales lanceolate, ciliate, about .1 in. long. *Leaves* coriaceous, glossy-green; obovate, obtuse and often emarginate at apex, cuneate at base; glabrous on both surfaces, margin recurved, reddish when dry, 2.5 to 4 in. long, 1.5 in. broad; midrib prominent,

impressed above; main-nerves obscure, about 12 to 14 pairs at about 60° with the midrib; reticulations scarcely visible; petiole .5 to .6 in. long, channelled above by the decurrent margins of the blade, stipules ovate, ciliate, very small, caducous. *Flowers* fascicled, up to 8 together, in the axils of the leaves or of the scars below them; pedicels slender, recurved, .2 in. long; buds very small, conical. *Calyx-lobes* 6, .1 in. long, 3 outer valvate, 3 inner imbricate, ovate-acute, rusty-pubescent. *Corolla* campanulate, 3 in. long, tube short, lobes 6, imbricate, oblong, blunt. *Stamens* 12, inserted on the top of the tube; filaments stout, curved, anthers ovate-sagittate, mucronate, extrorse. *Ovary* rounded, glabrous, style .1 in. long, subulate. *Fruit* an ovoid berry, glabrous. *Isonandra xanthochyma*, de Vriese Nat. Tijdschr. Ned. Ind. XXI. 311, and Miq. Journ. Bot. Neerl. i. 259. *Dichopsis rubens*, Clarke in Hook. f. Fl. Br. Ind. III 543.

PERAK *King's Collector* 7288—on low ground and rich soil. MALACCA *Mungray* (K.D.) 995. SINGAPORE: *Cantley* 63; *Ridley* 3774. —DISTRIB. Borneo

Produces a rattaparcha of a yellowish colour and second quality (de Vriese).

7. *PALAEQUIM BANCANUM*, Burck in Ann. Jard. Buit. V. 43 (1885). A very large evergreen tree, stems reaching 80 to 100 feet (Curtis), 100 to 120 feet (Kunstler) in height, with a girth of 10 to 12 feet; branchlets rough, prominently marked with the scars of fallen leaves, upper branchlets and innovations slightly but minutely rusty-pubescent. *Leaves* coriaceous, clustered at the ends of the branchlets, obovate or obovate-oblong, abruptly and very shortly acute at the otherwise rounded apex, cuneate at base; margins slightly recurved, glabrous on both surfaces, the lower with very minute glandular scales; 3 to 4 in long, 1.5 to 2.5 in. broad; midrib prominent, impressed above; main-nerves very obscure, about 14 to 16 pairs, inclined at nearly 70° to midrib and at first parallel, afterwards arching, reticulations very faint, petiole .7 to 1 in. long, edged above with the decurrent margins of the blade, glabrous. *Flowers* fasciculate, clustered about 2 to 4 together in the axils of the leaves or of the scars of fallen leaves, often on a length of as much as 4 to 5 in. of the branchlet; pedicels and calyx minutely ferruginous-pubescent; pedicels .1 to .15 in long, thick. *Calyx-lobes* 6, the 3 outer valvate rounded, the 3 inner imbricate acute, .15 to .2 in. long. *Corolla* campanulate, tube as long as calyx, lobes 6, ovate, spreading, as long as tube, glabrous except a slight rusty pubescence within. *Stamens* 12, the 6 longer opposite to, the 6 shorter alternate with, the corolla-lobes; filaments inserted on the top of the tube, slender; anthers ovate, apiculate, extrorse. *Ovary* flattened-

cylindrical, the top rusty-hirsute, style as long as corolla, subulate, glabrous, cells 6 *Fruit* a fleshy oblong or obovate berry, smooth, 75 in long, 5 in thick, 1-seeded

MALACCA: Mangay (K.D.) 979, Griffith (K.D.) 3641. LANGKAWI: Curtis 2557. PENANG: Curtis 708.—DISTRIB. Malay Archipelago, Br. India, N. Australia, Philippines, tropical Africa.

A variable species, of which two varieties are recognised by Mr C B Clarke in Hooker's "Flora of British India." Both these have leaves longer than as above described, but neither occurs in our region.

2. DIOSPYROS, Linn.

Trees, rarely shrubs. *Leaves* alternate or rarely sub opposite, entire. *Flowers* dioecious, very rarely polygamous, axillary and short pedicelled, or in small cymes, the ♀ often, and the ♂ sometimes, solitary, usually 4- or 5 merous, rarely 3 merous. *Calyx* usually deeply-lobed, rarely truncate, often in the ♀ larger than in the ♂ and often accrescent and plicate or auriculate in fruit. *Corolla* tubular with short deep lobes, or salver shaped, or campanulate the lobes contorted to the right in bud. *Stamens* in the ♂ flowers 4 to 64, often 16, their filaments distinct, paired or polyadelphous, anthers linear, rarely short, *ovary* rudimentary. In the ♀ flowers, *staminodes* 0 to 16, *ovary* 4-5-celled or imperfectly 8-10 celled, the cells usually with 1, rarely with 2 ovules, styles or stigmas 1 to 4. *Fruit* a globose ellipsoid or ovoid-conic, berry, usually subtended by the enlarged (sometimes woody) calyx, flesh pulpy or viscid. *Seed* oblong, usually compressed, albumen equable or (rarely) ruminant. — **DISTRIB** About 220 species chiefly in the tropics

Leaves membranous or thinly coriaceous, glabrous or hairy, ♂ flowers in small cymes or fascicles 4-5 merous, stamens usually 8, 12, or 16. flowers sub solitary, ♀ calyx longer than that of the ♂ not accrescent or but slightly so, in fruit —

Leaves under 5 in long —

Fruit lobular glabrous stamens 16

1 *D. Wrayi*

Fruit cylindric or oblong conical, glabrous, stamens about 16 leaves 1 to 1 1/4 in long, and under 65 in broad

3 *D. microphylla*

Fruit ellipsoid —

Stamens 8 —

Fruit puberulous —

Leaves usually under 2 25 in long lanceolate sub rhomboidal

2 *D. subrhomboides*

Leaves usually over 2 25 in long elliptic oblong

6 *D. Scorteum*

Fruit glabrous leaves 2 5 to 4 5 in long

5 *D. graciliflora*

Stamens 12, leaves 3 25 to 5 in long, fruit glabrous

7 *D. fluviatilis*

Fruit not known, stamens 12, leaves under 2 in long

4 *D. dumosa*

Leaves over 5 in long, fruit ovoid conic, rusty setose, stamens 6 to 12

8 *D. apiculata*

Leaves coriaceous, upper surface glabrous and shining, flowers mostly 4 merous, a few 5 merous, ♂ flowers in small cymes or clusters, calyx deeply lobed, often larger in the ♀ and differing in shape from that of the ♂ —

Calyx 4 lobed

Leaves under 5 in long —

Leaves under 1 5 in broad —

Calyx of ♀ flower densely sericeous pubescent, lobes reniform, fruit ovoid or sub globose rusty villous, its calyx 1 in in diam

9 *D. lanceolata*

- Calyx margins of ♀ flower tomentose, lobes broadly ovate, fruit globose, ultimately glabrous, 75 in long 14 *D lucida*
- Leaves 15 to 25 in broad —
- Stamens about 12, main nerves of leaves 8 to 9 pairs 10 *D pachyphylla*
- Stamens about 16, main nerves of leaves 6 to 7 pairs 11 *D clavigera*
- Stamens 16, in pairs, main nerves of leaves 5 pairs 13 *D styraciformis*
- Leaves usually more than 5 and less than 75 in long,
- Leaves under 65 in long, over 25 in broad, fruit olive shaped nearly 2 in long and 125 in in diam 12 *D bilocularis*
- Leaves under 25 in broad —
- Leaves under 65 in long main nerves of leaves not visible, probably many pairs, fruit depressed globose 185 in in diam persistent calyx thick, woody 25 *D oleifolia*
- Leaves under 75 in long, main nerves 5 to 8 pairs, fruit ellipsoid 1 in in diam persistent calyx with large membranous lobes 27 *D paniculata*
- Leaves usually more than 6 and less than 12 in long —
- Leaves beneath covered with appressed sericeous hair, stamens 20 to 24, main nerves of leaves not visible 21 *D argentea*
- Leaves beneath glabrous except the midrib, which is covered with dark hair main nerves of leaves 7 to 8 pairs fruit glabrous 17 *D tristis*
- Leaves beneath glabrous or only minutely puberulous —
- Leaves usually 3 to 35 in broad —
- Main nerves of leaves 8 to 10 pairs apex caudate acuminate base cuneate 18 *D pauciflora*
- Main nerves of leaves 10 to 12 pairs apex acute base rounded 19 *D ellipsoidea*
- Leaves reaching 4 in broad, fruit glabrescent
- Main nerves of leaves 8 to 14 pairs apex sub acute 23 *D Horsfieldii*
- Main nerves of leaves 16 to 20 pairs, apex shortly acuminate 24 *D toponoide*
- Leaves 35 to 45 in broad, main nerves of leaves 8 to 12 pairs, apex acute fruit densely rusty tomentose ridged 28 *D kunstleri*
- Leaves 4 to 14 in long 25 to 5 in broad main nerves 14 to 18 pairs, fruit sub globose 1 in in diam immersed in the thickened calyx 20 *D Wallachii*
- Leaves 10 to 18 in long 2 to 4 in broad, main nerves 14 to 20 pairs fruit depressed globose, 2 in in diam, seated on a cupular calyx 22 *D rigida*
- Calyx 5 lobed
- Leaves glabrous beneath 7 to 9 in long 3 to 375 in broad main nerves 16 to 18 pairs 15 *D oblonga*
- Leaves puberulous on the midrib and main nerves beneath 55 to 75 in long 25 to 325 in broad main nerves 10 to 12 pairs 16 *D Helferii*
- Leaves glabrous beneath 55 to 9 in long, 15 to 25 in broad, main nerves 10 to 12 pairs 26 *D brachyata*
- Leaves thinly mucous glabrous above puberulous beneath both ♂ and ♀ flowers in few flowered cymes on long slender extra axillary peduncles pendulous calyx 5 lobed not accrescent in fruit 29 *D nutans*

SPECIES IMPERFECTLY KNOWN

Calyx of fruit long woody its lobes pointed and much reflexed leaves glabrous	30 <i>D. reflexa</i>
Leaves oblong, hairy beneath cordate at the base Calyx in fruit small Fruit globular rusty pubescent	31 <i>D. pinnatifida</i>
Leaves quite glabrous elliptic narrowed at each end not cordate Fruit globular with small calyx	32 <i>D. rupestris</i>
Leaves coriaceous quite glabrous oblong, arcular reticulate Male flowers in terminal tomentose cymes	33 <i>D. violacea</i>
Leaves membranous oblong or oblong, elliptic glabrous Male flowers in fascicles of about 3 Calyx with reniform lobes pedicels bracteolate Corolla salver shaped	34 <i>D. Curtisii</i>
Leaves membranous pubescent beneath Male flowers in dense short hairy glomeruli Stamens 8	35 <i>D. glomerulata</i>
Leaves pubescent beneath Calyx lobes 4 stamens 16	36 <i>D. alutacea</i>

1 *Diospyros* WRAY King & Gamble, n sp. A shrub 4 to 12 feet high, young branches as thick as a crow quill cinereous or rusty puberulous. *Leaves* small, alternate, membranous, ovate lanceolate to narrowly elliptic, shortly acuminate, the base cuneate, both surfaces dark olivaceous, the upper very shining and minutely reticulate, glabrous except the puberulous depressed midrib, the lower more brown and dull the midrib pubescent and prominent the reticulations less distinct, length 2 to 4 in breadth 75 to 15 in, petioles 0.5 to 1 in. *Male flowers* 25 in long 2 to 4 together in small axillary cymes, black when dry, puberulous, pedicels very short. *Calyx* less than 1 in long, narrowly campanulate with 4 deep ovate lobes. *Corolla* three times as long as the calyx, salver shaped, sub glabrous, limb with 4 oblong lobes. *Stamens* 16, united in pairs by the bases of the unequal filaments, broadly lanceolate inserted near the base of the tube. *Female flowers* like the ♂ but longer—especially the calyx. *Staminal tube* about 3, lanceolate. *Ovary* glabrescent, ovoid conic, tapering into a rather long style, stigmas 4, fleshy, short. *Fruit* globular, crowned by the short style, glabrous, shining, black when ripe (when dry) calyx at its base 75 in across, coriaceous, deeply divided into 4 oblong blunt or sub acute reflexed lobes.

PRANK *Scortechini*, Wray 2764, 3272, 3955, King's Collector 2076 2993

2 *Diospyros* SUB RHOMBOIDEA, King & Gamble, n sp. A shrub 4 to 6 feet high young branches thinner than a crow quill, softly tawny pubescent, pale brown when dry. *Leaves* small, alternate lanceolate or ovate lanceolate or sub rhomboidal, bluntly acuminate the base cuneate, both surfaces olivaceous brown when dry, the upper dark, glabrous except the puberulous midrib, the lower sparsely adpressed pubescent especially on the bold midrib, main

nerves 4 or 5 pairs, curved, ascending, faint on both surfaces; length 1.5 to 2.25 in., breadth .6 to .8 in.; petiole about .1 in. *Male flower* .6 in. long, solitary, axillary on a short tomentose pedicel with 2 broad bracteoles. *Calyx* less than .1 in. long, pubescent outside, glabrous inside, deeply divided into 4 broad obtuse almost quadrate imbricate lobes. *Corolla* salver-shaped; the tube cylindric, tapering to the apex, tomentose outside; limb as long as the tube but less hairy outside, glabrous inside like the tube, deeply divided into 4 oblong sub-acute lobes with inflexed edges, twisted to the right in bud. *Stamens* 8, attached near the bottom of the tube, 4 shorter than the others; anthers all lanceolate, and on short filaments. *Female flower* not known. *Fruit* ellipsoid, sparsely adpressed-puberulous, crowned by the conic style, .8 or .9 in. long and 4 in. in diam. *Calyx* at its base .25 in. across, flat, with 4 spreading, broad, blunt lobes.

12 *Diosyros bilocularis*, Oliver in Hook Ic Pl t 2336 (1894). A glabrous tree 60 to 80 feet high, young branches about the thickness of a goose quill, dark purplish when dry and shining, slightly striate. *Leaves* thickly coriaceous, elliptic sub acute, the base slightly cuneate, the edges (when dry) recurved both surfaces olivaceous when dry, the upper shining, the lower paler and dull, midrib inconspicuous and

slightly channelled on the upper surface, bold on the lower; main-nerves 10 to 12 pairs, slightly curved, spreading, interarching far from the edge, faint on both surfaces, length 5 to 6.5 in., breadth 2.5 to 3.25 in. *Male flowers* .65 in. long (in bud) on rusty-pubescent pedicels .3 to .4 in. long, in axillary and extra-axillary fascicles of 2 to 4, with a few tomentose bracteoles at their bases. *Calyx* very coriaceous, .25 in. long and nearly as much in width at the mouth; limb 4-lobed, the lobes very short and broad. *Corolla* narrowly tubular, .4 in. long, very thick; lobes of limb long, narrowly oblong. *Stamens* 16; sub-sessile, linear, sub-equal, apiculate; rudimentary ovary none. *Female flower*; calyx and corolla as in the ♂, staminodes none; ovary oblong or oval-ovoid, narrowed at the apex, longer than the calyx, 2-celled; ovules 2 in each cell and pendulous. *Fruit* olive-shaped, shortly apiculate, 1.5 to 2 in. long and 1 to 1.25 in. in diam. at the middle, yellow when ripe, its pedicel obconic, stout, woody, .4 in. long, calyx in ripe fruit flat, with 4 broad blunt lobes. *Seed* solitary; pericarp thin, only .3 in. across, albumen large stellately ruminant. *Maba Mangayi*, Hiern in Trans Camb Phil Soc XII 107, Clarke in Hook fil Fl. Br. Ind III 552.

PENANG *Curtis* 1085, *Ridley* 7174 MALACCA *Maugay* (K D), 974, *Griffith* (K D) 3636 PERAK *Scortechini* 1976, *Wray* 2535, 2865 *King's Collector* 2966, 2982, 4058, 6779, 7459, 7619, 10123 KEDAH *Curtis* 2594 SELANGOR *Ridley* 2748, 8544

This is the plant issued by Wallich as No 4141 of his Catalogue under the name *D macrophylla*. Being different from the older *D macrophylla* of Blume, a new name had to be found for it. This was done by De Candolle, who reduced it, as a variety to Wallich's *D undulata* with the type specimen of which in Wallich's own herbarium it does not agree. De Candolle was followed by Hiern, Kurz and Clarke, we now restore it to specific rank. The true *D undulata*, Wall, is a Burmese species. It is found also in the Andaman Islands, but it has not as yet been collected in Malaya.

21 DIOSYROS ARGENTEA, Griff Notul IV 288 (1854). A tree 15 to 50 feet high young branches about as thick as a goose-quill, covered with sub deciduous yellowish silky hairs. *Leaves* large, coriaceous, oblong, apex acute, base rather abruptly cuneate or rounded, upper surface warm brown when dry, glabrous and shining, the midrib depressed, lower densely covered with yellowish adpressed sericeous hair, the midrib very stout, main nerves invisible on both surfaces, length 6 to 10 in, breadth 1.65 to 3.5 in, petioles 1 to 2.5 in. *Male flowers* in somewhat supra axillary few flowered shortly pedunculate spike like cymes 1 to 1.25 in long (peduncle included), bracts ovate 2 in long. *Calyx* 2.5 in long, deeply 4 lobed, villous. *Corolla* 3.5 in long, tubular, lobed half way down, very villous outside. *Stamens* 20 to 24. *Female flower* solitary on a peduncle 2 in long, calyx campanulate, 5 in long, with ovate lobes. *Corolla* 6.5 in long. *Staminodes* 4 to 5. *Ovary* 4 celled, 8 ovuled, densely hairy, styles 4, erect, hairy. *Fruit* ellipsoid, apiculate, 2 to 2.5 in long and 1 to 2 in in diam, densely rusty tomentose the calyx persistent, its lobes enlarged, broad, very coriaceous, shortly hairy. Hiern in Trans Camb Phil Soc XII 262, Clarke in Hook fil Fl Br Ind. III 569. *D discolor*, Wall Cat 4131 (not of Willd.)

26. *DIOSPYROS BRACHIATA*, King & Gamble, n. sp. A glabrous tree

20 to 40 feet high, young branches half as thick as a goose-quill. *Leaves* alternate, coriaceous, elliptic oblong, acute or shortly acuminate, the base slightly cuneate or rounded, upper surface pale olivaceous when dry, lower pale brown, main-nerves 10 to 12 pairs, curved, ascending, prominent like the midrib on the lower surface, depressed somewhat on the upper, length 5.5 to 9 in breadth 1.5 to 2.5 in, petioles 3 to 5 in. *Male flowers* about 5 in long *Calyx* 2 in long, campanulate, divided almost to the base into 5 ovate acute erect lobes, each folded vertically along the midrib so as to form a deep dorsal groove, everywhere minutely rusty tomentose. *Corolla* twice as long as the calyx, narrowly tubular, the tube 5 angled, externally divided, the 5 lobes twice as long as the tube, linear-oblong, contorted in aestivation, the external half of each lobe tawny tomentose, the inner half and the whole of the anterior surface glabrous. *Stamens* 14, linear, apiculate, sub-sessile. *Female flowers* 4 in long, collected in compound umbellate axillary cymes 1.5 to 1.75 in long and about as much across, the branches compressed, rusty puberulous, spreading, bearing a few oblong obtuse bracts, flower pedicels varying in length from .1 to 2 in, bracteolate. *Calyx* fleshy, tomentose outside, deeply divided into ovate acuminate erect grooved lobes. *Corolla* tubular, tomentose outside, glabrous inside, very thick, deeply divided into 4 oblong lobes. *Stamens* about 8, lanceolate, flattened. *Ovary* ovoid, tapering into a short style, tomentose. *Fruit* depressed-globose, puberulous, .75 to 9 in diam, and about the same from below the calyx to the somewhat concave apex, calyx woody, thick, 1 in. wide, with triangular deeply grooved sub-acute lobes.

PINANG. *Curtis* 1453, 1454, 10230.

27 DIOSPYROS PANICULATA, Dalz. in Hook. Kew Journ. IV 109 (1852). A tree 50 to 70 feet high, young branches less than half as thick as a goose quill, rusty-puberulous. *Leaves* thinly coriaceous, alternate, elliptic or elliptic-oblong, shortly and bluntly apiculate or acuminate, the base cuneate or rounded, both surfaces pale olivaceous when dry, the reticulations minute and distinct, especially on the glabrous upper surface, main-nerves 5 to 8 pairs, curving upwards and forming arches far from the edge, bold like the midrib on the lower surface and slightly depressed on the upper, lower surface softly pubescent, length 4 to 7.5 in, breadth 1.65 to 2.5 in, petiole .25, stout, channelled, pubescent. *Male and female flowers* not seen. *Fruit* in lax racemoid cymes, ellipsoid, crowned by the small remains of the style, rufous hirsute when young, ultimately glabrous, 1.5 in long and 1 in diam, the accrescent calyx at its base with 4 large broadly ovate membranous lobes with many vertical nerves and numerous distinct

minute reticulations, each lobe 1·25 long and nearly as wide. Dalz. & Gibs. Flora Bombay, 141; Bedd. Ic. Pl. Ind. Or. t. cxxv, and Fl. Sylv. Madr. cxliv; Hiern in Trans. Camb. Phil. Soc. XII. 190; Clarke in Hook. fil. Fl. Br. Ind. III. 570.

PERAK: *King's Collector* 7637, 8163.

The scanty specimens from Perak are in fruit only, but the leaves and fruit agree so well with those of *D. paniculata*—a species hitherto known only from the west of the Indian Peninsula—that, in spite of the anomalous geographical distribution, we, temporarily at least, refer the Perak specimens to that species.

28. *DIOSPYROS KUNSTLERI*, King & Gamble, n. sp. A tree 20 to 40 feet high; young branches as thick as a goose-quill, glabrous. *Leaves* alternate, large, thickly membranous; elliptic to elliptic-oblong, acute, the base rounded; both surfaces, when dry, olivaceous-brown, the lower rather darker than the upper, somewhat shining, faintly reticulate; main-nerves 8 to 12 pairs, much curved, spreading, ascending, and forming wide arches ·25 in. from the edge, prominent on the lower surface like the midrib, somewhat depressed on the upper; length 8 to 12 in., breadth 3·5 to 4·5 in.; petioles ·25 to ·35 in. *Male flowers* unknown. *Female flowers* in short axillary and extra-axillary puberulous cymes, nearly 1 in. long, pedicellate; bracts narrow, nearly as long as the pedicels, oblong. *Fruit* in short stout cymes (unripe) depressed-globular, crowned by the short remains of the style, with 4 or 5 vertical ridges, everywhere densely rusty-tomentose, subtended by the accrescent almost woody calyx, with 4 deep reniform-cordate apiculate erect undulate lobes.

PERAK. *King's Collector* 4343, 7633, 8229.

29. *DIOSPYROS NUTANS*, King & Gamble, n. sp. A shrub or small tree 8 to 16 feet high; young branches less than one-third as thick as a goose-quill, deciduously villous, the older much thicker with deeply channelled dark-coloured, sub-glabrous bark. *Leaves* alternate, thinly coriaceous; oblong or sub-oblongate-oblong, apex shortly caudate-acuminate, the base rounded; both surfaces brown when dry, the upper glabrous, the lower puberulous, but often villous on the prominent midrib; main-nerves 7 to 10 pairs, curved, ascending, interarching near the margin, the reticulations distinct; length 5 to 7 in., breadth 1·5 to 2·25 in.; petiole ·15 in. *Cymes* umbellate, few-flowered, borne on the apices of slender slightly supra-axillary flexuous puberulous peduncles much longer than the leaves (often twice as long); bracteoles few, small, lanceolate, concave. *Male flowers* in different cymes from the females, ·5 in. long, on short pedicels less than ·1 in. long. *Calyx* puberulous, campanulate, with 5 long lanceolate lobes. *Corolla* four times as long

as the calyx, narrowly tubular, slightly constricted at the throat, hairy outside, glabrous inside, the limb with 5 deep oblong lobes. *Stamens* 10, linear-elliptic, apiculate, inserted in the bottom of the tube, 5 sessile and 5 with filaments. *Female flowers* shorter than the ♂, with small filamentous staminodes. *Ovary* narrowly ovoid, densely rufous-hirsute, attenuated into a long pubescent style crowned by 5 short glabrous reflexed small stigmas. *Fruit* narrowly ellipsoid, sparsely hairy, .6 to 1 in. long and .5 in. in diam., crowned by the persistent style and subtended by the non-acrescent calyx. *Seeds* few, narrowly ellipsoid.

PERAK: *Scortechini* 674, 1678; *King's Collector* 378, 2675, 2987, 3573, 7087.

Differs from all the other Malayan species by its long peduncled pendulous inflorescence.

SPECIES IMPERFECTLY KNOWN.

30. *DIOSPYROS REFLEXA*, King & Gamble, n. sp. A tree 50 to 70 feet high, young branches as thick as a goose-quill, covered with a layer of minute deciduous rusty pubescence. *Leaves* alternate, thickly coriaceous; oblong to elliptic, shortly acuminate, the base cuneate; upper surface olivaceous-brown when dry, the lower pale brown, both minutely reticulate, main-nerves 8 to 10 pairs, spreading, interarching .15 in. from the slightly recurved edges; length 5 to 7.5 in., breadth 1.75 to 3 in.; petiole .4 or .5 in. *Flowers* unknown. *Fruit* hemispheric with depressed truncate apex, under 1 in. in diam.; the calyx embracing the very base of the fruit with 4 fleshy much reflexed revolute triangular fleshy lobes, densely rusty-tomentose like the fruit.

PERAK: *King's Collector* 7676, 7747.

The curious fleshy calyx with much-reflexed lobes distinguishes this from all the other Malayan species.

31. *DIOSPYROS PENANGIANA*, King & Gamble, n. sp. A tree 20 to 30 feet high; young branches twice as thick as a crow-quill, covered with deciduous hair of two sorts, namely, a uniform coat of minute rusty tomentum with long rusty bristle-like hairs protruding through it. *Leaves* alternate, coriaceous, oblong, shortly and bluntly acuminate, narrowed below the middle to the rather broad auriculately cordate base; upper surface when dry pale brown, shining, glabrous except the puberulous depressed midrib, lower surface reddish-brown, transversely reticulate, with pubescence like that of the young branches on the stout midrib and 10 to 14 pairs of ascending rather straight main-nerves, otherwise glabrescent; length 5.5 to 7.5 in., breadth 1.25 to 2.25 in.; petioles .15 to .2 in. long, hispid. *Male and female flowers* unknown.

Fruit sessile, globular, from .75 to 1 in. in diam., densely covered with minute rufous tomentum, crowned by the short remains of the style and subtended by the small calyx with 5 broad reflexed lobes.

PENANG : *Curtis* 2221.

Collected only in Penang. In leaves this resembles the Bornean plant named by Hiern *Maba ? cordata*. The 5-cleft calyx of this is suggestive rather of *Diospyros* than of *Maba*.

32. *DIOSPYROS RUFA*, King & Gamble, n. sp. A tree 60 to 80 feet high; young branches about half as thick as a goose-quill or thicker, glabrous, brown and rough when dry. *Leaves* alternate, thickly coriaceous; oblong-elliptic, sometimes oblanceolate, the apex shortly and bluntly acuminate, the base much narrowed; upper surface warm brown when dry, glabrous, very shining; the lower dull, glabrous or slightly puberulous towards the base; main-nerves 7 to 10 pairs, spreading, little curved, interarching near the slightly incurved edges, slightly prominent on the lower surface and somewhat depressed on the upper when dry; length 5.5 to 7.5 in., breadth 1.75 to 2.25 in.; petioles .4 to .6 in., stout, channelled. *Male and female flowers* unknown. *Fruit* globular-ovoid, blunt, 1.25 to 1.5 in. long and about 1.15 in. in diam., densely rusty-tomentose. *Calyx* at base flat, 4-angled, .4 in. in diam., rusty-tomentose.

PERAK : *King's Collector* 3330, 4945, 5409, 6712

33. *DIOSPYROS AREOLATA*, King & Gamble, n. sp. A tree 50 to 60 feet high; young branches thinner than a goose-quill, rusty-puberulous becoming glabrous. *Leaves* alternate, very coriaceous; oblong, sub-acute, the base rounded; both surfaces glabrous except the puberulous midrib and sometimes the main-nerves, hepatic-brown when dry; the upper shining, minutely and faintly areolate; the lower dull and boldly areolar-reticulate, midrib bold on the lower surface, slightly depressed on the upper; main-nerves about 7 pairs, curved, ascending abruptly, faint on the lower surface, almost invisible on the upper, length 4.5 to 6 in., breadth 1.5 to 1.75 in., petioles .5 or .6 in. *Male flowers* (only buds seen) under .5 in. in length, collected near the ends of the branches in tomentose cymes .5 to 1 in. long. *Calyx* coriaceous, on a thick pedicel shorter than itself, ovoid in bud; the mouth with triangular short teeth. *Corolla* like the calyx, but glabrous and fleshy. *Stamens* about 21; anthers linear, apiculate, nearly uniform, sub-sessile or on short broad flat filaments, sometimes slightly attached in groups of 3. *Female flower* probably solitary, much broader than the ♂. *Calyx* velvety outside and inside, divided nearly to the base into 4 ovate-triangular very acute lobes .4 in. long. *Corolla* fleshy, glabrous, .6 in. long, its

tube wide with staminodes like the anthers of the ♂ but not so numerous; limb about as long as the tube, with 4 deep, broad, sub-quadrate spreading lobes. *Ovary* ovoid-conic, densely rusty-pilose. *Stigmas* 4, oblong, fleshy, glabrous. *Fruit* unknown.

PERAK: *Scortechini* 476; *King's Collector* 5813.

34. *Diospyros CURTISII*, King & Gamble, n. sp. A tree (?); young branches rather thicker than a goose-quill, rugulose and dark-coloured when dry, glabrous. *Leaves* alternate, thinly membranous; oblong or oblong-elliptic, shortly and bluntly acuminate, base rounded or slightly cuneate; both surfaces glabrous, the upper olivaceous when dry, the lower brown; main-nerves 7 to 9 pairs, slightly curved, ascending, faint on both surfaces; the midrib prominent on the lower surface, slightly so on the upper; length 2.5 to 5 in., breadth 1.25 to 2 in.; petioles .2 in. *Male flowers* not seen. *Female flowers* .25 in. long, in extra-axillary or axillary fascicles of about 3 on the younger branches; pedicels about .2 in. long, cinerous-pubescent, each with 2 oblong obtuse bracteoles at its base, about .5 in. long. *Calyx* coriaceous, nearly .2 in. broad at the base, deeply divided into 4 triangular-reniform glabrescent lobes. *Corolla* partially glabrous, about as long as the calyx, salver-shaped; tube short; limb divided into 4 deep, broadly ovate, spreading lobes. *Staminodes* about 4, linear-lanceolate, compressed. *Ovary* narrowly oblong, tapering into the short thick style, densely tawny-tomentose. *Fruit* unknown.

PULAU POONGAH: *Curtis* 2942.

35. *Diospyros GLOMERULATA*, King & Gamble, n. sp. A tree 40 to 60 feet high; young branches rather thicker than a crow-quill, densely clothed with minute rufous pubescence. *Leaves* membranous, alternate; elliptic, shortly and bluntly apiculate, the base rounded or slightly cuneate; upper surface olivaceous when dry, glabrous; the lower brown, puberulous, midrib bold, main-nerves 5 or 6 pairs, slightly curved, ascending; length 2.25 to 3.5 in., breadth 1.25 to 1.75 in.; petiole about .1 in. *Male flowers* .2 in. long, crowded in dense sessile axillary and extra-axillary globular capitules 4 in. across. *Calyx* sessile, campanulate, tomentose, deeply divided into 4 broadly triangular sub-acute erect lobes. *Corolla* tubular, tetragonous, thick, about as long as the calyx, tube glabrous, the 4 lobes pubescent outside, oblong. *Stamens* 8, separate. *Anthers* broadly lanceolate, apiculate, filaments short. *Female flowers* and *fruit* not known.

PERAK: *King's Collector* 8590.

The following description of a *Diospyros* from Pahang is taken from Ridley's account of the Flora of the Eastern Coast of the Malay Peninsula.

36. *Diospyros caliginosa*, Ridley in Trans. Linn. Soc. Ser. 2, III. 318 (1893). A graceful lofty tree; bark black; branches pubescent. *Leaves* alternate, elliptic-oblong, acute; 8 in. long, 3 in. broad; main-nerves 13 pairs; glabrous above, minutely pubescent beneath on the midrib and nerves; petiole .25 in. long, minutely pubescent. *Flowers* on old wood, fascicled; peduncles short, covered with a black pubescence. *Calyx* of ♂ flower patelliform; sepals 4, broadly ovate, obtuse, covered without and on the margin with black hair. *Corolla* urceolate, white, silky, .5 in. long; lobes 4, short, ovate, recurved. *Stamens* 16, collected in pairs; filaments thick, minutely hispid; anthers glabrous, long-conical with acute tips. *Ovary* abortive, 4-lobed, irregular, the lobes furrowed; style conical. Flowers of ♀ not seen. *Fruit* small, globose, surrounded by the accrescent sepals.

PAHANG: in thick woods at Kota Glanggi and Kwala Tembeling, Ridley.

We are unable, having seen no specimen, to make quite sure of the place of this species. It seems to come very near to No. 17 *D. tristis*, King & Gamble.

Order LXXIII. STYRACEÆ.

Trees or shrubs. *Leaves* alternate, simple; stipules none. *Flowers* in simple or branched axillary or terminal racemes or spikes, sometimes solitary; usually white, rarely red; bracts small, often minute or obsolete. *Calyx* gamosepalous, the tube more or less adnate to the ovary, so that it may be superior or inferior; limb 4-5-toothed or truncate, persistent. *Corolla* of 4 to 5 petals, the tube usually short, sometimes none, petals imbricate or sometimes valvate or contorted. *Stamens* adnate to the petals, equal in number to them or double or very many; 1-many-seriate; filaments free or connate; anthers round or linear, dehiscing laterally. *Ovary* inferior or superior, 2-5-celled or sometimes, by the separation of the septa, 1-celled; style filiform, sometimes thick; stigma capitate, entire or lobed, ovules 1 or more, on the inner angle of each cell, pendulous or erect. *Fruit* drupaceous, indehiscent, 1-, rarely 2-3-seeded. *Seeds* albuminous, testa thin or coriaceous, hilum generally broad; embryo straight or curved, cotyledons terete or flattened; radicle cylindrical or short.—DISTRIB. Warmer regions of Asia, Australia, and America, absent from Africa; genera 7 or 8, species about 350.

Stamens many, in several series	1. SYMPLOCOS.
Stamens 10, in one series	2. STYRAX.

1. SYMPLOCOS, Linn.

Trees or shrubs. *Leaves* alternate, often turning yellow when dry, entire or toothed. *Flowers* white, sometimes red, in axillary simple or compound spikes or racemes, sometimes in few-flowered fascicles, occasionally reduced to one flower; bracts small, solitary at the base of the pedicels; bracteoles 1 to 3, small, at the base of the flower. *Calyx-tube* adnate, short when in flower, campanulate, often enlarged in fruit; lobes 5, imbricate. *Petals* 5 in one series, or 6 to 10 in two series, free or somewhat connate, or sometimes connate in a tube, imbricate. *Stamens* adnate to the corolla, at the base of the petals or higher up the tube, numerous, many-seriate, the outer the longest; filaments filiform, or sometimes flattened; anthers short, dehiscing in longitudinal parallel cells. *Ovary* inferior, or semi-superior, 2-5-celled; style filiform; stigmas capitate, slightly lobed; ovules 2, pendulous from the inner angle of each cell. *Fruit* an oblong, ovoid or sub-globose drupe, endocarp woody or thin, often ridged or ribbed, 1-3-seeded. *Seeds* usually 1 only (by abortion), embryo terete, straight or curved, in the centre of fleshy albumen; cotyledons much shorter than the radicle.—
DISTRIB Warmer regions of Asia, Australia and America, species about 290 to 300.

Filaments more or less pentadelphous; corolla-tube divided nearly to the base (Subg. I. HOPEA):—

Fruit (where known) more or less ampulliform; embryo curved (Sect. 1. PALURA).—

Inflorescence compound, branching at any rate at the base —

Branches of the inflorescence paniculately racemose, drupe nearly .5 in long 1 *S. odoratissima*.

Branches of the inflorescence racemose —

Racemes densely ferruginous-tomentose; pedicels scarcely .05 in. long, thick 2 *S. fulvosa*.

Racemes ferruginous-villous, pedicels .2 in. long, slender; leaves elliptic, under 4 in. long 3. *S. nvea*.

Racemes pulverulent, pedicels .2 in long, slender; leaves obovate 4. *S. pulverulenta*.

Racemes glabrous or slightly pubescent; pedicels longer than .05 in., slender. —

Leaves over 4 in. long and 2 in. broad; calyx-lobes glabrous 5. *S. monticola*.

Leaves under 4 in. long and 1.5 in. broad; calyx-lobes pubescent 6. *S. fasciculata*.

Branches of the inflorescence spicate:—

Leaves beneath and inflorescence glabrous or nearly so; { 7. *S. spicata*.
endocarp of seed thin var. *malasica*.

Leaves beneath and inflorescence ferruginous-villous; endocarp of seed hard, bony 8. *S. ferruginea*

Inflorescence simple, racemose; racemes very short, almost reduced to fascicles 9. *S. Ridleyi*

Fruit (where known) ovoid-oblong, not ampulliform; embryo straight (Sect. II. *LODHEA*).—

Inflorescence paniculate, branching usually from the base only:—

Branches of the inflorescence racemose, more than .5 in. long.—

Leaves glabrous or nearly so; fruit glabrous:—

Leaf-margins prominently broad-crenate, apex shortly and bluntly acuminate 10 *S. celastrifolia*

Leaf-margins obscurely crenate or entire:—

Leaf-margins prominently glandular, texture almost coriaceous 11 *S. adenophylla*

Leaf-margins not glandular, texture chartaceous 12. *S. perakensis*.

Leaves very hairy; fruit villous 13. *S. Brandiana*

Branches of the inflorescence racemose, under .5 in long; leaf-margins entire or nearly so 14. *S. concolor*.

Inflorescence unbranched:—

Inflorescence racemose:—

Racemes 2 to 3 in long, slender, few-flowered 15. *S. calycodactylos*

Racemes very short.—

Leaves coriaceous, acute or rounded or emarginate at apex, fruit ovoid oblong, under .5 in long 16. *S. ophirens*

Leaves chartaceous, long-acuminate at apex, cuneate at base, fruit cylindric-oblong, over .5 in. long 17. *S. Curtisi*

Leaves chartaceous; fruit not known.—

Leaves 6 to 7 in long, abruptly acuminate at apex, usually sub-cordate at base, quite glabrous 18. *S. crassipes*

Leaves 4 to 7 in long, long acuminate at apex, rounded at base, ferruginous pilose beneath 19 *S. penangiana*

Inflorescence spicate —

Drupes large, over 1 in. in length; endocarp with 8 prominent sharp ridges; leaves nearly glabrous —

Leaves usually under 6 in long and 2 in. broad; young inflorescence without prominent bracts 20 *S. cerasifolia*

Leaves usually over 6 in. long and 2 in broad; young inflorescence prominently bracteate so as to appear strobilate 21. *S. rigida*

Drupes small, under .5 in long; endocarp with faint ridges only; leaves rusty-pubescent beneath; young inflorescence strobilate 22. *S. rubiginosa*

Filaments connate in a staminal tube; corolla-tube elongate (Subg. II. *CORPYLOBIASIS*).

Corolla-tube scarcely 3 in. long 23. *S. confusa*

Corolla-tube about 1 in long —

Inflorescence densely rusty tomentose; leaves pubescent beneath 24. *S. Mangayi*

Inflorescence slightly grey-pubescent; leaves glabrous 25 *S. Scortechinii*.

Subgenus I.—HOPEA.

1. *SYMPLOCOS ODORATISSIMA*, Choisy ex Zoll. Syst. Verz. 136 (1854). A tree with spreading branches reaching 60 to 70 feet in height and 18 to 24 in. in diam. of stem; branches grey, stout, branchlets dark greyish-brown, angled, striate, minutely puberulous, leaf-buds acuminate, .15 in. long. *Leaves* thinly coriaceous; elliptic or elliptic-obovate or elliptic-oblong, shortly acuminate at apex, cuneate or slightly rounded at base; glabrous on both surfaces; margin entire or serrate, blackish-brown when dry; 3 to 6 in. long, 2 to 2.5 in. broad; midrib slender, prominent beneath, impressed above; main-nerves 8 to 10 pairs, arching upwards to and along the margin where they meet in an intramarginal looped nerve near it; reticulations transverse, not prominent; petiole .4 to 6 in. long, flattened above. *Inflorescence* of grey-pubescent panicles, 1.5 to 2 in. long, axillary to the upper leaves, longer in fruit and stouter; branches paniculately racemose; bracts very small, deciduous; bracteoles 2, below the calyx-tube, ovate-acute, reflexed, .05 in. long; pedicels .15 in. long. *Calyx-tube* .05 in. long, pubescent; lobes 5, as long as tube, rounded. *Corolla-tube* very short; lobes ovate-obtuse, .15 in. long, pubescent on back, ciliate, white. *Stamens* in 5 bundles opposite corolla-lobes, very many, 80 to 100 in all, filaments slender; anthers rounded. *Ovary* villous; style thick, .075 in. long, stigma lobed; cells 3, ovules 2 in each cell. *Fruit* an ampulliform drupe, .4 to 5 in. long, 25 in. broad, lower part rounded, upper cylindrical, crowned by the calyx-rim and connivent lobes, the calyx-rim .075 in. broad, exocarp corky, rusty-brown, slightly pubescent; endocarp hard. *Seeds* 1 to 3, usually 1 only perfect, testa membranous, albumen fleshy; embryo slightly curved, .15 in. long, radicle long. Miq. Fl. Ind. Bat. I Pt. 2, 468; Koord & Val. Bijdr. VII. 148, Brand Monog. Sympl. 35. *Dicalyx odoratissimus*, Blume Bijdr. 1116.

PERAK: *King's Collector* 10030, 10411, 10777. SINGAPORE: *Ridley* 4428 (this latter specimen has leaves up to 8 in. long and 3.5 in. broad).—DISTRIB. Sumatra (*Beccari* 834), Java, Borneo (*Beccari* 4014).

This is var. *divaricata*, Brand, which seems to us hardly separable, unless by the leaves being almost entire. In the Java and Sumatra specimens of *G. odoratissima* the leaves are markedly serrate.

2. *SYMPLOCOS FULVOSA*, King & Gamble, n. sp. A very large tree, reaching 150 feet in height (*Scortechini*); branchlets dark-brown, young ones and innovations densely ferruginous-tomentose. *Leaves* chartaceous-coriaceous; elliptic, abruptly long blunt-acuminate at apex the acumen often curved, cuneate or attenuate at base; glabrous and shining above,

glabrous and dull beneath, ferruginous-brown when dry; margins faintly crenate-serrate, with a row of glands, slightly recurved; 3 to 4.5 in. long, 1.25 to 2 in. broad, midrib slender, slightly impressed above; main-nerves 6 to 8 pairs, the lowest pair close to the margin, the rest gradually more distant upwards, curved upwards to and along the margin where they meet in a looped intramarginal nerve; reticulations many, forming an elegant network; petiole .75 in. long. *Inflorescence* of tripartite sessile panicles of racemes, the racemes 1 to 2 in. long, densely ferruginous-tomentose; bracts and bracteoles minute, hidden in the tomentum; pedicels thick, .05 in. long; flowers white, then yellowish. *Calyx-tube* short; lobes very short, rounded, densely tomentose without. *Corolla-tube* short; lobes ovate-oblong, glabrous, .15 in. long, 3-5-nerved. *Stamens* many, obscurely separated in bundles; filaments slender; anthers very small rounded. *Ovary* and disk glabrous, style glabrous, .075 in. long, stigma capitate; cells 3. *Fruit* unknown.

PERAK: *Scortechini* 563, 567.

3. *SYMPLOCOS NIVEA*, Brand Monog. Sympl. 36 (1901). A tree, reaching 50 to 60 feet in height; branchlets slender, rounded, dark brown, glabrous; leaf-buds ovate-acuminate, tawny-pubescent. *Leaves* chartaceo-coriaceous; elliptic or elliptic-oblong, acute or acuminate at apex, cuneate at base; glabrous and shining above, glabrous and pale beneath, dark olive-brown when dry; margins obscurely undulate-crenate, recurved; 3 to 4 in. long, 1 to 1.75 in. broad; midrib slender, impressed above; main-nerves 5 to 6 pairs, irregularly spaced and often branched, at first straight then curved upwards to and along the margin where they anastomose in a looped intramarginal nerve, reticulations obscure; petiole slender, 3 to .4 in. long. *Inflorescence* an axillary panicle of villous racemes 2 to 3 in. long, the racemes 12-15-flowered; bracts and bracteoles ovate-lanceolate, villous, quickly caducous; pedicels slender, .2 in. long. *Calyx-tube* adnate to the ovary; lobes 5, oblong-obtuse, .1 in. long, glabrous, persistent. *Corolla* pure white; lobes twice as long as those of the calyx. *Stamens* about 60, as long as the corolla. *Ovary* glabrous, 1-celled, ovules apparently 2, style slender from a conical villous base. *Fruit* unknown.

PENANG: at Pulau Boetong, Government Hill and Muka Head, *Curtis* 715.

4. *SYMPLOCOS PULVERULENTA*, King & Gamble, n. sp. A tree (?); ultimate branchlets and inflorescence gray- or golden-pulverulent-scaly; leaf-buds lanceolate-acuminate. *Leaves* membranous; obovate, abruptly short acuminate at apex, cuneate often unequally at base; glabrous on both surfaces except on the nerves, olive-green when dry; margins

entire; 5 to 7 in. long, 2 to 3 in. broad; midrib slender, impressed above; main-nerves 8 to 9 pairs, curving upwards to and along the margin; reticulations transverse, prominent and slightly raised above; petiole .7 to .8 in. long, smooth, pulverulent-pubescent. *Inflorescence* of axillary panicles of racemes about 2 in. long; main rachis .7 in. long; branches sub-opposite, about 2 pairs, .5 to 1 in. long; bracts short, ovate, caducous, bracteoles 2, ovate-acute, under the calyx-tube, pedicels slender, .15 to .2 in. long; flowers yellow, buds globose. *Calyx-tube* funnel-shaped, .06 in. long; lobes 5, short, rounded. *Corolla-tube* short, lobes 5, ovate, obtuse, pulverulent-pubescent. *Stamens* very numerous, probably 200 at least, in 5 bundles opposite the corolla-lobes; filaments slender; anthers very small, rounded. *Ovary* and disk pubescent; style stout, stigma capitate; cells 2, ovules several. *Fruit* not known.

SINGAPORE: at Chanchukam, *Ridley* 4786.

5. *SYMPLOCOS MONTICOLA*, King & Gamble, n. sp. A shrub or small tree reaching 20 feet in height and 3 in. in diam. of stem; branchlets somewhat slender, pale brown, sinuous; leaf-buds small, acuminate. *Leaves* chartaceous; elliptic or elliptic-oblong, acuminate at apex, cuneate or somewhat rounded at base; glabrous on both surfaces, greenish-brown when dry; margins serrate except near the base, slightly recurved; 4 to 6 in. long, 2 to 2.5 in. broad, midrib slender, pale, impressed above; main-nerves 6 to 8 pairs, close near the base, gradually more distant, curved upwards to meet in a looped intramarginal nerve; secondary nerves few, reticulations transverse; petiole .25 in. long, channelled above. *Inflorescence* a fascicle of racemes either from the axils of leaves a little below the last, or from the new wood below them; racemes .5 to 1.5 in. long, 6-8-flowered, all parts nearly glabrous, bracts ovate, very minute; pedicels 0 to .1 in. long, bracteoles 2, ovate, acute, ciliate, .05 in. long, at the base of the calyx-tube. *Calyx-tube* short; lobes as long (.1 in.), thin, glabrous, round. *Corolla-tube* very short; lobes 5, thin, oblong, obtuse, .2 in. long, 3-nerved. *Stamens* many, more than 80, in 5 bundles opposite the corolla-lobes; filaments slender; anthers rounded. *Ovary* and disk glabrous or slightly pubescent; style short, .1 in. long; stigma capitate; cells 3. *Fruit* not known.

PERAK: *Scortechini* 533; *King's Collector* 3804, 6927, in dense jungle on the summits of mountains at 4,000 to 4,600 feet.

6. *SYMPLOCOS FASCICULATA*, Zoll. Syst. Verz. 136 (1854). A tree with spreading branches reaching 40 to 50 feet in height and 10 to 15 in. in diam. of stem; branchlets pale greyish-brown, slender, innovations greyish-pubescent. *Leaves* thinly chartaceous or membranous; oblong-lanceolate, long acuminate at apex, the acumen curved and mucro-

nate, rounded or obtusely rhomboid at base; glabrous and shining above, glabrous beneath except on the midrib, yellowish when dry; margins entire or obscurely and distantly serrate, slightly recurved; 2 to 4 in. long, .7 to 1.5 in. broad; midrib slender, impressed above, minutely pilose beneath; main-nerves about 5 to 7 pairs, indistinct, curved upwards and meeting in an intramarginal looped nerve rather distant from the margin; secondary nerves and reticulations slender, obscure; petiole .2 in. long, bordered above by the decurrent margin of the blade and minutely pilose. *Inflorescence* a short fascicle of axillary cymes or racemes .5 to .7 in. long, ashy-pubescent; bracts very minute, pedicels slender, .15 in. long; bracteoles 3, minute, ovate, acute, ciliate. *Calyx-lobes* 5, rounded, obtuse, .05 in. long, pubescent without. *Corolla-lobes* oblong, obtuse, .1 to .15 in. long, glabrous, 5-nerved; tube very short or almost none. *Stamens* in 5 bundles opposite the corolla-lobes, about 20 to 25 or sometimes more; filaments slender, outer ones exsert; anthers minute, rounded, emarginate. *Ovary* depressed at top, disk glabrous, cells 3; style slender, .075 in. long, ending in a flattened 3-lobed stigma. *Fruit* an ampulliform drupe, ovoid below for .2 in. in length, .15 in. in diam., glabrous, 5-6-ribbed, tipped by a cylindric beak .05 in. long and by the persistent calyx-lobes; exocarp thin, endocarp hard, furrowed, furnished within with 3 to 6 strong ribs, enclosing a much-lobed seed; testa thin; albumen fleshy; embryo very slightly curved, .15 in. long. Miq. Fl. Ind. Bat. I. Pt. 2. 467; Clarke in Hook. f. Fl. Br. Ind. III. 574, Koord. & Val. Bijdr. 7. 150; Brand Monog. Sympl. 34. *Dicalyx tinctorius*, Bl. Bijdr. 1116.

Sumatra (*Forbes* 2355, 2358, 2563, 2812); Java (*Forbes* 218); Borneo (*Beccari* 2380, *Haviland* 1024, 1545).

After a great deal of trouble the seed with albumen and embryo were separated. The walls of the shell of the fruit are furnished inside with projecting ribs, so that the seed resembles that of a small walnut and the embryo is slightly curved, long and narrow, and might be called straight. Koorders & Valetton's description is thus confirmed.

24 SYMPLOCOS MAINGAYI, Benth ex Clarke in Hook f Fl Br Ind
 III 588 (1882) A tree with spreading branches reaching 40 to 60
 feet in height and 10 to 15 in in diam of stem, branches stout,
 light brown, branchlets and innovations densely ferruginous-velvety
 pubescent *Leaves* chartaceous, elliptic oblong, shortly acuminate
 at apex, broadly attenuate or rounded at base, glabrous or with a
 few scattered hairs above, sparsely pubescent beneath except the
 nerves which are hirsute, marked also beneath by numerous faint
 transverse lines, margins entire, 4 to 6 in long, 2 to 2.5 in broad,
 midrib stout, very prominent beneath, impressed above, main nerves
 8 pairs, curving upwards and joining in a looped intramarginal nerve,
 unimpressed above, secondary nerves few and with the reticulations
 irregular, petiole 3 to 5 in long, stout, densely ferruginous
 pubescent *Inflorescence* of stout densely ferruginous pubescent
 racemes, 1 to 1.5 in. long, bearing about 8 to 10 flowers, in the
 axils of the upper leaves, bract 1, ovate, acute, 2 in long, brac-
 teoles 2, similar but smaller, pedicels stout, 1 to 1.5 in long *Calyx*
tube campanulate, densely rusty pubescent, teeth 5, rounded, .05 in
 long *Corolla-tube* narrow funnel shaped, 1 to 1.5 in long, densely
 white-tomentose without, lobes 5 in long, oblong, reflexed *Staminal*
tube adnate to the corolla tube as far as the lobes, then free above it,
 top of tube truncate, 15-20-lobed, the lobes separable as ligules,
 stamens inserted irregularly on the tube and lobes, about 40 to 60,
 free part of filaments short, slender, anthers ovoid *Ovary* and disk
 hairy, style slender, as long as corolla tube, stigma capitate, cells 3
Fruit obovoid, obtuse, glabrous, 1.75 in long, 1.25 in broad, crowned

with the remains of the calyx-rim $\cdot 125$ in. wide, pericarp very thick, woody. Brand Monog Sympl. 90.

PERAK: *King's Collector* 6728. MALACCA: *Maingay* (K.D.) 961.

25. SYMPLOCOS SCORTECHINII, King & Gamble, n. sp. A tree (?); branchlets pale brown, slender, scurfy; innovations sparsely grey-pubescent. *Leaves* chartaceous, oblong-lanceolate, attenuately blunt-acuminate at apex, cuneate at base, glabrous on both surfaces dark brown when dry, margins entire; 4 to 5 in. long, 1.5 to 2 in. broad; midrib slender, raised beneath, impressed above; main-nerves 8 to 10 pairs the lowest close to the margin, the others curved upwards to meet in a looped intramarginal nerve, secondary nerves many and, with the reticulations, irregular, fairly prominent; petiole $\cdot 5$ in. long, channelled above, slightly pubescent when young. *Inflorescence* of axillary or pseudo-terminal racemes, 7 to 1 in. long, sometimes giving the appearance of a terminal panicle, rachis grey-pubescent, angular, bract and 2 bracteoles lanceolate-acuminate, $\cdot 1$ to 1.5 in. long; pedicels $\cdot 2$ in. long. *Calyx-tube* campanulate, 2 in. long, grey-pubescent without, as are the rounded obtuse lobes in long teeth. *Corolla-tube* slender, funnel-shaped, 1 to 1.5 in. long, densely white-tomentose without, lobes $\cdot 5$ in. long, oblong-obtuse, much imbricate in bud. *Staminal-tube* adnate to the corolla-tube as far as the lobes, then free above it, top of tube truncate, about 15-lobed, the lobes separable as ligules, stamens inserted irregularly on the tube and lobes, about 40 to 50, free part of filaments short, slender; anthers rounded. *Ovary* and disk hairy, style slender, as long as corolla-tube, stigma capitate, cells 3, ovules 2 in each cell. *Fruit* obovoid-oblong, obtuse, glabrous, 1.75 in. long, 1.2 in. broad, crowned with the remains of the calyx-rim $\cdot 1$ in. in diam, pericarp thick, corky, seed 1.

PERAK *Scortechini*.

This species comes very near to *S. Maingayi* in respect to its flowers and fruit, but the branches are much more slender, the dense ferruginous tomentum is absent, and the leaves are different, so we have no hesitation in describing it as a new species.

The following Bornean species seems worthy of description here: it may possibly be found also in the Peninsula.—

SYMPLOCOS HAVILANDI, King & Gamble, n. sp. A small tree (?); branchlets stout, somewhat flattened, yellowish brown, leaf-buds conical, glabrous. *Leaves* coriaceous, elliptic, abruptly acuminate at apex, acute at base, glabrous on both surfaces, orange-brown when dry, margins entire, recurved, 3 to 4 in. long, 1.25 to 1.75 in. broad, midrib stout, impressed above, main-nerves 7 to 8 pairs, the lowest pair near the margin and more acutely angled (about 45°) than the others, straight at first at an angle of 60° , then curved to meet in a widely looped intramarginal nerve, prominently raised above when dry, secondary-nerves and reticulations also raised; petiole $\cdot 4$ to $\cdot 5$ in. long, stout, rough, the upper half winged by the decurrent margin of the blade. *Inflorescence* a nearly sessile, few-branched panicle of racemes, about 1.5 in. long;

flowers about 12; rachis glabrous, flattened; bracts and bracteoles minute, caducous; pedicels none or very short, scarcely .05 in. long; buds globose. *Calyx-tube* .05 in. long; lobes orbicular, ciliate, as long as tube. *Corolla-tube* very short, lobes 5, .15 in. long, ovate-oblong, ciliate. *Stamens* about 50, in 5 bundles of about 10 each, opposite the corolla-lobes; anther-cells orbicular; filaments slender, the longest as long as the petals. *Ovary* conical, glabrous; style slender, .1 in. long, stigma capitate. *Fruit* not known.

BORNEO. in Sarawak, near Kuching, *Haviland* No. 1954

2. STYRAX, Linn.

Trees and shrubs, usually more or less lepidote or stellate-tomentose on all parts **except** the upper-surface of the leaves, rarely glabrous. *Leaves* various in shape, entire or serrulate. *Flowers* generally white, in lax axillary or terminal, simple or compound, often pendulous racemes, bracts very small. *Calyx* campanulate, free or slightly adnate to the base of the ovary, truncate or 5-toothed. *Corolla-tube* short, lobes 5, erecto-patent, elliptic-oblong, imbricate or valvate. *Stamens* 10, 1-seriate at the base of the corolla-tube, filaments more or less flattened, continuous with the connective, anthers large, linear, the cells parallel, erect. *Ovary* nearly free, at first 3-celled, later often 1-celled, style subulate, stigma capitate, somewhat 3-lobed; ovules few in each cell, in free ovaries nearly all erect from the lower basal angle, in half-adnate ovaries upper pendulous lower erect. *Fruit* globose or ellipsoid, seated on the cupuliform or patelliform calyx, breaking up irregularly. *Seeds* 1 or rarely 2 or more, integuments 2, the outer chartaceous or hardened, the inner membranous, albumen fleshy, copious, embryo straight, axile or excentric; cotyledons broad, with a longish terete radicle — **DISTRIB.** Warmer regions of Asia and America, a few extending to temperate Asia and South Europe, species about 60.

Leaves green beneath, slightly stellate-pubescent 1 *S. serrulatum*
Leaves white or greyish-white beneath, with occasional rusty-stellate hairs —

Leaves small, under 5 in long and 2.5 in broad, calyx about one-third of the length of the corolla 2 *S. Benzoin*
Leaves large, over 5 in long and 2.5 in. broad; calyx about half of the length of the corolla 3 *S. crotonoides*

1. *STYRAX SERRULATUM*, Roxb. Fl. Ind II. 415 (1832). A shrub or small tree, reaching 50 feet in height; branches slender, branchlets stellately grey-pubescent. *Leaves* membranous; ovate or ovate-lanceolate, acuminate at apex, rounded or cordate, sometimes acute at base, nearly glabrous above, glabrescent beneath, but with stellate hairs on both sides of the nerves, margins sparingly and irregularly serrate, sometimes sub-

entire, slightly revolute, 1.5 to 5 in long, 1 to 2 in broad, midrib slender, main nerves 6 to 8 pairs, curving upwards and anastomosing near the margin, secondary nerves and reticulations prominent, the latter transverse, petiole 2 in long, stellate pubescent. *Racemes* terminal or from the axils of the uppermost leaves of the branchlets, 6-8 flowered or fewer, sometimes reduced to 1 only, sometimes paniculate from the absence of leaves, 1 to 2 in long, rachis slender, densely white stellate-pubescent, pedicels 2 in long, bracteoles linear, nearly as long as pedicels, flowers white. *Calyx* campanulate, tube white-pubescent without, glabrous within, 15 in long, teeth 5, 0.5 in long, irregular, repand-dentate, white-pubescent on both sides. *Corolla-tube* 15 in long, cylindric, lobes 5, 2.5 in long, oblong, sub-acute, densely white pubescent without and within except the lower part of the tube. *Stamens* 10-25 in long, filaments inserted on the corolla-tube, wide and white tomentose at the base, narrower and glabrous above continued in the connective, anthers broadly linear, erect, as long as the filaments, rounded at top, cells 2 parallel. *Ovary* densely white villous, style slender, 3 in long, stigma small, capitate, cells 3. *Fruit* ellipsoid, 4 to 5 in long, 3 in broad, white- or grey pubescent, supported by the patelliform calyx, pericarp fleshy, rather thin, irregularly breaking up. *Seeds* 1, rarely 2 or more, outer integument smooth, hard, shining, brittle, inner one membranous, brown, albumen firm, grey. *Embryo* erect, nearly as long as the endosperm, cotyledons cordate, 15 in long, radicle thick, terete, as long as cotyledons. PERAK: *Scortechini* 997.—DISTRIB. India, Ceylon, Burma, Siam.

Much cultivated in India and in all tropical regions. The cultivated forms have many-flowered cymes and rounded corolla-lobes, and they are often found with double flowers.

2 *JASMINUM GRIFFITHII*, Clarke in Hook. f. Fl. Br. Ind. III. 593 (1882). A slender climbing shrub; branchlets densely and patently fulvous villous. Leaves chartaceous; ovate or elliptic-oblong, bluntly acute or acuminate at apex, rounded or cordate at base; fulvous-pilose on both surfaces, sparsely above, more densely beneath but glabrescent when old, the uppermost often whitened, 4 to 6 in. long, 1.5 to 3.5 in. broad, midrib prominent beneath, main-nerves 10 to 12 pairs, at first straight then arching upwards to join in a prominent looped intra-marginal nerve, secondary nerves few, reticulations rather indistinct; midrib and all nerves impressed above and pilose, raised and densely fulvous-villous beneath, tufted in the axils; petiole stout, .2 to .4 in. long. Flowers creamy-white, in terminal, many-flowered, fulvous-pilose cymes, 1 to 1.5 in. long and up to 2 in. broad; bracts leafy, lanceolate, about 5 to 1 in. long, few, bracteoles many, linear, similar to calyx-lobes, of various lengths. Calyx-tube slender, .1 in. long, lobes 5, linear, .2 in. long. Corolla-tube slender, slightly enlarged above, .75 in. long, lobes 5, spreading, .25 in. long, elliptic, apiculate, lobes and tube minutely pubescent without. Stamens included or slightly exsert, filaments broad; anthers oblong-lanceolate with a broad connective, .15 to .2 in. long. Ovary glabrous; style slender; stigma clavate. Berry didymous, carpels waxy-white, globose, .3 to .4 in. in diam., pericarp crustaceous, glabrous. Seed usually one, testa fibrous, cotyledons thick, plano-convex, .2 in. in diam.

PERAK: *King's Collector* 10229. MALACCA: *Griffith* (K.D.) 3704. SINGAPORE: *Ridley* 8455.

VAR. *cuspidata*, King & Gamble. Leaves thinner than in the type, oblong, abruptly and sharply cuspidate-acuminate at apex, attenuate and

abruptly rounded at base, 5 to 5.5 in long, 1.5 to 2 in broad, much less pilose, main nerves 8 to 10 pairs, seeds 1 to 2, testa crustaceous

8 JASMINUM ADLNOPHYLLUM, Wall Cat 2876 (1829). A very slender wiry climber, branchlets extensively twining, glabrous. *Leaves* membranous, ovate lanceolate to elliptic oblong, variable, acuminate and mucronate at apex, cuneate at base, glabrous above except on the midrib, glabrous beneath except the tuft of tawny hairs in the axils of the main-nerves, margins somewhat undulate, 1.5 to 5 in long, .75 to 1.5 in broad, midrib slender, main nerves very slender, obscure, about 6 pairs, curving upwards to meet in a faint intramarginal looped nerve, petiole slender, twisted, articulate in the middle, 2 to 3 in long, hispid. *Flowers* white, solitary, or 2 to 3 together in a slender, sometimes leafy, umbel from the axils of the leaves, peduncle .75 to 1.25 in long, flattened above and with a pair of opposite bracts near the middle, bracts of umbel 2, linear-subulate, 3 in long, pedicels very slender, .75 to 1 in long, clavately enlarged in fruit. *Calyx-tube* campanulate, glabrous, ribbed, 1 in long, lobes linear-subulate, keeled on the back,

sparsely hispid, 4 to 5 in long, points recurved *Corolla-tube* slender, funnel shaped, 75 in long, lobes as long or slightly longer, 8 to 9, recurved, oblong-ligulate, about 25 to 3 in broad *Stamens* included in the corolla-tube, filaments short, slender, anthers oblong, mucronate, 15 in long, connective broad *Ovary* cylindric, style slender; stigma clavate *Fruit* globose, shining, young carpels 25 in in diam. A DC Prod VIII 314, Clarke in Hook f Fl Br Ind III 597

PENANG *King's Collector* 1736 —DISTRIB Khasia Hills (*Wallich*)

This species is clearly quite a small climber, and while the Penang specimens have only small leaves those from the Khasia Hills show comparatively large ones, but this is not unnatural, and we believe the identification to be correct

9 *JASMINUM LONGIPTALUM*, King & Gamble, n sp A large climbing shrub, reaching 30 to 40 feet, branchlets slender, terete, pale brown *Leaves* chartaceous-coriaceous, 3-nerved, elliptic, acute or shortly acuminate at apex, attenuate or cuneate or slightly rounded at base, glabrous on both surfaces, margins slightly recurved, 2 to 6 in long, 15 to 3 in broad, midrib slightly impressed above, shortly raised beneath, main-nerves 7 to 8 pairs, the basal pair opposite, at about 25° with the midrib produced in an intramarginal nerve about 25 in from the margin, looped where the others, which are at about 65° with the midrib, join it, secondary nerves and reticulations very indistinct, petiole 2 to 4 in long, twisted *Flowers* white tinged with pink, fascicled 3 to 6 together in the axils of the upper leaves, forming sessile umbellate cymes *Bracts* very small, ovate-acute, deciduous, pedicels 1 to 15 in long very slender, summit enlarged in fruit *Calyx tube* short, lobes 6, glabrous, linear subulate, 1 in long, margins inflexed *Corolla-tube* very slender 75 in long, lobes 9, linear-oblong, acute, 3-5 nerved, 75 to 1 in long, much recurved in flower *Stamens* within the tube, filaments short slender, anthers oblong, 175 in long, obtuse *Ovary* glabrous 2-celled, style slender, stigma flattened, minutely pubescent *Fruit* didymous, carpel usually 1 only by suppression, black, globose, 4 to 5 in in diam, pericarp fleshy, glabrous *Seeds* 2, testa very thin, cotyledons plano convex

PERAK *King's Collector* 2765, 6005—on rich soil at 300 to 800 feet elevation, scarce SINGAPORE *Ridley* 10937

A particularly handsome and well defined species, which is well worthy of garden cultivation

10 *JASMINUM SMILACIFOLIUM*, Griff MS, Clarke in Hook f Fl Br. Ind III 600 (1882) A large glabrous climbing shrub, branchlets pale brown, terete *Leaves* coriaceous, 3 nerved, ovate, abruptly caudate-

acuminate at apex, obtuse or nearly cordate at base; margins entire, recurved; 5 to 7 in. long, 3 to 4 in. broad; midrib very prominent, impressed above, much raised beneath; two lowest main-nerves very prominent, similar to the midrib, curved upwards to form a pair of intramarginal nerves meeting at the apex; remaining main-nerves irregular, 3 to 4 pairs, inconspicuous; secondary nerves and reticulations raised above; petiole .75 in. long, twisted, articulate in the middle. *Inflorescence* of axillary 5-20-flowered cymes, rachis jointed, terete; bracts spatulate, .1 to .2 in. long; bracteoles smaller, linear, pedicels .2 to .3 in. long, greatly enlarged in fruit, flowers white, tinged with pink. *Calyx* campanulate, tube .15 in. long, teeth 5, .05 in. long. *Corolla-tube* slender, cylindrical, .75 to 1 in. long; lobes oblong, acute or apiculate, .75 in. long, .2 in. broad. *Stamens* inserted in the throat of the tube; filaments short; anthers linear-oblong, .25 in. long, mucronate. *Drupe* didymous; carpels ellipsoid, .1 in. long, .3 to .4 in. broad, smooth, shining.

MALACCA · Griffith (K.D.) 3698, *Maingay* (K.D.) 997.

11. *JASMINUM INSIGNE*, Blume Mus Bot. Lugd. Bat. I 278 (1849)
An extensively climbing shrub, branches obscurely quadrangular with pale-grey corky bark, branchlets acutely quadrangular, glabrous, the edges pale-corky-winged. *Leaves* chartaceo-coriaceous, opposite, occasionally whorled, elliptic or elliptic-oblong, acute at apex, cuneate at base; glabrous on both surfaces; margins recurved; 2 to 8 in. long, 1 to 4 in. broad; midrib slender, raised beneath, main-nerves 6 to 7 pairs, the basal pair faint, opposite, at about 30° with the midrib, produced in an intramarginal nerve .1 to .2 in. from the margin, looped where the others, which are at 50° to the midrib, join it; secondary nerves and reticulations obscure, petiole .4 to 1.2 in. long, twisted, the upper part bordered for a short distance by the decurrent margins of the blade. *Flowers* white, in compact, many-flowered, glabrous cymes from the axils of the leaves or (more usually) from the stem, bracteoles subulate, .1 to .15 in. long, caducous, pedicels stout, .2 in. long, somewhat angular. *Calyx-tube* campanulate, .25 in. long; lobes 4 to 5, linear-subulate, unequal, .25 to .35 in. long, points hooked. *Corolla-tube* slender, .75 to 1 in. long, somewhat inflated above, mouth slightly thickened; lobes 4 to 5, spreading, ovate-oblong, apiculate, .5 in. long, .3 to .4 in. broad. *Stamens* in the tube of the corolla; filaments flattened; anthers oblong, mucronate, .25 to .3 in. long. *Ovary* glabrous, rounded; style slender, clavate, obscurely cleft in 2 short stigmas; cells 2. *Fruit* didymous; carpels oblong, smooth, white when ripe. Miq. Fl. Ind. Bat. II. 541. *J. cauliflorum*, Seortechini MS in Herb. Calcutta

PERAK : at Theripay Taipay, *Scortechini*; Wray 2840; Cantley 23; King's Collector 2890, 3398, 7059.—DISTRIB. Sumatra, Forbes 2906.

A very fine species of well-marked characters

12. *JASMINUM SCORTECHINII*, King & Gamble, n. sp. A slender climbing shrub, reaching 60 feet in length; branchlets dark-coloured, glabrous. *Leaves* thin when young, almost coriaceous when old, 3-sometimes 1-foliolate, opposite or sub-opposite; terminal leaflet ovate or lanceolate, acuminate at apex, rounded at base, glabrous on both surfaces, upper surface shining, nearly black when dry, lower surface dull, reddish when dry; 2.5 to 4 in long, 1 to 1.5 in. broad; lateral leaflets similar but slightly smaller and often lanceolate; midrib slender, raised beneath; main-nerves very indistinct, apparently 6 to 8 pairs; petiole .75 in long, petiolule of end leaflet .5, of side leaflets .3 in. long, all grooved, slender, articulate below the leaflet. *Flowers* white, in axillary or terminal trichotomous cymes, terminal ones often paniculate, peduncles .5 to 1 in. long; bracts ovate-acute or subulate, .1 in. long, cymes sparsely scaly, bracteoles at the base of the calyx minute; pedicels .1 to .2 in long, very much enlarged in fruit and then reaching .5 to .7 in. in length and .3 in in diam. at top. *Calyx-tube* campanulate, 1.25 in. long; teeth 5, very short, triangular. *Corolla-tube* slender, enlarged above, .4 to .6 in. long, lobes 5, ovate-cordate, obtuse, .3 to .4 in. long, spreading. *Stamens* included in the corolla-tube, filaments short; anthers oblong, mucronate, .15 in. long, connective broad. *Ovary* cylindrical, glabrous, 2-celled; style slender, as long as the corolla-tube; stigma clavate. *Fruit* didymous; carpels ellipsoid, .75 to 1 in long, .5 in. broad; pericarp thin, crustaceous, blackish-brown. *Seed* nearly filling the cavity, testa thin, fragile, cotyledons oblong-obtuse, slightly auricled at base, .5 to .6 in. long by .25 in. broad, plano-convex.

PENANG. *Curtis* 1227, 2031 PERAK. *Scortechini* 383, 479; *Ridley* 10679; *King's Collector* 7006, 7009, *Curtis* 169.

The description is largely after *Scortechini* MS. The species comes very near *J. lanceolaria*, Roxb., but differs in its more slender habit, thinner leaves, and large ellipsoid carpels.

Ridley's No 8325 from Lankaw Island, Kedah, is a twiggy, apparently erect shrub with trifoliate leaves, the leaflets all obovate-orbicular emarginate, the end one reaching 1.7 in long and 1.3 in broad, the side ones only about .6 in long and broad. The fruits are of one carpel about the size of a small pea, and the flowers are unknown. It may possibly not be a *Jasminum* (Herb Kew).

The following species from Borneo is of interest, and may perhaps be found later on in the Peninsula —

JASMINUM SARAWAKENSE, King & Gamble, n. sp. A climbing shrub; branchlets pale brown, terete; internodes rather long. *Leaves* opposite, chartaceous; elliptic-

oblong, long acuminate at apex, cuneate at base, both surfaces glabrous, margins recurved, 4 to 7 in long, 175 to 275 in broad, midrib strong, impressed above, raised beneath, main nerves 4 pairs, the lowest pair near the margin at an angle of about 30° with the midrib, the remaining pairs at about 50° curving upwards to meet in an intramarginal looped nerve, which is also met by secondary nerves above the fourth pair, reticulations irregular, not prominent, petiole 5 to 75 in long, twisted in the middle *Inflorescence* of axillary, long peduncled trichotomous pubescent, corymbose cymes about 1 in broad at top usually 1 pair from each node, peduncle terete, 2 to 3 in long, sometimes branched minutely pubescent, branches very short 2 in long, pedicels clavate, 1 to 15 in long, bracts and bracteoles linear subulate 25 in long, one pair of bracteoles to each terminal fascicle of 3 flowers, flowers white, buds clavate, 1 in long *Calyx* tube campanulate, 15 in long, lobes 6, linear oblong, applicately infolded at the middle inwards, 15 to 2 in long pubescent *Corolla* tube cylindrical, 1 in long, lobes 6, spreading, oblong, rounded at top, 4 to 5 in long, prominently 3-5 nerved *Stamens* 2, inserted at about the middle of the tube within, filaments short, decurrent within the tube, anthers linear oblong 2 in long *Ovary* cylindric, truncate and depressed at top 2 celled, style very slender, stigma clavate *Fruit* not known

BORNEO near Kuching in Sarawak, *Haviland & Hose* 8489

2 OSMANTHUS, Lour

Trees or shrubs, glabrous *Leaves* opposite, evergreen, entire or dentate *Flowers* small, axillary or terminal, fascicled or in very short racemes, hermaphrodite or polygamous *Calyx* short, 4 toothed or lobed *Corolla* tube short or long, lobes 4, broad, obtuse, imbricate *Stamens* 2, more rarely 4, inserted on the corolla tube, anthers ovate, sub-extrorsely dehiscent *Ovary* 2 celled, ovules 2 in each cell, pendulous from its apex, style short or cylindric, 2 lobed or sub entire *Drupe* ovoid or globose, exocarp fleshy, endocarp bony or crustaceous *Seeds* usually solitary, pendulous testa thin, albumen fleshy cotyledons flat, radicle short, superior — *DISTRIB* NW Himalaya and eastwards to China and Japan, also in Western North America, about 8 to 10 species

OSMANTHUS SCORTECHINII, King & Gamble, n sp A tree, reaching 40 to 50 feet in height, and 10 to 15 in in diam of stem, branchlets terete with pale grey, somewhat corky, bark *Leaves* coriaceous, lanceolate, shortly acuminate at apex, cuneate at base, both surfaces glabrous, margins entire, recurved, 2 to 4 in long, 75 to 125 in broad, midrib thick, impressed above, raised beneath, main nerves very obscure, about 5 to 6 pairs, petiole broad, 3 to 6 in long, channelled above and bordered by the decurrent margins of the blade *Flowers* in very short, close, axillary racemes, reaching 5 in long in fruit, supported by a pair of ovate, acute, coriaceous bracts, pedicels slender, 05 in long *Calyx* membranous, 06 in long lobes 4, slightly serrate *Corolla* campanulate, tube 05 in long, lobes 1 in long, oblong, obtuse, margins incurved

Stamens 4, slightly exsert, inserted between the corolla-lobes at the top of the tube, filaments slender, anthers small, ovate, cells dehiscing on the margins or somewhat extrorsely. *Ovary* conical, glabrous, style slender, subulate, 0.4 in long, cells 2, ovules in each cell apparently 2. *Drupe* globose, 2 to 3 in diam, dark greenish-blue when ripe, exocarp thin, fleshy, endocarp crustaceous. *Seed* 1, testa membranous, albumen fleshy, ruminate, cotyledons oblong, flat, narrow, radicle superior.

PERAK *Scortechium* 414—at Thaipeng, Wray 682, King's Collector 5029, 6978

The structure of the wood, so far as the examination of a very small branch goes, confirms the placing of this plant in the genus *Osmanthus*.

To this species seems also to belong King's Collector 3663, which has a bright red drupe reaching 5 in in length slightly ribbed and with a spatulate embryo having the radicle nearly as long as the cotyledons, each 1 in. It may be called VAR *oblonga*.

3 LINOCIERA, Swartz

Shrubs or trees. *Leaves* opposite, entire. *Flowers* small, in axillary or extra axillary, rarely terminal, panicles or cymes, bracts generally small, sometimes rather enlarged and leafy, bracteoles very small. *Calyx* small, 4 fid or toothed. *Corolla* of 4 petals, long or short, nearly free or cohering by pairs or very shortly connate, induplicate valvate in bud. *Stamens* 2, rarely 4, inserted at the base of the petals and usually between the two cohering ones, filaments short, anthers elliptic or oblong, dehiscing on the margin or slightly extrorse, connective broad, often apiculate. *Ovary* 2 celled, ovules 2 in each cell, pendulous from its apex. *Style* short, stigma bifid or entire. *Drupe* globose or ellipsoid. *Exocarp* fleshy, thin, *endocarp* bony or crustaceous. *Seed* usually solitary, pendulous, testa thin, albumen fleshy or 0, if fleshy the cotyledons flattened, radicle superior.—DISTRIB. Tropics of both hemispheres, species about 40.

Leaves over 4 in long main nerves prominent beneath

Panicles 4 to 6 in long drupe 75 in long

Panicles 2 to 4 in long, drupe 1.7 in long

Panicles 1.5 to 2 in long drupe not known

Leaves under 4 in long main nerves obscure beneath cymes scarcely 1 in long

2 *L. macrocarpa*

3 *L. pulidosa*

4 *L. caudata*

1 LINOCIERA PAUCIFLORA, Clarke in Hook f Fl Br Ind III 609 (1882). A small tree, reaching 30 to 40 feet in height and 1.5 to 2 feet in diam of stem, branches moderately stout, pale grey, smooth, swollen at the nodes, internodes slightly angular, branchlets darker coloured,

slender; leaf-buds linear-lanceolate. *Leaves* coriaceous; elliptic-oblong, rounded or shortly obtusely acuminate at apex, cuneate at base; glabrous on both surfaces, but with prominent raised glandular papillæ, 4 to 9 in. long, 2 to 4 in. broad; midrib stout, slightly impressed above, prominently raised beneath, main-nerves 11 to 13 pairs, fairly prominent and regular, curving upwards to and along the margin near which they anastomose; secondary nerves and reticulations obscure, petiole .7 to 1.3 in. long, thickened at base. *Flowers* pale yellow or white, in compound axillary panicles, 4 to 6 in. long; main branches 1 to 2 in. long, rachis slender, glabrous, somewhat angular, bracts leafy, ovate or spatulate, .5 to 1 in. or sometimes longer, bracteoles ovate-acute, very small; pedicels slender, .05 to 1.5 in. long, much thickened and pale in fruit even when quite young. *Calyx-tube* short, teeth 4, ovate-acute, .05 in. long. *Corolla-lobes* in two pairs, oblong, 1 to .15 in. long, slightly hairy within. *Stamens* .05 in. long; filaments short, broad, anthers elliptic, emarginate, with a gland on the front of the connective. *Drupe* ellipsoid, .75 in. long, .3 to 4 in. broad, blueish-black when ripe; exocarp fleshy, endocarp thin, crustaceous. *Seed* 1, testa pergamaceous, albumen none, cotyledons fleshy, 55 in long; radiole very small, superior. *Olea* (?) *pauciflora*, Wall Cat 2812, A DC. Prod VIII. 288. *Chionanthus palembanica*, Miq. Fl. Ind. Bat. Suppl. 558, Kurz For. Fl. II 159, and Journ. As. Soc. Beng. XLVI ii. 243

2. *LINOCIERA MACROCARPA*, King & Gamble. A small tree; branchlets pale greyish-brown, stout, lenticellate, innovations ashy-pubescent. *Leaves* coriaceous, obovate-oblong or obovate lanceolate, obtuse or very shortly and bluntly acuminate at apex, long cuneate at base, glabrous on both surfaces; margins entire or slightly recurved; 6 to 10 in. long, 2 to 3.5 in. broad; midrib very stout, broad and plane above, much raised beneath, main-nerves 14 to 17 pairs, prominent beneath, curved only near the margin to meet in a faint looped intramarginal nerve, secondary nerves and reticulations obscure, petiole 1 to 1.5 in. long, enlarged at base. *Flowers* in ashy-pubescent panicles, 2 to 4 in. long; bracts leafy, sometimes oblong-lanceolate, more generally spatulate, bracteoles linear-subulate, short; pedicels variable, often 0; rachis and pedicels much enlarged in fruit. *Calyx* pubescent, tube short, lobes ovate-acute, .05 in. long. *Corolla-tube* very short, lobes oblong-linear, .1 to .15 in. long, margins much incurved. *Stamens* .075 in. long, anthers oblong, filaments very short,

connective produced in a conical acumen. *Ovary* pubescent; style short; stigma 2-lobed. *Drupe* oblong-ellipsoid, 1·7 in. long, 1 to 1·2 in. broad; exocarp thick, granular; endocarp hard, ·15 in. thick, obscurely ridged outside. *Seed* 1, testa membranous, albumen fleshy. *L. insignis*, Clarke in Hook. f. Fl. Br. Ind. III. 610. *Chionanthus macrocarpa*, Blume Mus. Bot. I. 319 (1849); Koord. & Val. Bijdr. VIII. 239. *C. insignis*, Miq. Fl. Ind. Bat. Suppl. 559 (1862). *C. montanus*, Kurz in Journ. As. Soc. Beng. XLVI. ii. 243, and For. Fl. II. 159.

SINGAPORE: at Bukit Mandai, Ridley 4580.—DISTRIB. Tenasserim (*Helfer* (K.D.) 3688), Martaban (*Kurz*), Sumatra (*Teysmann*, *Beccari* 826), Borneo (*Beccari* 725).

3. *LINOCIERA PALUDOSA*, King & Gamble, n. sp. A small tree (*Wray*), large tree, 60 to 80 feet high, and 15 to 20 in. in diam of stem (*King's Collector*); branchlets thick, pale greyish-brown. *Leaves* coriaceous; oblong, bluntly acute at apex, also at base; glabrous on both surfaces except on the nerves which are minutely pubescent; margins recurved; 6 to 12 in. long, 2 to 4 in. broad; midrib thick, prominent, slightly raised above, strongly so beneath main-nerves 11 to 15 pairs, impressed above, prominently raised beneath, ·75 to 1 in. apart, at first straight then curving upwards to and along the margin to anastomose and form a prominent looped intramarginal nerve; secondary nerves few; reticulations transverse, not prominent, petiole stout, wrinkled, ·5 in. long. *Flowers* yellow, with a brown centre, in pubescent panicles 1·5 to 2 in. long from the branchlets between the leaf-nodes in the axils of small tubercles; peduncles stout, grey-pubescent, ·2 in. long; bracts ovate, grey-pubescent, bracteoles ovate-acute, recurved; pedicels 0·5 in. long. *Calyx-tube* short, lobes ovate-acute or triangular, ciliate, ·025 in. long, one lobe sometimes enlarged. *Corolla-lobes* in 2 pairs, linear-oblong, obtuse, ·2 in. long, ·05 in. broad, glabrous. *Stamens* 0·5 in. long, filaments broad, short, anthers rounded, connective with an obscure gland. *Ovary* conical, glabrous; style short; stigmas 2. *Fruit* not known.

PERAK: at Sungie Larút, *Wray* 2424; on low wet ground, *King's Collector* 6476

4. *LINOCIERA CAUDATA*, King & Gamble, n. sp. A tree, reaching 30 to 40 feet in height and 5 to 7 in. in diam. of stem, branches slender, pale grey, ultimate branchlets darker. *Leaves* chartaceous, lanceolate, caudate-acuminate at apex, cuneate at base; glabrous on both surfaces, margins entire, recurved, 3 to 4 in. long, 1 to 1·25 in. broad, midrib slender, raised above, scarcely raised beneath; main-nerves very obscure, about 4 to 5 pairs, curving sharply upwards to meet in an intramarginal looped nerve; petiole ·1 to ·2 in. long, grooved above.

Flowers in axillary or extra-axillary, few-flowered, trichotomous, paniculate cymes about 1 in long, rachis glabrous, somewhat angular, bracts and bracteoles small, ovate, acute *Calyx* 0.5 in long, tube short, lobes 4, ovate, obtuse *Corolla-tube* scarcely any, lobes in 2 pairs, oblong, 1 in. long *Stamens* filaments broad, anthers oblong, cells extrorsely dehiscent, connective apiculate *Ovary* glabrous, conical, style very short, stigma bifid *Drupe* (immature) obovoid, 3 to 4 in long, seed apparently albuminous

PERAK *King's Collector* 3212, 6857, in dense jungle on high mountains at 3,500 to 4,000 feet

This species is rather near *L. monticola*, Bl., but the leaves are narrower and the inflorescence longer

4. OLEA, Linn.

Trees or shrubs *Leaves* opposite, entire or toothed *Flowers* small, hermaphrodite, dioecious or polygamous, in axillary, rarely terminal trichotomous panicles, bracts small *Calyx* short, 4-toothed or lobed *Corolla tube* short, lobes 4, induplicate valvate, sometimes 0 *Stamens* 2, on the corolla tube or sub hypogynous, filaments short, anthers ovate or oblong, cells dehiscent on the margin or slightly extrorse, in ♂ flowers sometimes introse *Ovary* 2-celled, ovules 2 in each cell, attached laterally to the septum or sub pendulous, style short, stigma obtuse, capitate or bifid *Drupe* ellipsoid or sub globose, exocarp fleshy, endocarp bony or crustaceous, usually 1-seeded *Seed* pendulous, testa thin, albumen fleshy, sometimes slightly imbricate, cotyledons flat, radicle superior — **DISTRIB** South Europe and Asia, tropical and South Africa, New Zealand, about 35 species

Inflorescence more than 3 in long leaves oblong lanceolate acute, usually over 4 in in length

1 *O. dentata*

Inflorescence under 3 in long, leaves elliptic lanceolate acuminate under 4 in in length

2 *O. maritima*

SPECIES IMPERFECTLY KNOWN

Leaves 8 to 14 in long, inflorescence extra axillary on old wood, drupes flattened

3 *O. platycarpa*

Leaves 2 to 3 in long, inflorescence axillary or extra axillary on young wood, corolla lobes linear, 1 in long, drupes not known

4 *O. ardisioides*

1 **OLEA DENTATA**, Wall Cat 2840 (1829) A tree, 40 to 60 feet high, branchlets light brown, smooth, innovations minutely pubescent *Leaves* coriaceous, oblong lanceolate, bluntly acute at apex, cuneate or rounded at base, glabrous on both surfaces, but when young pubescent on the nerves beneath, margins entire or distantly dentate, slightly recurved, 3.5 to 5.5 in long, 1 to 2 in broad, midrib slender, im-

pressed above, raised beneath, main-nerves obscure, 8 to 10 pairs, arching upwards to join in a looped nerve near the margin, impressed above, petiole 4 in long. *Flowers* in axillary or extra-axillary, leafy, tripinnate, minutely pubescent, paniculate cymes, 3 to 6 in long, branches trichotomous, ultimate cymes umbellate, bracts leafy, oblong or lanceolate, 5 to 15 in long, pedicels slender, .05 to 1 in long, bracteoles minute, ovate acute. *Calyx* minutely pubescent, .05 in long, lobes 4, ovate, obtuse. *Corolla* tubular-campanulate, 15 in long, lobes 4, rounded, .05 in long. *Stamens* very small, inserted at the base of the corolla tube. filaments very short, anthers ovoid, subextrorsely dehiscent. *Ovary* ovoid, style none, stigma capitate, cells 2, ovules 2 in each cell. *Drupa* not seen. A DC Prodr VIII 286, Kurz in Journ As Soc Beng XLVI ii 245, and For Fl II 157, Clarke in Hook f Fl Br Ind III 613.

PENANG *Curtis* 222, 950, 2267 — *DISTRIB* Burma

2 *OLEA MARITIMA*, Wall Cat 2813 (1829). A large shrub or small tree. branchlets terete, pale brown. innovations minutely pubescent. *Leaves* coriaceous, elliptic lanceolate acuminate at apex cuncate or somewhat rounded at base glabrous on both surfaces, margins entire or distantly serrate on their upper half 3 to 4 in long, 1 to 2 in broad midrib slender, impressed above raised beneath, main nerves obscure, 7 to 10 pairs, meeting near the margin in a looped intramarginal nerve, reticulations scanty, petiole 2 to 3 in long, minutely pubescent when young finally glabrous. *Flowers* dull white, polygamous, in slender, minutely pubescent, trichotomous paniculate cymes with few branches, ultimate cymes umbellate usually .75 to 1 in long in flower, up to 1.5 in long in fruit, rarely axillary, usually extra axillary. each pair of peduncles supported by a pair of ovate lanceolate leafy bracts 3 to 5 in long common peduncles 7 in long pedicels .05 to 1 in long, bracteoles none. *Calyx* .05 in long, minutely rusty pubescent, tube short lobes 4 ovate acute, as long as tube. *Corolla* campanulate, 1 to 1.5 in long lobes 4, obtuse, as long as tube, induplicate valvate, apparently absent in ♀. *Stamens* .07 in long, inserted near the base of the corolla tube filaments slender, anthers as long as filaments, reniform cells subextrorsely dehiscent. *Ovary* conical, style none, stigma capitate cells 2, ovules in each cell pendulous. *Drupa* globose, 2 in in diam, black when ripe wrinkled when dry, exocarp thin, fleshy endocarp crustaceous. *Seed* 1, testa very thin, albumen copious cotyledons elliptic, nearly 1 in long, radicle somewhat thick. G. Don Gen Syst IV 49. A DC Prodr VIII 288, 288, Clarke in Hook f Fl Br Ind III 612, Miq Fl Ind Bat II 547.

SPECIES IMPERFECTLY KNOWN

3 *OLEA PLATYCARPA*, King & Gamble, n sp A small tree with spreading branches, reaching 25 to 30 feet in height branchlets stout, pale brown, smooth, marked by the prominent horse shoe shaped scars of fallen leaves *Leaves* coriaceous, obovate-oblong or oblong-lanceolate, abruptly acuminate at apex, cuneate at base, glabrous on both surfaces and with scattered glands, margins entire, slightly recurved, 8 to 14 in long, 3 to 5 in broad, midrib very stout and prominent, main-nerves 14 to 16 pairs, curving upwards to join in a looped intramarginal nerve close to the margin, secondary nerves few, reticulations irregular, obscure, petiole 1 in long, base enlarged, wrinkled *Flowers* dioecious, in extra-axillary, sessile, paniculate, trichotomous cymes, usually on old wood, 1 to 15 in long, supported by a cluster of sheathing scarious bracts, bracts of panicle branches and bracteoles ovate acute pedicels very short, stout, somewhat angular *Calya* short, 0.5 in long, teeth (in ♀ flowers) ovate, obtuse, ciliate *Corolla* none in ♀, ♂ not seen *Ovary* conical, rugose, style 0, stigma 2 lobed, mitriform *Drupe* ovate-oblong, flattened, 7 in. long, 5 in broad, exocarp thick, wrinkled when dry, endocarp thick, granular, cells 2 *Seed* 1, pendulous from the summit of the thin central persistent septum, testa membranous, albumen thick, fleshy, cotyledons ovoid, 15 in long, radicle rather stout

PERAK at low levels on the hills, King's Collector 5541, 7649, Heney

The absence of male flowers renders the identification of the genus of this plant somewhat uncertain, but we consider it belongs rightly to *Olea*

4 *OLEA ARDISIODES*, King & Gamble, n sp A small tree, branches slender, terete, with yellowish bark, branchlets minutely pubescent *Leaves* coriaceous, lanceolate, long acuminate at apex, cuneate at base, glabrous on both surfaces, margins entire, recurved, 2 to 3 in long, 6 to 1 in broad, midrib slender, impressed above, raised beneath, main-nerves 5 pairs, curving upwards to meet in a looped intramarginal nerve, obscure, secondary nerves and reticulations very obscure, petiole slender, 1 to 2 in long *Flowers* in axillary or extra-axillary

slender paniculate cymes, 1 to 2 in. long; rachis somewhat angular, minutely pubescent; bracts leafy, lanceolate, .5 to 1 in. long; bracteoles similar or sometimes subulate-spathulate, pedicels slender, .1 in. long, reflexed. *Calyx-tube* very short; lobes 4, ovate-acute, .025 in. long, ciliate. *Corolla-tube* .03 to .05 in. long, lobes 4, induplicate-valvate, linear, .1 in. long. *Stamens* 2, inserted at the base of the corolla-tube, .05 in. long; filaments slender; anthers elliptic, cells dehiscent laterally, connective mucronate. *Ovary* conical, style 0, stigma minute, bifid; cells 2. *Fruit* not seen.

PERAK: on Gunong Bubu, 5,000 feet, Wray 3871. PAHANG. Barnes 10896

We have hesitated whether to describe this species as *Olea* or *Isnociera*, for the corolla-tube is not very long, and the lobes are like those of the latter genus, but the character of the leaves is distinctly that of *Olea*

5 MYXOPYRUM, Blume.

Large scandent shrubs with quadrangular branches. *Leaves* opposite, large, triplinerved, entire or denticulate. *Flowers* small, yellow, very numerous, in axillary and terminal trichotomous panicles. *Calyx-tube* short, lobes 4. *Corolla* fleshy, tube urceolate, lobes 4, concave, induplicate-valvate in bud. *Stamens* 2, inserted on the base of the corolla-tube, filaments very short, anthers rather large, ovate, cells dehiscent laterally. *Ovary* 2-celled, style very short or 0, stigma 2-lobed, ovules 1 to 2 in each cell, attached near the base at the inner angle. *Fruit* a 1 2-seeded sub-globose berry, pericarp crustaceous. *Seeds* 1 to 4, erect, testa membranous, albumen thick, cotyledons flat, ovate, radicle inferior.—DISTRIB India and Malaya, 3 species

MYXOPYRUM NERVOSUM, Blume Bijdr. 683 (1826). A large climbing shrub, branches with fibrous pale brown bark, branchlets prominently quadrangular. *Leaves* coriaceous, elliptic or elliptic-oblong or elliptic-lanceolate, acuminate at apex, cuneate or rounded at base, glabrous on both surfaces, margins entire or denticulate in the upper half, prominently recurved, 4 to 7 in. long, 1.5 to 3.5 in. broad; midrib thick, prominent beneath, impressed above; main-nerves 4 to 6 pairs, the lowest pair opposite, very prominent, starting a little above the base and forming an intramarginal nerve looped only after where it meets the rest at about two-thirds of the way up, the next pair not opposite and only starting from about half the length of the leaf; secondary nerves few, reticulations irregular, prominent in dry specimens; petiole .3 to .5 in. long, often twisted, channelled above, articulate at the base. *Flowers* sessile, in terminal or axillary or extra-axillary, trichotomous, minutely

pubescent panicles, 1·5 to 3 in. long, rachis angular, swollen at the nodes; bracts subulate, recurved, ·1 in. long; bracteoles triangular, minute. *Calyx-tube* very short; lobes 4, triangular, acuminate. *Corolla* yellowish- or greenish-white, fleshy, tube urceolate, ·05 to ·1 in. long; lobes oblong, incurved, ·05 in. long, induplicate-valvate in bud. *Stamens* 2, inserted on the tube of the corolla; filaments very short, broad; anthers ovate, rather large. *Ovary* ovoid; style 0; stigma 2-lobed; cells 2, ovules 2 in each cell, erect from a minute basal central placenta. *Berry* ovoid or globose, ·5 to ·7 in. in diam., rough, surmounted by the persistent stigma, blueish-black when ripe, cells 2. *Seeds* 2 to 4, erect on an enlarged placenta at the base of the central dissepiment; albumen fleshy, testa membranous. Mus. Bot. Lugd. Bat. I. 320, t. 51; A.DC. Prod. VIII. 290; Miq. Fl. Ind. Bat. II. 549; Clarke in Hook f. Fl. Br. Ind. III. 618.

OF THE

ASIATIC SOCIETY OF BENGAL.

VOL LXXIV, PART II.—Extra Number, 1905

Materials for a Flora of the Malayan Peninsula—By SIR GEORGE KING, K C I E, L L D, F R S, late Superintendent of the Royal Botanic Garden, Calcutta, and J SYKES GAMBLE, C I E, F R S, late of the Indian Forest Department

No 18

This part contains nine Natural Orders, viz, Nos 79 *Hydrophyllaceæ* to 85 *Lentibulariaceæ* inclusive, as well as Nos 87 *Bignoniaceæ* and 88 *Pidalmeæ*. The whole part is the work of Lieut-Col D Prain, I M S, F R S, Superintendent of the Royal Botanic Garden, Calcutta, with the exception of *Boraginææ*, which has been done by Sir George King, and *Hydrophyllaceæ* and *Bignoniaceæ*, which have been done by Mr Gamble.

The nine Orders dealt with contain 53 genera and 150 species of the species none are here described for the first time.

Natural Order No 86 *Gesneraceæ* will follow later on with the three Orders, 75 *Apocynaceæ*, 76 *Asclepiadaceæ*, and 77 *Loganiaceæ*, the preparation of which is not yet quite complete.

Order LXXIX HYDROPHYLLACEÆ

Annual or perennial herbaceous plants. *Leaves* radical or alternate, rarely opposite, entire or dentate, simple or pinnately or palmately lobed. *Flowers* usually unilaterally subsessile on the branches of a bifid or dichotomous scorpioid cyme, or else pedunculate in the axils or on the summits of the branches, regular, hermaphrodite. *Calyx*

inferior, with 5 or occasionally many equal imbricate lobes. *Corolla* gamopetalous, funnel-shaped cup-shaped campanulate or rotate; lobes 5, rarely many, imbricate or sometimes twisted. *Stamens* as many as the corolla-lobes, alternate with them, usually fixed to the base of the tube, exsert or included, filaments filiform, sometimes dilated or appendiculate at base, anthers ovate, oblong or linear, dorsifixed, cells 2, parallel, dehiscing introrsely with longitudinal clefts. *Ovary* superior, sometimes unilocular, with 2 free or parietal placentas, sometimes more or less completely 2 celled with fleshy placentas adnate to the septum, styles either 1 filiform bifid or undivided, or 2 distinct from the base; stigmas terminal, small or capitate, ovules 2 to many in each cell. *Capsule* loculicidally, sometimes septicidally, bi-valved, the placentas if parietal attached to the valves, if central remaining free. *Seeds* usually oblong, globose or angular, 2 to many on each placenta, testa reticulate or wrinkled, rarely smooth, albumen fleshy, embryo small, erect, cotyledons plano-convex or semi terete — **DISTRIB** About 150 species, chiefly American, very few in the Old World.

HYDROLEA, Linn

Herbs or undershrubs. *Leaves* entire, alternate. *Flowers* blue, in short terminal cymes or racemes. *Calyx* divided nearly to the base, segments lanceolate. *Corolla* widely campanulate, sub-rotate, lobes imbricate. *Stamens* 5, attached to the corolla tube, filaments filiform, sometimes dilated at base, anthers sagittate. *Ovary* completely 2-celled, with fleshy placentas adnate to the dissepiment, styles 2, rarely 3, distinct, filiform, stigmas capitate, ovules many in each cell, multi-seriate. *Capsule* globose or ovoid, septicidal, usually 2-, rarely 3- or 4-valved. *Seeds* minute, irregularly wrinkled — **DISTRIB** About 14 species, chiefly American, with one Chinese, one of tropical Africa, and one of India and Malaya.

HYDROLA ZYLANICA, Vahl Symb II 46 (1791). An annual herb, stems nearly glabrous below, glandular pubescent above, soft, somewhat succulent, often rooting, always straggling. *Leaves* membranous, lanceolate or oblong lanceolate, attenuate above and below, 5 to 2 in long, 2 to 5 in broad, glabrous or slightly pubescent, petiole none or very short and winged by the decurrent blade. *Flowers* in racemes on short lateral leafy branches. *Calyx* lobes acute, glandular-pubescent, 3-nerved, about 3 in long. *Corolla* lobes ovate, 2 in long, many nerved, blue. *Stamens* with sagittate, often twisted anthers, and filaments dilated at base. *Capsule* shorter than the calyx-lobes, ovoid, 2-lobed, placentas central, adherent at their backs to the dissepiment. *Seeds* very many,

oblong, obtuse, testa very faintly wrinkled Lamk III t 184, Wall Cat 4398, W & A in Hook Comp Bot Mag II 193, t 26, Wight III t 167, and Ic t 601, Choisy in DC Prod X 180, Dalz & Gibs Bomb Fl 170, Miq Fl Ind Bat II 633, Clarke in Hook f Fl Br Ind IV 133, Trimen Fl Ceyl III 191 Cooke Bomb Fl II 197, Prain Beng Plants 711 *H. javanica*, Blume Bijdr 725 *Namazyanica*, Linn Sp Pl 226, Roxb Fl Ind II 73 "Tsjeru Vallel," Rheede Hort Mal X. t 28

PERAK. Wray 2571, 3336, *Scortechini*, Ridley 2906, *Kings Collector* 391, 2577 —DISTRIB. Throughout India, Ceylon, Burma, Siam, Java, Malaya, China, the Philippines, also in Australia, tropical Africa and America, in wet places and rice-fields

Order LXXX BORAGINEÆ

Herbs, shrubs, or trees, often conspicuously hispid or scabrous. *Leaves* alternate very rarely opposite, ex stipulate, usually entire, rarely in verticil. *Flowers* usually in scorpioid dichotomous cymes, sometimes trichotomously paniculate, rarely solitary and axillary, bracteate or not, hemiphradite. *Calyx* inferior, 5 lobed (rarely 6 to 8 lobed), the lobes imbricate, rarely valvate, usually persistent in fruit. *Corolla* gamopetalous, of various forms, often with scales in the throat, the limb 5 lobed (rarely 4 to 6 lobed), the lobes imbricate, rarely twisted. *Stamens* as many as the lobes and alternate with them, inserted on the tube, anthers ovate to linear, introrse, filaments slender, often dilated at the base. *Disk* under the ovary or obsolete. *Ovary* superior, sessile, cells 2 with 2 ovules in each, or 4 with 1 ovule in each, style terminal or from the depression between the lobes of the ovary, long or short, stigma entire and capitate or 2 lobed, the style rarely twice bifid. *ovules* sub erect from the basal angle of the cell. *Fruit* drupaceous with a hard 2 to 4 celled endocarp or dividing into 2 or 4 nutlets with thin or fleshy walls. *Seeds* erect or oblique, with membranous testa and fleshy albumen or ex albuminous, embryo curved or straight, radicle superior —DISTRIB. Universal Species about 1,500

Styles twice partite, drupe 4 1 seeded, trees or shrubs, calyx enlarging in fruit

1 CORNIA

Styles simple or only bi partite, rarely (*Coldenia*) 2 or more and distinct, drupe including two 2 seeded or four 1 seeded pyrenes, calyx only slightly or not at all enlarged in fruit —

Styles depressed conical at the apex or with a horizontal ring below or at the stigmas

- Styles short, shortly 2-lobed; pyrenes two 2-seeded; herbs or shrubs 2. *TOURNEFORTIA*.
 Styles elongated, dilated at the apex; pyrenes four 1-seeded, much resembling nutlets; herbs 3. *HELIOTROPIMUM*.
 Styles elongated, not dilated or annular at the apex, more or less bi-partite.—
 Styles 2-fid at the apex; pyrenes two 2-seeded, or four 1-seeded; trees or shrubs 4. *EBRETIA*.
 Styles more or less separate, distinct at base and apex, united but easily separable in the middle; pyrenes four 1-seeded, much resembling nutlets; prostrate herbs .. 5. *COLDENIA*.

1. *CORDIA*, Linn.

Trees or shrubs. *Leaves* alternate, rarely sub-opposite, petiolate. *Flowers* in dichotomous cymes with scorpioid branches, or corymbose or in clusters, ebracteate, polygamous, the ♀ fewer than the ♂. *Calyx* tubular or campanulate, usually with short and often irregular teeth, accrescent in fruit. *Corolla* funnel- or salver-shaped or campanulate; the lobes of the limb 4 to 8, spreading or recurved, white or orange. *Stamens* as many as the lobes; anthers sagittate or hastate, shortly exserted; filaments often hairy near the base. *Ovary* 4-celled, glabrous; style terminal, long, bi-partite, the branches again bifid, linear or sub-spathulate, cells of ovary 1-ovuled. *Fruit* ovoid or ellipsoid, surrounded by the enlarged calyx, the putamen bony, with 1 to 4 cells, but one only with a fertile seed. *Seed* exalbuminous, the cotyledons large and fleshy or thin but always plicate.—*DISTRIB* About 280 species, all tropical.

- Flowers about 1·5 in long 1. *C. subcordata*.
 Flowers less than 5 in long --
 Leaves broadly ovate, sub-acute or obtuse, the base often cordate .. 2. *C. Myza*.
 Leaves ovate-lanceolate, acuminate, the base cuneate .. 3. *C. Griffithii*.

1. *CORDIA SUBCORDATA*, Lamk Ill. 1899 (1792). A small tree, young branches as thick as a goose-quill, glabrous, pale brown when dry. *Leaves* membranous; broadly ovate or ovate-rotund, the apex acute, the base broadly rounded or sub-cordate, both surfaces brown when dry, the lower paler, harshly and minutely reticulate, main-nerves 4 or 5 pairs, faint on both surfaces when dry, length 3·5 to 6·5 in, breadth 2·5 to 4 in., petiole 1·25 to 2 in. *Corymbs* lateral, few-flowered, shorter than the leaves, glaberrulous, pedicels 2·5 in. long. *Calyx* cylindric, slightly widening towards the mouth, 4 in. long and nearly 2 in. wide at the middle, glabrous; the limb with 3 broad triangular teeth. *Corolla* about 1·3 in. long, orange or reddish, funnel-shaped; lobes about 6, broad, spreading, as long as the tube. *Stamens* 6.

Stigma with linear-spathulate branches *Fruit* very bony, pyramidal, its apex acute, with 4 bold angles, the spaces between the angles often with large tubercles, 1 in long and as much in breadth from angle to angle, usually with 1 or more seeds, entirely enveloped in the much inflated glabrous accrescent apiculate calyx Wall Cat 9063, DC Prod IX 477, Seem Fl Viti, t 34 Benth Fl Austral IV 385 Kurz For Fl Burm II 209, Clarke in Hook fil Fl Br Ind IV 140 Miq Fl Ind Bat II 914 *C orientalis*, R Br Prod 498 *C campanulata*, Roxb Fl Ind, ed Carey & Wall II 336 *C humphii* Blume Bijdr 843 *C hexandra*, Roem & Schult Syst IV 799 Rumph Hicrb Amb II t 75

SELANGOR Ridley 7373 KEDAH King's Collector 1742

2 *TOURNEFORTIA*, Linn

Trees or shrubs, sometimes almost herbs, and often sub-scandent. *Leaves* alternate, entire. *Cymus* scorpioid, dichotomous, usually terminal, rarely lateral or extra-axillary. *Flowers* small, numerous, crowded, sessile or on short pedicels, ebracteate. *Calyx* deeply 4- or 5-partite, the segments ovate or lanceolate. *Corolla* white or greenish, the tube cylindric, naked in the throat, the lobes of the limb 5 or 4, small, spreading. *Stamens* 5 or 4, included in the tube, anthers oblong-ovate or lanceolate, apiculate or not, filaments short. *Ovary* 4-celled, style terminal, short, 2-lobed (in the Indo-Malayan species), ovules 1 in each cell, pendulous from the upper inner part of the cell. *Drupe* small, ovoid, slightly fleshy or leathery, indistinctly separating into two 2-seeded or into four 1-seeded pyrenes. *Seeds* straight or curved, pendulous, albuminous, embryo straight or curved —DISTRIB. About 130 species, in the tropics of both hemispheres

TOURNEFORTIA WALLICHII, DC Prod IX 527 (1845) A climber, 10 to 30 feet long, young branches terete, twice as thick as a crow's-quill, minutely rusty-puberulous, becoming glabrous. *Leaves* thickly mem-

branous, ovate, the apex acute or shortly acuminate, the base rounded, slightly oblique, both surfaces when dry brown, the upper quite glabrous, the lower paler, reticulate, sometimes with a few small hairs on the nerves, main-nerves 4 or 5 pairs, curved, ascending, depressed like the midrib on the upper surface, prominent on the lower, length 2 to 3.5 in, breadth .75 to 1.75 in, petioles 3 to 4 in. Cymes terminal and lateral (extra-axillary), on long peduncles, dichotomously branched, sub-glabrous. Flowers 3 to 4 in long, sessile, forming crowded one-sided pseudo spikes (scorpioid cymes) on the terminal inch or two of the branches of the cymes. Calyx about .05 in long, only about a sixth or a seventh as long as the corolla, cleft nearly to the base into 4 broadly triangular acute spreading segments. Corolla tube 4-angled, the limb short, with 4 ovate teeth, glabrous. Anthers 4, oblong, sessile or nearly so, near the throat. Fruit broadly ovoid, 1.5 to 2 in long, with 4 vertical grooves (2 of them deep) on the sides, and a depression on the apex. Clarke in Hook fil Fl Br Ind IV 147. *Tetrandria*, Wall Cat 911 (not of Blume). *Tetrandria Wallichii*, Miq Fl Ind Bat II 928.

3 HETIOTROPIDIUM, Linn

Annual or perennial herbs, very hairy or scabrous. Leaves alternate. Flowers small, white, or pale purple, sometimes in terminal dichotomous cymes with scorpioid branches and small or no bracts, sometimes axillary in the axils of large bracts. Calyx divided into 5 linear or lanceolate segments. Corolla with a cylindric tube and limb of various shapes, the lobes of the latter always imbricate or induplicate in bud, spreading in flower. Stamens 5, included, inserted on the tube by short filaments, anthers ovate oblong or lanceolate. Ovary completely or imperfectly 4 celled, 4 ovulate, style short or long, terminal, with a depressed conical or flat disk on its apex, stigma above the disk, none or short or elongate, entire or rarely bifid. Fruit dry, 2 to 4-grooved or -lobed, and consisting of 4 nutlets free from the beginning or finally becoming so. Seeds straight or curved, albumen none, small or large, cotyledons plano convex.—DISTRIB Species about 225, widely distributed in both hemispheres.

Leaves ovate lanceolate, 1.5 to 2.5 in long

1 *H. indicum*

Leaves linear, .5 to 1 in long .

Order LXXXI CONVULVULACEÆ

[By D. PRAIN]

Herbs or shrubs, usually twining, occasionally erect, very rarely trees, sometimes parasitic *Leaves* alternate or in parasitic species

obsolete, stipules 0 Flowers in cymes, rarely solitary, regular, hermaphrodite, bracts at cyme bases or under solitary flowers opposite; bracteoles at base of pedicels small, scale-like Sepals 5, imbricate, occasionally slightly connate below, often persistent, sometimes accrescent Corolla campanulate or infundibuliform, rarely sub-rotate, limb with 5 short or long lobes often plicate in bud, after flowering either involute or reverting to the original aestivation. Stamens 5, adnate to corolla tube, anthers oblong, opening by longitudinal introrse or lateral slits Carpels usually 2, very rarely 3 or more, connate throughout in a superior ovary with its base often encircled by an annular or lobed disk, and its cells as many or, by development of accessory partitions, twice as many as the component carpels, rarely, from absorption of dissepiments, fewer than carpels, ovules 2 in each carpel, sessile erect anatropous, style solitary or rarely styles 2, stigma capitate or 2-lobed or 2-fid Fruit an indehiscent often dry berry, or a 2-4-valved or circumscissile or irregularly opening capsule Seeds 4 to 2, rarely solitary, erect, albumen scanty or 0, cotyledons generally plicate, rarely flat — DISTRIB Species about 1,000, in all regions, but more abundant in sub tropical and tropical countries

Corolla tube usually uniformly enlarged from base to apex, the 5 bands or lobes rarely, except in *Lychee*, clearly defined from the intervening spaces, pollen not spinulose —

Yellow parasitic twining leafless herbs

1 CUSCUTA

Green non parasitic leafy herbs shrubs or trees —

Fruit indehiscent, woody or fleshy, rather large, style short or 0, stigma 5-10 rayed, corolla lobes 2 fid, the lobules induplicate, contorted, woody, climbing shrubs or caet tics Fruit dehiscent, or if indehiscent small, with thin fragile walls

2 ERYCIBE

Flowers in racemes or panicles —

Bracts not enlarged in fruit, outer 3 or all of the sepals enlarged in fruit, style entire or shortly 2 lobed, capsule indehiscent or rarely 2 valved

3 PORANA

Bracts in fruit much enlarged, scarious, adnate to calyx, sepals not enlarged, capsule 4 valved 1 seeded

4 NEUROPEITIS

Flowers in cymes or solitary, capsule valvate or opercular, rarely dehiscent irregularly —

Styles 2, free or partially united below, sepals not or slightly enlarging in fruit —

Capsule 4 valved, 2 1 locular, 4 2 seeded, styles quite free, each 2 branched, cymes few flowered

5 EVOLVULUS

Capsule irregularly dehiscent, splitting into numerous vertical segments, styles usually partially united below, stigmas capitate, cymes sub capitate ..

6 BONANIA

Style entire, stigmas usually 2 —

Ovary 1 locular, capsule 4 valved, 4 seeded, stigmas shortly oblong, calyx lobes not enlarged in fruit —

- Bract enveloping the calyx; pollen spherical .. 7. *CALYSTEGIA*.
 Bract not enveloping the calyx; pollen polyhedral .. 8. *HEWITTIA*.
 Ovary 2-locular, sometimes 4-locular:—
 Outer 3 sepals much larger than the 2 inner, and
 decurrent on the peduncle; stigmas capitate .. 9. *ANISFIA*.
 Outer 3 sepals not larger than the 2 inner, and not
 decurrent on the peduncle:—
 Stigmas elliptic; capsule 8-valved, rarely 4-valved 10. *JACQUEMONTIA*.
 Stigmas globose:—
 Capsule 4-valved; fruiting sepals not enlarged;
 bands of corolla usually with 5 purple lines;
 stems not winged .. 11. *MERREMIA*.
 Capsule with circumscissile dehiscence; fruiting
 sepals considerably enlarged; bands of corolla
 without lines, stems winged .. 12. *OPERCULINA*.
 Corolla-tube not uniformly enlarged from base to apex, the
 5 bands on the lobes clearly defined by 2 prominent lines; pollen
 spinulose:—
 Fruit dehiscent, or if indehiscent then with thin fragile walls:—
 Stamens arising from the backs of 5 scales attached to
 the corolla-tube; flowers small urceolate, fasciculate, fruit
 4-valved .. 13. *LEPISTEMON*.
 Stamens arising directly from the corolla-tube.—
 Corolla more or less campanulate; calyx-lobes never
 aristate, inflorescence never scorpioid; stamens not ex-
 serted .. 14. *IPOMOEA*.
 Corolla more or less hypocrateriform; calyx-lobes aristate,
 or if obtuse the inflorescence scorpioid; stamens exserted.—
 Flowers rather small, pink or red, slightly irregular .. 15. *QUAMOCUIT*.
 Flowers large white, regular .. 16. *CALONTICTION*.
 Fruit indehiscent, coriaceous or fleshy.—
 Ovary 4-celled .. 17. *ANGYRIA*.
 Ovary 2-celled .. 18. *LETTESOMIA*.

1 *CUSCUTA*, Linn.

Leafless twining yellow-reddish parasitic herbs. *Flowers* small, white or rose-coloured, fascicled, sessile or shortly pedicelled; bracts small or 0. *Sepals* 5 or 4, sub-equal; free or shortly connate at the base. *Corolla* ovoid or campanulate, usually with a ring of fimbriate or lobed scales near the base or below the stamens; lobes short, imbricate. *Stamens* 5 or 4, adnate near throat of corolla; filaments short, linear; anthers oblong, partially exserted. *Ovary* more or less completely 2-celled; ovules 4; styles 2 or 1; stigmas 2. *Fruit* a globose or ovoid, dry or succulent, circumscissile or irregularly bursting 4-2-seeded capsule. *Seeds* glabrous, albumen fleshy; embryo slender, spiral; cotyledons minute or obsolete.—*DISTRIB.* Species about 80, in temperate and tropical regions.

CUSCUTA HYGROPHILA, H. H. W. Pears. in Hook. Ic. Plant. t. 2704.

A small slender parasitic twiner. *Flowers* in dense umbellate cymes, .25 in. wide. *Sepals* ovate obtuse, connate below, .1 in. long. *Corolla* .15 in. wide, campanulate; lobes ovate obtuse. *Stamens* 5, shortly exerted. *Scales* near base of corolla-tube shortly fimbriate. *Ovary* obtuse, more or less perfectly 2-celled; ovules 4; styles 2; stigmas capitate. *Fruit* an oblate capsule, .15 in. wide.

JOHORE: near the town, parasitic on *Hygrophila quadrivalvis*, Ridley 9161!

Closely related to *C. chinensis*, from which it differs in having the sepals without keels, and of which the writer believes it to be a form.

2. ERYCIBE, Roxb.

Shrubs, scandent or diffuse, less often erect; rarely trees. *Leaves* alternate, elliptic, entire, coriaceous. *Flowers* rather small, cymes in axillary or terminal panicles or racemes; bracts lanceolate, small. *Sepals* 5, small, sub-equal, orbicular, coriaceous, adpressed to base of fruit. *Corolla* rather small, white or yellowish, sub-rotate; tube hirsute externally; limb 5-lobed, the lobes obcordate, induplicate-contorted in bud, with a thicker triangular centre externally hirsute, and sub-membranous semicordate inargins glabrous on both sides. *Stamens* 5, sub-included, adnate to throat of corolla; filaments short; anthers ovate-lanceolate. *Ovary* globose, 1-celled; ovules 4; stigma large, sessile, sub-globose or conic, 5- or 10-ridged. *Fruit* a fleshy, leathery or woody berry, ovoid or ellipsoid. *Seed* solitary, glabrous; albumen scanty, intruded between folds of fleshy cotyledons.—DISTRIB. Species about 30; throughout S.E. Asia.

Leaves more or less pubescent beneath —

Pubescence on under surfaces of leaves persistent.—

Branches angular; bark fissured; pubescence on under side of leaves black, closely adpressed, leaves with acuminate tips, the lateral nerves in 5 pairs, obliquely ascending, hardly visible above

1. *E. strigosa*.

Branches cylindric; bark not fissured: pubescence on under surface of leaves not adpressed, brown or tawny; leaves obtuse, the lateral nerves in 12 to 15 pairs, spreading not very oblique, fruit velvety

2. *E. magnifica*.

Pubescence on under surface of leaves usually disappearing, except from the midrib, as the leaves become old; branches with fissured bark:—

Flowers in pyramidal terminal panicles, the panicle branches subtended by foliaceous bracts

3. *E. expansa*.

Flowers in axillary cymes, or if passing into a terminal panicle the panicle branches not subtended by foliaceous bracts:—

- Flowers often passing into a terminal panicle; corolla greenish; fruit ellipsoid, black, .6 in. long, .85 in. wide .. 4. *E. Princei*.
- Flowers all axillary; corolla white; fruit ellipsoid, purple, with a faint apical areola, .75 in. long, .5 in. wide .. 5. *E. malaccensis*.
- Leaves quite glabrous on both surfaces:—
- Flowers in both terminal and axillary panicles; leaves with lateral nerves distinct, but secondary venation indistinct .. 6. *E. angulata*.
- Flowers always axillary:—
- Leaves small, never exceeding 1.75 in. long, sub-bifarious; flowers solitary, axillary.. .. 7. *E. leucozylioides*.
- Leaves medium to large, very rarely, and never all, less than 2 in. long, arranged spirally; flowers never solitary:—
- Lateral nerves of leaves distinct and secondary reticulate venation distinct on both surfaces, or at least beneath:—
- Lateral nerves of leaves 7 to 9 pairs 8. *E. festiva*.
- Lateral nerves of leaves 6 or fewer pairs:—
- Fruit quite glabrous 9. *E. sapotacea*.
- Fruit finely velvety 10. *E. Stapfiana*.
- Lateral nerves of leaves indistinct, secondary venation not visible:—
- Corolla rufous-pubescent internally as well as externally 11. *E. pricipua*.
- Corolla glabrous internally:—
- Flowers densely glomerate in leaf axils; leaves pale waxy greenish yellow beneath 12. *E. glomerata*.
- Flowers in short but open axillary cymes:—
- Leaves thickly coriaceous; fruit verrucose but not scurfy externally 13. *E. aenea*.
- Leaves sub-coriaceous, fruit scurfy but not verrucose externally 14. *E. Griffithii*.

1. *ERYCIBE STRIGOSA*, Prain Journ. As. Soc. Beng. LXV. 2. 536. A climber 40 to 60 feet long, with stems 1 to 2 in. in diam.; branches slightly angled with fissured bark, and except along the fissures densely clothed with black adpressed tomentum; branchlets angular with black adpressed tomentum. *Leaves* elliptic or ovate-lanceolate, base cuneate, apex rather long acuminate, with tip obtuse; 3 to 4 in. long, 1.5 to 1.75 in. wide; thinly coriaceous; dark green, quite glabrous above, brownish-black and densely covered with black adpressed tomentum beneath; lateral nerves 5 pairs, oblique, distinct beneath not visible above, secondary venation indistinct beneath not visible above; petiole .75 to 1 in. long, with close adpressed black tomentum. *Flowers* in few-flowered cymes, .25 in. across, disposed in narrow axillary panicles 3 to 6 in. long, .5 in. wide; main-rachis angular, densely rusty-pubescent, the peduncles of individual cymes .25 in. long or less, densely rusty-pubescent, as are the linear deciduous bracteoles .15 in. long, and the very short pedicels. *Sepals* orbicular, rusty-pubescent. *Corolla* white, .3 in. across (but not quite fully opened), the lobes spreading, glabrous

within; interlobular spaces brown tomentose externally; lobules ovate, their margins sub-entire. Hallier f. Bull. Herb. Boiss. V. 737.

PERAK: Thaiping, 500 to 800 feet elevation; *King's Collector* 8461!

2. *ERYCIBE MAGNIFICA*, Prain Journ. As. Soc. Beng. LXXIII.

2. 18. A strong creeper 80 to 100 feet long, stem 2 to 3 in. in diam.; old branches .75 in. in diam. still densely tomentose, quite cylindric, with large pith; branchlets .3 in. in diam., densely velvety with a tawny to rusty matted tomentum. *Leaves* elliptic or elliptic-obovate, with a narrowly truncate or rounded base, and an obtuse or sometimes retuse apex, the margin strongly revolute; 8 to 10 in long, 3.5 to 4 in. wide; coriaceous; upper surface quite glabrous, dark green and shining with sometimes a silvery, sometimes a rich coppery sheen; under surface velvety, pale brownish-green, the tomentum longer, looser, and sometimes whitish on the main-nerves; lateral nerves rather straight, spreading, 12 to 15 pairs, rather distinctly looped along the margin, prominent beneath, deeply impressed above, as is the secondary reticulate venation; petiole .35 in. long, densely rusty-velvety. *Flowers* in short axillary racemes, sometimes clustered, of close-set 2-3-flowered individual cymules; the racemes 1 to 2 in. long; peduncles, short pedicels and small ovate bracts and bracteoles densely rusty-velvety. *Sepals* orbicular, densely velvety outside, quite glabrous within, coriaceous, in fruit .2 in. across. *Corolla* .5 in. across; lobes slightly spreading, glabrous within, and waxy white or yellow, narrow and deeply divided; interlobular spaces densely dark brown, almost black velvety-pubescent externally; lobules very small oblong. *Fruit* ellipsoid, 1.25 in. long, 1 in. in diam., densely softly velvety, of a rich brown colour

PERAK: *King's Collector* 3454! 3879! 6721!

In the first of his three gatherings Kunstler has noted this as a tree 50 to 70 feet high, but in the two subsequent ones as a large creeper, which is, from the appearance of the specimens, undoubtedly the case with the first gathering also.

3. *ERYCIBE EXPANSA*, Wall. Cat. 1331. A large climber, branches angled, with fissured bark, glabrous; branchlets angular, densely rusty-tomentose. *Leaves* elliptic or slightly obovate, apex abruptly shortly acuminate to a sharp tip, base rounded or sub-cordate; 2 to 2.5 in. long, 1 to 1.5 in. wide; chartaceous; dark green, quite glabrous above, paler and rusty-pubescent, especially on the nerves, beneath, the pubescence ultimately disappearing except from the nerves in old leaves; lateral nerves 2 to 3 pairs, very oblique, ascending, secondary reticulate venation fairly visible above only; petioles .15 in. long, densely rusty-pubescent. *Flowers* in rather condensed 5-9-flowered cymes disposed in pyra-

midal terminal panicles 3 to 15 in. long, 1·5 to 6 in. wide, the main rachis and branches densely rusty-tomentose, the panicle branches ·75 to 2·5 in. long, subtended by large foliaceous bracts ·4 to 1 in. long, exactly like the foliage leaves but smaller; peduncles of individual cymes rusty-tomentose, ·25 in. long; pedicels bracteolate, ·1 in. long or less, rusty-tomentose. *Sepals* orbicular, rusty-pubescent. *Corolla* white, or white tinged with pink, ·45 in. wide; lobes spreading, glabrous within; interlobular spaces densely rusty-pubescent externally; lobules ovate acute, their margins sub-entire. G. Don Gen. Syst. IV. 392; Clarke in Hook. f. Flor. Brit. Ind. IV. 181; Prain Journ. As. Soc. Beng. LXIII. 2. 84; Hallier f. Bull. Herb. Boiss. V. 737. *E. ferruginosa*, Griff. Notul. IV. 283. *E. paniculata*, β . *expansa*, Choisy Ann. Sc. Nat. 2. I. 222; DC. Prod. IX. 464. *E. coriacea*, Kurz For. Flor. Burm. II. 213 partly (not of Wall.).

KEDAH: Lankawi, Curtis 2128!—DISTRIB. Tenasserim.

4. *ERYCIBE PRINCEI*, Wall. Cat. 1335. A large straggling bush with spreading branches, or a stout climber; branches glabrous, the bark more or less fissured but quite cylindric; branchlets densely rusty-tomentose, cylindric. *Leaves* obovate-oblong or rarely obovate-lanceolate, narrowed slightly to the narrowly truncate or sometimes rounded base, more abruptly to the shortly acuminate or acute apex, with an obtuse or occasionally acute tip; 2·5 to 4 in. long, 1·25 to 1·75 in. wide, coriaceous, shrinking somewhat irregularly when dry; glabrous rather pale green above, beneath at first rusty pubescent with a loose tomentum, which soon disappears except from the midrib; lateral nerves 5 to 7 pairs, very oblique and not very prominent on either surface, with a distinct sub-marginal looping vein; secondary reticulate venation distinct but not prominent on either surface, petiole ·2 to ·25 in. long, rusty-pubescent. *Flowers* in axillary cymes in the uppermost leaf axils, 5-9-flowered, ·75 in. wide, the ultimate 3 to 7 passing into a terminal panicle without leaves 1·5 to 3 in. long, rarely longer; peduncles ·15 to ·25 in. long, rusty-pubescent, pedicels very short and lanceolate bracteoles, ·2 in. long, rusty-pubescent. *Sepals* orbicular, coriaceous, rusty-pubescent. *Corolla* greenish, sweet-scented, ·4 in. across; lobes slightly spreading; interlobular spaces shining golden silky externally; lobules ovate, margins finely undulate. *Fruit* ellipsoid, black, smooth, ·6 in. long, ·35 in. in diam. Choisy in Ann. Sc. Nat. 2. I. 224; DC. Prod. IX. 464; Clarke in Hook. f. Flor. Brit. Ind. IV. 152; Prain Journ. As. Soc. Beng. LXIII. 2. 85; Hallier f. Bull. Herb. Boiss. V. 737 (excluding the Assam and Khasia localities), 1052. *E. campptobotrya*, Miq. Flor. Ind. Bat. Suppl. 578.

9. *ERYCIBE SAPOTACEA*, Hallier f. & Prain Journ. As. Soc. Beng. LXXIII. 2. 16. A tree (?); branches slightly angled, with fissured bark, quite glabrous. *Leaves* elliptic, base cuneate, apex abruptly shortly acuminate with tip obtuse; 5 in. long, 2 to 2.25 in. wide; firmly coriaceous; quite glabrous on both sides; bright green and glossy above, pale beneath; lateral nerves 6 pairs, distinct above and rather prominent beneath, secondary reticulate venation very distinct on both surfaces; petiole .5 in. long, glabrous. *Flowers* in few-flowered congested, axillary subsessile cymes. *Sepals* and *Corolla* not seen. *Fruit* ovoid, quite glabrous, the epicarp very coriaceous, almost woody, wrinkled and fissured, with a rounded base and conical pointed apex, 2 in. long, 1 in. in diam.; fruiting pedicels .3 in. long, with epidermis fissured like that on the branches.

PENANG: Government Hill, *Curtis* 772!

A very distinct and striking species, the flowers of which are as yet unknown. In shape the fruit is most like that of *E. Griffithii*, but besides being about twice the size it has none of the scurfy covering of the fruit of that species. The leaves of the two are very different.

10. *ERYCIBE STAFFIANA*, Prain Journ. As. Soc. Beng. LXIII. 2. 87. A shrubby or slender climber, sometimes 80 to 100 feet long; much branched; branches and glabrous branchlets cylindric. *Leaves* usually oblong or elliptic, rarely narrowly lanceolate, narrowed to a cuneate or narrowly truncate base, apex shortly acuminate with a blunt tip; 4 to 7 in. long, 2 to 3 in. wide; coriaceous; glabrous; dark green and glossy above, paler beneath; lateral nerves 4 to 6 pairs, ascending obliquely, the lowest pairs extending more than half-way along the margin, the secondary veins reticulately raised beneath, visible but not conspicuous above; petiole .25 in. long, glabrous. *Flowers* in clustered axillary cymes .5 to 2 in. long, in fascicles of 4 to 9 from a woody protuberance, each 5-20-flowered; peduncles densely dark-brown-tomentose, as are the bracteolate pedicels, .1 to .15 in. long. *Sepals* orbicular, densely brown-tomentose. *Corolla* waxy-white within, .5 in. across; lobes narrow; interlobular spaces very dark-brown-tomentose (nearly black—*Kunatler*) externally; lobules narrow, divergent, slightly crenulate along the obliquely truncate apex. *Fruit* ovoid, .6 to .8 in. long, .5 in. in diam., densely clothed with a fine dark-brown velvety tomentum. Hallier f. Bull. Herb. Boiss. V. 738.

PERAK: at various elevations from 800 to 4,000 feet, *King's Collector* 4015! 4115! 7784! *Wray* 3371! *Scortechini* 1793!—DISTRIB. Tenasserim (*Parish*).

11. *ERYCIBE PRÆCIPUA*, *Prain Journ. As. Soc. Beng.* LXIII. 2. 86. A large climbing shrub; branches and ultimate branchlets cylindric, glabrous. *Leaves* narrowly elliptic to elliptic, narrowed to the cuneate base and more abruptly to the obtuse tip; thickly coriaceous; quite glabrous; 1.5 to 4 in. long, .75 to 2 in. wide; nerves about 5 pairs, curved and ascending, but all very obscure even when dry; petioles .3 in. long, glabrous. *Flowers* in small, axillary, laxly 5-8-flowered cymes .5 in. across; peduncles and bracteolate pedicels closely rusty-pubescent, pedicels .12 in. long. *Sepals* orbicular, the outer minutely, the inner densely closely rusty-pubescent. *Corolla* whitish, .5 in. wide, the lobes very narrow, spreading; interlobular spaces rufous-pubescent internally as well as externally; lobules small glabrous, narrowly oblong, sub-acute, divergent. *Fruit* ovoid, slightly rough but not verrucose, .7 to .75 in. long, .5 to .6 in. wide, pointed or rounded.

PENANG: Government Hill, *Curtis* 911! 1273! PERAK: Larut, *Scortechini*!

Father *Scortechini*'s specimens from Perak have the fruit slightly smaller, not at all pointed, and not so distinctly roughened as the Penang specimens, but in all other respects the two plants agree.

12. *ERYCIBE GLOMERATA*, *Bl. Bijdr.* 1047. A shrub or a small tree, 10 to 20 feet high, erect, much spreading; branches and sparingly pubescent ultimate branchlets cylindric. *Leaves* elliptic or narrow-oblong, shortly or gradually narrowed to the cuneate base and to the obtuse tip; 7 to 12 in. long, 1.75 to 5 in. wide; coriaceous, quite glabrous; dark green above, waxy-pale greenish-yellow (*Kunstler*) beneath; lateral nerves 8 to 9 pairs, visible but not raised on either surface or only faintly raised beneath; petiole .15 to .35 in. long. *Flowers* in axillary very short and closely glomerate 5-8-flowered cymes; peduncles .05 in. long; individual flowers nearly sessile with 3 rusty-pubescent bracteoles at the base of the calyx. *Sepals* almost glabrous, pale waxy-green (*Kunstler*), orbicular, margins ciliate. *Corolla* pure white within, 1.25 in. across; lobes narrow; interlobular spaces rufous externally, lobules oblong, obtuse, slightly crenulate at the apex. *Hallier f. Bull. Herb. Boiss.* V. 382, 739. *E. alba*, *Prain Journ. As. Soc. Beng.* LXIII. 2. 87.

VAR. *typica*; leaves elliptic, 3.5 to 5 in. wide.

MALACCA: *Griffith*! *King*!—DISTRIB. Indo-China, Malay Archipelago.

King's examples are from a cultivated plant, whether those of *Griffith* be from wild plants is unknown.

4. NEUROPELTIS, Wall.

Large scandent, tomentose shrubs. *Leaves* ovate or oblong, firm, petioled. *Flowers* many, small, in axillary racemes or terminal panicles; pedicels distinct, beset by solitary ovate-lanceolate bracteoles under the calyx, in flower inconspicuous, in fruit greatly accrescent.

Sepals 5, sub-orbicular, hardly altered in fruit. *Corolla* small, white; tube wide-campanulate; limb deeply 5-lobed, the lobes induplicate-valvate in bud. *Stamens* 5, exserted or included, adnate to corolla-tube; filaments filiform. *Ovary* imperfectly or perfectly 2-celled; ovules 4; styles 2, free throughout, stigmas sub-capitate wavy or obscurely lobed. *Fruit* a globose, 4-valved, 1-seeded capsule sessile near the centre of the flat, much-acrescent bracteole. *Seed* globose, glabrous, albuminous; cotyledons plicate.—DISTRIB. Species 2, in tropics of Eastern Hemisphere.

NEUROPELTIS RACEMOSA, Wall. Cat. 1322. A robust climber; branchlets pubescent, lenticellate, rather dark. *Leaves* alternate, elliptic-lanceolate, base cuneate, apex acuminate with a narrow longish thickened mucro; lamina 2.5 to 5 in. long, 1.25 to 2.25 in. wide; firmly papery; glabrous except along the midrib above, slightly rusty with a sub-persistent pubescence beneath; lateral nerves about 7-paired, somewhat curved forward, rather prominent and pubescent beneath. *Flowers* in axillary racemes 2 to 5 in. long, peduncle .5 to 1 in. and rachis rusty-tomentose; bracts small ovate; pedicels .12 to .2 in. long, tomentose, slender, with an ovate-lanceolate bracteole under the calyx. *Sepals* 5, somewhat connate below, small, orbicular, rufous-villous. *Corolla* small, campanulate, white, tube rufous-villous externally; limb .25 to .3 in. across, 5-lobed, lobes ovate nearly as long as the tube. *Stamens* 5, adnate to corolla-tube, exserted; filaments thickened at base. *Ovary* imperfectly or perfectly 2-celled, rufous-villous at base; ovules 2 in each cell; styles 2, glabrous; stigmas large globose wavy. *Capsule* .25 in. long, ovoid, glabrescent, sessile in the centre of the accrescent, orbicular, scarious, reticulate bract 1 to 1.75 in. wide with rounded or cordate base. *Seed* globose, glabrous, albuminous; cotyledons plicate. Roxb. Flor. Ind. ed. Carey & Wall. II. 44; Deless. Ic. Select. V. t. 96; Choisy Convolv. Or. 109, t. 2. f. 12, and in DC. Prod. IX. 437; Bedd. Ic. Pl. Ind. Or. t. 291; Kurz For. Flor. Burm. II. 222; Clarke in Hook f. Flor. Brit. Ind. IV. 225. *N. ovata*, Wall. Cat. 1323; Choisy Convolv. Or. 110, t. 2, f. 13, and in DC. Prod. IX. 437. *N. bracteata*, Griff. Notul. IV. 285. *N. intermedia*, Griff. Notul. IV. 285.

PEBAK: Larut, *Scortechini* 1483! 1489! 2071! *King's Collector* 3544! 3792! 4370! 6809! PENANG: *Wallich*! MALACCA: *Maingay* 1152! 1163! SINGAPORE: *Wallich*!—DISTRIB. Malabar, Borneo.

5. EVOLVULUS, Linn.

Small prostrate or erect herbs or undershrubs, never climbing. *Leaves* small, entire, often distichous. *Flowers* small, blueish or white,

in axillary few-flowered peduncled or sub-sessile cymes. *Sepals* 5, small, sub-equal, not enlarged in fruit. *Corolla* small, funnel-shaped or sub-rotate; limb plicate, sub-entire. *Stamens* 5, included or exerted; filaments filiform. *Ovary* 2-celled or, rarely, 1-celled; ovules 4; styles 2, free from the base, each cleft into 2 linear or sub-clavate stigmas, papillose on the inner face. *Fruit* a 4-valved, less often a 2-valved capsule, 2-celled or 1-celled. *Seeds* 4 or 2, rarely solitary, glabrous; cotyledons twice plicate.—**DISTRIB.** Species about 80, mostly tropical American; the present the only Asiatic.

EVOLVULUS ALSINOIDES, Linn. Sp. Pl. ed. II. 392. A small perennial herb; annual branches numerous, wiry, often prostrate. *Leaves* variable in shape from lanceolate to ovate, and in pubescence from sparingly silky to densely tawny or rufous-tomentose; .25 to 1 in. or occasionally 1.5 in. long, .2 to .5 in. wide; petiole absent or short, rarely .2 in. long. *Flowers* 1 to 3, on peduncles .1 in. to 1 or 1.5 in. long; bracts small, linear, hirsute, persistent; pedicels .05 to .5 in. long. *Sepals* 5, lanceolate, hirsute, .1 to .15 in. long. *Corolla* pale blue or white, transparent, .25 to .3 in. long. *Capsule* globose, .15 in. in diam., 4-valved. *Seeds* 4, glabrous. Burm. Fl. Zeyl. 9, t. 6, f. 1; Wall. Cat. 1317; Roxb. Flor. Ind. II. 105; Choisy in DC. Prod. IX. 447; Clarke in Hook f. Flor. Brit. Ind. IV. 220. *E. unifolius*, Linn. Sp. Pl. ed. II. 392; Choisy in DC. Prod. IX. 449. *E. angustifolius*, Roxb. Flor. Ind. ed. Carey & Wall. II. 107. *E. hirsutus*, Lamk Encyc. Meth. III. 538; Ill. t. 216, f. 2; Choisy in DC. Prod. IX. 447, excl. syn. Roxb. *E. sericeus*, Wall. Cat. 1315. *Convolvulus valerianoides*, Blanco Fl. Filip. 90.

NICOBARS: Kamorta, Kurz! **SINGAPORE:** Changi, Ridley!—**DISTRIB.** Cosmopolitan in the tropics.

The form recorded from the Nicobars and Singapore is the narrow-leaved form, which is *E. unifolius* Linn. In both localities it is probably an introduced weed.

6. BONAMIA, Thouars.

Large climbing shrubs. *Leaves* large ovate-cordate, entire, firm. *Flowers* medium, in axillary peduncled cymes, bracts small. *Sepals* 5, sub-equal, firm, ovate. *Corolla* infundibuliform, tube hirsute externally except opposite the sepals; limb 5-lobed, plicate. *Stamens*, 5, included, adnate to corolla-tube; filaments filiform, at least in upper part. *Ovary* 2-celled, ovules 4; style 2-fid to the middle; stigmas 2, capitate. *Fruit* a globose or ovoid capsule; valves thin, splitting irregularly at their apices. *Seeds* normally 4, glabrous or nearly so.—**DISTRIB.** Species about 30, throughout the tropics.

BONAMIA SEMIDIGYNA, Hallier f. Engl. Bot. Jahrb. XVI. 528. A large twining shrub; stems and leaves rusty-tomentose. *Leaves* ovate-cordate, entire, apex acute; length 4 in., width 2·5 in.; petiole 1·5 in. long. *Flowers* medium, in axillary sub-capitate 2-5-flowered cymes; peduncles 1 to 2 in. long, rusty-villous as are the pedicels and sepals; bracts ·25 in. long, oblong, rusty-villous. *Sepals* ·35 to ·5 in. long, ovate-oblong, sub-acute, sub-equal. *Corolla* yellowish, wide-infundibuliform, 1·5 in. long, tube hirsute externally; limb sub-entire. *Style* ·6 in. long. *Capsule* sub-globose, glabrous, ·5 in. in diam., splitting into many vertical segments, hardly covered by the slightly accrescent, ovate fruiting sepals. *Seeds* sub-glabrous. Bull. Herb. Boiss. V. 1814. *Convolvulus semidigynus*, Roxb. Hort. Beng. 13, Flor. Ind. I. 468; Wall. Cat. 1405. *Breweria cordata*, Bl. Bijdr. 722, Choisy in DC. Prod. IX. 438; Clarke in Hook. f. Flor. Brit. Ind. IV. 223. *B. Roxburghii*, Choisy Convolv. Or. III., and in DC. Prod. IX. 438; Wight, Ic. t. 1370; Dalz & Gibs. Bomb. Fl. 162. *B. madagascariensis*, Choisy Mem. Soc. Phys. Genev. 493.

PROV. WELLESLEY: at Kubang Ulu, *Curtis*! PENANG: on the coast, *Porter*! *Curtis* 1703! PERAK: Ipoh, *Curtis* 3166!—DISTRIB. S.E. Asia generally, Mascarenes.

7. CALYSTEGIA, R. Br.

Prostrate or twining perennial herbs. *Leaves* entire or lobed, glabrous or nearly so. *Flowers* medium, axillary solitary or rarely in few-flowered cymes; bracts 2, large, leafy, embracing the calyx, persistent. *Sepals* 5, ovate or oblong, the innermost 2 rather the smallest. *Corolla* funnel-shaped or campanulate; tube glabrous externally with 5 bands in centre of component petals, each with 5 pellucid lines at the base; limb sub-entire plicate. *Stamens* 5, adnate to corolla-tube, included; filaments sub-equal. *Ovary* 1-celled or imperfectly 2-celled; ovules 4; style filiform, entire; stigma of 2 oblong lobes. *Fruit* a globose, 1-celled, 4-valved, 4-seeded capsule. *Seeds* black, glabrous or verrucose.—DISTRIB. Species 16 to 20, in warm and temperate regions.

CALYSTEGIA HEDERACEA Wall. Cat 1328. A prostrate or climbing weed of cultivated places and hedges. *Leaves* somewhat irregular, cordate or sagittate, lobed or rarely entire, 1 to 3 in. long, ·75 to 1 in. wide; petiole 1 in. long. *Flowers* axillary solitary; peduncles 1 in. long; bracts 2 ovate, ·3 in. across, persistent, enclosing the calyx. *Sepals* 5, oblong, obtuse, glabrous, outer ·3 in. long, inner rather smaller. *Corolla* sub-campanulate, pinkish purple, tube 1 in. long; limb plicate, sub-entire. *Capsule* ovoid, sub-acute, glabrous, ·3 in. long.

Seeds glabrous. Roxb. Flor. Ind. ed. Carey & Wall. II. 94; Choisy Convolv. Or. 103, and in DC. Prod. IX. 434; Clarke in Hook. f. Flor. Brit. Ind. IV. 217. *Convolvulus Wallichianus*, Spreng. Syst. cur. post. 61.

PENANG: Porter, fide Wallich.—DISTRIB. Northern India, Afghanistan, Eastern Asia.

Possibly only a casual weed in our area.

8. HEWITTIA, W. & A

A pubescent twining herb. *Leaves* cordate, entire angled or lobed. *Flowers* axillary solitary, or in few-flowered cymes; bracts below the calyx 2, linear-lanceolate. *Sepals* 5, acute; outer 3 wide-ovate, accrescent in fruit, inner 2 narrow-lanceolate. *Corolla* medium, yellow or white with a purple eye; tube campanulate; limb plicate. *Stamens* 5, included, adnate to corolla-tube; filaments linear with dilated bases. *Ovary* 1-celled or imperfectly 2-celled; ovules 4; style filiform; stigma of 2 ovate-oblong lobes. *Fruit* a globose, 4-valved, 1-celled, normally 4-seeded capsule. *Seeds* black, glabrous.—DISTRIB. A single species, throughout the tropics of the Eastern Hemisphere and Polynesia.

HEWITTIA BICOLOR, Wight Ic. t. 835. A pubescent perennial herb; stems twining. *Leaves* cordate, entire angled or lobed, pubescent, 2 to 4 in. long; petiole .5 in. long. *Flowers* on axillary 1-few-flowered peduncles .5 to 4 in. long; bracts 2, narrow-lanceolate, .25 to .5 in. long, situated a short distance below the calyx. *Sepals* 5, the outer ovate, accrescent; the inner narrowly lanceolate, .3 to .5 in. long. *Corolla* yellow or whitish with a purple patch in lower part of tube, rather widely campanulate, 1 in. long; tube externally hirsute; lobes 5, very short. *Stamens* 5, included; filaments linear with dilated bases. *Ovary* hirsute, more or less perfectly 2-celled; ovules 4; style filiform; stigmas 2, ovate-oblong. *Fruit* a globose capsule, .25 in. in diam., 1-celled, opening by 4 valves. *Seeds* 4, black, glabrous. Wight Ill. t. 168; Clarke in Hook. f. Flor. Brit. Ind. IV. 216. *Convolvulus bicolor*, Vahl. Symb. III. 25; Bot. Mag. t. 2205; Roxb. Hort. Beng. 14; Flor. Ind. I. 475; Flor. Ind. ed. Carey & Wall. II. 57; Wall. Cat. 1410. *C. bracteatus*, Vahl Symb. III. 25. *C. involucratus*, Ker in Bot. Reg. t. 318 (not of Spreng.). *Ipomœa bicolor*, Sweet Hort. Brit. ed. 2, 372. *I. bracteata*, Bl. Bijdr. 711 (not of Willd. nor of Wight). *I. Weinmanni* Roem. & Schult. Syst. Nat. IV. 243. *Calystegia Kerriana*, Sweet Hort. Brit. ed. 2, 370. *Palmia bicolor*, Endl. ex Dalz. & Gibs. Bomb. Flor. 163. *Shutera bicolor*, Choisy Convolv. Or. 104, and in DC. Prod. IX. 435; Flor. des Serres t. 421. *Aniseia Afzelii*, G. Don Gen. Syst. IV. 295. *A. bracteata*, Hassk. Pl. Jav. Rar. 516.

PERAK : Larut, *Scortechini* !—DISTRIB. Tropical Africa, S.E. Asia generally, Polynesia.

9. ANISEIA, Choisy.

Twining herbs. *Leaves* elliptic, mucronulate or lanceolate. *Flowers* axillary, solitary or in few-flowered cymes. *Sepals* 5, herbaceous, acuminate; outer 3 the larger, ovate, decurrent on the peduncle and accrescent in fruit; inner 2 smaller, lanceolate, unaltered in fruit. *Corolla* wide-infundibuliform; tube hirsute externally except on spaces opposite the sepals, with 5 distinct vertical bands; limb sub-entire. *Stamens* 5, adnate to corolla-tube, included; filaments filiform. *Ovary* glabrous, 2-celled; ovules 4; style filiform; stigma 2-globose. *Fruit* a 2-celled, 4-valved capsule. *Seeds* 4, large, black, smooth.—DISTRIB. Species about 5, all confined to America but one, which is cosmopolitan in the tropics

ANISEIA MARTINICENSIS, Choisy Convolv. Rar. 144. A slender herb creeping in wet places or climbing, glabrous or with a few adpressed hairs. *Leaves* oblong-lanceolate, apex obtuse with a mucro, base cuneate; glabrescent; .75 to 3 in. long, .5 to 1 in. wide; petiole .6 in. long. *Flowers* axillary solitary; peduncles 1 in. long, with 2 minute, persistent bracts about the middle. *Sepals* unequal, the outer ovate-acute .6 in. long, the inner narrower, green, glabrescent; in fruit accrescent at length .75 to 1 in. long, the 2 outer then sub-cordate-ovate scarious, strongly nerved, decurrent on the peduncle; the inner lanceolate. *Corolla* white, campanulate, tube 1 in. long, pubescent outside; limb 1 in. across. *Capsule* ovoid, glabrous, .5 in. long. *Seeds* with minutely strigose margins. Choisy in DC. Prod. IX. 430; Hallier f. Engl. Bot. Jahrb. XVIII 96, and Bull. Herb Boiss. V. 382. *A. uniflora*, Choisy Convolv. Or. 101, t. 2, f. 9, and in DC. Prod. IX. 431; Wight Ic. t. 850. *Convolvulus martinicensis*, Jacq. Am. 20, t. 17. *C. uniflorus*, Lamk Encyc. Meth. III. 544; Burm. Fl. Ind. 47, t. 21. *C. emarginatus*, Vahl Symb. III. 23. *C. Rheedei*, Wall. Cat. 1358; Roxb. Flor. Ind. ed. Carey & Wall. II. 70. *Ipomœa martinicensis*, Mez Prim. Fl. Esseq. 98. *I. uniflora*, Roem. & Schult. Symb. IV. 247; Clarke in Hook. f. Flor. Brit. Ind. IV. 201. *I. lanceolata*, G. Don Gen. Syst. IV. 282.

PERAK : Kwala Dipong, *Scortechini* 1780! Kota Bahru, *King's Collector* 1075! MALACCA : *Griffith* !—DISTRIB. Tropics generally.

10 JACQUEMONTIA, Choisy.

Climbing or twining herbs or undershrubs; stems and leaves usually pubescent. *Leaves* usually cordate or elliptic, entire or rarely toothed or lobed. *Flowers* axillary, in compound umbellate or capitate

cymes, very rarely solitary; bracts small, rarely leafy. *Sepals* 5, equal or unequal. *Corolla* usually small; tube infundibuliform with a wide or narrow throat, and with 5 vertical bands each ending in 2 distinct nerves; limb plicate. *Stamens* 5, adnate to corolla-tube, included. *Ovary* glabrous, 2-celled; ovules 4; style filiform; stigmas 2, linear or elliptic-oblong. *Fruit* a globose 2-celled capsule, usually 8-valved, rarely 4-valved. *Seeds* normally 4, usually glabrous, often slightly winged along the margins.—**DISTRIB.** Species 60 to 70, mostly in Brazil; 2 to 3 in S.E. Asia.

JACQUEMONTIA PANICULATA, Hallier f. Engl. Bot. Jahrb. XVI. 541; XVIII. 95. A slender climber; stems twining, puberulous. *Leaves* ovate-cordate, acute, entire, pubescent beneath, puberulous at length; glabrescent above, 1.5 to 3 in. long, 1 to 2 in. wide; petiole .5 to 1 in. long. *Flowers* axillary, in small dense many-flowered sub-capitate cymes; peduncles puberulous, 1 to 1.5 in. long; bracts inconspicuous. *Sepals* 5, ovate-cordate, pubescent, .25 in. long, not altered in fruit. *Corolla* tubular, .5 in. long; mouth narrow, limb pink or white, shortly acutely 5-lobed. *Capsule* globose, glabrous, 2 in. in diam. *Seeds* glabrous. *Convolvulus parviflorus*, Vahl. Symb. III. 29; Roxb. Flor. Ind. ed. Carey & Wall. II. 51; Choisy Convolv. Or. 98, and in DC. Prod. IX. 413; Clarke in Hook. f. Flor. Brit. Ind. IV. 220. *C. asclepiadeus*, Wall. Cat. 1396. *Ipomœa paniculata*, Burm. Flor. Ind. 50, t. 21, f. 3. *I. parviflora*, Pers. Synops. I. 183 (not of Vahl.)

PERAK. Kampong Kota, Wray 3337!—**DISTRIB.** Tropical Africa, S.E. Asia generally, Australia.

11. MERREMIA, Dennst.

Shrubs or herbs, usually climbing, rarely erect or prostrate; stems very rarely winged. *Leaves* entire, lobed, or divided. *Flowers* axillary, usually long-peduncled, solitary or in few-flowered, rarely many-flowered cymes, bracts small. *Sepals* 5, sub-equal, elliptic or lanceolate, acuminate, rarely rounded or truncate, convex, usually slightly accrescent in fruit. *Corolla* campanulate, white, less often yellow or orange, the tube with 5 vertical bands each usually marked by 5 dark-violet lines, limb plicate, margin slightly 5-lobed. *Stamens* 5, unequal, included or exerted; filaments filiform; anthers usually twisted; pollen never spinulose. *Ovary* 2-celled or occasionally 4-celled, ovules 4; style filiform; stigma 2-globose. *Fruit* a 4-valved capsule, 1-4-locular, sometimes the style separating with a small stopple. *Seeds* 4, rarely fewer, dull, glabrous, rarely puberulous.—**DISTRIB.** Species about 40, in all warm countries.

Corolla glabrous externally :—

Leaves not peltate :—

Leaves deeply 5-lobed ; flowers large 1. *M. vitifolia*.

Leaves entire or very slightly lobed ; flowers small —

Sepals acuminate ; flowers yellow with a pink or purple eye :—

Leaves acute at apex 2. *M. hastata*.

Leaves obtuse, truncate, or 3-toothed at apex 3. *M. tridentata*.

Sepals obtuse : flowers without a distinct eye :—

Leaves narrow-oblong, the lower often ovate-oblong ; flowers white with pinkish tinge or yellowish-white or pale yellow 4. *M. caespitosa*.

Leaves ovate-cordate, margin often crenate or toothed ;

flowers clear yellow 5. *M. convolvulacea*.

Leaves peltate ; flowers large 6. *M. nymphaeifolia*.

Corolla somewhat hirsute or shaggy externally .—

Leaves more or less hirsute ; flowers in compact corymbose

or umbellate cymes 7. *M. umbellata*.

Leaves quite glabrous ; flowers in lax cymes 8. *M. crispata*.

1. *MERREMIA VITIFOLIA*, Hallier f. Engl. Bot. Jahrb. XVI. 552. A large climber with slender hispidly hairy branches. *Leaves* cordate, palmately 5-lobed, 2 to 6 in. across, lobes triangular acute, often toothed or again acutely lobed ; petiole .5 to 2 in. long, hispidly hairy. *Flowers* in axillary 1-7-flowered cymes ; peduncles hispidly hairy, 1 to 4 in. long, pedicels hispidly hairy, .2 to .5 in. long. *Sepals* ovate-acute, hispid, .5 in. long, in fruit somewhat enlarged, .75 in. long. *Corolla* campanulate, clear yellow, glabrous, 1.5 in. long and nearly as wide, slightly irregular. *Capsule* depressed-globose, membranous, 2-celled, normally 4-seeded. *Seeds* glabrous. Verslag. Buitenzorg, 1895, 127, and Bull. Herb. Boiss. V. 379. *Convolvulus vitifolius*, Burm. Fl. Ind. 45, t. 18, f. 1 ; Linn. Mantiss. 203 ; Roxb. Hort. Beng. 14, Flor. Ind. I. 476, and ed Carey & Wall. II. 61 ; Wall. Cat. 1348. *C. angularis*, Burm. Fl. Ind. 46, t. 19, f. 2 ; Linn. Mantiss. 203 ; Hassk. Pl. Jav. Rar. 519. *Ipomœa vitifolia*, Sweet Hort. Brit. ed. II. 372, Blume Bijdr. 709 ; Choisy Convolv. Or 72, and in DC. Prod. IX. 361, Kurz For. Flor. Burm. II. 219 ; Clarke in Hook. f. Flor. Brit. Ind. IV. 213. *I. angularis*, Choisy Convolv. Or. 72

PERAK : Larut, *Scortechini* ! ANDAMANS : Port Mouat, *Kurz* ! Narcondam, *Prairie* ! NICOBARS : Nancowry, *Prairie* ! Collector !—
DISTRIB. S.E. Asia generally.

2. *MERREMIA HASTATA*, Hallier f. Engl. Bot. Jahrb. XVI. 552. A diffuse twining biennial herb, stem angular. *Leaves* glabrous, hastate-lanceolate, 2 to 3 in. long, .3 to .5 in. wide, apex acute ; petiole very short. *Flowers* 1 to 3 on wiry axillary peduncles as long as or longer than the leaves ; bracts very small, lanceolate. *Sepals* narrow,

acuminate, .3 to .5 in. long, glabrous. *Corolla* funnel-shaped, .6 in. long, pale yellow with a purple eye; limb slightly lobed. *Stamens* 5; filaments slightly hairy at the base; anthers straight. *Ovary* and style glabrous; ovary 2-celled, each cell 2-ovuled. *Capsule* ovoid, papery, glabrous, 2-celled. *Seeds* glabrous. Engl. Bot. Jahrb. XVIII. 117. *Convolvulus hastatus*, Desr. in Lamk Encyc. Meth. III. 547. *C. filicaulis*, Vahl Symb. III. 24. *C. denticulatus*, Spreng. Syst. I. 603. *C. medrus*, Roxb. Flor. Ind. I. 474, and ed. Carey & Wall. II. 56; Wall. Cat. 1346 (not of Linn.). *C. Blumei*, Dietr. Syn. Pl. I. 675. *Ipomœa denticulata*, R. Br. Prod. I. 485; Bot. 8. *MERREMIA CRISPATULA*, Prain Beng. Pl. II. 730; VAR. *andamanica*, Prain. A large glabrous scandent herb. *Leaves* ovate-cordate, acuminate, margins entire or faintly undulate, glabrous on both surfaces, 3 to 4 in. long, 2.5 to 4 in. wide; petiole 1 to 1.5 in. long. *Flowers* in axillary few-flowered cymes, peduncles 1.5 to 2 in. long, pedicels .75 to 1.25 in. long, thickened upwards. *Sepals* orbicular, .5 in. long, in fruit .75 in. long. *Corolla* campanulate, limb hardly lobed, tube hirsute externally, yellow, 1.25 in. long. *Capsule* sub-orbicular, .75 in. across. *Seeds* minutely velvety, margins somewhat shaggy. *Ipomœa petaloidea*, var. *andamanica*, Prain Journ. As. Soc. Beng. LXIII. 2, 110.

ANDAMANS. S. Andaman, common.

This is in all probability specifically distinct from *Merremia crispatula* (*Ipomœa petaloidea*, Choisy), but it seems preferable to treat it for the moment as a variety of that species and not as a new species, because of its remarkable resemblance to *Merremia Riedeliana*, Hallier f. (*Ipomœa Riedeliana*, Oliv.), and *Merremia mammosa*, Hallier f. (*Ipomœa mammosa*, Choisy). From the former, as described and figured by Oliver, this differs in having a 4-celled ovary with 1 ovule in each cell, whereas *M. Riedeliana* has a 2-celled ovary with 4, sometimes 5, ovules in each cell. From *M. mammosa*, as figured by Rumphius, this differs in having obtuse calyx-lobes and a shaggy corolla; Rumphius' figure shows the sepals acute and the corolla glabrous. This plant appears to be the same thing as *Convolvulus platypeltis*, Span, from Timor, and if it proves to be distinct alike from *M. Riedeliana* and *M. mammosa*, which last is cited by Dr Hallier as an Andaman plant, though we have no authentic example of *M. mammosa* from the Andamans at Calcutta, the name it should bear will be *Merremia platypeltis*.

12. OPERCULINA, Manso.

Large herbaceous climbers; stems, peduncles and petioles usually winged. *Leaves* large, entire or lobed, rarely peltate. *Flowers* large, showy, axillary, solitary or often in few-flowered cymes. *Sepals* 5, large, ovoid, glabrous, accrescent in fruit and ultimately irregularly splitting from the tip. *Corolla* infundibuliform, rarely campanulate; tube with 5 vertical smooth bands. *Stamens* 5; filaments filiform; anthers large, at length contorted; pollen never spinulose. *Ovary* 2-celled, glabrous; ovules 4; style filiform; stigma 2-globose. *Fruit* a capsule, not

opening by valves; the epicarp circumscissile above the middle, the cap in separating carrying away the style; the endocarp at first entire, at length rupturing irregularly. *Seeds* usually solitary, rarely more than one, black, smooth or furred, usually large.—DISTRIB. Species 15, tropics generally.

Stems winged; bracts large, coloured; flowers white or pale yellow; leaves softly pubescent, not palmate 1. *O. Turpethum*.
 Stems not winged; bracts small; flowers brilliant yellow; leaves glabrous, deeply palmately lobed 2. *O. tuberosa*.

1. OPERCULINA TURPETHUM, Manso En. Pl. Bras. 16, n. 49. A stout softly pubescent climber, with strong twining 4-angled ~~at~~ compressed less often sub-cylindric winged stems, wings membranous. *Leaves* large, ovate or oblong, obtuse or acute, 2 to 5 in. long, 1 to 3 in. wide, base cordate or truncate; petiole 1 in. long. *Flowers* axillary, in few-flowered cymes; peduncles 1 to 4 in. long; bracts oblong, 1 in. long, sometimes pinkish-purple, caducous. *Sepals* 5, ovate, softly pubescent, .5 in. long; in fruit accrescent orbicular, concave, scarious and fissile, 1 in. long. *Corolla* white or pale yellow, tubular-campanulate, 1.5 in. long. *Stamens* 5, included, anthers at length contorted. *Capsule* globose, .5 to .75 in. across. *Seeds* 4 or fewer, glabrous. Hallier f. Engl. Bot. Jahrb. XVIII. 120, and Verslag. Buitenzorg, 1895, 128. *Convolvulus Turpethum*, Linn. Sp. Pl. 155; Roxb. Hort. Beng. 14, Flor. Ind. ed. Carey & Wall. II 57, and Flor. Ind. 2. OPERCULINA TUBEROSA, Meissn in Mart. Fl. Bras. VII. 212. A stout glabrous climber with strong twining smooth or muricate stems. *Leaves* large, ovate, deeply palmately lobed; lobes elliptic-lanceolate, acuminate, entire, 3 to 5 in. across; petiole 2 to 5 in. long. *Flowers* axillary in many-flowered cymes; peduncles 2 to 6 in. long; bracts deciduous; pedicels .25 to 1 in. long. *Sepals* 5, elliptic-oblong, obtuse; accrescent in fruit and spreading, ultimately 2 in. long, 1 to 1.5 in. wide. *Corolla* yellow, tubular-campanulate, 2 in. long. *Stamens* 5, included,

anthers twisted. *Capsule* globose, .3 in. wide; peduncle somewhat thickened. *Seeds* furred along the angles. Hallier f., in Engl. Bot. Jahrb. XVI. 476, 549; XVIII. 119; Verslag. Buitenzorg 1895, 128, and Bull. Herb. Boiss. VII. 410. *Ipomæa tuberosa*, Linn. Sp. Pl. 160; Choisy in DC. Prod. IX. 362 (partly).

SINGAPORE: *Hullett* 645, in cultivation.—DISTRIB. America, Africa, India, Malaya, New Caledonia.

LEPISTEMON, Bl.

Stout climbing herbs, with villous stems. *Leaves* cordate, often more or less lobed. *Flowers* in very dense axillary cymes; bracts narrow, deciduous. *Sepals* 5, sub-equal, herbaceous, hispid or glabrous, acute or obtuse. *Corolla* small, yellowish-white; tube hirsute externally, narrowed and shortly cylindric at base, urceolate above; limb shortly 5-lobed. *Stamens* 5, included; filaments dilated at their bases into 5 sub-equal, concave scales arched over the ovary; *disk* large cupular. *Ovary* 2-celled; ovules 4; style very short; stigma 2-partite, sub-capitate. *Fruit* a 4-valved capsule. *Seeds* glabrous.—DISTRIB. Species 3, S.E. Asiatic and African.

LEPISTEMON FLAVESCENS, Bl. Bijdr. 722. A climber with stout fulvous-villous stems. *Leaves* ovate-cordate, acute, entire or often distinctly 3-lobed, densely tawny-tomentose on both surfaces; 3 to 5 in. wide; petiole 1 to 2 in. long. *Flowers* yellowish-white in closely 10-30-flowered axillary cymes, sessile or on short peduncles .25 to .5 in. long; bracts tawny-hirsute, .2 in. long, deciduous. *Sepals* 5, rather narrowly ovate to lanceolate, sub-acute to rather finely acuminate, densely patently sub-strigose, .35 to .4 in. long. *Corolla* narrow and hyaline at the base, membranous and from slightly to widely urceolate above; tube hirsute externally; limb widely infundibuliform. *Stamens* 5, the basal processes papillose or hirsute, included in the lower part of the corolla-tube and overarching the short style; filaments glabrous, included in the upper part of the corolla-tube. *Ovary* 2-celled; ovules 4; style very short; stigma 2-lobed, lobes sub-globose. *Capsule* ovoid, glabrous, 2-celled, 4-valved, .25 in. long, normally 4-seeded. *Seeds* glabrous. Miq. Flor. Ind. Bat. II. 629; Prain Journ. As. Soc. Beng. LXIII. 2, 111; Wight Ic. t. 1362; Choisy in DC. Prod. IX. 348. *L. Wallichii*, Choisy Convolv. Or. 61, and in DC. Prod. IX. 348; Clarke in Hook. f. Flor. Brit. Ind. IV. 216. *Convolvulus cephalanthus*, Wall. Cat. 1402. *C. binectariferus*, Wall. in Roxb. Flor. Ind. ed. Carey & Wall. II. 47. *Vallaris controversa*, Spreng. Syst. cur. post. 65. *Ipomæa Wallichii*, Steud. Nomencl. Bot. *Nemodora* sp., Griff. Notul. IV. 286.

PERAK : Larut, *Scortechini* n. 1544! Goping, *King's Collector* 987† 1059!—DISTRIB. Assam, Tenasserim, Chittagong, Java, Borneo, Philippines.

The three gatherings from Perak agree with each other in every respect. They differ from the plant as it occurs in Tenasserim, in having a more widely urocelate corolla and even longer and more lanceolate sepals; at the same time they differ from the plant as it occurs in the Malay Archipelago, in having the sepals narrowly lanceolate and acuminate, instead of ovate and sub-acute. As regards corolla, however, they are exactly like the species as it occurs elsewhere in Malaya. Since the Perak plant combines the characters of the two previously recognised species—*L. Wallichii* with long acuminate sepals and *L. flavescens* with wide-urocelate corolla—it appears to afford conclusive proof of the suggestion already made by Clarke, *l.c.*, that the Assamese and the Malayan plants are no more than forms of one somewhat variable species. An Indian form occurs in Travancore; this has been characterised by Stapf as a distinct species, *L. levocalyx*, probably quite justly, since the Travancore plant has quite glabrous and obtuse sepals: the same form occurs in Chittagong; otherwise, however, the Indian plant agrees with the forms reported from Indo-China and Malaya.

IPOMŒA, Linn.

Herbs, rarely shrubs, twining or prostrate, less often sub-erect or erect. *Leaves* alternate, entire lobed or divided. *Flowers* axillary, solitary or in cymes, the cymes rarely paniculate, or in terminal spikes; bracts various. *Sepals* 5, ovate or linear, equal or unequal. *Corolla* campanulate or infundibuliform; limb plicate, very slightly 5-lobed. *Stamens* 5, included or very rarely exserted; filaments filiform or dilated at the base, often somewhat unequal; anthers straight or contorted; pollen spinulose. *Ovary* 1–3-celled, rarely 4-celled; ovules 4, rarely 6; style filiform, stigma capitate, entire or 2–3-globose, rarely stigmas 2, linear. *Fruit* a 4–6-valved capsule, rarely indehiscent. *Seeds* 4, less often 6, rarely solitary, glabrous, bearded, or uniformly velvety or woolly.—DISTRIB. Species about 300, throughout the tropics.

Leaves softly pubescent or densely hirsute on both surfaces:—

Leaves deeply 5–7-lobed; flowers densely capitate with a whorl of involucrent bracts

1. *I. Pes-Tigridis*.

Leaves entire or slightly 3-lobed; flowers in congested cymes, with often one of the bracts foliaceous

2. *I. Leari*.

Leaves glabrous or only slightly hirsute or pubescent:—

Leaves all deeply 5- or more-lobed, glabrous:—

Leaves digitately 5-lobed, lobes nearly if not quite distinct at the base; flowers more or less white

3. *I. pulchella*.

Leaves palmately 5–7-lobed, lobes not as a rule more than three-fourths cut to the base; flowers purplish-pink

4. *I. paniculata*.

Leaves entire or slightly lobed or if (rarely) deeply lobed the lobes only 2:—

Flowers in few-flowered axillary cymes:—

Cymes corymbose and lax or flowers 2 or solitary:—

Terrestrial, firm-stemmed plants :—

Flowers purple :—

Leaves ovate-cordate, acute or acuminate, entire or more or less lobed :—

Cultivated species with tuberous edible roots, often without flowers, rarely with seeds .. 5. *I. Batatas*.

Wild plants or if grown in gardens with the roots not edible :—

Large stout climbers on bushes near sea-coasts; flowers large, 4 in. long; sepals obtuse 6. *I. illustris*.

Slender climbers; flowers never more than 1·5 in. long; sepals acute or acuminate :—

Climbing or trailing herbs on sea-beaches; flowers 1·5 in. long 7. *I. denticulata*.

Climbing herbs in gardens, or garden escapes; flowers ·5 in. long .. 8. *I. triloba*.

Leaves oblong, obtuse or 2-lobed; littoral sand-binding creepers 9. *I. Pes-Caprae*.

Flowers white or yellowish-white; leaves oblong or linear-oblong, emarginate, sometimes lobed, occasionally lyrate; littoral sand-binding creepers .. 10. *I. littoralis*.

Aquatic or palustrine herbs; stems soft, thick and spongy, trailing and rooting on wet mud or floating in ponds and ditches, flowers purple 11. *I. reptans*.

Cymes subumbellate, dense; flowers pale purple, or white with a darker purple eye 12. *I. sagittifolia*.

Flowers in many-flowered rather condensed axillary panicles; flowers white, slightly tinged with pink .. } 13. *I. staphylina*,
VAR. *malayana*.

1. *IPOMŒA PES-TIGRIDIS*, Linn. Sp. Pl. 162. A hirsute twining herb; stems patently hirsute. *Leaves* hirsute on both surfaces, deeply 5–9-lobed, lobes elliptic, acuminate, narrowed at the base; length 1 to 5 in., width 1 to 4 in.; petiole 1 to 2 in. long. *Flowers* densely capitate, on axillary hirsute peduncles ·5 to 3 in. long; the heads surrounded by a whorl of fulvous-hirsute bracts, the outer ovate or elliptic-oblong with cuneate or rounded bases 1 in. long, the inner narrower acute ·5 to ·75 in. long. *Sepals* lanceolate, acute, tawny-hirsute, ·3 to ·5 in. long, scarcely altered in fruit. *Corolla* 1·25 in. long, sparsely strigose externally, infundibuliform with rather narrow tube and abruptly widened mouth, pink. *Capsule* ovoid, ·25 in. long, glabrous, chartaceous. *Seeds* minutely velvety. Roxb. Flor. Ind. ed. Carey & Wall. II. 93; Bl. Bijdr. 709; Wight Ic. t. 836; Choisy Convolv. Or. 73, and in DC. Prod. IX. 363; Clarke in Hook. f. Flor. Brit. Ind. IV. 204; Hallier f. Bull. Herb. Boiss. V. 379. *Convolvulus Pes-Tigridis*, Spreng. Syst. I. 592; Wall. Cat. 1374. *C. bryoniaefolius* Salisb. Prod. 125. *Convolvuloides palmata*, Moench. Meth. 452. Rheede Hort. Malab. XI. t. 59.

MALACCA: *Griffith!*—**DISTRIB.** Tropical Africa, S.E. Asia generally.

2. *IPOMŒA LEARII*, Paxt. Bot. Mag. VI. 267. A large hirsute climber, with perennial root. *Leaves* widely or deeply cordate, acute, entire or slightly 3-lobed, softly sparingly hirsute above, more densely beneath; length 3 to 6 in., width 2 to 5 in.; petiole hirsute, 2 to 3 in. long. *Flowers* in congested 3-7-flowered cymes on axillary softly pubescent peduncles 3 to 7 in. long; bracts linear acuminate .3 to .4 in. long, with casually a foliaceous bract 1.5 in. long, .3 to .5 in. wide, with a cuneate, less often sub-cordate base, close to the flowers. *Sepals* lanceolate, acuminate, .75 in. long, pubescent. *Corolla* abruptly campanulate from a narrow cylindric base, tube 2.75 to 3 in. long, purple-blue or mixed red and blue, changing with age. *Fruit* not seen. *I. congesta*, Prain Journ. As. Soc. Beng. LXIII. 2, 104 (not of R. Br.). *Pharbitis Learii*, Hook. Bot. Mag. t. 3928; Choisy in DC. Prod. IX. 343.

SINGAPORE: *Hullett!*—**DISTRIB.** Cultivated throughout the tropics, native of America.

Mr. Hullett, whose plant was probably an escape, notes on his specimen (*Hullett* 646): "January, 1885. blue convolvulus, wild? Have never seen it in seed."

3. *IPOMŒA PULCHELLA*, Roth Nov. Sp. 115. A glabrous twining herb. *Leaves* glabrous, digitate, 5-lobed, lobes ovate-acute, base cuneate, central largest 1.25 to 1.5 in. long, .5 to .75 in. wide, basal smallest .5 to .75 in. long, .3 to .5 in. wide; petiole glabrous, .75 to 2 in. long. *Flowers* in axillary 1-3-flowered cymes, peduncles .25 to 1.25 in. long; bracts minute, deciduous, pedicels .5 in. long, with small ovate sub-persistent bracteoles below the middle. *Sepals* ovate, glabrous, .2 to .25 in. long, the inner obtuse, the outer sub-acute. *Corolla* campanulate, 2 in. long, white or with a tinge of rose. *Capsule* globose, glabrous, .5 in. wide. *Seeds* villous. Wight Ic. 158; Choisy in DC. Prod. IX. 386. *I. palmata* Clarke in Hook. f. Flor. Brit. Ind. IV. 386 in part (not *I. palmata*, Forsk = *I. carrica*, Sweet).

MALACCA: *Manngay.* **SINGAPORE:** Tanglin, *Ridley* 5817!—**DISTRIB.** India, Indo-China.

Mr. Ridley's specimens may be from plants escaped from cultivation; they are noted as "from behind the stable, Tanglin." This is one of two species often cultivated in India under the name of the "Railway Creeper"; the other species so termed is the American *Merremia quinquefolia*, Hallier f.; the latter we have not yet received from the Malay peninsula, though it has already escaped and become domesticated near Port Blair in the Andamans.

4. *IPOMŒA PANICULATA*, R. Br. Prod. I. 486. A large scandent perennial climber with a tuberous root; stems glabrous. *Leaves* palmately 5-7-lobed, glabrous, the lobes sometimes cut almost to

the base, lanceolate or elliptic, often spathulate; length 3 to 7 in., width 2.5 to 6 in.; petiole 2 to 5 in. long. *Flowers* in many-flowered axillary cymes, on peduncles 2 to 6 in. long; pedicels .25 to .75 in. long; bracts deciduous. *Sepals* elliptic, shortly acute, glabrous, .25 to .3 in. long, enlarged and concave in fruit, .4 to .5 in. long. *Corolla* 1.5 to 2.25 in. long, glabrous externally, wide-campanulate, purplish-pink. *Stamens* 5, anthers straight. *Ovary* 4-celled for three-fourths of its height or throughout. *Capsule* ovoid, .3 in. long, 4-celled throughout, 4-valved. *Seeds* woolly with long hairs which protrude from the chinks of the capsule. Bl. Bijdr. 709; Bot. Reg. t. 62; Hallier f. Bull. Herb. Boiss. V. 379. *Convolvulus paniculatus*, Linn. Sp. Pl. 223; Roxb. Flor. Ind. I. 478, and ed. Carey & Wall. II. 63; Wall. Cat. 1350; Spreng. Syst. I. 591. *C. platensis*, Spreng. Syst. I. 591. *C. insignis*, Spreng. Syst. I. 592. *C. roseus*, Kunth in Humb. & Bonpl. III. 108 (not of Miller). *Ipomœa digitata*, Linn. Syst. ed. Rheede Hort. Malab. VII. t. 50.

PERAK: Larut; *Scortechini* 1836! but doubtless also present in other provinces, cultivated.

The Sweet Potato; very rarely seen in flower, still more rarely in fruit. A native of America, but now grown throughout the tropics.

6. *IPOMŒA ILLUSTRIS*, Prain Beng. Pl. II. 735. A glabrous climber. *Leaves* ovate or oblong, cordate or hastate, entire, glabrous, apex acuminate; nerves rather prominent; 4 to 6 in. long, 3.5 to 5 in. wide; petiole 1.5 to 2 in. long. *Flowers* in axillary cymes; peduncles 1 to 1.5 in. long, usually 2-3-flowered, often 1-flowered; bracts caducous; pedicels .5 to 1.5 in. long. *Sepals* orbicular, obtuse, glabrous, .3 to .4 in. long. *Corolla* rather wide-campanulate, purple, 4 to 4.5 in. long, glabrous, limb 3 in. wide. *Capsule* .5 in. wide, globose. *Seeds* with long silky hairs. *I. campanulata* var. *illustris*, Clarke in Hook. f. Flor. Brit. Ind. IV. 211.

ANDAMANS: on the coasts, everywhere. PENANG: Pulo Boetong, Curtis 1970!—DISTRIB. Coasts of Ceylon, Sunderbuns, Indo-China, and Malay Archipelago.

This is very nearly allied to *I. campanulata*, Linn., which appears, however, to be always an inland species, whereas this is always a littoral plant. *I. illustris* differs further in having flowers at least one-half larger, sepals quite glabrous, and fewer flowers to the cyme.

7. *IPOMŒA DENTICULATA*, Choisy in DC. Prod. IX. 379 (not of R. Br.). A glabrous trailing or twining littoral herb. *Leaves* ovate-cordate, acute, entire denticulate angled or sub-lobate, base rather deep-cordate with an obtuse sinus, firm in texture but hardly fleshy; 1 to 2.5 in. long, .75 to 1.75 in. wide; petiole 1.5 in. long. *Flowers* axillary on short 1-3-flowered peduncles, never more than 1.5 in. long; pedicels (often only one) 1 to 1.25 in. long; bracts .2 in. long, linear. *Sepals* elliptic, abruptly acute, sub-scarious, .4 in. long. *Corolla* 1.5 in. long, tube funnel-shaped, abruptly widening at the mouth, purple. *Ovary* 2-celled. *Capsule* globose, .3 in. in diam., glabrous. *Seeds* smooth. Benth. Fl. Austr. IV. 421; Clarke in Hook. f. Flor. Brit. Ind. IV. 298; Hallier f. Engl. Bot. Jahrb. XVI. 554. *I. littoralis*, Bl. Bijdr. 713 Thw. Enum. 211 (not of Boiss.). *I. subdentata*, Miq. Fl. Ind. Bat. II. 614. *I. cymosa*, Bak. Fl. Maurit. 208 (not of Roem. & Schult.). *I.*

nicobarica, Kurz in Journ. As. Soc. XLV. 2, 141. *Convolvulus denticulatus*, Lamk Encycl. Meth. III. 540.

PERAK: Dindings, *Scortechini* 1066! *Curtis* 3449! PENANG: Bagian Jumal, *Curtis* 1974! PAHANG: Rumpin, *Ridley*! NICOBARS: common. ANDAMANS: very common.—DISTRIB. Coasts of the Indian and Pacific Oceans, from the Seychelles to Polynesia.

This species, in the writer's experience, prefers shingle beaches, though occasionally it is to be met with on sandy beaches along with *I. biloba*.

8. *IPOMŒA TRILOBA*, Linn. Sp. Pl. 229. A twining or prostrate herb with glabrous slightly angular stem. *Leaves* cordate, acuminate to an often rounded tip, entire or toothed or occasionally 3-lobed; 1·5 to 2 in. long, 1·25 to 1·75 in. wide; petiole slender, 1·75 to 2 in. long. *Flowers* in axillary 1-4-flowered cymes; peduncles 1 to 1·5 in. long; bracts lanceolate, ·2 in. long, deciduous; pedicels ·25 to ·35 in. long. *Sepals* lanceolate, acuminate, ciliate with spreading yellowish hairs, ·35 in. long. *Corolla* tubular, purple, ·5 in. long. *Capsule* pilose. Choisy in DC. Prod. IX. 383.

SINGAPORE: *Hullett*!—DISTRIB. Cultivated in the tropics; native of America.

Under his n. 68, Mr. Hullett sent to Calcutta, in 1884, as *Ipomœa corcinea*, a mixture of two species, one of which is *Quamoclit pharicea*, the other being *Ipomœa triloba*, as they are not noted as cultivated it seems possible that *I. triloba* may at least casually occur as an escape at Singapore. For the detection of this mixture, which had not been observed by the writer when arranging the Calcutta *Convolvulacæ* in 1894 (see Journ. As. Soc. Beng. LXIII. 2, 88 *et seq.*), we are indebted to Dr. H. Hallier.

9. *IPOMŒA PES-CAPRÆ*, Roth Nov. Sp. 109. A glabrous extensive sand-binding creeper. *Leaves* orbicular or oblong, obtuse emarginate or 2-lobed; 1 to 4 in. long and sometimes wider than long; thick, fleshy, when dry distinctly nerved; petiole 1 to 4 in. long. *Flowers* in axillary 1-3-flowered cymes; peduncles 1 to 4 in. long; bracts ·2 in. long, lanceolate, deciduous; pedicels ·75 to 1·5 in. long. *Sepals* ovate, obtuse, glabrous, ·5 to ·6 in. long, slightly enlarged in fruit. *Corolla* tubular-campanulate, glabrous, 2 in. long, purple. *Capsule* ovoid, glabrous, ·5 in. long. *Seeds* villous. Choisy Convolv. Or. 63, and in DC Prod. IX. 349; Meissn. in Mart. Fl. Brasil. VII. 256; Hallier f. Bull. Herb. Boiss. V. 381. *I. biloba*, Forsk. Flor. Ægypt.-Arab. 44; Clarke in Hook. f. Flor. Brit. Ind. IV. 212. *I. maritima*, R. Br. Prod. 486; Bl. Bijdr. 720; Bot. Reg. t. 319. *Convolvulus Pes-Capræ*, Linn. Sp. Pl. 159; Roxb. Hort. Beng. 14, Flor. Ind. f. 486, and ed. Carey & Wall. II. 74; Wall. Cat. 1360. *C. maritimus*, Lamk Encyc. Meth.

15. QUAMOCLIT, Mœench.

Leaves ovate-cordate, entire or lobed 1. *Q. pharnicea*.
Leaves ovate, deeply pinnately divided into numerous linear segments 2. *Q. pinnata*.

SINGAPORE: *Hullett* !—DISTRIB. Widely naturalised throughout S.E. Asia, native of America.

2. **QUAMOCLIT PINNATA**, Boj. Hort. Maurit 224. A slender glabrous twining herb. *Leaves* ovate in outline, deeply pinnately divided into

numerous distant linear segments, glabrous; 3 to 5 in. long, 2 to 3 in. wide; petioles 1 to 3 in. long. *Flowers* in axillary lax few-flowered cymes; peduncles slender, 2 to 4 in. long; pedicels erect, if more than one virgate; bracts minute. *Sepals* 5, elliptic, .25 in. long, hardly changed in fruit. *Corolla* dark red, occasionally in cultivated varieties white; tube slender, 1 in. long; limb salver-shaped, somewhat oblique, .75 in. across. *Stamens* 5, exserted. *Capsule* smooth, ovoid, .3 in. long, completely 4-celled with membranous persistent septa. *Seeds* puberulous. Hallier f. Engl. Bot. Jahrb. XVIII. 154. *Q. vulgaris*, Choisy Convolv. Or. 52, and in DC. Prod. IX. 336. *Convolvulus pinnatus*, Desr. in Lamk Encyc. Meth. III. 567. *C. Quamoclit*, Spreng. Syst. I. 591; Wall. Cat. 1375. *Ipomœa Quamoclit*, Linn. Sp. Pl. 159; Bot. Mag. t. 244; Bl. Bijdr. 708; Roxb. Hort. Beng 14, Flor. Ind. ed. Carey & Wall. II. 93, and Flor. Ind. I. 502; Clarke in Hook f. Flor. Brit. Ind. IV. 199.

PENANG: Batu Gaja jungles, *Deschamps* !—DISTRIB. Widely naturalised in S.E. Asia, native of America.

16. CALONYCTION, Choisy.

Large herbaceous climbers, stems usually muricate. *Leaves* large, cordate, entire or angled. *Flowers* solitary or in few-flowered axillary cymes, bracts caducous. *Sepals* 5, herbaceous, smooth, usually aristate, sub-equal or the outer smaller. *Corolla* large, salver-shaped, white or rose-purple, tube narrow-cylindric, limb plicate. *Stamens* 5, adnate to corolla-tube, considerably exserted. *Ovary* glabrous, 2-locular; ovules 4, style filiform; stigma 2-globose. *Fruit* a 4-valved capsule. *Seeds* 4, dull, glabrous.—Species 6 to 7, all tropical American, 2 now widespread and sub-spontaneous in the tropics of the Eastern Hemisphere.

CALONYCTION BONA-NOX, Boj. Hort. Maurit. 227. A large climber, stems smooth or muricate, glabrous. *Leaves* ovate-cordate, acute, glabrous, entire or casually lobed; 3 to 8 in. long, 2 to 4 in. wide; petiole 3 to 6 in. long. *Flowers* on axillary 1-5-flowered peduncles, 2 to 6 in. long, bracts caducous. *Sepals* 5, usually ovate, obtuse with a mucro, very slightly enlarged in fruit, glabrous; .5 in. long. *Corolla* 3 in. long, tube linear, .2 in. wide, limb salver-shaped, 3 to 5 in. wide, white. *Stamens* 5, slightly unequal, distinctly exserted. *Capsule* ovoid-oblong, narrowed upwards, 1 in. long; peduncle in fruit slightly thickened. *Seeds* glabrous. Hallier f. Bull. Herb Boiss. V. 1028. *C. noctilucum*, Don in Sw Hort. Brit. ed. III. 482. *C. speciosum*, Choisy Mem. Soc. Gen. VI. 441, t. 1, f. 4, and in DC. Prod. IX. 345, Hallier f. Engl. Bot. Jahrb. XVI. 556; XVIII. 153. *C. Roxburghii*, G. Don Gen. Syst. IV. 263. *Convolvulus aculeatus*, Linn. Sp. Pl. ed. I. 155. *C. bona-nox*

Spreng. Syst. I. 600. *C. grandiflorus*, Linn. f. Suppl. 136; Willd. Sp. Pl. I. 2. 859; Pers. Synops. I. 179; Wall. Cat. 1370. *C. latiflorus*, Desr in Lamk Encyc. Meth. III. 561. *Ipomœa bona-nox*, Linn. Sp. Pl. ed. II. 228; Roem. & Schult. Syst. IV. 217; Bl. Bijdr. II. 712; Kurz For Fl. Burm. II. 217; Clarke in Hook. f. Flor. Brit. Ind. IV. 197. *I. grandiflora*, Lamk III. I. 467, and Encyc. Meth. III. 16; Roem. & Schult. Syst. IV. 240; Roxb. Hort. Beng. 14, Flor. Ind. ed. Carey & Wall. II. 87, and Flor. Ind. I. 497. *I. Roxburghii*, Steud. Nomencl. ed. II. 1, 819. *I. noctiflora*, Griff. Not. IV. 286.

PENANG: cultivated, Haller. SINGAPORE: S. Mayer 211.—DISTRIB. Throughout the tropics; possibly not truly wild in our area.

17. ARGYREIA, Lour.

Climbing rarely sub-erect shrubs. *Leaves* cordate to lanceolate, pubescent or silky. *Flowers* axillary, usually in many-flowered cymes, often sub-capitate, bracts often conspicuous. *Sepals* 5, herbaceous in flower; in fruit leathery but little enlarged, often red within. *Corolla* funnel-shaped, rose-purple, tube more or less hirsute externally; limb plicate, shortly 5-lobed. *Stamens* 5, included, anthers oblong, straight. *Disk* annular. *Ovary* 4-celled; ovules 4, style filiform; stigma 2-globose. *Fruit* a hard dry berry. *Seeds* 4 or fewer, embedded in a mealy pulp.—DISTRIB. Species about 30, in the tropics of the Old World chiefly, and mostly in S.E. Asia and Polynesia.

ARGYREIA OBTUSIFOLIA, Lour. Flor. Cochinchin. 135. A large climber. *Leaves* elliptic or oblong, acute or obtuse, with or without a sub-mucronate tip, base cuneate or occasionally rounded, upper surface pilose, under surface silky strigose, nerves 9 to 11 pairs, often rather distinct beneath, very oblique even in wide-leaved plants, length 5 in., breadth 1.5 to 3 in., petiole 6 to 8 in., very rarely 1 to 1.5 in. long. *Flowers* axillary; peduncles usually short, .6 to 1 in., but occasionally 1.5 to 3 in. long, cymes sub-capitate, the pedicels .1 to .2 in. long; bracts ovate, .15 to .2 in. long, caducous. *Sepals* 5, ovate-obtuse, .25 in. long, densely silky-strigose externally, sub-patent in fruit, pale red within. *Corolla* 1.5 in. long, tubular-campanulate, densely uniformly hirsute externally. *Capsule* .4 in. in diam., globose, pericarp chartaceous, pink. *Seeds* finely grey-velvety, hemispheric, .2 in. in diam. Choisy in DC. Prod. IX. 333. *Convolvulus obtectus*, Wall. Cat. 1416. *Rivea* ? *obtecta*, Choisy, Convolv. Or. 28, and in DC. Prod. IX. 326. *Argyrea Champoni*, Benth. Fl. Hongkong, 236. *A. obtecta*, Clarke in Hook. f. Flor. Brit. Ind. IV. 186. *Lettsomia Champoni*, Benth. & Hook. f. Gen. Pl. II. 869.

PERAK: *Scortechini* 1384! KEDAH: Langkawi, *Curtis* 2852!—

DISTRIB. Indo-China, from the Andamans and Tenasserim to Cochin China, Hongkong.

The two varieties distinguished in the *Flora of British India* can no longer be maintained in view of the large suites of specimens reported of late years from the Andamans, where the species is exceedingly common

18. LETTSOMIA, Roxb.

Scandent, more or less hirsute or strigose shrubs. *Leaves* cordate rounded or truncate. *Flowers* in axillary, peduncled, corymbose or capitate cymes, bracts conspicuous. *Sepals* 5, orbicular or elliptic; somewhat thickened and coriaceous in fruit. *Corolla* usually pink; tube infundibuliform-campanulate; limb plicate, very shortly 5-lobed *Stamens* 5, exserted or included, anthers oblong or linear, straight *Disk* annular or cupular *Ovary* 2-celled; ovules 4; style filiform, stigma 2-globose *Fruit* a dry berry. *Seeds* 4 or fewer, embedded in a mealy pulp.—**DISTRIB** Species about 40, in tropical Africa and S.E Asia.

There is not, as the writer has already explained (*Journ As Soc Beng.* LXIII 2, 91), any very good reason for retaining *Lettsomia* as a genus apart from *Argyreia*. In *Argyreia* the ovary is completely 4-celled, in *Lettsomia* it is 2-celled, but not infrequently a partial dissepiment of smaller or larger size is to be found at the base of, sometimes half-way up, the cell.

Capsule chartaceous; seeds usually 4, only casually fewer; leaves cordate, softly hairy; cymes capitate, bracts large, elliptic oblong, sub-persistent 1 *I. peguensis*.

Capsule coriaceous or sometimes somewhat fleshy, seeds usually 1, only casually 2 -

Cymes compact, bracts large, persistent —

Cymes capitate, globose, bracts purple, large, orbicular obtuse, leaves ovate-lanceolate, sparingly adpressed-hirsute 2 *L. sphaerocephala*

Cymes sub capitate, hardly globose, bracts ovate or ovate-lanceolate, acute, leaves ovate or elliptic, base rounded or shortly cuneate -

Corolla 2-25 in long, leaves chartaceous, glabrous and shining above, a few hairs on petiole and midrib beneath 3 *L. Manngayi*

Corolla 1-25 in long; leaves firmer, glabrous not shining above, hirsute beneath —

Leaves hirsute, more especially on the nerves, beneath; petioles sparingly hairy 4 *L. Ridleyi*
Leaves densely hirsute beneath throughout; petioles densely hairy 4a. *L. Ridleyi*,
var. *velutina*.

Cymes lax, bracts small, rarely with a casual foliaceous bract in a cyme, and usually caducous —

Sepals narrowly lanceolate, acute, spreading or sub-reflexed in fruit; bracts lanceolate, occasionally one large and leaf-like; leaves elliptic; softly hairy on both surfaces 5. *L. adpressa*.

Sepals ovate or orbicular, obtuse or rarely some of them emarginate, bracts minute, usually caducous, leaves glabrous above —

Sepals irregular, the three outer entire rounded, sparingly hairy, the two inner wider deeply emarginate, all closely embracing the base of the fruit, leaves elliptic shortly acuminate, sparingly adpressed pubescent beneath

6 *L. Curtisi*

Sepals regular or nearly so, all entire

Corolla 1.5 to 1.75 in long —

Sepals sub equal, at length almost glabrous and somewhat spreading in fruit, leaves elliptic oblong, chartaceous, glabrous or very sparingly pubescent beneath

7 *L. penangiana*

Sepals persistently adpressed grey pubescent outside, the inner rather larger than the outer, closely embracing the base of the fruit, leaves ovate acute, firm, sparsely hirsute with rusty hairs beneath

8 *L. Scortechinii*

Corolla .5 to .75 in long, leaves elliptic acuminate, sepals closely embracing the base of the fruit —

Leaves densely tawny tomentose beneath, sepals all softly tawny velvety the inner rather the smaller, corolla .75 in long

9 *L. rubicunda*

Leaves sparingly stigose hirsute beneath, sepals sub equal, the outer pubescent the inner at length almost glabrous

10 *L. Kunthiana*

1 *LITTOMIA PIGUIENSIS*, Clarke in Hook f Flor Brit Ind IV 193
A large climber, sometimes 50 feet long, with villous stems and branches. *Leaves* ovate, ovate lanceolate or sub orbicular, apex acute, base cordate, both surfaces densely softly hairy, tomentum fulvous but not acicular, length 4 to 6 in, width 1.5 to 3.5, rarely 5 to 6 in, petiole 1.5 to 4 in long. *Flowers* in axillary capitate cymes, peduncles 5 to 9 in long, bracts sub persistent, densely softly hairy, elliptic oblong, 1 in long. *Sepals* 5, the outer elliptic acute, rather larger than the inner lanceolate, densely hispid 5 to 7 in long. *Corolla* infundibuliform campanulate, softly sparsely hairy externally, 2 in long, limb and upper two thirds of tube bright pink, base of tube nearly or quite white. *Berry* when ripe glossy brown, sub globose thin-walled, .25 in across. *Seeds* usually 2 or 4. *Plam Journ As Soc Beng* LXIII 2, 94. *L. strigosa*, Roxb Hort Beng 13, ex Wall Cat sub n 1404. *L. capitata*, Miq Flor. Ind Bat II 591. *Argyrea capitata*, Choisy in DC Prod IX 332, partly and including var β *conferta* Kurz For Flor Burm II 216 mainly. *Convolvulus strigosus*, Wall Cat 1365/2, 1365/c, and 1365/e partly. *C. barthleyi*, Wall Cat 1404/1, 1404/2 in part. *Argyrea barthleyi*, Choisy Convolv Or 42, and in DC Prod IX 332.

PERAK Batu Krian, *Scortechini* 1628' near Goping, *King's Collector* 1077' Larut, *King's Collector* 2622' near Ulu Keiling, *King's Collector* 8627' PENANG Bateh Pulo, *Deschamps* ' SELANGOR Woods at Gua Batu, *Ridley* 8210' 8227' 10194'—DISTRIB Burma, Tenasserim, Sumatra, Java.

Probably only a geographical form of *Ictisomia strijosa* Roxb which is widespread in Indo China and extends to S China.

2 *ICTISOMIA SPHAEROCEPHALA*, Plain Joun As Soc Beng LXXIII 2, 19 A shrubby climber, branches irregularly angled, with ridged bark brownish on young shoots, pale straw coloured on older twigs, sparingly beset with adpressed acicular hairs. *Leaves* ovate lanceolate, apex acute, base rounded, purplish beneath very sparingly beset on both surfaces with adpressed hairs, length 4 to 5 in, width 1 5 to 2 in, petiole 1 to 1 25 in, sparsely pubescent above with adpressed hairs. *Flowers* in compact capitate globose cymes 1 5 to 2 in across, on long slender peduncles 2 to 12 in long, sparingly adpressed pubescent, surrounded by large orbicular purple involucrent sessile bracts 1 5 in across, sparsely hirsute externally, quite glabrous internally, the individual flowers enveloped in similar but smaller sub orbicular to spatulate bracteoles 5 in long, 2 5 to 5 in wide, pedicels short adpressed-setose. *Sepals* glabrous externally except at their setose apices, the outer sub acute, the inner wider obtuse 2 5 in long. *Corolla* 7 5 to 1 in long infundibuliform campanulate, pink, softly adpressed hirsute externally. *Berry* not seen. *Argyria sphaerocephala*, Plain MSS.

PERAK Krian, Abu Salima Gunong Harau Ryah, *Scortechini* '.

A very striking and remarkable species. The corollas do not appear to be full sized. *Scortechini* on the ticket of his Gunong Harau Ryah specimens has written fruit from Maxwell's Hill, but unfortunately the fruiting specimens alluded to are not at Calcutta.

3 *ICTISOMIA MAINGAYI*, Clarke in Hook f Flor Brit Ind IV 195 A large slender climber, branches slender or stoutish, with spreading setulose hairs. *Leaves* ovate or elliptic, base rounded or very shortly cuneate, apex acute or shortly caudate acuminate, papery, glabrous and shining on both surfaces except for a few hairs on the midrib beneath, length 5 to 7 in, width 3 to 4 in, lateral nerves 5 to 7, petioles 5 to 1 in long, very sparsely setulose. *Flowers* in axillary few flowered cymes 2 to 3 in wide, peduncles 2 5 to 2 in long, rather closely hirsute with tawny spreading hairs, bracts ovate-lanceolate, 1 5 in long, 6 in wide, rather strongly parallel nerved, sparingly hirsute externally, glabrous and dark purple within, bracteoles similar but smaller, 3 in long. *Sepals* linear lanceolate, long-acuminate, 7 5 in

long, beset with long setulose hairs. *Corolla* tubular campanulate, purple with whitish folds, 2.25 in long, hairy externally. *Stamens* with filaments glandular hairy at the thickened base. *Berry* ellipsoid, succulent, 7 in long, 5 in wide. *Seed* solitary.

MALACCA *Griffith, Mangay, Derry* 318! *Goodenough* 1432! PERAK *Scortechini* 297!

A very distinct species. There is no fruiting specimen in Herb. Calcutta, the above description of the berry is taken from the *Flora of British India*.

4 LETTSOMIA RIDLEYI, *Prain Journ. As. Soc. Beng.* LXIII 2, 98. A large climber, branches sparingly hirsute. *Leaves* elliptic acuminate, quite glabrous above, hirsute especially on the nerves beneath. 5.5 in long, 3.5 in wide. *Petiole* 1 to 3 in long, sparsely hirsute. *Flowers* in compact subcapitate 8-10 flowered cymes 1.5 in across, surrounded by large ovate acute sessile foliaceous persistent bracts hirsute below, quite glabrous above, 8 in long, 2.5 in wide, bracteoles similar but smaller, 3 in long, peduncles 2 to 6 in long hirsute. *Sepals* subequal, ovate lanceolate, externally pubescent, 3 in long. *Corolla* pink infundibuliform campanulate 1.25 in long, tube hirsute externally. *Berry* ovoid, 5 in long, 3 in in diam, the sepals spreading from its base.

JOHORE *Kota Tinggi, Ridley* 1211! Chin chin, *Lake & Kelsall*! SINGAPORE *Bukit Mandai, Ridley*!

VAR *reticulata* *Prain* l.c. *Leaves* beneath densely hirsute, as are the petioles, pedicels and bracts externally.

SINGAPORE *Bukit Mandai, Ridley*!

Nearest to *L. sphaerophylla* but distinguished by the acute bracts and bracteoles and to *L. mangayi* from which it differs by the smaller flowers and shorter bracts and sepals. Var. *reticulata* in foliage and tomentum remarkably resembles *L. reticulata* but the acute sepals and large persistent bracts and bracteoles amply distinguish it.

5 LETTSOMIA ADRISSA, *Miq. Flor. Ind. Bat.* II 591. A scandent shrub, branches hirsute, stems 10 to 30 feet long. *Leaves* elliptic, softly hirsute on both surfaces, base rounded or cuneate, apex acute, length 4 to 5 in, width 2 to 2.5 in. *Petiole* 1.5 in long, softly hirsute. *Flowers* in axillary few flowered somewhat open cymes 2 in across. *Peduncles* 5 to 1.5 in long hirsute. *Bracts* lanceolate, hirsute, 3 in long, 1.5 in wide, with an occasional longer leaf like bract, bracteoles small. *Sepals* 3 to 5 in long, narrowly lanceolate, sparingly hirsute, spreading or subreflexed in fruit. *Corolla* tubular campanulate, dull claret, or pale pink and white or white with claret stripes, externally hairy, tube 1.25 in long. *Berry* ellipsoid, 5 in long, 3 in wide, at first green with a reddish tint, becoming bright pink, and at length, when quite ripe, reddish brown. *Clarke in Hook. f. Flor. Brit. Ind.* IV 196.

Convolvulus adpressus, Wall. Cat. 1424. *Moorcroftia adpressa*, Choisy Convolv. Or. 49, and in DC. Prod. IX. 334.

6. *LETTSOMIA CURTISII*, Prain Journ. As. Soc. Beng. LXIII. 2, 100. A climber with brown glabrous branches. *Leaves* elliptic, shortly acuminate, glabrous except for a few hairs on the midrib above, sparingly adpressed-hirsute beneath, length 4 to 5 in., width 2.5 to 3 in., petiole 2 to 3 in. long, glabrous. *Flowers* in axillary compound sub-umbellate cymes, 3 in. wide, 12-16-flowered; peduncles 4 to 10 in. long, brown, glabrous, bracts deciduous. *Sepals* coriaceous, .25 in. long, the three outer sparingly hirsute, rounded, entire, the two inner wider, deeply emarginate, glabrous. *Corolla* not seen. *Berry* ovoid, succulent, 75 in. long, 5 in. wide, lower third closely embraced by the sepals.

SELANGOR: Kwala Lampar, Curtis 2158!

A very distinct species, easily differentiated by its emarginate inner sepals.

7. *LETTSOMIA PENANGIANA*, Miq. Flor. Ind. Bat. III. 592. A climber with very slender stems sometimes 100 feet long, young branches thin, fulvous-tomentose, soon becoming glabrous. *Leaves* elliptic-oblong, base rounded or cuneate, apex acute or sub-acute, papery, medium green glabrous above, very light green and glabrous or sparingly adpressed-pubescent and more closely hairy on the midrib beneath, 6 in. long, 2.5 in. wide, petiole 5 to 1 in., glabrous. *Flowers* in lax axillary cymes 2 to 3 in. across, the terminal flower usually longer than the others, peduncles slender, 2 to 6 in. long, very sparsely hirsute, soon glabrous, pedicels .3 to .7 in. long, slender, hirsute, bracts minute. *Sepals* ovate-obtuse, sparingly hairy and at length glabrescent, .2 in. long, at length spreading or sub-reflexed. *Corolla* tubular-campanulate, externally hirsute, bright claret or purple within, paler without, 1.5 to 1.75 in. long. *Berry* ovoid, 6 in. long, .3 in. wide, rose-pink, reddish-blue, or purple. Clarke in Hook. f. Flor. Brit. Ind. IV. 196; Prain Journ. As. Soc. Beng. LXIII. 2, 99. *Convolvulus penangianus*, Wall. Cat. 1425. *Moorcroftia penangiana*, Choisy Convolv. Or. 50, t. 4., and in DC. Prod. IX. 335.

PENANG: Porter! Curtis 1586! PERAK: very common; Scortechini 1147! Wray 2061! 2095! 2334! 2733! Curtis 2034! Derry! King's Collector 1936! 2048! 2574! 3223! 5339!

VAR. *reticulata*, Prain Journ. As. Soc. Beng. LXIII. 2, 100. Leaves thicker, secondary nerves beneath very distinct.

PERAK Larut, King's Collector 8544¹

The leaves of this species are very characteristically glandular punctate beneath. The peduncles and pedicels of var. *reticulata* are rather shorter than in the type and the corolla described by Kunth as 'waxy white pale blue inside' is only two thirds the length and only half the width of that of *L. penanpana* proper. But the leaves have the same characteristic glandular punctulation and are similarly sparingly adpressed pubescent beneath while the fruit described by Kunth as a rich pink is indistinguishable from that of *L. penanpana*. This form therefore, though very distinct cannot yet be more than varietally separated.

8 *LEPTOSOMIA SCORTICHIINI* Prain Journ. As. Soc. Beng. LXIII 2, 198. A strong climber, stems rusty brown very sparingly pubescent. Leaves ovate acute, base rounded, finely sub coriaceous, very sparsely hirsute with scattered rusty hairs beneath, glabrous above, length 2 to 3 in., width 1 to 2 in., petiole 5 to 1 in., minutely sparingly rusty-pubescent. Flowers in open 3-8 flowered corymbose cymes 1 to 1.5 in. across, peduncles minutely sparingly rusty pubescent, 2 to 5 in. long, bracts caducous. Sepals orbicular, minutely adpressed grey-tomentose externally, in flower 2.5 in., in fruit 3 in. across, the inner larger than the outer. Corolla 1.5 in. long, infundibuliform campanulate, pink, densely adpressed fulvous tomentose on tube and bands of limb externally. Berry sub spherical to ellipsoid, 5 in. wide, 5 to 7.5 in. long, the base closely embraced by the sepals.

PERAK Canfield's Hill 4000 feet, *Scortichinii* 381¹. Birch's Hill, *Ridley* 10681¹. Maxwell's Hill *Judley* 5559¹.

As in the case of *L. rubicunda* one or two bracts remain on the specimen they are small orbicular 2 in. across but it does not follow that the fallen bracts were so small. The corollas on *Scortichinii* specimens on which the original description was based are about 6 in. long but subsequent material communicated by Mr. Judley (*Ridley* 5559) shows that the flowers originally described were not fully expanded. Another of Mr. Ridley's specimen (10681) proves that the berry is not always sub spherical. The species is obviously closely allied to *L. rubicunda* but besides the very different degree of tomentum *L. Scortichinii* differs from *L. rubicunda* in having the inner sepals distinctly larger instead of smaller than the outer.

9 *LEPTOSOMIA RUBICUNDA* Clarke in Hook. f. Flor. Brit. Ind. IV 195. An extensive climber, stems fulvous tomentose. Leaves elliptic, shortly abruptly acuminate or acute, base rounded, sub coriaceous, densely tawny tomentose beneath, glabrous above, length 5 to 7 in., width 2 to 4 in., petiole tawny tomentose 1 to 2 in. long. Flowers in open many flowered corymbose cymes 2 to 4 in. across, peduncles tawny tomentose, 3.5 to 7 in. long, bracts caducous. Sepals orbicular, obtuse, softly tawny velvety, in flower 2 in., in fruit 3 in. across, the inner rather smaller. Corolla 7.5 in. long, infundibuliform campanulate, pink, densely tawny tomentose externally. Berry ellipsoid, obtuse,

smooth, dry, 75 in long, 3 to 5 in wide, the base closely embraced by the sepals *Convolvulus rubicundus*, Wall Cat 1409 *Argyrea rubicunda*, Choisy Convolv Or 44, and in DC Prod IX 333

MALACCA Griffith! Mangay—DISTRIB Burma

The above description is taken from Griffith's Malacca plant, the writer has seen no other specimens. One or two bracts remain, they are small 2 in across, and orbicular, but it does not follow that the fallen bracts were so small. There is no perfect corolla on the specimens at Calcutta, the length of the tube given above is derived from Mr C B Clarke's description.

10 LETTSONIA KUNSTLERI, Pisin Journ As Soc Beng LXIII 2, 100 A slender climber, 50 to 80 feet long, young branches densely hirsute. Leaves elliptic-acuminate, glabrous and shining above, sparingly strigose hirsute beneath, especially on the nerves, occasionally the midrib above sparsely hairy, length 3.5 to 4.5 in, width 2 to 2.5 in, petioles densely hirsute, 1 to 1.5 in long. Flowers in lax axillary 12-20-flowered cymes, 2 to 3 in across, peduncles 5 to 8 in long, densely hirsute, bracts hirsute, 3 in wide, pedicels hirsute, slender, 5 to 7.5 in long. Sepals orbicular, subequal, the three outer pubescent, the others at length almost glabrous, 1.5 in long. Corolla white externally, bright pink or red within, externally hirsute, tubular-campanulate, 5 in long. Berry ovoid, 5 in long, 3 in wide, deep glossy red.

Order LXXXII SOLANACEÆ.

[By D. PRAIN.]

Herbs or shrubs, sometimes becoming small soft wooded trees. Leaves alternate or at times in unequal pairs, rarely clustered, never truly opposite, entire, lobed or pinnate, stipules 0. Inflorescence of terminal or oftener lateral axillary or extra axillary cymes, or of solitary or clustered pedicels, without bracts or bracteoles. Flowers regular, hermaphrodite. Calyx inferior, gamosepalous, lobes or teeth usually 5, rare 4 or 6 to 10, usually persistent, sometimes enlarged in fruit. Corolla gamosepalous 5-lobed or rarely (*Datura*) 10 lobed or with limb subentire, narrow-campanulate to rotate. Stamens 5, epipetalous, anthers oblong or narrow ovate, cells parallel, dehiscing by apical pores or longitudinally. Ovary 2-celled or imperfectly

1-celled by abortion, or 4 celled by subsequent development of accessory dissepiments, style linear, stigma capitate or shortly lobed, ovules indefinite, on peltate intruded placentas. *Fruit* indehiscent, berry like or capsular and opening by valvular or circumscissile dehiscence, usually 2 celled, rarely 4 celled, many seeded. *Seeds* compressed, disc like or sub reniform with embryo periphragic, occasionally (*Nicotiana*) hardly compressed and with embryo straight.—**DISTRIB** Species about 1300, throughout tropical and sub tropical countries

Fruits berry like 2 celled indehiscent seeds compressed and embedded in pulp

Anthers opening by 2 small pores at the tips, fruits globular (in *Melomelasma* sometimes elongated)

1 SOLANUM

Anthers dehiscing throughout longitudinally —

Calyx in fruit small fruits usually elongated

2 CAESICUM

Calyx in fruit enlarging and enveloping the globose berry

3 PHYSALIS

Fruits capsular

Capsules 4 celled and 4 valved or sometimes hardly dehiscing seeds compressed flowers solitary

4 DATURA

Capsules 2 celled dehiscing freely seeds hardly compressed flowers in panicles

5 NICOTIANA

SOLANUM, Linn

Armed or unarmed herbs shrubs or small trees. *Leaves* alternate or sub opposed in unequal pairs entire lobed or pinnatifid. *Cymes* dichotomous or racemose lateral or terminal. *Calyx* usually 5 lobed, rarely 10 lobed or sub entire sometimes enlarging in fruit. *Corolla tube* short, rotate or very shortly campanulate limb 5 lobed plicate in bud. *Stamens* 5 with short filaments adnate to throat of corolla, anthers oblong narrowed upwards so that the two cells form a cone opening at the tip by terminal pores. *Ovary* 2 celled (in cultivated forms sometimes 3 4 celled) style columnar stigma small. *Fruit* berry like but with calyx at base rarely overtopping it globose or (rarely) elongated. *Seeds* very numerous disk like embryo periphragic.—**DISTRIB** Species 750 mostly tropical American, but spread throughout all tropical and sub tropical regions

In all the provinces, cultivated; occasionally also as an escape from cultivation or sub-feral (e.g., at Trang, King's Collector 1416!)

The Egg-Plant, or Brinjal, largely cultivated in all warm countries; originally American. As an escape this species tends to become more prickly and to have 3 to 4 fruits on the peduncle, owing to the males being replaced by perfect flowers. In such cases the fruits are much smaller and often approach, or sometimes even attain a globose form.

10. *SOLANUM SARMENTOSUM*, Nees Trans. Linn. Soc. XVII. 58. A straggling prickly shrub with procumbent zigzag branches, 2 to 3 feet long; all parts sparsely hairy and covered with long, straight, sharp prickles. *Leaves* membranous, broadly elliptic, sub-pinnatifid, lobes obtuse, sub-glabrescent above, sparsely stellately pubescent and prickly beneath; 4 in. long, 2 in. across, the lobes .75 in. deep, green on both surfaces; petioles .6 in. long. *Flowers* large, with thickish pedicels on 1-2-flowered, extra-axillary peduncles about 1 in. long, sparsely stellate-pubescent. *Calyx* with very shortly funnel-shaped tube, lobes ovate-acuminate .2 in. long, sparsely hairy and prickly, much enlarged in fruit. *Corolla* blue, externally pubescent, .7 in. across; lobes oblong-acute. *Ovary* glabrous. *Fruit* yellow, globose, glabrous, .5 in. across, overtopped by the enlarged caudate-acuminate, adpressed, armed calyxlobes, .75 in. long and .35 in. wide. *Seeds* .12 in. in diam., scrobiculate. Dun. in DC. Prod. XIII. 357; Clarke in Hook. f. Flor. Brit. Ind. IV. 236. *S. Melongena*, Wall Cat. 2628 (F. only—not of Linn.). *S. Jacquinum*, Miq. Flor. Ind. Bat. II. 651 (not of Willd.).

PENANG: Wallich! PERAK: Scortechini! MALACCA: Griffith.
PAHANG: Ridley!—DISTRIB. Malay Archipelago

11. SOLANUM ACULEATISSIMUM, Jacq. Col. I. 100. An armed slender undershrub, 2 to 3 feet high, with glabrous stems covered with very many long, straight, slender prickles. *Leaves* only on the upper part of the stems, membranous, ovate, lobed, sparsely hairy; 3 to 5 in. long. *Flowers* on 1-7-flowered peduncles, that are usually only 1-fruited; peduncles in fruit .75 in. long. *Calyx* even in fruit small, under .25 in. long, very prickly. *Fruit* globose, 1.25 in. across, smooth. *Seeds* .2 in. in diam., extremely compressed, almost winged. Jacq. Icon. I. t. 41; Clarke in Hook. f. Flor. Brit. Ind. IV. 237. *S. aculeatissimum* var. ? *denudatum*, Dun. in DC. Prod. XIII. 244.

SINGAPORE: G. Thomson.

This is not in Herb Calcutta. The above meagre description is taken from the accounts of Dunal in the *Prodromus*, and of Clarke in the *Flora of British India*. The specimen to which Clarke refers is one of the "varieties" of Dunal, not the true *S. aculeatissimum* of Jacquin, and Dunal himself was not satisfied that it is to Jacquin's species of this name that the variety should be referred. As it has not again been reported, it is possible we may have here to deal with an unusual state of some casually introduced and perhaps well-known American species.

2. CAPSICUM, Linn.

Unarmed annual or perennial, glabrous or glabrescent herbs or shrubs. *Leaves* alternate, entire or repand. *Flowers* axillary, solitary or several together. *Calyx* campanulate, minutely 5-toothed, not enlarging in fruit. *Corolla-tube* short, rotate, limb 5-lobed, valvate in bud. *Stamens* 5, adnate near base of corolla, anthers oblong, not longer than filaments, dehiscing longitudinally. *Ovary* 2-celled, rarely 3-celled; style columnar, stigma small. *Fruit* resembling a berry, but with the calyx at its base, elongated or (rarely) globose. *Seeds* very numerous, disk-like; embryo peripheric.—DISTRIB. Species 2 or more, natives of America.

The number of species is doubtful, and depends on the point of view of the reviewer with regard to the many more or less distinct forms assumed by the plants under cultivation; some writers recognise as many as 80, others claim only about 20; more recent authors insist only on 2 species—a perennial (*C. frutescens*), and an annual (*C. annuum*), both very variable. Possibly, however, there is but a single very variable species, for in the tropics the forms of *C. annuum* are often not truly annual, and in temperate regions the perennial tropical forms rarely persist for more than a season.

Pedicels solitary, variously erect or reflexed; fruits erect or spreading or pendent, at least as long as, usually longer than, the pedicels; plants annual or biennial.—

Flowers white, berries at first green, afterwards becoming red, orange or yellow.—

Fruit not globular.—

Berries tapering, much longer than broad —

Fruit stout, flesh thick, usually mildly pungent; calyx not enclosing base of berry 1. *C. annuum*.

Fruit slender, flesh thin, keenly pungent, calyx enclosing base of berry { *annuum*,
VAR. *acuminata*.

Berries not much if at all longer than broad, usually obtuse, calyx not enclosing base of berry —

Berries circular in section, sub-conical, ovate or oblong, flesh thin, pungent { *annuum*,
VAR. *abbreviata*.

Berries swollen, irregularly angled in section, prismatic, quadrate or oblate, flesh very thick, hardly at all pungent { *annuum*,
VAR. *grossa*.

Fruit globular, extremely pungent { *annuum*,
VAR. *cerasiformis*

Flowers purple; berries at first dark-purple, afterwards becoming orange-red, much longer than broad, only slightly pungent; calyx hardly enclosing base of berry { *annuum*,
VAR. *nigra*.

Pedicels 2 or more, erect; fruit always erect, red, shorter than the pedicels, pungent; plants perennial, flowers always white or yellowish-white —

Berries elongated, tapering; base embraced by the calyx 2. *C. frutescens*.

Berries globose or sub-globose; base seated on the calyx { *frutescens*,
VAR. *baccata*

1. *CAPSICUM ANNUM*, Linn. Sp. Pl. 188. An erect branching or rarely simple robust herb 2 to 3 feet high, with slightly ridged branches; glabrous throughout. *Leaves* membranous, elliptic or ovate, rather long-acuminate, base long-cuneate, prolonged as a wing on upper part of petiole, margin entire, lamina 3 in. long, .75 to 1 in. wide, rarely 1.5 in. wide, green on both surfaces; petiole .25 to .6 in. long. *Flowers* white or rarely (VAR. *nigra*) purple, pedicels almost always solitary, though casually there may be more than one in a leaf-axil, always drooping in flower, in fruit rigid, slightly thickened under the enlarging calyx and variously erect, or spreading or recurved and pendent, then .75 to 1 in. long. *Calyx* glabrous, campanulate, with sinuate-dentate limb, .2 in. across; in fruit enlarging into a shallow cup embracing the lower part of fruit, or saucer-shaped with the base of the fruit resting on it, then often .5 in. across. *Corolla* rotate, .4 in. across; 5-lobed. *Ovary* glabrous. *Fruit* erect, straight, very variable in shape, colour, fleshiness and pungency. Irish Miss. Bot. Gard. Rep. IX. 65.

VAR. *typica*. Fruit much longer than broad, stout, tapering to the usually narrow apex; flesh thick, mildly pungent; berry resting on the saucer-shaped fruiting calyx; colour variable.

In gardens, occasionally, usually raised from seed imported from Europe.

This variety includes the many mild chillies which do not keep true to their characters when their seed is collected in the tropics.

VAR. *acuminata*, Fingerhuth. Fruit much longer than broad, slender, rarely straight, always tapering to an acute or sub-acute apex; flesh thin, keenly pungent; berry enclosed at the base by the cupular calyx; colour red or orange, or yellow *C. longum*, DC. Hort. Monsp. 86; Fingerhuth, Caps. 23, t. 6, 7, Dun. in DC. Prod. XIII. 424. *C. frutescens*, Roxb. Hort. Beng. 17, Flor. Ind. I. 574; Bl. Bijdr. 704; Clarke in Hook. f. Flor. Brit. Ind. IV. 239.

Cultivated in most of the provinces.

Some of the forms of this variety seem to have been evolved since the introduction of *Capsicum annuum* to the Eastern Hemisphere.

VAR. *abbreviata*, Fingerhuth. Fruit conoid, ovate or oblong, not much longer than broad, apex usually blunt, flesh thin, pungent; berry resting on the saucer-shaped fruiting calyx; colour variable. *C. annuum*, Roxb. Flor. Ind. I. 573. *C. frutescens*, Dun. in DC. Prod. I. 413. *Capo Molajo*, Rheede Hort. Malab. II. 109, t. 56.

Occasionally cultivated.

VAR. *grossa*, Sendt. Fruit swollen, somewhat angular, prismatic or quadrate or oblate, obtuse, hardly longer than broad; flesh thick, hardly pungent; berry resting on the saucer-shaped fruiting calyx; colour red. *C. grossum*, Linn. Mant. 47, Willd. Sp. Pl. I. 1051; Roxb. Hort. Beng. 17, Flor. Ind. I. 574, Fingerhuth, Caps. 21; Dun. in DC. Prod. XIII. 422, Miq. Flor. Ind. Bat. II. 659; Clarke in Hook. f. Flor. Brit. Ind. IV. 239.

Occasionally cultivated.

VAR. *cerasiforme*, Mill. Fruit globular, red, flesh thin, very pungent. *C. cerasiforme*, Roxb. Flor. Ind. I. 574. *C. grossum*, var. *cerasiforme*, Clarke in Hook. f. Flor. Brit. Ind. IV. 239.

Sometimes grown in gardens by European residents.

VAR. *ugra*. Fruit much longer than broad; flesh thin, only slightly pungent, calyx hardly enclosing base of fruit; berry at first dark purple, at length becoming orange-red. *C. purpureum*, Roxb. Flor. Ind. IV. 239.

Occasionally cultivated.

2. **CAPSICUM FRUTESCENS**, Linn. Sp. Pl. 189. An erect, much-branched undershrub, 2 to 4 feet high, branches angled, the smaller ones puberulous but soon, like the leaves, becoming quite glabrous. Leaves petioled, membranous, ovate-acute, the base short-cuneate, truncate or rarely sub-cordate, the margins entire; lamina usually 2.5 to 4 in. long, 1.5 in. wide, green on both surfaces; petiole .5 to .75 in. long. Flowers small, white or yellowish-white, pedicels usually 2 to 3, sometimes 4 or more together in leaf-axils, never all of the same age, drooping in

flower and erect, thickened, rigid and somewhat elongated in fruit, 1 to 1.25 in. long. *Calyx* glabrous; limb truncate with 5 shortly projecting, spreading teeth .12 in. in diam. *Corolla* .2 in. in diam., rotate, 5-toothed. *Ovary* glabrous. *Fruit* erect, narrow to globose, bright red, .2 to .25 in. in diam. Irish Miss. Bot. Gard. Rep. IX. 97.

VAR. typica. Fruits ovate or sub-cylindric, acute, .75 in. long, .2 in. in diam. *C. frutescens*, Wall. Cat. 2642 B.C. *C. minimum*, Roxb. Hort. Beng. 17, Flor. Ind. ed. Carey & Wall. II. 261, and ed. propr. I. 574; Wall. Cat. 2641; Blanco, Flor. Filip. 133; Dun. in DC. Prod. XIII. 415; Miq. Flor. Ind. Bat. II. 659; Clarke in Hook. f. Flor. Brit. Ind. IV. 239. *C. fastigiatum*, Bl. Bijdr. 705, Nees Trans. Linn. Soc. XVII. 64; Dun. in DC. Prod. XIII. 416; Wight Ic. t. 1617, Miq. Flor. Ind. Bat. II. 659; Benth. & Trim. Med. Pl. t. 188.

In all the provinces, cultivated and as an escape.

VAR. baccata, Irish l.c. 99. Fruit elliptic-obtuse or globose, .25 to .3 in. long, .25 in. in diam. *Capsicum baccatum*, Linn. Ment. 46; Ham. in Wall. Cat. 2644. *C. angustifolium*, Dun. in DC. Prod. XIII. 420.

NICOBARS. cultivated, *Jelnech* 137! 138!

3. *PHYSALIS*, Linn

Annual or perennial herbs. *Leaves* alternate, entire sinuate or shortly lobed. *Pedicels* axillary, solitary. *Calyx* campanulate, 5-partite in flower, the tube much enlarged and inflated in fruit, loosely enclosing the berry; teeth small, connivent. *Corolla* campanulate, yellow. *Stamens* 5, attached near base of corolla; anthers oblong, shorter than filaments, dehiscent longitudinally. *Ovary* 2-celled; style columnar; stigma obscurely 2-lobed. *Fruit* berry-like, globose. *Seeds* few or many, disk-like; embryo peripheric.—DISTRIB. Species about 34, mostly tropical American.

PHYSALIS MINIMA, Linn. A herbaceous pubescent or glabrescent annual, erect or with procumbent straggling branches, 6 to 15 in. high. *Leaves* petioled, ovate, sinuate angular or hardly lobed, 2 in. long, .75 in. wide, green on both surfaces; petioles 1 in. *Flowers* small, axillary, solitary, pedicels .25 to .5 in. *Calyx* hirsute or glabrescent, in flower .1 to .2 in., with lanceolate lobes as long as tube, in fruit .75 to 1 in., ovoid or sub-globose, 5-10-ribbed, the teeth subconnivent and little altered. *Corolla* yellow, .25 in. across, glabrous, campanulate, 5-toothed. *Ovary* glabrous. *Fruits* yellow, globose, .5 in. across, completely enveloped by the accrescent calyx. *Seeds* very many, .1 in. in diam., discoid, reticulated, hardly scabrous.

VAR. typica; calyx not distinctly angled, all parts more or less pubescent. *P. minima*, Linn. Sp. Pl. 183; Nees in Trans. Linn. Soc.

XVII. 69; Roxb. Flor. Ind. I. 563; Dun. in DC. Prod. XIII. 445; Clarke in Hook. f. Flor. Brit. Ind. IV. 238; Miq. Flor. Ind. Bat. II. 664. *P. parviflora*, R. Br. Prod. 447. *P. divaricata*, Don Prod. 97. *P. villosa*, Roth Nov. Sp. 122. *P. Rothiana*, Roem. & Schult. Syst. IV. 677. *P. Hermann*, Dun. in DC. Prod. XIII. 444.

PERAK: *Scortechini*! MALACCA: *Griffith*! ANDAMANS: common in waste places.—DISTRIB. A cosmopolitan tropical weed.

VAR. *indica*, Clarke Flor. Brit. Ind. IV. 238; calyx distinctly 5-angled, all parts nearly glabrous. *C. indica*, Lamk Encyc. Meth. II. 102; Nees in Trans. Linn. Soc. XVII. 70; Dun. in DC. Prod. XIII. 443; Miq. Flor. Ind. Bat. II. 662. *P. pseudoangulata*, Bl. Bijdr. 706; Miq. Flor. Ind. Bat. II. 663. *P. angulata*, Griff. Notul. IV. 96. *Nicandra indica*, Roem. & Schult. Syst. IV. 632.

PERAK: Kota Bahru, *Kunstler*, 568! Ipoh, *Curtis* 3190! PENANG: *Deschamps*! common. SELANGOR: *Ridley* 10548! NICOBARs: coasts, common.—DISTRIB. India generally.

The Cape Gooseberry, or Winter Cherry (*Physalis peruviana*), is cultivated in European gardens in the cold weather

4. DATURA, Linn.

Suffrutescent, rank-smelling, glabrous or minutely pubescent herbs. *Leaves* large, entire, sinuate or deeply toothed. *Pedicels* solitary, flowers very large, purple or white. *Calyx* long-tubular, herbaceous, apex 5-toothed; in fruit circumscissile above the base. *Corolla* narrowly tubular-funnel-shaped; throat widened, limb plaited, entire or shortly lobed. *Stamens* attached near base of tube, filaments filiform; anthers included, linear, dehiscing longitudinally. *Ovary* 2-celled, or 4-celled by the formation of spurious dissepiments; style filiform; stigma 2-lobed. *Fruit* a capsule, ellipsoid, 4-celled, spinous, more or less completely 4-valved. *Seeds* very many, compressed, rugose; embryo peripheric.—DISTRIB. Species 10, temperate and tropical

DATURA FASTUOSA, Linn. Syst. ed. X. 932. A coarse annual, 3 to 8 feet high, all parts glabrescent or very faintly puberulous. *Leaves* petioled, membranous, ovate, entire or deeply toothed, glabrous, green; 6 to 8 in. long, 3 to 4 in. across, base unequal; petioles 1 in. *Flowers* very large, solitary, pedicels .25 to .5 in., erect in flower, recurved in fruit. *Calyx* tubular, 2.5 to 3 in. long, .5 in. wide, lobes lanceolate, .25 in. long. *Corolla* purple or white, 7 in. long, base .5, throat 1.5, limb 3 to 5 in. in diam., shortly 5-6-toothed. *Ovary* glabrous. *Capsules* sub-globose, 4-celled, equally spinous on all sides, irregularly dehiscent

near apex, supported by the persistent base of calyx; 1·25 to 1·5 in. in diam. *Seeds* .25 in. diam.

VAR. typica; corolla purple. *D. fastuosa*, Linn. Syst. ed. X. 932; Roxb. Flor. Ind. I. 561; Wall. Cat. 2638; Nees in Trans. Linn. Soc. XVII. 74; Dun. in DC. Prod. XIII. 542; Miq. Flor. Ind. Bat. II. 669; Clarke in Hook. f. Flor. Brit. Ind. IV. 242. *D. Hummatu*, Bernh. in Linn. Litteraturber. (1883) 141.

VAR. alba, Clarke in Flor. Brit. Ind. IV. 243; corolla white or cream-coloured. *D. alba*, Nees in Trans. Linn. Soc. XVII. 73; Wight Ic. t. 852; Dun. in DC. Prod. XIII. 542; Miq. Flor. Ind. Bat. II. 667. *D. Metel*, Roxb. Flor. Ind. I. 561; Wall. Cat. 2639 (*not of* Linn.).

PERAK: Larut, *Scortechini*! Ulu Bubong, *King's Collector*! SINGAPORE: *Hullett*!—DISTRIB. Tropical Africa, S.E. Asia.

The purple-flowered variety has not been sent to Calcutta from any of the provinces. Kunstler says that the white one is "not native" in Perak.

5. NICOTIANA, Linn.

Erect, viscid-pubescent herbs, shrubs, or trees. *Leaves* entire or sinuate. *Racemes* paniculate, terminal or sub-terminal. *Calyx* tubular or ovoid, 5-fid. *Corolla* funnel-shaped; lobes 5, induplicate in bud. *Stamens* attached to lower part of corolla-tube, filaments filiform; anthers ovate, dehiscing longitudinally. *Ovary* 2-celled; style filiform; stigma shortly 2-fid. *Fruit* a capsule, 2-celled, or rarely spuriously almost 4-celled; valves separating to their middle, often again splitting. *Seeds* very many, small, scarcely compressed, embryo nearly straight. —DISTRIB. Species about 35; American, Australian, Polynesian.

NICOTIANA TABACUM, Linn. Sp. Pl. 180. A herb 2 to 3 feet high branching upwards, all parts glandular-pubescent. *Leaves* large, sessile or sub-amplexicaul, ovate-lanceolate, acute, the lower decurrent; 4 to 8 in. (the lower sometimes 12 to 15 in. long) by 2 to 3 in. across; tapering to the cuneate base. *Flowers* large, in compound corymbs with short ultimate bracteate branchlets. *Calyx* campanulate, 5 in. long, .3 in. wide, teeth 5, triangular-lanceolate, .2 in. long. *Corolla* pink or pale-rose, linear-funnel-shaped, 1·75 to 2 in. long, limb 1 in. across, lobes spreading ovate, sub-acuminate. *Capsule* ovate, .75 in. long, .5 in. in diam., slightly exceeding calyx. *Seeds* small. Gaertn. Fruct. I. 264, t. 55; Lamk Ill. t. 113. Dun. in DC. Prod. XIII. 557; Miq. Flor. Ind. Bat. II. 670; Clarke in Hook. f. Flor. Brit. Ind. IV. 245.

In all the provinces, cultivated.

A native of America, cultivated in all warm countries. The common Tobacco.

Order LXXXIII. SCROPHULARIACEÆ.

[By D. PRAIN]

Herbs or shrubs, occasionally epiphytic, sometimes semi-parasitic. *Leaves* all or only the lower opposite, rarely all alternate or whorled, occasionally all radical, sub-rosulate; stipules 0. *Flowers* hermaphrodite, usually irregular; inflorescence centripetal or composite. *Calyx* inferior, 5-, rarely 4-lobed or -partite. *Corolla* hypogynous, more or less 2-lipped or occasionally personate; upper lip entire or 2-lobed, lower 3-lobed. *Stamens* epipetalous, usually 4, didynamous or rarely sub-equal, occasionally only 2, very rarely 5; anthers 2-celled, cells distinct or apically or entirely confluent, or 1-celled by abortion, often when stamens didynamous with anthers connivent and sometimes with their apices connate in a posterior and an anterior pair. *Disk* annular, cupular, or glandular. *Ovary* superior, 2-celled; ovules usually numerous in each cell, anatropous or amphitropous; style simple; stigma capitate or dilated, simple; occasionally 2-lobed or 2-lamellate. *Fruit* usually a capsule, rarely a berry; placentas sometimes persistent on a central axis, at others attached to margins of valves. *Seeds* small with a lateral or ventral hilum; albumen fleshy, rarely absent; embryo straight or curved.—**DISTRIB.** Species 2,000 or more, in all regions.

Angelonia grandiflora, C. Morr., an American species, has become naturalised as an escape from gardens in Selangor (*Goodenough* in Herb Ridley 10486); it has long been similarly naturalised in Tenasserim and the Irawadi Delta, and has more recently become established in the Gangetic Delta.

Corolla with upper lip or two upper lobes outmost in bud.—

Stamens 4, fertile.—

All 4 filaments inserted within corolla-tube.—

Trees or epiphytes 1. WIGHTIA.

Herbs —

Throat of corolla plicate, forming a 2-lobed palate; anther-cells contiguous, divaricate 2. MAZUS.

Throat of corolla not plicate:—

Anther-cells discrete, stipitate; corolla distinctly 2-lipped.—

Upper lobe of calyx distinctly exceeding the others; 2 or sometimes all the anthers with one cell imperfect 3. ADENOSMA.

Upper lobe of calyx hardly if at all exceeding the others, all 4 stamens with perfect anthers .. 4. LIMNOPHILA.

Anther-cells contiguous; lateral calyx-lobes much narrower than the other three; corolla sub-equally 5-lobed 5. HERPESTIS.

Only 2 posterior filaments inserted within corolla-tube; the anterior pair inserted on corolla-throat —

Calyx with 3 to 5 distinct ridges or wings 6. TORENIA.

- Calyx without wings or ridges :—**
 Calyx-segments narrow 7. *VANDELLIA*.
 Calyx-segments broad 8. *ARTANEMA*.
Stamens only 2 posterior fertile, inserted within corolla-tube ;
anterior pair reduced to staminodes on corolla-throat :—
 Calyx 4-lobed, the outer lobes very broad 9. *CURANGA*.
 Calyx 5-lobed, the lobes all narrow 10. *BONNAYA*.
Corolla with upper lip or 2 upper lobes inmost in bud ; rarely
lobes imbricate :—
 Corolla-tube very short ; lobes 4, sub-equal, imbricate ; stamens
 4, sub-equal 11. *SCOPARIA*.
 Corolla-tube elongated ; lobes 5, 2-labiate —
 Calyx tubular, 5-lobed 12. *STRIGA*.
 Calyx spathaceous, split in front 13. *CENTRANTHERA*.

1. *WIGHTIA*, Wall.

Large epiphytic climbers, eventually becoming trees. *Leaves* mostly or all opposite, quite entire, coriaceous. *Flowers* in usually axillary, often thyrsoid racemes, large, rosy or purple, pubescent. *Calyx* campanulate, irregularly 3-5-lobed. *Corolla-tube* incurved, upper lip erect, 2-lobed, lower spreading, 3-fid. *Stamens* 4, didynamous, ascending, exserted ; anthers oblong, sagittate, cells parallel. *Style* long, tip incurved, stigma simple. *Capsule* oblong-ovoid, septicidal, many-seeded, valves long, separating from the placentiferous axis, which is 2-partite or entire. *Seeds* linear, ascending, nucleus slender, testa membranous, broadly winged all round ; albumen 0 ; embryo straight. —**DISTRIB.** Species 3, all S. E. Asiatic.

The species of this genus exhibit the primarily epiphytic but subsequently arboreal habit characteristic of many species of *Ficus*. Though often loosely spoken of as parasites, and though, as a matter of fact, they frequently strangle the trees on which they become established, epiphytes of this class are not parasites in the physiological

WIGHTIA BORNEENSIS, Hook. f in Ic Plant. XV 35, t. 1444 (1883). A tree, 20 feet in height and upwards, commencing life as an epiphyte and flowering most freely in that condition. *Leaves* opposite, thinly coriaceous, glabrous as are the lenticellate branchlets, drying brown, margin entire, outline elliptic, apex obtusely acuminate, base cuneate, narrowed to the petiole, main-nerves 2-3-jugate ; length 3 to 4 in., breadth 1.25 to 1.75 in., petiole .75 in. long. *Flowers* opposite or whorled on the rachis of axillary or terminal racemes, pedicels slender, rigid, spreading, 5 in. long, rachis stout, glabrous, erect, 6-10-flowered, 3 to 6 in. long. *Calyx* campanulate, margin entire, .4 in. across. *Corolla* trumpet-shaped, incurved, purple, densely beset with a fine stellate tomentum, 2 in. long, lobes rounded, throat slightly enlarged. *Stamens* inserted near base of corolla ; filaments slender, far-exserted ;

anthers sagittate. Ovary glabrous; style filiform; stigma simple. Fruit not seen.

PERAK: Larut Hill at 3,000 feet, Derry (Herb. Curtis, n. 3710) !—
DISTRIB. Borneo.

The solitary Perak specimen agrees well with a specimen from Borneo in Herb. Kew; as our Perak example is destitute of leaves the description of these is based on a second Bornean example of the plant. The species is most readily distinguished from the other two known species by its entire calyx-limb

2. MAZUS, Lour.

Small herbs, often surculose. Leaves rosulate or opposite below, opposite or alternate above. Flowers in terminal, sub-second racemes; bracts minute or 0; bracteoles 0. Calyx campanulate, 5-fid; lobes large, leafy. Corolla 2-lipped; tube short, upper lip erect, ovate, 2-fid; lower longer, spreading, 3-fid; throat with a 2-lobed palate. Stamens 4, didynamous; anther-cells contiguous, divaricate. Ovary 2-celled; style short; stigma 2-lamellate; ovules numerous. Capsule globose or compressed, loculicidal, 2-valved, included. Seeds many, ovoid, very minute.—DISTRIB. Species about 5, Asiatic and Australian.

MAZUS RUGOSUS, Lour. Flor. Cochín-Chin. 385. A small annual glabrous or sparingly hirsute herb. Leaves many, radical, obovate-spathulate, irregularly coarsely crenate, narrowed to a short petiole, .75 to 3 in. long. Scapes numerous from the root, 2 to 10 in. long, leafless or with a few alternate spathulate leaves, with terminal racemes 1 to 6 in. long, the pedicels slender, .25 to .5 in. long, usually without bracteoles. Calyx campanulate, .25 in. long, lobes ovate-lanceolate, acute, half as long as tube, spreading in fruit. Corolla pale blue, .3 in. long. Capsule .2 in. long, included in the calyx; calyx-mouth in front .3 to .5 in. across. Seeds very minute; testa pale straw-coloured. Benth in DC. Prod. X. 375; Boiss. Fl. Orient. IV. 424; Miq. Flor. Ind. Bat. II. 677; Hook. f. Flor. Brit. Ind. IV. 259. *M. bicolor*, Benth. in Wall. Cat. 3913. *M. vandellhoides*, Hance in Walp. Ann. III. 193. *Lindernia japonica*, Thunb. Flor. Japon. 253. *Hornemannia bicolor*, Willd. Enum. Hort. Berol. 654; Reichb. Icon. Exot. 25, t. 37. *Columnea tomentosa*, Roxb. Flor. Ind. III. 98. *Stemodia tomentosa*, G. Don Gen. Syst. Gard. IV. 842. *Tittmannia obovata*, Bunge Enum. Pl. Chin. 279. *Vandellia obovata*, Walp. Act. Acad. Leopold. XIX., Suppl. I. 394. *Gratiola goodenæfolia*, Hornem. Hort. Hafn.

SINGAPORE: a garden weed, Ridley !—DISTRIB. E. and S.E. Asia generally.

3. ADENOSMA, R. Br.

Annual, villous or glandular aromatic herbs. Leaves opposite, rugose, crenulate. Flowers axillary or in leafy spikes, racemes or

heads; bracteoles conspicuous or absent. *Calyx* deeply 5-lobed; lobes imbricate, the upper the largest; sometimes in fruit all enlarged. *Corolla* 2-lipped; upper lip erect, entire or notched, outmost in bud; lower 3-lobed, spreading; throat not plicate; tube cylindric. *Stamens* 4, didynamous, included; anther-cells discrete, stipitate, one cell of each anterior stamen or of all four stamens empty. *Ovary* 2-celled; ovules in each cell numerous, style filiform below, winged upwards under the entire or 2-lamellate stigma. *Fruit* an ovoid, ellipsoid, or lanceolate 2-grooved and 4-valved capsule, opening both loculicidally and septiciidally. *Seeds* many, minute, reticulate.—**DISTRIB.** Species about 10, in S.E. Asia and Australia.

Flowers axillary; outer fruiting sepals enlarged:—

Leaves ovate-obtuse, crenate-serrate	1. <i>A. ovatum</i> .
Leaves ovate-acute, serrate	2 <i>A. inopinatum</i> .

Flowers in terminal heads, spikes or racemes; sepals little altered.—

Bracts linear, hardly exceeding the calyx.—	
Spikes short, dense, cylindric or capitate	3. <i>A. capitatum</i> .
Spikes long, slender	4. <i>A. cœruleum</i> .
Bracts leafy, elliptic, acute, longer than calyx	5. <i>A. hirsutum</i> .

1. **ADENOSMA OVATUM**, Benth in Hook. fil. Flor. Brit. Ind. IV. 263, A puberulous or glabrate herb, branched from the base, branches rooting below, prostrate or ascending, 6 to 18 in. long. *Leaves* ovate-obtuse, crenate-serrate, base wide-cuneate, rounded or truncate; blade .75 in. long, .5 in. wide; petiole .3 in. *Flowers* axillary, sessile; bracts lanceolate, shorter than the calyx *Calyx* of 5 almost free sepals, in flower herbaceous, sub-equal, in fruit membranous, reticulate, pubescent, the 3 outer enlarged, .35 in. wide, ovate-cordate, the 2 inner unaltered, narrow lanceolate, all .25 in. long. *Corolla* blue *Capsule* lanceolate, about as long as the sepals but hidden by the enlarged outer ones. *Herpestis ovata*, Benth Scroph. Ind 30; Wall. Cat. 3896. *H. javanica*, Bl. Bijar. 748 *Pterostigma ovatum*, Benth. in DC. Prod. X. 380; Miq. Flor. Ind. Bat II. 678

PERAK: Gunong Tundul, *Ridley* 9444! PENANG: Waterfall, *Curtis*! MALACCA: *Griffith*! SINGAPORE Bukit Timah, *Ridley* 6894! "a garden weed," *Ridley* 8910!—**DISTRIB.** Indo-China, Malay Archipelago.

2 **ADENOSMA INOPINATUM**, Prain Journ. As. Soc Beng. LXXII. 2, 16. A pubescent herb, branched from the base, branches rooting below, ascending, 6 to 18 in. long. *Leaves* ovate-acute, serrate, base cuneate; blade 1 to 1.5 in. long, .75 to 1 in. wide; petiole .3 in. *Flowers* axillary, sessile; bracts lanceolate, shorter than calyx. *Calyx*

of 5 almost free sepals; in flower herbaceous, sub-equal; in fruit membranous, reticulate, the 3 outer enlarged, .25 in. wide, ovate-lanceolate with truncate bases, the 2 inner unaltered, narrow lanceolate, all .25 in. long. *Corolla* blue. *Capsule* lanceolate, about as long as the sepals but hidden by the enlarged outer ones.

MALACCA: *Griffith*! SINGAPORE: *Anderson*! *King's Collector*!

Very nearly allied to *A. ovatum*, Benth., and *A. subrepens*, Benth. It differs from both by its acute leaves, but except in this respect and as regards its distribution it is hardly separable from *A. subrepens* of Ceylon. From *A. ovatum* of Tenasserim, with which it has been confused, it further differs in its larger size, coarser habit of growth, and much narrower outer sepals. It has also been confused with *A. cœruleum*, from which it differs by its flowers being all axillary and by its enlarged fruiting sepals.

3. *ADENOSMA CAPITATUM*, Benth. in Hook. f. Flor. Brit. Ind. IV. 264. A stout, erect, glandular-villous herb, 1 to 2 feet high. *Leaves* ovate or oblong, sub-acute, serrate, often reflexed; base cuneate; blade 1 to 2 in. long, .5 to .75 in. wide, petiole very short. *Flowers* in dense cylindrical or globose terminal or axillary heads, with basal involucre of floral leaves; peduncles 1 in. or less, sometimes in the lower clusters sub-obsolete and the flowers in axillary whorls; heads usually .5 in. across, sometimes longer up to 4 in. long, bracts linear, hardly exceeding the sepals. *Calyx* of 5 almost free sepals, villous with long hairs, .25 in. long, the uppermost ovate-lanceolate, broader than the other lanceolate. *Corolla* blue. *Capsule* ovoid, .2 in long *Stemodia capitata*, Benth. in Bot. Reg. under t. 1470; Wall. Cat. 3926. *Pterostigma spicatum*, Benth. Scroph. Ind. 21. *P. capitatum*, Benth. Scroph. Ind. 31, and in DC. Prod. X. 380 *Erinus bilabiatus*, Roxb. Fl. Ind. III. 92.

A coarser plant than *A. capitatum*, with leafy bracts throughout the spikes

4 LIMNOPHILA, R. Br.

Herbs of marshes and pools, glabrous or pubescent, aromatic. *Leaves* with transparent dots, opposite or whorled, toothed or cut, when submerged frequently lacinate-multifid. *Flowers* solitary axillary, sessile or pedicelled, or passing into terminal spikes or racemes; bracts leafy; bracteoles small or obsolete. *Calyx* 5-partite; lobes narrow, imbricate, all equal or the upper largest. *Corolla* 2-labiate; upper lip outmost, sub-erect, entire or 2-fid; lower spreading, 3-lobed; throat not plicate; tube cylindric. *Stamens* 4, didynamous, included; anther-cells all perfect, usually discrete, stipitate, occasionally contiguous. *Ovary* 2-celled; ovules in each cell numerous; style slender, with deflexed tip and 2-lamellate stigma. *Fruit* an ovoid or oblong capsule, with both septical and loculicidal dehiscence, the placentiferous septum separating from the valves. *Seeds* many, minute, angular and truncate, reticulate.—DISTRIB. Species about 25, in the tropics of the Eastern Hemisphere and Australia.

Leaves never pinnatifid above, very rarely so even on lower portion of stem.—

Flowers sessile:—

Leaves at least 1 in. long:—

Leaves petioled, 2 to 3 in. long, pubescent or glabrous .. 1. *L. Roxburghii*.

- Leaves sessile, 1 to 2 in. long, softly pubescent .. 2. *L. balsamea*.
 Leaves glabrous, never exceeding .5 in. long .. 3. *L. micrantha*.
 Flowers pedicelled :—
 Leaves hirsute :—
 Leaves usually opposite, rarely 3-nate, never more than .75 in. long ; flowers always axillary, solitary .. 4. *L. villosa*.
 Leaves usually 3-4-nately whorled, rarely opposite, never less than 1.5 in. long ; flowers usually cymose or paniculate, rarely axillary, solitary .. 5. *L. hirsuta*.
 Leaves glabrous :—
 Leaves cuneate at base, always opposite ; flowers axillary, solitary —
 Stems creeping ; branches many, divaricate ; pedicels in fruit erect .. 6. *L. pygmaea*.
 Stems erect, usually simple ; pedicels in fruit recurved .. 7. *L. erecta*.
 Leaves half-amplexicaul at base, often 3-4-nately whorled, flowers usually in many-flowered racemes, rarely axillary, solitary .. 8. *L. gratissima*.
 Leaves mostly or all lobulate or pinnatisect, or capillary multifid :—
 Flowers sessile or shortly pedicelled ; uppermost leaves entire :—
 Flowers all solitary .. 9. *L. sessiliflora*.
 Flowers passing into a terminal spike .. 10. *L. heterophylla*,
 VAR. *reflexa*.
 Flowers all pedicelled, the pedicels exceeding the calyx, all the leaves capillary multifid .. 11. *L. Griffithii*.

1. LIMNOPHILA ROXBURGHII, G. Don Gen. Syst. IV. 543 (not of Benth). A stout glabrous or pubescent aromatic herb, with a creeping rootstock and with decumbent rooting base, giving off numerous erect stems 1 to 2 feet high. Leaves opposite, petioled, elliptic or ovate, obtuse or sub-acute, margin crenulate, base cuneate, punctate beneath, nerves distinct, 8 to 10 pairs, length up to 4 in., width to 2 in. ; petiole .75 in. Flowers sessile, in axillary peduncled heads, rarely solitary. Calyx hirsute, .2 in. long ; lobes lanceolate, finely acuminate in fruit, not striate. Corolla .35 in. long, purplish-blue with a yellow throat. Capsule .2 in. long, elliptic, sub-acute. Hook. f. Flor. Brit. Ind. IV. 265. *L. Menthastrum*, Benth. in DC. Prod. X. 386 ; Maxim. Mel. Biol. IX. 406. *Herpestis rugosa*, Roth Nov. Sp. 290. *Capraria gratissima*, Roxb. Fl. Ind. III. 92 (in part). *Stemodia Menthastrum*, Benth. Scroph. Ind. 23, Wall. Cat. 3927. *Adenosma triflora*, Seem. Fl. Vit. 184 (not of Nees). *Eclipta scabriuscula*, Wall. Cat. 3212.

KEDAH : Langkawi, at Coah, Curtis 2556!—DISTRIB. Himalaya, from Chamba eastward, N. and C. India, Indo-China, Philippines, China.

The bases of the stems are often submerged, and besides the fibrous roots then emitted the lower nodes at times have multifid submerged leaves. The plant smells strongly of Aniseed.

2. *LIMNOPHILA BALSAMEA*, Benth. in DC. Prod. X. 386. A stoutish, softly pubescent herb; stem 1 to 2 feet high. *Leaves* opposite, elliptic, sub-acute, narrowed from the middle to the base with margin entire, beyond the middle obscurely crenulate, punctate beneath, nerves slender, 3 to 5 pairs; length up to 2 in., width to 1 in.; petiole 0. *Flowers* in short peduncled axillary heads or spikes. *Calyx* hirsute, .15 in. long; lobes lanceolate, finely acuminate; in fruit striate. *Corolla* .35 in. long. *Capsule* .2 in. long, broadly elliptic, obtuse. Hook. f. Flor. Brit. Ind. IV. 266. *Stemodia balsamea*, Benth. Scroph. Ind. 23; Wall. Cat. 3928.

PERAK: *King's Collector* 1027!—DISTRIB. Indo-China

3. *LIMNOPHILA MICRANTHA*, Benth in DC Prod. X. 387. A small, stoutish, glabrous herb, creeping below; stem 3 to 6 in. long, branching from the base. *Leaves* all opposite, crowded, thick, 25 to .45 in long, margin entire or very sparingly sub-serrate, punctate beneath, nerves obscure; petiole 0. *Flowers* axillary, sub-sessile, small. *Calyx* .06 in. long, glabrous; lobes subulate, in fruit striate. *Corolla* reddish-purple, .12 in. long. *Capsule* ovate, .08 in. long. Hook f. Flor Brit. Ind. IV. 267. *Stemodia micrantha*, Benth. Scroph. Ind. 23; Wall. Cat 3936. *Herpestis pygmaea*, Griff. Notul. IV. 104.

PAHANG. *Ridley*!—DISTRIB. Indo-China, Bengal.

4. *LIMNOPHILA VILLOSA*, Bl. Bijdr 750. An erect or spreading, sub-simple, stoutish or slender, pubescent herb, stems 4 to 6 in. high. *Leaves* opposite, elliptic-oblong, sub-crenate, 5 to .75 in. long, punctate beneath, nerves obscure; petiole 0. *Flowers* axillary, solitary, on short pubescent pedicels, .15 in. long, erect in fruit. *Calyx* hirsute, .15 in long, lobes lanceolate, acuminate-subulate, in fruit striate. *Corolla* .2 in. long. *Capsule* 15 in long, ovate. Benth. in DC Prod. X. 388; Miq. Flor. Ind. Bat. II 681. *L. laxa*, Benth in DC Prod. X. 388 partly. *L. pulcherrima*, Hook f Flor Brit. Ind IV 267 *Herpestis pulcherrima*, Griff. Notul IV 104

8. LIMNOPHILA GRATISSIMA, Bl. Bijdr. 749. An erect, glabrous herb with a stout stem, 1 to 2 feet high, simple or occasionally branched above. *Leaves* opposite and ternate, half-amplexicaul, linear-oblong, 1.5 to 2.5 in. long, apex sub-acute, margin serrulate, punctate beneath, nerves few, indistinct; petiole 0. *Flowers* in axillary and terminal many-flowered racemes, rarely flowers axillary solitary, sometimes the racemes 12 in. long and paniculately branched with the flowers whorled, at others the racemes reduced, pedicels .5 to 1 in. long, glandular; bracteoles minute. *Calyx* .3 in. long, glabrate, lobes lanceolate-acuminate; in fruit calyx hemispherical with lobes striate. *Corolla* 5 in. long. *Capsule* oblong, acute, .3 in. long. Benth. Scroph. Ind. 26;

Wall. Cat. 3906; Hook. f. Flor. Brit. Ind. IV. 268. *L. punctata*, Bl. Bijdr. 750; Benth. in DC. Prod. X. 388; Miq. Flor. Ind. Bat. II. 682; Maxim. Mel. Biol. IX. 406. *Gratiola aromatica*, Pers. Synops. I. 14. *Ambulia aromatica*, Lamk Encycl. Meth. I. 128. Rheede Hort. Malab. X. 6.

MALACCA: Griffith. PERAK: King's Collector! Wray!—DISTRIB. S.E. Asia generally, N. Australia.

9. *LIMNOPHILA SESSIFLORA*, Blume Bijdr. 750. A hirsute or rarely glabrate herb; stem stoutish, 4 to 8 in long. Leaves 3 to 6 in a whorl throughout all lobulate or pinnatisect, or the uppermost very rarely opposite entire, usually about 4 to 5 in. long. Flowers axillary solitary, sessile or shortly pedicelled. Calyx 3 in long, lobes ovate-acuminate, tube in fruit membranous, hemispheric, not striate. Corolla 5 in. long. Capsule orbicular, turgid, 2 in. across. Benth. Scroph. Ind. 25, Wall. Cat. 3902; DC. Prod. X. 389; Miq. Flor. Ind. Bat. II. 683, Hook. f. Flor. Brit. Ind. IV. 270. *Hottoma sessiflora*, Vahl Symb. II. 36.

KEDAH: Langkawi, in swamps, Curtis!—DISTRIB. Throughout S.E. Asia.

10. *LIMNOPHILA HETEROPHYLLA*, Benth; var. *reflexa*, Hook. f. Flor. Brit. Ind. IV. 270. A glabrous herb with a very slender elongated stem, 1 to 1.5 feet long. Leaves towards apex of stem usually opposite, small, rarely over 25 in. long, sessile, half-amplexicaul, oblong, margin crenulate; followed by pinnatifid leaves 4 to 6 in a whorl, 5 in. long; with below these submerged whorled and very finely capillary-multifid leaves, 5 in. long. Flowers axillary solitary, the upper sub-sessile passing into a short leafy spike, the lower pedicelled, with pedicels recurved in fruit and longer than the calyx. Calyx 25 in. long, lobes ovate, very shortly acuminate, in fruit not at all striate, tube in fruit hemispheric, membranous. Corolla 4 in long. Capsule sub-globose, 3 in. long. *L. reflexa*, Benth. Scroph. Ind. 25; DC. Prod. X. 389; Wall. Cat. 3904.

MALACCA. Cuming. KEDAH: Curtis 2103!—DISTRIB. (of variety,) Tenasserim: (of type,) throughout S E Asia.

This variety differs from the type in having distinctly shorter submerged leaves, and distinctly longer pedicels to the lower flowers.

11. *LIMNOPHILA GRIFFITHII*, Hook. f. Flor. Brit. Ind. IV. 271. A very small herb with creeping tufted stems, sending down long rigid roots and emitting many erect branches, 1 to 2 in. long, sometimes stout and stiff, sometimes slender and flaccid. Leaves 25 to 35 in. long, usually densely whorled and imbricated, multifid. Flowers axillary solitary, on slender pedicels, 35 to 5 in. long, that are deflexed

in fruit. *Calyx* .1 in. long, teeth short. *Corolla* pure white, .4 in. long. *L. sessiliflora*, Griff. Notul. IV. 99, t. 418, f. 5 (not of Bl.). *L. gratio-
loides* var. *myriophylloides*, Benth. in DC Prod. X. 389 partly. *Quin-
quelobus glaber*, Benj. in Linnæa XX 316. *Benjaminea glabra*, Benj.
in Linnæa XX. 761.

MALACCA. Griffith! Leman, Cuming! Manngay! PERAK: King's
Collector!

Griffith's specimens have slightly larger leaf-segments and shorter pedicels than those of Maingay, Cuming, and Kunstler, where the leaf-segments are finely capillary. But Griffith's plant evidently grew on mud, while that of Kunstler was floating in water, and the difference of habitat probably sufficiently explains the difference in foliage. The flowers of the two forms are the same.

5. HERPESTIS, Gaertn. f.

Herbs, glabrous. *Leaves* often dotted, entire or toothed, or below submerged and multifid. *Flowers* axillary or racemose, bracteoles small or obsolete. *Calyx* 5-partite; lobes imbricate, the upper largest, the two lateral inmost often very narrow. *Corolla* indistinctly 2-lipped; upper lip outmost spreading, 2-lobed or only emarginate, lower 3-lobed, tube cylindric. *Stamens* 4, didynamous, included; anthers sometimes approximate in pairs; cells contiguous, parallel, not confluent. *Ovary* 2-celled; ovules in each cell numerous; style dilated at the top; stigma entire or 2-lobed. *Fruit* a globose or ovoid 2-celled capsule; valves 2 or 4, separating from the placentiferous septum. *Seeds* many, very minute.—DISTRIB. Species about 50, throughout the tropics.

HERPESTIS MONNIERIA, H B. & K Nov. Gen. and Sp. II. 366. A glabrous, rather succulent creeping herb, rooting at the nodes; branches 4 to 10 in. long. *Leaves* obovate-oblong, spatulate, sessile, obtuse, entire, .5 to .75 in. long. *Flowers* axillary, peduncles usually .75 to 1 in. long, bracteoles 2. *Calyx* of 5 nearly free sepals, .2 to .3 in. long, the upper sepal ovate. *Corolla* white, faintly tinged with blue, .4 to .6 in. long, lobes sub-equal. *Capsule* ovoid, acute, hidden by the sepals, .15 to .25 in. long. *Seeds* minute, irregular; testa pale. Benth. Scroph. Ind. 30, and in DC. Prod. X. 410; Wall. Cat. 3900; Dalz. & Gibs. Bomb. Flor. 178, Miq. Flor. Ind. Bat. II. 685; Bot. Mag. t. 2557, Boiss. Flor. Orient. IV. 426; Hook f. Flor. Brit. MALACCA: Hervey! JOHORE. Hullett! SINGAPORE: Kurz! Ridley!—DISTRIB. Throughout the tropics.

6. TORENIA, Linn.

Herbs, glabrous or pubescent. *Leaves* opposite, entire or crenate or serrate. *Flowers* often showy, axillary, or in terminal or pseudo-axillary racemes or umbels; bracteoles 0. *Calyx* 2-lipped or 3-5-toothed, 3-5-keeled or -winged or -folded. *Corolla* 2-lipped; upper lip outmost erect, concave or pinched, notched or 2-fid; lower larger spreading, 3-lobed; tube cylindric, somewhat curved, dilated upwards. *Stamens* 4, didynamous; upper pair included inserted on corolla-tube; lower inserted on throat, appendaged or not at base, and connivent under upper lip; anthers contiguous or connate in pairs, cells often confluent. *Ovary* 2-celled; ovules in each cell numerous; style slender; stigma 2-lamellate. *Fruit* a linear or oblong, included septicidal capsule; valves separating from the placentiferous septum. *Seeds* many, rugose or cancellate.—DISTRIB. Species 20, Tropical Asiatic and African, one American.

Calyx very distinctly winged —

Fruiting calyx sub-orbicular, as broad as long; stems prostrate and rooting 1 *T. polygonoides*.

Fruiting calyx longer than broad; stems erect —

Wings broad distinctly decurrent on the pedicels; corolla very little exserted, bracteoles very small, pedicels shorter than the calyx 2. *T. peduncularis*.

Wings narrow hardly decurrent on the pedicels, corolla distinctly exserted; bracteoles large, pedicels as long as or longer than the calyx 3 *T. ciliata*.

Calyx hardly or not at all winged —

Flowers all axillary.—

Stems and leaves glabrous; calyx deeply lobed, faintly winged 4. *T. asiatica*

Stems and leaves hirsute; calyx wingless, shortly lobed .. 5 *T. Benthamiana*.

Flowers in terminal racemes, stems and leaves hirsute, calyx wingless, shortly lobed 6 *T. flava*.

1 TORENIA POLYGONOIDES, Benth. Scroph. Ind. 39. A slender straggling herb, branches 6 to 12 in long, decumbent and often rooting at the nodes; all parts glabrous. *Leaves* orbicular-ovate, serrate; lamina .4 to .5 in. long, .35 to .45 in. wide, apex acute or sub-acute, base cuneate; petiole slender, .25 in long. *Flowers* axillary on 2-4-flowered peduncles; pedicels .25 in. long, slender; bracteoles minute. *Calyx* tubular with very wide wings, in fruit sub-orbicular .3 in. in diam. *Corolla* .35 in. long, white or white and pink, distinctly exserted. DC Prod X. 409; Miq. Flor. Ind Bat II. 688, Hook. f. Flor. Brit. Ind IV. 276. *T. cardiosperma*, Benth. in DC Prod. X. 409. *Herpestes polygonoides*, Benth. in Wall. Cat. 3897.

SINGAPORE: Wallich 3897! King's Collector! Hullett! Murton, Kuntze! Schomburgk! Anderson! Kurz! MALACCA: Mangay! Griffith! Goodenough! PENANG: Bouton; Deschamps! PERAK: Gapis Pass, Curtis 2683!

2. *TORENIA PEDUNCULARIS*, Benth. in Wall. Cat. 3956. An erect annual herb 1 to 2 feet high; branches acutely 4-gonous, uniformly hairy upwards, below ciliate only on the angles with recurved hairs. Leaves ovate-lanceolate, base cordate, apex acuminate, margin serrate; lamina membranous 1 to 2 in. long, .5 to 1 in. wide, sparingly hairy on both surfaces; petiole slender, sparsely hirsute, .5 to .75 in. long. Flowers axillary solitary, or the uppermost in a sub-umbellate corymb or a terminal raceme, the lowest in the raceme leaf-opposed; pedicels .3 in., in fruit 5 in. long, thickened upwards, shorter than the calyx; bracteoles linear-subulate small. Calyx-tube narrow-ovate, .6 in., in fruit .85 in. long, wings broad, decurrent on the pedicel, the margins ciliate. Corolla .75 in. long, little exserted, tube yellow below, pale blue above, lateral lobes of lip with darker blotches. Stamens with glabrous filaments not appendaged. Disk cupular. Hook. f. Flor. Brit. Ind. IV. 276. *T. edentula*, Benth. in DC. Prod. X. 410, Bot. Mag. t. 4229.

PENANG: Schomburgk! MALACCA: Goodenough! PERAK: *Scortechini*! Ridley 9457! 9758! Ipoh, Curtis! NICOBAR: Kamorta, Kurz!—DISTRIB. Indo-China, Java, Timor.

3. *TORENIA CILIATA*, Sm in Rees Cyclop. V. 36. An erect annual herb, 1 to 2 feet high, branches acutely 4-gonous, uniformly hairy upwards, below ciliate only on the angles. Leaves ovate, base wide cuneate, apex obtuse or sub-acute, margin entire or crenate; lamina membranous 1.5 to 2.5 in. long, .75 to 1.25 in. wide, sparingly hairy on both surfaces; petiole winged above .25 to .5 in. long, sometimes shorter. Flowers in distant pairs, racemed at the ends of the branches; pedicels .3 in., in fruit .4 in. long, thickened upwards, as long as or longer than the calyx, bracteoles .3 in. long, linear, hirsute, as long as the flowering pedicels. Calyx very narrow-tubular, .4 in., in fruit .6 in. long, wings distinct but narrow, the margins ciliate. Corolla .75 in. long, distinctly exserted, light blue. Benth. in DC. Prod. X. 411; Miq. Flor. Ind. Bat. II. 689; Hook. f. Flor. Brit. Ind. IV. 279. *T. racemosa*, Benth. Scroph. Ind. 38 (not of Griff.). *T. cœrulea*, Miq. Flor. Ind. Bat. Suppl. 562. *T. flava*, Wall. Cat. 3957 (in part); Miq. Flor. Ind. Bat. Suppl. 562 (not of Ham).

PENANG: Wallich! Deschamps! PERAK: King's Collector! *Scortechini*! Ridley!—DISTRIB. Sumatra, Timor.

Very near to *T. peduncularis*, and really only separable by its smaller more winged calyx. It may be remarked that Kurz in Herb. Calcutta has suggested that *T. ciliata*

is = *T. peduncularis*, while in the field Scortechini has named *T. peduncularis*, "*T. ciliata*."

4. *TORENIA ASIATICA*, Linn. Sp. Pl. 619. A sub-erect or spreading slightly branching herb, stems quadrangular glabrous. *Leaves* ovate-lanceolate, base cuneate, margin finely serrate; lamina 1.5 to 2.5 in. long, 1 to 1.5 in. wide, membranous, glabrous; petiole slender, glabrous, .5 in. long. *Flowers* axillary, pedicels .5 in. long; bracteoles minute subulate. *Calyx* .5 in. long, deeply 5-partite, lobes narrow-lanceolate, with a prominent midrib. *Corolla* 1.5 in. long, tube narrow-cylindric at base, infundibuliform above, dark violet on both sides, upper lobe erect, lip 3-lobed spreading, all yellowish. *Stamens* with appendages on anterior filaments. *Disk* cupular waved Wight Ic. t. 862, Benth. in DC. Prod. X. 410; Wall. Cat. 3953 A. B.; Miq. Flor. Ind. Bat. II. 689; Gaertn. Fruct. III. 29, t. 184, Lamk Ill. t. 523; Bot. Mag. t. 4249; Lem. Ill. Hort. t. 199, Flore des Serres II. t. 157, XIII. t. 1342; Hook. f. Flor. Brit. Ind. IV. 277. *Treisteria cordata*, Griff. Notul. IV. 109. Rheede Hort. Malab. IX. t. 53.

5. *TORENIA BENTHAMIANA*, Hance Ann. Sc. Nat. Ser. 4. XVIII. 226. A slender straggling herb, branches 6 to 10 in. long, decumbent and often rooting at the nodes, all parts sparingly hirsute. *Leaves* ovate, acute, margin serrate; lamina .5 to .75 in. long, 3 to .4 in. wide, base truncate or cuneate; petiole .25 in. long. *Flowers* axillary, solitary, pedicels .75 to 1.25 in. long, slender, bracteoles minute. *Calyx* very narrow-tubular, .35 in. long, in fruit 5 in. long, keeled and channelled but not winged, hirsute with sparse spreading hairs. *Corolla* 1.25 in. long, distinctly exserted; tube violet purple, limb yellow. *T. Baillonii* Godef. in Ill. Hort. XXV. t. 324, E. Morr. in Belg. Hort. XXIX. t. 9, f. 2. *T. flava*, Bot. Mag. t. 6700 (not of Ham.).

JOHORE: *Ridley* 4160!—DISTRIB. Siam, Cochin-China, S. China.

6. *TORENIA FLAVA*, Ham. in Wall. Cat. 3957. An erect annual herb, 1 to 2 feet high; branches acutely 4-gonous, uniformly hairy upwards, below ciliate only on the angles with spreading hairs. *Leaves* ovate or ovate-oblong, base wide-cuneate, margin entire or crenate, lamina membranous 1 to 1.5 in. long, .7 to 1 in. wide, hairy on both surfaces; petiole winged above, often very short. *Flowers* racemed at the ends of the branches; pedicels 2 in., in fruit .3 in. long, thickened upwards, shorter than the calyx; bracteoles .4 in. long linear, hirsute, rather longer than the fruiting pedicels. *Calyx* very narrow-tubular .35 in., in fruit .5 in. long, keeled and channelled but not winged, hirsute

throughout with sparse spreading hairs. *Corolla* .75 in. long, distinctly exserted, bright yellow. Benth. Scroph. Ind. 38, and in DC. Prod. X. 414; Miq. Flor. Ind. Bat. II. 689; Hook. f. Flor. Brit. Ind. IV. 278. *Pentstemon racemosus*, Griff. Notul. IV. 120. *Mimulus hirsutus*, Bl. Bijdr. 756.

PERAK: *Kunstler* 904!—DISTRIB. Indo-China, Malaya.

7. VANDELLIA, Linn.

Herbs, glabrous or pubescent. *Leaves* opposite, often toothed, usually penninerved. *Flowers* small, axillary or racemose, bracteoles 0. *Calyx* campanulate, 5-toothed, or oftener deeply 5-partite, neither keeled nor winged. *Corolla* 2-lipped; upper lip outmost, erect, concave, emarginate or 2-fid; lower wider, spreading, 3-lobed; tube cylindric. *Stamens* 4, didynamous; the posterior pair inserted in corolla-tube, usually included, the anterior pair inserted on corolla-throat, with arched filaments appendaged near the base, anthers contiguous or connate in pairs under upper lip, cells divaricate. *Ovary* 2-celled; ovules in each cell numerous, style slender; stigma 2-lamellate. *Fruit* a globose or ovoid, or long cylindric, septacidal capsule; valves separating from the placentiferous septum. *Seeds* many, small, rugose.—DISTRIB. Species about 30, mostly S.E. Asiatic.

Capsule about equalling or shorter than the calyx —

Calyx very shortly 5-lobed .. . 1. *V. crustacea*.

Calyx divided almost to the base in 5 sepals —

Sepals longer than the capsule —

Stems erect; all parts sparsely beset with spreading hairs;

leaves entire or sinuate .. . 2. *V. hirsuta*.

Stems procumbent, all parts softly villous; leaves crenate-

serrate .. . 3. *V. mollis*.

Sepals not longer than the capsule —

Leaves sessile .. . 4. *V. scabra*.

Leaves petioled .. . 5. *V. elata*

Capsule much longer than the calyx .. . 6. *V. pedunculata*.

1. VANDELLIA CRUSTACEA, Benth. Scroph. Ind. 35. A diffusely trichotomously branched, glabrous or sparsely hairy herb; branches mostly from near the root; stems 4 to 18 in. high. *Leaves* ovate or lanceolate, entire or serrate; lamina .5 to 1 in. long, .25 to .5 in. wide; petioles short. *Flowers* axillary or sub-racemose; pedicels slender, strict, .5 to 1.5 in. long. *Calyx* shortly 5-lobed, in flower 1 in., in fruit .15 in. long. *Corolla* pale purple or white. *Capsule* ovate-oblong, obtuse, .12 in. long. DC. Prod. X. 413; Wight Ic. t. 863; Miq. Flor. Ind. Bat. II. 690; Hook. f. Flor. Brit. Ind. IV. 279. *V. alba*, Benth.

13 CENTRANTHERA, R. Br

Herbs, semiparasitic, annual, rigid, scabrous. *Leaves* opposite throughout, or opposite below alternate above, oblong or linear, obtuse, entire or toothed. *Flowers* axillary, or in bracteate spikes or racemes, bracteoles 2. *Calyx* compressed, spathaceous, split on one side, acuminate entire, or shortly 3-5-lobed on the other. *Corolla* 5-lobed; lobes sub-equal, spreading, the 2 upper inmost in bud; limb oblique; tube long, incurved. *Stamens* 4, didynamous, included; anthers contiguous in pairs; cells transverse, spurred or mucronate at base, one cell often sterile. *Ovary* 2-celled, ovules in each cell numerous, style simple, dilated above, stigma acute, linguiform. *Fruit* an ovoid or sub-globose loculicidal capsule; valves entire, carrying away the

placentas. *Seeds* many, small, oblong-cuneate; *testa* lax, reticulate.—
DISTRIB. Species 4–5, E. Asiatic and Australian.

CENTRANTHERA HUMIFUSA, Wall. Cat. 3883. A dwarf herb, diffusely branching from the base, hispid or glabrous, branches 3 to 6 in. long. *Leaves* linear, entire, .5 to .75 in. long. *Flowers* in terminal spikes, sub-sessile; bracts small. *Calyx* ovoid, sub-acute, .15 in. long. *Corolla* yellow, .3 to .5 in. long, incurved. *Capsule* sub-globose, .15 in. wide. Benth. in DC. Prod. X. 525; Hook. f. Flor. Brit. Ind. IV. 301. *Razumovia tranquebarica*, Spreng. Syst. II. 812. *Torenia lepidota*, Roth Nov. Sp. 281.

MALACCA: *Griffith*! **SINGAPORE:** *Kurz*!—**DISTRIB.** China, Indo-China, India, Malaya.

Order LXXXIV. OROBANCHACEÆ.

[By D. PRAIN.]

Root-parasites, annual, white or reddish. *Stem* simple or branched, stout or slender, clothed with leaf scales. *Leaves* proper 0. *Flowers* solitary or in spikes or racemes, irregular. *Sepals* 4–5, usually connate in a variously toothed or spathaceous calyx, rarely free. *Corolla* hypogynous, 2-lipped, upper lip vaulted, lower lip 3-lobed; throat often with 2 villous folds; tube curved. *Stamens* 4, didynamous, inserted on corolla-tube; anthers 1–2-celled; cells spurred at the base, dehiscence by slits or basal pores; one cell sometimes imperfect. *Disk* unilateral or glandular or obsolete. *Ovary* of 2 connate carpels, usually 1-celled; style long, tip curved, stigma 2-lobed, sub-capitate, ovules usually numerous on generally 2 pairs of free or confluent parietal placentas which sometimes meet in the axis of the ovary. *Capsule* 1-celled, 2-valved; *seeds* usually many, minute, with a pitted or tubercled, rarely reticulate and lax testa; albumen fleshy; embryo ovoid, entire or 2-fid.

ÆGINETIA, Linn.

Leafless parasitic herbs with simple or branched naked or scaly stems or scapes. *Flowers* few, large, solitary or corymbose; bracteoles 0. *Calyx* spathaceous, split in front almost to the base. *Corolla* incurved, campanulate-tubular; limb obscurely 2-lipped, lobes somewhat spreading, the two upper lobes (upper-lip) connate. *Stamens* included; anthers with one perfect cell adnate to filament and not spurred; the other cell absent in upper anthers, empty clavate and deflexed in the lower. *Ovary* 1-celled; placentas large, 2-lobed or multifid, filling the chamber, ovuliferous throughout; style slender;

stigma large peltate. *Capsule* partially 2-valved. *Seeds* many, small, crowded; testa pitted.—DISTRIB. Species 3, S.E. Asiatic.

ÆGINETIA PEDUNCULATA, Wall. Pl. As. Rar. III. 13, t. 219. A leafless herb, 3 to 6 in. high; stems red or yellow, parasitic on roots, buried, emitting several short stout fleshy several-flowered scapes with alternate peduncled flowers; peduncles 1 to 4 in. long, stout, bracteate at base; bracts .25 to .35 in., ovate, obtuse. *Calyx* 1.5 to 2 in. long, fleshy, dull-pink at length yellowish-white, with a mucilaginous pad surrounding base of corolla, tip acute or obtuse. *Corolla-tube* yellow or white, the lobes violet or claret-coloured, crenate and erose. *Stamens* didynamous, anthers of lower pair with a large dorsal fleshy decurved horn. *Ovary* 1-celled, placentas 2, each of 2 plates; stigma cordate-peltate. *Capsule* ovoid. *Seeds* brown. Reut. in DC. Prod. XI. 43; Wight Ill. t. 158B, f. 6; Ic. t. 1421; Hook. f. Flor. Brit. Ind. IV. 320. *Æ. abbreviata*, Ham. in Wall. Cat. 3965; Benth. Scroph. Ind. 95; Reut. in DC. Prod. XI. 43. *Æ. acaulis*, Walp. Rep. III. 481; Reut. in DC. Prod. XI. 43. *Orobanche pedunculata*, Roxb. Hort. Beng. 45; Fl. Ind. iii. 29. *O. acaulis*, Roxb. Cor. Pl. III. 89, t. 292, and Fl. Ind. III 29.

PERAK: Batang Padang Valley, 2,000 feet; Wray 1456! 1457!—DISTRIB. India, Indo-China, Java, Sumatra.

One of Wray's specimens is attached to the rhizome of a *Kempferia*.

CHRISTISONIA, Gardn.

Low fleshy scaly parasitic herbs, with yellow or white or rose-purple flowers; stems simple or tufted from a short or long rootstock; scales alternate, obtuse or acute. *Flowers* densely or laxly corymbose; bracteoles 2 or 0. *Calyx* tubular, terete or angular, 2-5-lobed or -toothed. *Corolla-tube* long, inflated or funnel-shaped, slightly or distinctly curved, 5-lobed, obscurely to distinctly 2-lipped, the two upper lobes (in our species outer in bud) sub-erect, the lower spreading. *Stamens* 4, included or sub-exserted; filaments stout; anthers with one perfect cell and one imperfect, one pair sometimes spurred or appendaged; rarely with both cells perfect. *Disk* 0. *Ovary* 1-celled with two 2-partite placentas, or 2-celled from the placentas meeting in the axis; style long, tip incurved, stigma large, 2-lobed, the upper lobe very small or obsolete, the lower (sometimes the only one present) very large orbicular or clavate; ovules numerous. *Capsule* ovoid or sub-globose, loculicidal. *Seeds* minute, crowded, many perfect with striate testa, others imperfect with lax testa; embryo half as long as the albumen.—DISTRIB. Species 12, tropical Asiatic.

CHRISTISONIA SCORTECHINII, Prain in Journ. As. Soc. Beng. LXXIII. 2. 205. *Stem* short hypogæal, covered with linear scales. *Flowers* 3 to 8, crowded in a dense corymb; some shortly peduncled, others sessile, each with an oblong cucullate basal bract .75 in. long; all parts loaded with sticky mucilage. *Calyx* spathaceous, rupturing into usually 2 (sometimes, *vide* Scortechini, into 2 to 4) lobes, in the fully opened flower with tube 1 in., lobes .25 in. long. *Corolla-tube* white, with a yellow line inside in front, 2 in. long, infundibuliform and curved above, the lower part narrow-cylindric 1 in. long; limb 2-labiate, upper lip outmost in bud, erect, 2-lobed, lower lip 3-lobed, spreading. *Stamens* didynamous; anthers all conniving; filaments glabrous, inserted below middle of corolla-tube, 1-celled, adnate to the enlarged filament, upper pair without, lower with an empty oblong pointed cell. *Disk* 0. *Ovary* glabrous, 1-celled, placentas 2, 2-fid, uniformly covered with ovules; style glabrous downwards; stigma peltate, flat, .2 in. in diam.

PERAK: *Scortechini*, 2121!

Order LXXXV. LENTIBULARIACEÆ.

[By D. PRAIN]

Marsh or aquatic herbs, or occasionally growing on wet rocks. *Leaves* radical, rosulate or when submerged capillary-multifid, sometimes obsolete. *Flowers* irregular, hermaphrodite, on 1-many-flowered simple or branched scapes, bracts small, sometimes 0, bracteoles under calyx 2 or 0. *Calyx* inferior, 2-5-lobed. *Corolla* 2-lipped and spurred; upper lip usually the smaller, entire or emarginate; lower lip 3-6-lobed. *Stamens* 2, adnate to the base of the corolla, alternate with the lobes of the lower lip, filaments widely curving, anther-cells ovate, transversely confluent; dehiscence longitudinal. *Carpels* 2, connate in a superior, globose, 1-celled ovary; ovules very many, on a free basal placenta; style short, stigma unequally 2-lobed. *Fruit* a globose 2-4-valved, or irregularly rupturing capsule. *Seeds* very many, minute; albumen 0.—**DISTRIB.** Species nearly 200, in all parts of the world.

UTRICULARIA, Linn.

Herbs, often very small, submerged or floating, or growing on wet rocks. *Leaves* in submerged or floating species multifid, with capillary segments, in erect or twining species entire, often disappearing at time of flowering, frequently with minute bladders. *Flowers* on simple or branched scapes, racemes few- or many-flowered; bracts and 2 bracteoles

distinct. *Calyx* 2-partite; lobes entire or nearly so, often accrescent. *Corolla* 2-lipped; upper lip entire or emarginate; lower larger 3-6-lobed; tube with a straight or curved spur. *Stamens* 2, adnate to base of corolla, alternate with lobes of lower lip; filaments broad; anthers ovate, 2-celled, or by confluence almost 1-celled. *Carpels* connate in a globose 1-celled ovary; ovules many, on a central placenta; style short; stigma unequally 2-lobed. *Capsule* globose, regularly 2-4-valved, or opening irregularly. *Seeds* many, small; albumen 0.—*DISTRIB.* Species 150, in most countries.

Leaves many, submerged, scattered, divided into numerous capillary segments—mostly interspersed with bladders; calyx-lobes equal or nearly so; pedicels not winged :—

Flowers yellow to pale-yellow or nearly white.—

Peduncles very slender; flowers usually two, never more than three, always under .25 in. across; pedicels in fruit erect. sometimes the capillary leaves absent 1. *U. exoleta*.

Peduncles stout; flowers usually more than three, and always from .35 to .5 in. across; pedicels reflexed in fruit and thickened under the calyx 2. *U. flexuosa*

Flowers blue or red or pink, pedicels erect in fruit 3. *U. punctata*.

Leaves few, 10-12 at base of stem —

Leaves linear or linear-spathulate, usually absent at time of flowering; calyx-lobes equal or nearly so, seeds not glochidiate —

Scales of the scape and bracts attached by their bases.—

Stems erect.—

Flowers yellow; pedicels in fruit distinctly winged .. 4. *U. bifida*.

Flowers pink, purple, or violet, rarely white with lilac markings —

Pedicels in fruit slightly winged; sometimes a few leaves still present at time of flowering; stems 8 to 12 in. high, stoutish 5. *U. affinis*
VAR. *Griffithii*.

Pedicels in fruit capillary, short, wingless; leaves 0 at time of flowering; stems 2 to 3 in. high, very slender 6. *U. minutissima*

Stems twining; flowers yellow.—

Stems slender, leaves absent at time of flowering; lower lip less than 25 in. wide 7. *U. Wallichiana*.

Stems stouter; leaves forming matted masses; lower lip over .3 in. wide 8. *U. involvens*.

Scales of the scape and bracts produced downward below point of attachment.—

Flowers on distinct pedicels as long as the fruiting calyx or longer, capsule longer than fruiting calyx-lobes; flowers pink (*Ridley*) 9. *U. verticillata*.

Flowers almost or quite sessile; capsule hidden by the fruiting calyx-lobes:—

Flowers few, scattered on the very slender scapes; } 10. *U. racemosa*
corolla white } VAR. *filicaulis*.

Flowers many or few, congested at the ends of the
stouter rigid scapes and branches; corolla rarely pure
white 11. *U. ophirensis*.

Leaves orbicular or spatulate-orbicular, persistent; calyx-lobes
very unequal, the upper the larger; seeds glochidiate; stems
very slender, lip pale-violet or white with a yellow centre .. 12. *U. orbiculata*.

1. *UTRICULARIA EXOLETA*, R. Br. Prod. 430. A water-weed, sometimes floating with very slender stems and submerged divided capillary leaves, the segments interspersed with bladders; sometimes growing in mud with capillary leaves absent and with tufted setaceous leaves. *Scapes* slender, naked, or with one or two scale-like bracts, 2 to 4 in. long, usually 2-flowered, occasionally 3-flowered, sometimes 1-flowered, then often with an abortive axis or flower-bud opposite the bract; pedicels slender, erect, the lowest ultimately 4 in. long; bracts very small, obtuse, basifixed; bracteoles 0. *Calyx* 2-lobed; lobes slightly unequal, ovate-obtuse or sub-orbicular, in fruit adpressed to the capsule, 1 in. long. *Corolla* yellow, 2 in. across; spur cylindric-conical, twice as long as lower calyx-lobe and slightly exceeding lower lip of corolla, which has an entire margin and embraces the base of the spur. *Capsule* almost globose, 15 in. in diam. *Seeds* sub-trapezoid-discoïd, margin thin, spreading, minutely crenulate. A. DC. Prod. VIII 7; Hook. f. Flor. Brit. Ind. IV. 329; Ridl. Journ. Bot. XXXIII. 10. *U. diantha*, Roem. & Schult. Syst. Veg. I. 169; Wight Ic. t. 1569; Oliv. Journ. Linn. Soc. Forma gracilis, Oliv. Journ. Linn. Soc. III. 175 (= *U. inæqualis*, Benj.) more slender in all its parts and with smaller paler yellow flowers.

SINGAPORE: *King's Collector* 1165! *Hullett* 36! 385! MALACCA *Cunning*! *Goodenough* 1407! *Ridley*! PROV. WELLESLEY: *Ridley*!

The very similar and nearly allied *U. stellaris*, distinguished most easily by the presence of a cluster of oblong vesicles about the middle of the peduncle, has not been reported so far from the Malayan Peninsula.

King's Collector's field note on the slender form, which the writer agrees with Oliver in considering no more than a form of *U. flexuosa*, is as follows: "Herbaceous plant, in clear pools of fresh water; colour bright green. Flowers pale yellow. I sent a similar one from Durian S. Batang, but I don't think the same" His field-note on genuine *U. flexuosa* is as follows. "Growing in muddy pools of water, colour a dark reddish-brown, tinged with green; flower bright yellow."

In his interesting paper on the *Utricularias* of the Malay Peninsula (*Journ. Bot.* for 1895, pp 10, 11) Mr. Ridley gives as localities for *U. flexuosa* Pahang and Kedah, Langkawi, but does not differentiate the two forms. The leaves, he remarks, are used in medicine by the Malays, who call it Lumut Ekoi Kuching (Cat's Tail Moss) or Lumut Ekoi Kuning (Yellow Tail Moss).

3 *UTRICULARIA PUNCTATA*, Wall. Cat. 2121. A floating water-weed, with submerged divided capillary leaves, the segments interspersed with bladders, often with narrow, oblong, floating vesicles 1 to 3 in. long, beset with capillary leaves, near the base of the scapes. *Scapes* 4 to 12 in., usually many-flowered; pedicels slender, ascending or sub-erect in fruit, ultimately .5 to .6 in. long; bracts ovate, more or less acute, slightly produced beyond base, bracteoles 0. *Calyx* 2-lobed, lobes sub-equal, ovate-rotund, obtuse, .1 in. long. *Corolla* blue, reddish-purple or pink, .25 in. across, spur somewhat longer than lower calyx-lobe, shorter than lower lip of corolla, thick, sub-cylindric, obtuse. *Capsule* thin, ovate-oblong, obtuse, .2 in. long. *Seeds* discoid, peltate,

margin winged throughout, wing deeply, sharply toothed. A. DC. Prod. VIII. 5; Wight Ic. t. 1570; Oliv. in Journ. Linn. Soc. III. 175; Hook. f. Flor. Brit. Ind. IV. 329; Ridl. Journ. Bot. XXXIII. 10.

PAHANG: Chenei Lake, Fox!—DISTRIB. Borneo, Tenasserim.

4. *UTRICULARIA BIFIDA*, Linn. Sp. Pl. 26. A slender erect weed of wet places; leaves radical, linear-spathulate, disappearing before flowering, .3 to .5 in. long; roots fibrous, sometimes with a few bladders. *Scapes* 2 to 10 in. long, 2-many-flowered, beset with a few basifixed ovate-acute scales or empty bracts; pedicels short, in flower .12 in., in fruit .2 in. long, recurved and distinctly winged from the decurrent calyx, with ovate-acute basal bracts. *Calyx* 2-lobed; lobes sub-equal, ovate-obtuse, .25 in. long. *Corolla* yellow, .25 in. wide; spur longer than the lower calyx-lobe and as long as the lower lip of the corolla, slightly falcate. *Capsule* ovate, .2 in. long, hidden by the calyx. *Seeds* obovoid, testa lax, scrobiculate, obliquely striate. A. DC. Prod. VIII. 21; Oliv. Journ. Linn. Soc. III. 182; Hook. f. Flor. Brit. Ind. IV. 332; Ridl. Journ. Bot. XXXIII. 10. *U. biflora*, Wall. Cat. 1498 (not of Roxb.). *U. diantha*, A. DC. Prod. VIII. 21 (not of Roem. & Schult.). *U. Wallichiana*, Benj. Bot. Zeit. 1845 214 (not of Wight). *U. brevicaulis*, Benj. Linnæa XX. 303.

PENANG: Curtis! SELANGOR. Ridley! PERAK: Larut, Scortechini! Selama, growing among grass in swampy places, Wray 4263! Ridley! PROV. WELLESLEY: in wet and swampy places, King's Collector 1616! SINGAPORE: in wet, sandy hollows, Kurz 2973! Ridley! MALACCA: Griffith! Hervey! Ridley! PAHANG: Kwala Pahang, Ridley 1481! KEDAH: Curtis.—DISTRIB. Throughout E. and S.E. Asia.

Mr Ridley has seen specimens of this species from the Dindings and from Penang, also from Kedah, Langkawi. He finds two rather distinct forms, a small-flowered, plain yellow one and a form with larger flowers over .25 in. long with a darker orange centre; this latter Ridley found in Pahang growing with the common form.

5. *UTRICULARIA AFFINIS*, Wight; var. *Griffithii*, Oliv. Journ. Linn. Soc. III. 179. A slender erect weed of wet places. *Leaves* radical, linear or linear-spathulate, obtuse, very often persisting during flowering, .5 to .7 in. long, roots fibrous, sometimes with a few bladders. *Scapes* 5 to 12 in. long, usually many-flowered; beset with a few basifixed ovate-acute scales or empty bracts; pedicels short, .1 in. long in flower, in fruit .15 in. long and slightly winged by the decurrent calyx, erect or ascending, never recurved and rarely patent, with ovate-acute basal bracts. *Calyx* 2-lobed; lobes sub-equal, ovate or sub-orbicular, acute or sub-cuspidate, .25 in. long. *Corolla* blue with whitish lines, .25 in. wide; spur slightly longer than the lower calyx-

lobe and the lower lip of the corolla. *Capsule* ovate, .2 in. long, hidden by the calyx. *Seeds* obovoid, reticulate, cells of the testa sub-hexagonal. *U. Griffithii*, Wight Ic. t. 1576; Ridl. Journ. Bot. XXXIII. 10. *U. caerulea*, Benth. Fl. Hongk. 256 (not of Linn.).

MALACCA: *Griffith*! *Ridley*! PERAK: *Scortechini*! SINGAPORE: *Hullett*! *Ridley*!—DISTRIB. China, Burma, Tenasserim, Borneo.

There are only shrivelled leaves on Ridley's and Wight's specimens, which are mostly in fruit; Scortechini's specimens, which are in flower, have numerous radical grassy linear-spathulate obtuse leaves, .5 in. long or rather longer. Mr. Ridley, in all probability rightly, considers that this is entitled to specific rank apart from *U. affinis*.

6. *UTRICULARIA MINUTISSIMA*, Vahl Enum. I. 204. A very small erect weed of wet places; leaves 0 at time of flowering and not seen; roots fibrous, bladders not seen. *Scapes* capillary, rigid, branched, 2 to 3 in. long, quite glabrous, or with a few rigid scattered black hairs; racemes 2-5-flowered, beset with a few basifixed ovate-acute empty bracts or scales; pedicels very short, in fruit only .05 in. long, occasionally like the upper calyx-lobe with a few straight black hairs, sub-patent, with small lanceolate basifixed bracts and bracteoles, less than half as long as their pedicels. *Calyx* 2-lobed, lobes sub-equal wide-oblong, obtuse, in fruit .1 in. long. *Corolla* mauve, .15 in. wide; spur wide-conic-cylindric, thrice as long as lower calyx-lobe and twice as long as lower lip of corolla. *Capsule* oblong, .07 in. long, covered by the calyx. *Seeds* minute, ovoid, obscurely scrobiculate. A. DC. Prod. VIII. 16; Oliv. Journ. Linn. Soc. III. 190; Hook. f. Flor. Brit. Ind. IV. 334; Ridl. Journ. Bot. XXXIII. 11.

PERAK: Larut, *Scortechini* 1501! PAHANG: Kwala Pahang, *Ridley* 1474c in part! MALACCA: *Koeng*; on Mount Ophir, *Ridley*.

This small plant, collected by Scortechini with no note of colour, and stated by Ridley to have mauve flowers, is here identified with *U. minutissima*, Vahl, from description only. The branched capillary stems render it very like and very liable to be mistaken for small specimens of *U. verticillata*, which has, however, longer pedicels and bracts produced below their point of insertion. The presence of hairs on the stems, pedicels, and sometimes the calyx, at once suggests a reference to *U. hirta*, which is undoubtedly its nearest affinity. The scape, however, appears never to branch in *U. hirta*; the flowers in that species are larger and fewer; the pubescence, too, when present in *U. minutissima*, which is not always the case, is very different, consisting of rigid patent black bristly hairs, whereas in *U. hirta* the hairs are soft and grey or tawny. The seeds of the two species are very similar, but those of *U. minutissima* are smaller and yet have fewer- and larger-meshed sub-hexagonal reticulations.

7. *UTRICULARIA WALLICHIANA*, Wight Ic. t. 1572, fig. 1. A very slender herb growing in wettish fields and damp grassy places; stems

twining, thin, 6 to 8 in. long. *Leaves* linear-spathulate, absent at time of flowering; bladders not seen. *Flowers* small, racemose or subspicate at ends of stems; pedicels sometimes absent, sometimes up to .25 in. long; bracts lanceolate, acute, basifixed. *Calyx-lobes* ovate, acute, .15 in. long, in fruit .2 in. long. *Corolla* yellow; upper lip obovate, lower rounded, .2 in. wide; spur straight or slightly incurved, .2 in. long. *Capsule* sub-globose, enclosed within calyx-lobes, upraised on the sub-erect fruiting pedicels. *Seeds* ellipsoid, scrobiculate but not glochidiate or papillose. Oliv. in Journ. Linn. Soc. III. 182; Clarke in Hook. f. Flor. Brit. Ind. IV. 332; Ridl. Journ. Bot. XXXIII. 11. *U. scandens*, Benj. in Linnæa XX. 309 chiefly. *U. macrolepis*, Wight Ic. t. 1580, fig. 2. *U. capillacea*, Thw. Enum. 171 (not of Oliv.).

MALACCA: Mount Ophir, at 4,000 feet elevation, growing among grasses, Ridley!—DISTRIB. Throughout India.

8. *UTRICULARIA INVOLVENS*, Ridl. Journ. Bot. XXXIII. 11. A tufted herb forming mats of leaves on rocks in streams; stems twining, fairly stout, 12 in. long. *Leaves* thinly membranous, spathulate-linear, obtuse, 1 in. long or longer, .1 in. across. *Flowers* large, racemed at ends of stems; pedicels .5 to .75 in. long; bracts lanceolate, acute, basifixed, .1 in. long. *Calyx-lobes* oblong-ovate, .25 in. long. *Corolla* lemon-yellow; upper lip obovate, lower rounded, 2-lobed, .35 in. wide; spur straight, pendulous, acute or acuminate, .25 in. long. *Capsule* unknown.

KEDAH: Kedah Peak (Gunong Jerai), at 3,000 feet elevation, in streams and wet places, Ridley!

A very fine and remarkably distinct species

9. *UTRICULARIA VERTICILLATA*, Benj. Linnæa XX. 312. A slender erect weed of wet places. *Leaves* 0 at time of flowering and not seen; roots fibrous, bladders not seen. *Scapes* slender, sometimes capillary, rigid, branched, 3 to 10 in. long, glabrous; beset with a few ovate scales or empty bracts, acute at both ends and produced downwards beyond point of insertion; pedicels capillary, puberulous, .2 in. long in flower, in fruit .25 in. long; bracts and bracteoles produced below point of insertion. *Calyx* 2-lobed, lobes sub-equal, sub-orbicular, in fruit .1 in. long. *Corolla* (? yellow) .15 in. wide; spur wide-cylindric, slightly exceeding lower lip of corolla. *Capsule* globose, .15 in. in diam., projecting beyond the closely adpressed calyx-lobes. *Seeds* minute, with sub-hexagonal reticulations. Oliv. Journ. Linn. Soc. III. 184; Hook. f. Flor. Brit. Ind. IV. 333; Ridl. Journ. Bot. XXXIII. 10. *U. bifida*, Wight Ic. t. 1584, f. 2 (not of Linn.).

KEDAH : Langkawi, *Curtis* ! MALACCA : *Griffith* ! PAHANG : Kwala Pahang, *Ridley* 1481 in part !

Oliver has suggested that the colour of the corolla in this species is yellow, and the fact that *Ridley* has mixed it (under his n. 1481) with *U. bifida* might be taken as corroborating Oliver's opinion. *Ridley*, in his paper on the Malay Peninsula *Utricularias*, says, however, that the flowers are pink.

10. *UTRICULARIA RACEMOSA*, Wall. ; var. *filicaulis*, Clarke in Flor. Brit. Ind. IV. 333. A slender herb of damp places. *Leaves* linear or spatulate, absent at time of flowering ; roots fibrous, bladders not seen. *Scapes* erect, very slender, 2 to 4 in. high, rarely higher, rather rigid, occasionally with a few branches, glabrous ; beset with a few ovate scales or empty bracts acute at both ends and produced below point of attachment. *Flowers* few scattered sessile ; bracts and bracteoles ovate-lanceolate, attached above the base. *Calyx* 2-lobed, lobes sub-equal, the upper slightly the longer, obtuse, .1 in. long in flower, in fruit .12 in. long. *Corolla* white, from .15 to .2 in. across ; spur straight, conical or sub-cylindric, longer than lower lip of corolla. *Capsule* globose, .1 in. long, hidden by the adpressed calyx-lobes. *Seeds* minute, obscurely scrobiculate. *U. filicaulis*, Wall. Cat. 1501 ; A. DC. Prod. VIII. 21 ; Oliv. in Journ. Linn. Soc. III. 186. *U. nwea*, Vahl Enum. I. 203, Wall. in Roxb. Fl. Ind. ed. Carey & Wall. I. 144 ; Wight Ic. t. 1582. *U. setacea*, Wall. Cat. 6398 partly. *U. campestris*, Miq. in Pl. Hohenack. n. 596. *U. racemosa*, Ridl. Journ. Bot. XXXIII. 10 (hardly of Wall.).

MALACCA : Ayer Keroh, *Ridley* 10706 ! PAHANG : Kwala Pahang, *Ridley* 1474A ! SINGAPORE. Changi, *Ridley*. PENANG : Waterfall, *Curtis*, fide *Ridley* —DISTRIB. Indo-China, India.

This plant probably quite deserves to be considered a species distinct from *U. racemosa*, though except in its usually smaller size and its white instead of blue flowers, there is little to distinguish the two.

11. *UTRICULARIA OPHIRENSIS*, Ridl. Journ. Bot. XXXIII. 10. A herb *Leaves* linear-spatulate or spatulate, absent at time of flowering ; roots fibrous ; bladders not seen. *Scapes* erect 8 to 16 in. high, slender, rigid, often branching, glabrous ; beset with a few ovate scales or empty bracts acute at both ends and produced below point of attachment. *Flowers* sessile, clustered at the ends of the stems and branches in globose or oblong heads .3 to .5 in. long, .25 in. across ; bracts and bracteoles ovate-lanceolate, attached above the base. *Calyx* 2-lobed, lobes sub-equal, the upper slightly the larger, obtuse, .1 in. long in flower, in fruit .12 in. long. *Corolla* .25 in. across, variable in colour, the lower lip rose-coloured (*Ridley*), both lips blueish with a yellow

hairy gland in the centre of the lower lip inside (*Scortechini*), or white (*Curtis, Kunstler*), or white with a yellow tinge (*Kunstler*); spur straight with an incurved tip (*Ridley*), or curved ascending (*Scortechini*), .2 in. long. *Capsule* globose or depressed-globose, hidden by the adpressed calyx-lobes, .1 in. long. *Seeds* oblong or obovate, brown, the broad end glochidiate.

PERAK: Larut, *King's Collector* 1931! 3820! Thaipeng, *Wray* 131! *Scortechini* 376! PENANG: Waterfall, *Curtis*! MALACCA: Padang Batu, *Ridley* 10091!

This species, which is here sustained on the authority of Mr. Ridley, who knows well the Malayan *Utricularias* in the field, does not differ very greatly from *U. racemosa*, Wall.; not so much indeed as does the variety *filcaulis* previously described. It matters little whether the three forms are considered specifically distinct or are treated as manifestations of one protean species. A drawing by Mr. Ridley shows pink flowers.

12. *UTRICULARIA ORBICULATA*, Wall. Cat. 1500. A slender herb growing on wet banks, rocks, or tree-trunks. *Leaves* all radical or on small offsets, persistent, orbicular or orbicular-spathulate, .15 in. across; petioles distinct .15 to .25 in. long; roots fibrous, sometimes with bladders. *Scapes* erect, sub-capillary, 2 to 5 in. long; usually 2-4-flowered, sometimes 6-10-flowered; naked or with one or two empty scales, slightly produced at the base; flowers on capillary pedicels .15 to .25 in. long, rather distant; bracts and bracteoles minute, ovate-acute. *Calyx* 2-lobed, the lower lobe very much smaller than the upper, both obtuse, the upper often emarginate, .12 in. long in fruit and about as broad as long. *Corolla* pale violet or white with a yellow centre, .2 to .25 in. wide, with an explanate 5-lobed lower lip and a linear sub-acute spur .2 in. long about as long as the lower lip. *Capsule* globose, .1 in. across, covered by the upper calyx-lobe but projecting beyond the lower. *Seeds* minute, obovoid, glochidiate throughout the upper thicker half. A. DC. Prod. VIII. 18; Oliv. Journ. Linn. Soc. III. 187; Dalz. & Gibs. Bomb. Flor. 136; Hook. f. Flor. Brit. Ind. IV. 334; Ridl. Journ. Bot. XXXIII. 11. *U. pusilla*, Grah. Cat. Bomb. Pl. 165. *U. glochidata*, Wight Ic. t. 1581.

KEDAH: Telayah Tujon, *Curtis*! PERAK: Larut, *Scortechini* 376! on Gunong Bubu, growing on steep side of hill in the sun, amongst moss, at 5,000 feet, flower pale violet; *Wray* 3880! on Gunong Mas, at 5,000 feet, flower white with yellow centre; *Wray* 4146! MALACCA: Mount Ophir, *Griffith*; *Ridley*!—DISTRIB Throughout S.E. Asia.

Order LXXXVII. BIGNONIACEÆ.

Trees or climbing shrubs, more rarely herbs. *Leaves* opposite, rarely whorled or alternate, entire or 1- 2- 3-pinnate or digitate; leaflets entire or sometimes toothed. *Inflorescence* of terminal racemes or panicles; bracts various; flowers showy, usually large, hermaphrodite, irregular or regular. *Calyx* gamosepalous, campanulate, truncate or spathaceous or 2-5-lobed, valvate. *Corolla* gamopetalous, tubular-ventricose, mouth 2-lipped; lobes 5, sub-equal, patent or erecto-patent, bilabiate imbricate in bud. *Stamens* alternate with the corolla-lobes, inserted on the tube, 5 or more usually 4 from the fifth being absent or rudimentary; filaments filiform, often slightly thickened and sometimes hairy at the base; anthers 2-celled, included or shortly exsert; cells oblong or linear, parallel or divergent, dehiscing longitudinally. *Disk* hypogynous, cushion-like or annular, sometimes absent. *Ovary* sessile or shortly stalked, superior, 1-2-celled; style long, filiform; stigma of 2 flattened ovate or oblong lobes; ovules numerous, usually horizontal, anatropous, inserted in 2 to many rows in vertical lines along the edges of the septum in each cell. *Fruit* generally an elongate capsule, loculicidally or septicidally bivalved; the septum enlarged in fruit, deciduous together with the placentas. *Seeds* transverse, affixed by their margins to the septum or to enlarged placentas, vertically compressed, discoid or trigonous, often with a broad wing, embryo usually enveloped in a fine interior membrane; exalbuminous, cotyledons flattened, sometimes folded, radicle stout, lateral.—**DISTRIB.** Tropical regions of the world, a few in warm temperate regions; absent from Europe, the Mediterranean region and New Zealand. Species about 50.

Stamens 5; a tree with opposite 2-3-pinnate leaves and very large flat capsules 1. *Oroxylum*.

Stamens 4; trees.—

Anther-cells 2, both perfect:—

Leaves 1-3-pinnate.—

Calyx spathaceous, split on one side 2. *Dolichandrone*.

Calyx lobed or truncate.—

Septum of the capsule cylindric, spongy:—

Septum prominently pitted; seeds trigonous, transversely grooved without, inner lobe fitting into the septum-pit, ovules 2-seriate in each cell. .. 3. *Stereospermum*.

Septum only faintly pitted; seeds flat; ovules many-seriate in each cell 4. *Radermachera*.

Septum flat, capsule winged; a large tree with large flowers 5. *Pajanelia*.

- Leaves simple, often verticillate; calyx usually more or less bilabiate 6. *DIPLOANTHERA*.
 Anther-cells 1 perfect, 1 reduced to a small hook; a tall tree with 2-3-pinnate leaves and very long narrowly-linear corolla-tube.. .. 7. *MILLINGTONIA*.

1. *Oroxylum*, Vent.

A glabrous tree. *Leaves* opposite, large, 2-3-pinnate; leaflets entire. *Flowers* large, in a long, stout, terminal raceme. *Calyx* large, leathery, campanulate, truncate or obscurely toothed, persistent. *Corolla* large, fleshy; tube campanulate-ventricose; lobes 5, 2 in upper, 3 in lower lip, recurved, toothed, crumpled. *Stamens* 5 inserted near base of tube, posterior one the shortest. *Anthems* 2-celled; cells parallel, oblong. *Disk* large, cushion-like. *Ovary* sub-sessile, contracted at the base, compressed; style slender; stigma 2-lobed; ovules in 4 vertical rows on each placenta, very many. *Capsule* very large, broadly linear, compressed parallel to the septum, septifragally 2-valved. *Seeds* very many, flattened, surrounded by a broad hyaline wing.—*DISTRIB.* A single S.E. Asiatic species.

Oroxylum indicum, Vent. Dec. Gen. Nov. 8 (1808). A small tree, reaching 30 to 40 feet in height, with a clean bole and few branches or often none, the head bearing leaves only; branches thick; bark somewhat fleshy; pith large. *Leaves* extremely large, 1-3-pinnate, the lower 3-, middle ones 2-, upper 1-pinnate; 3 to 5 feet long, triangular in outline; rachis smooth, striate, stout, swollen at the base (pulvinus) and joints; primary pinnae about 45 pairs, the lower ones 2-pinnate at base, pinnules 3- to 5-foliate; leaflets ovate, entire, acuminate at apex, side ones rounded and often unequal at base, terminal one cuneate at base, 3 to 6 in. long, 2 to 2.5 in. broad; main-nerves 4 to 5 pairs; petiolules slender, .2 to .3 in. long. *Raceme* branch-like, 2 to 3 feet long, very thick, lower part prominently marked with the ovate scars of fallen pedicels; pedicels .5 in. long, stout; bracteoles fused with pedicels. *Calyx* campanulate, 1 in. long, fleshy, truncate, with 5 short teeth. *Corolla* fleshy, 2.5 in. long, yellowish; lobes much crumpled, red, villous on both sides. *Stamens* 5, shortly exsert; base of filaments woolly; anthers divergent below; connective shortly mucronate. *Disk* fleshy, cupular, somewhat lobed. *Ovary* oblong; style slender, hollow, as long as the stamens; stigma 2-lobed, lobes rounded. *Capsule* shortly stalked, concave-flat, elongate oblong, 1.5 to 2.5 feet long, 2.5 to 3.5 in. broad, scarcely .3 in. thick, margins somewhat incurved, back keeled, valves woody, septum flat. *Seeds* very many, flat, surrounded by a very thin, hyaline, shining wing, somewhat rectangular in shape, 3 in. long, 1.5 in. broad; testa membranous; cotyledons emarginate, oblong. Kurz For.

PENANG: *Curtis* 983. PERAK: *Scortechini* 1613; *King's Collector* 7033. PAHANG: common on the banks of the river from Pekan up, flowers dull brownish-purple (*Ridley* in Trans. Linn. Soc. 2nd Ser. III. 326). MALACCA: *Maingay* (K.D.) 1213.—DISTRIB. India, Ceylon, Burma, Sumatra (*Forbes* 1284), Java, and east to Cochin China.

2. DOLICHANDRONE, Fenzl.

Trees. *Leaves* opposite, pinnate, leaflets entire or toothed. *Flowers* in terminal racemes or panicles, few, large. *Calyx* spathaceous, cleft to the base down the front, caducous. *Corolla-tube* long or short, inflated above; lobes 5, nearly equal, crisped on the margin. *Stamens* 4, didynamous, included; *anthers* glabrous, the cells oblong, at first parallel, afterwards divergent. *Disk* annular, cushion-like. *Ovary* sessile; ovules numerous, usually many-seriate. *Capsule* elongate, terete or somewhat compressed, straight or incurved, loculicidally 2-valved, the septum often thickened and making 4 spurious cells. *Seeds* 1 to ∞ -seriate on the margins of the septum, much compressed, the wing thickened or hyaline.—DISTRIB. Tropical Africa, Asia, and Australia, about 15 species.

DOLICHANDRONE RHEEDII, Seem. Journ. Bot. VIII. 380 (1870). A deciduous tree reaching 40 to 50 feet in height of stem; branchlets stout, marked with prominent leaf-scars, innovations glabrous. *Leaves* imparipinnate, 9 to 12 in. long, leaflets 2 to 4 pairs, with an end one, rachis slender; side leaflets rhomboid, unequal at base, acuminate at apex, margin entire or with few distant serratures, glabrous on both surfaces, 3 to 4 in. long, 1.5 to 2.5 in. broad, main-nerves 6 to 7 pairs, petiolule slender, articulate at base, 3 to 5 in. long; end leaflet similar, but equal at base; all nearly black when dry. *Flowers* few, usually 1 to 4 in a short terminal corymbose raceme; pedicels glabrous, 1 to 1.5 in. long. *Calyx-tube* closed in bud and beaked, spathaceous in flower, 1.5 in. long. *Corolla* white, tubular-funnel-shaped, 4 to 7 in. long; tube slender at first, then gradually expanding; lobes 1 in.

long, crenately crisped, recurved. *Stamens* 4, didynamous; filaments curved inwards; anther-cells large, oblong, divaricate. *Ovary* conical, style slender, stigma of 2 rounded lobes. *Capsule* 1 to 2 feet long, about 1 in. broad, flattened-cylindrical, faintly ribbed, septum thickened in the middle on both sides. *Seeds* very many, overlapping in many rows, rectangular (with the wings), .5 to .7 in. long, .3 in. broad, wings corky; testa membranous; cotyledons flat, deeply emarginate, the lobes nearly orbicular; radicle short. Clarke in Hook. f. Fl. Br. Ind. III. 379; Trimen Fl. Ceyl. III. 282; Koord. & Val. Bijdr. I. 69. *D. longissima*, K. Sch. in Engl. & Prantl Pflanzenfam. 3. STEREOSPERMUM, Cham.

Trees. *Leaves* opposite, 1-2-pinnate; leaflets petiolulate, entire or sometimes toothed. *Flowers* in large lax terminal panicles, white pink or yellow. *Calyx* ovoid, open or closed in bud, truncate or shortly unequally lobed in flower. *Corolla* campanulate or funnel-shaped; mouth bilabiate, upper lip 2-, lower 3-cleft; lobes nearly equal, rounded, crisped, toothed or laciniate. *Stamens* 4, didynamous, included fifth rudimentary; anthers glabrous, colls linear divergent. *Ovary* sessile, elongate, 2-celled; ovules numerous, 2-seriate in each cell. *Disk* cupular, fleshy. *Capsule* elongate, terete or somewhat angled, loculicidally 2-valved; septum thick, corky, cylindrical, pitted to receive the seeds in alternating cavities. *Seeds* trigonous, with a transverse groove without and a prominent ridge within, which fits into a deep pit in the septum; wings membranous, lying flat upon the septum; cotyledons folded, 2-lobed, radicle straight.—DISTRIB. Tropical Asia and Africa. About 12 species

STEREOSPERMUM FIMBRIATUM, DC. Prod. IX. 211 (1844). A large deciduous tree, reaching 70 to 80 feet in height of stem and 1.5 to 3 feet in diam.; bark grey, rough; branchlets stout, innovations and inflorescence viscid-pubescent. *Leaves* imparipinnate, 1 to 2 feet long; rachis

grooved, viscid-pilose; leaflets 7-9, side ones opposite slightly unequal at base; end one equal, oblong-lanceolate, long-acuminate at apex, rounded at base, entire, membranous, viscid-pilose at any rate when young, afterwards glabrescent on upper surface; 4 to 6 in. long, 1.5 to 1.75 in. broad; midrib slender, main-nerves about 7 pairs, curving upwards to and along the margin, reticulations prominent, transverse; petiolules of side leaflets .3 to .4 in. long, of end one 1-1.5 in., articulate. *Panicle* large, very viscid-pilose, dichotomously branched, 5 to 9 in. long and broad; peduncle short, about .5 in. long, thick, secondary peduncles 1 to 1.5 in. long; pedicels slender, about .5 in. long, bracteoles very small, subulate, early caducous. *Flowers* pale lilac, the tube rather darker. *Calyx* campanulate, viscid-pubescent without, glabrous within, .5 in. long; lobes 5, rounded, very short, long-apiculate. *Corolla-tube* funnel-shaped, .1 to .15 in. long; lobes 5, as long as tube, spreading, long fimbriate, the laciniae .025 in. long. *Stamens* 4, didynamous, filaments slender, glabrous; anther-cells linear-oblong, divaricate, recurved, .05 in. long. *Ovary* cylindric, glabrous; style slender, stigma 2-lobed. *Capsule* cylindric, more or less quadrangular, torulose, 1 to 2 feet long, .5 in. in diam.; septum thick, corky. *Seeds* trigonous, with rather thick wings; 1 in. long, .3 in. broad, deeply immersed in alternate pits in the septum. Kurz For. Fl II. 231; Clarke in Hook. f. Fl. Br. Ind IV. 383. *Bygnonia fimbriata*, Wall. Cat. 6500.

JUNKSEYLON (Tongkah): *Curtis* 2912. PERAK *Wray* 3334, *Scortechum* 1746; *King's Collector* 5701. PAHANG: *Ridley* 1c MALACCA: *Mangay* (K D.) 1211.—DISTRIB. Burma.

4. RADERMACHEA, Zoll & Mor.

Trees. *Leaves* opposite, 1-2-pinnate; leaflets petiolulate, entire. *Flowers* in terminal racemes or panicles, showy *Calyx* urceolate, open or closed in bud, entire or shortly lobed in flower. *Corolla* funnel-shaped, tube narrow, mouth more or less 2-lipped, upper lip 2-, lower 3-lobed, the lobes spreading, rounded. *Stamens* 4, didynamous, with a fifth sterile one, included; filaments slender; anthers 2-celled, the cells divaricate. *Disk* cupular, fleshy, entire. *Ovary* cylindrical, cells 2; ovules very numerous in many rows in each cell. *Capsule* slender, compressed, terete, often spirally twisted; the septum slender, continuous, cylindric or compressed, very faintly pitted and bearing on each side a double row of seeds. *Seeds* very small, rounded, flattened, resting on a very slight depression but not sunk in the septum; wings hyaline, shining; cotyledons flat, not lobed; radicle minute.—DISTRIB. Burma, the Malay Peninsula, and Malay Archipelago. About 8 species.

Leaves 1-pinnate, leaflets prominently glandular at base, capsule under 10 in. long	1. <i>R. glandulosa</i> .
Leaves 2-3-pinnate, leaflets not glandular at base, capsule over 15 in. long	2. <i>R. amena</i> .

1. *RADERMACHEA GLANDULOSA*, K. Sch. in Engl. & Prantl Naturl. Pflanzenfam. IV. 3B, 243 (1894). A small tree with spreading branches, reaching 15 to 30 feet in height and 6 to 12 in. in diam. of stem; branches stout, with pale brown, corky bark; branchlets smooth, with prominent oblong lenticels; innovations slightly puberulous. *Leaves* imparipinnate, 15 to 20 in. long; rachis smooth, swollen at the nodes and at the base, glabrous; leaflets 3 to 7, side ones opposite, slightly unequal at base, end one equal, all furnished with prominent large glands at the base above the petiolule, elliptic or elliptic-oblong, acute or abruptly acuminate at apex, rounded at base, entire, glabrous, chartaceous, 5 to 10 in. long, 3 to 5 in. broad; midrib slender, main-nerves 9 to 11 pairs, arching upwards to and along the margin; reticulations transverse, prominent; petiolules .3 to .4 in. long, end one 1 in. long. *Panicles* terminal and occasionally axillary, 6 to 12 in. long; peduncle often very long, branches short, scarcely .5 in. long, few-flowered; pedicels slender, .2 to .4 in. long; bracteoles minute, caducous; flowers white, shaded with pink, calyx red. *Calyx* campanulate, truncate, persistent, .15 in. long, glabrous, margin undulate only. *Corolla-tube* cylindric below for .5 in., then campanulate for nearly 1 in., 5 in. wide at mouth, glabrous without, slightly pubescent within; lobes 5, 2 upper smaller than 3 lower, .3 in. long, margins slightly crispate-ciliate. *Stamens* 4, didynamous, included; filaments slender, anther-cells linear, .1 in. long, divaricate, sterile stamen clavate. *Disk* cupular, glabrous. *Ovary* oblong; style slender, .75 in. long, stigmas 2, oblong. *Capsule* slender, terete, 6 to 10 in. long, .25 in. broad; valves thin, chartaceous, flat after dehiscence, slightly keeled on back; septum cylindric, slightly pitted, white, spongy. *Seeds* very many, flat, .6 to .8 in. long and .05 to .1 in. broad (including the hyaline often fimbriate wings); testa membranous; cotyledons flat, oblong, broader than long (.05 in.); radicle minute. *R. stricta*, Zoll., Bureau Monog. Bign. t. 28. *Spathodea glandulosa*, Blume Bijdr. 762, DC Prod. IX. 207; Miq. Fl. Ind Bat. II. 755. *Bignonia Porteriana*, Wall Cat. 6509; DC. l.c. 165. *Laganopyxis glandulosa*, Miq. in Ann. Mus. Lugd. Bat. I. 199. *Stereospermum glandulosum*, Miq. Fl. Ind. Bat. Suppl. 565; Clarke in Hook. f. Fl. Br Ind. IV. 383; Koord. & Val. Bijdr. I. 74.

2. *RADERMACHERA AMENA*, Seem. Journ. Bot. VIII. 146 (1870). A
very tall tree, reaching 80 feet in height, all parts glabrous; branches
thick, with prominent leaf-scars. *Leaves* 2-3-pinnate, apparently 2 feet
long or longer, the lower pinnæ only again divided, the upper ones simply
pinnate; rachis smooth, thick, swollen and articulate at the nodes,
enlarged at foot; petiole about 6 in. long, all joints easily separating
when dry: leaflets oblong-lanceolate when young, elliptic-oblong when
old, shortly and abruptly blunt-acuminate at apex, rounded or attenuate
at base and slightly decurrent, glabrous, entire, coriaceous, 4 to 6 in.
long, 2 to 3 in. broad; midrib thick, impressed above, main-nerves
about 10 pairs, joined at about .25 in. from the margin in a looped
nerve, secondary nerves alternate with the main-nerves, reticulations
obscure; petiolules .4 or .5 in. long, channelled above by the decurrent
margins of the blade. *Panicles* much and usually trichotomously
branched, rachis terete, upper branches channelled; peduncle about
5 in. long; pedicels slender; bracteoles minute, rounded; flowers
white, tinted with pink outside and with yellow streaks within; the
calyx dark red. *Calyx* in bud closed, in flower 2-lipped, the lips bluntly
apiculate; tube and lobes equal, .3 in. long, glabrous, deciduous.
Corolla-tube shortly cylindric at first for .2 to .3 in. long, then cam-
panulate, glabrous; lobes nearly equal, rounded, crenulate on the
margins, .2 to .3 in. long. *Stamens* 4, with an abortive fifth; filaments
thickened and glandular-hairy below, slender and glabrous above;
anther-cells linear, curved, divaricate, the connective prominently
apiculate. *Disk* cupular, glabrous. *Ovary* oblong, flattened; style
slender, as long as tube, stigma bilobed, lobes lanceolate; cells 2,
ovules very many. *Capsule* slender, torulose, 12 to 18 in. long, 3 in.
broad, valves thin, chartaceous, flattened after dehiscence and then
.25 in. broad, keeled on the back; septum cylindric, spongy, speedily
caducous, bearing on each border a row of small seeds. *Seeds* (with
wings) .75 in. long, .1 to .15 in. broad, wings hyaline, rounded; testa
membranous; cotyledons flat, oblong, longer than broad; radicle
minute. Kurz For. Fl. II. 232. *R. gigantea* and *R. Lobbiani*, Miq. in
Ann. Mus. Lugd. Bat. III. 250. *Spathodea amena*, DC. Prod. IX. 208.

5. PAJANELIA, DC.

A large tree, glabrous except the flowers. *Leaves* large, imparipinnate; leaflets entire, numerous. *Flowers* large, in large terminal thyrsoid panicles, dark red. *Calyx* large, ovoid and closed in bud, in flower ventricose-campanulate; lobes 5. *Corolla-tube* cylindric below, ventricose-campanulate above, wide at the mouth; limb sub-bilabrate, lobes 5, spreading, recurved, unequal. *Stamens* 4, with a rudimentary fifth, didynamous, sub-exsert; filaments slender; anthers glabrous, cells oblong, divergent. *Disk* annular. *Ovary* 2-celled, ovules on each placenta numerous, ∞ -seriate. *Fruit* an elongate narrowly oblong capsule, loculicidally dehiscent, the septum contrary to the valves, the margins of the valves extended in broad wings. *Seeds* in several rows on the edges of the septum, compressed, with hyaline wings; cotyledons flat, radicle small.—DISTRIB. A single S E. Asiatic species.

PAJANELIA MULTIJUGA, DC Prod. IX. 227 (1845). A large evergreen tree, reaching 60 to 80 feet in height and 2 feet in diam. of stem; glabrous except the corolla; bark .25 in. thick, dark grey, rough; branches thick, lenticellate. *Leaves* imparipinnate, 1.5 to 3 feet long, glabrous; rachis angular; leaflets 10 to 12 pairs with a terminal one, very unequal-sided, elliptic-ovate, acute at apex, rounded at base on the upper, cuneate on the lower side, chartaceous, margins entire recurved, 4 to 8 in. long, 2.5 to 3.5 in. broad; midrib slender, main-nerves 9 on upper, 7 on lower side, reticulations transverse; petiolule stout, .2 to .3 in. long. *Panicles* thyrsoid, 12 to 18 in. long, rachis stout, fleshy, lenticellate; primary branches 1 to 2 in. long, similar, secondary di- tri-chotomously branched; pedicels .5 in. long; bracteoles minute; flowers large, pale yellow, throat purple within. *Calyx* closed in bud, in flower campanulate, 1 to 1.5 in. long; tube broad at base with keel-like folds without, lobes 5, irregular, acute. *Corolla* 2 to 2.5 in. long, cylindric below, then somewhat constricted, then ventricose-campanulate; lobes 5, unequal, at first parallel-sided, then broadening into a blunt rounded crispately crenulate limb; the upper part of the tube and the lobes, especially on the margin, grey-pubescent. *Stamens* 4 with a rudimentary fifth, didynamous; filaments slender, glabrous; anther-cells oblong, divergent. *Disk* annular, pulvinate, glabrous. *Ovary* sessile, oblong, style slender, angled, broadening upwards into a 2-lobed clavate stigma; cells 2, ovules very numerous. *Capsule* flat, lanceolate, broadly winged, the wings split, glabrous, 1 to 1.5 feet long, 2 to 2.5 in. broad; septum

transverse, quadrangular in section. *Seeds* exceedingly numerous, in many rows and imbricating, curved; furnished at either end with a very thin hyaline wing, seeds and wing reaching 1·5 in. long and ·5 in. broad; testa membranous; cotyledons obcordate, flat; radicle slender. Bureau Monog. Bign. t. 20; Kurz For. Fl. II. 237. *P. Rheedii*, Wight Ic. tt. 1343-4; Clarke in Hook. f. Fl. Br. Ind. III. 384; Bedd. Fl. Sylv. CLXIX.; Cooke Bomb. Fl. II. 333, Prain Beng Plants II. 790. *Bignonia indica*, var. β Linn. Sp. Pl. 871; Lour. Fl. Cochinch. 460. *B. Pajanelia*, Ham. in Trans. Linn. Soc. XIII. 316. *B. longifolia*, Willd. Sp. Pl. III. 306; K. Sch. in Engl. & Prantl Pflanzenfam. IV. 3b, 244. *B. multijuga*, Wall. Cat. 6503 and Pl. As. Rar. 1. 81, tt 95, 96. "Pajaneli," Rheede Hort. Mal. I. 44.

PENANG: Jack. PERAK: *Scortechini*; King's Collector 2616, 3958. —DISTRIB. Eastern Bengal, Burma, Andaman Islands, Malabar coast.

6. DIPLANTHERA, Banks & Solander.

Trees, more or less hairy. *Leaves* undivided, large, opposite or whorled. *Flowers* large, yellow, in short thick panicles among the uppermost leaves, the primary branches of the panicles shortly verticillate and densely cyme-bearing. *Calyx* campanulate, oblong and closed when young, with 2 to 5 valvate lobes connivent in flower and sometimes sub-bilabiate. *Corolla* tubular-ventricose; lobes 5, rounded, sub-equal. *Stamens* 4, didynamous, exsert; filaments involute in bud; anthers glabrous; cells linear, at first parallel, afterwards divaricate. *Disk* thick, pulvinate. *Ovary* sub-sessile, ovules densely many-seriate. *Capsule* oblong-fusiform, woody, loculicidally 2-valved; septum flat, thick. *Seeds* many-seriate, between the margins of the septum, flattened, with a broad hyaline wing.—DISTRIB. From the Malay Peninsula to New Caledonia and Australia: about 6 species.

DIPLANTHERA BANCANA, Scheffer in Nat. Tijdschr. XXXI. 334 (1870). A lofty tree; branches stout; branchlets pale brown, pubescent, marked with lenticels and prominent leaf-scars. *Leaves* chartaceous, undivided, ovate, obtuse at apex, cordate at base; margins irregularly undulate, furnished with 1 to 2 glandular pits on the upper surface at the insertion of the petiole; both surfaces slightly pubescent, especially beneath and on the nerves; 8 to 13 in. long, 5 to 8 in. broad; midrib stout, main-nerves 10 to 12 pairs, the lowest 3 close together and spreading more or less downwards or horizontally, the rest distant, irregular, often branched at two-thirds of their length, the branches all anastomosing near the margin; reticulations prominent, transverse; petiole stout, 2 to 4 in. long, base articulate. *Panicles* terminal, 4 to 5 in. in diam., tawny-villous; common peduncle 5 to 6 in. long, ·25 in. thick;

branches easily disarticulating; pedicels slender, .75 in. long; bracts leafy, spatulate, .2 in. long; bracteoles linear-subulate, .1 to .2 in. long; flowers yellow. *Calyx* campanulate, closed in bud, 5-lobed in flower, .7 to .8 in. long; often 2-labiate, the upper lip with 2 divisions of 2 lobes each, the lower 1-lobed, acute; tube puberulous without. *Corolla* tubular-ventricose, 1 in. long; lobes 5, uppermost and 2 lowest acute; side lobes broadly obtuse, margins incurved; tube glabrous except for a ring of tawny hairs at the insertion of the filaments. *Stamens* 4, filaments inserted a little above the base of the tube, involute in bud; anther-cells linear, pendulous. *Ovary* oblong; style slender; stigmas 2, lanceolate; ovules very many. *Capsule* 6 in. long, 1.2 in. broad, smooth, valves boat-shaped after dehiscence. *Seeds* 1.5 in. long, .75 in. broad, winged on 3 sides; cotyledons flat, emarginate, .15 in. long, .25 in. broad. Clarke in Hook. f. Fl. Br. Ind. IV. 385.

PENANG: *Curtis* 870, 1569. MALACCA: *Walker* 283; *Maingay* (K.D.) 1214.—DISTRIB. Bangka (*Teysmann* 7666).

7. MILLINGTONIA, Linn f.

A tall tree with corky bark. *Leaves* opposite, 2-3-pinnate; leaflets entire or crenate. *Flowers* white, in terminal corymbose panicles. *Calyx* small, cupular, truncate or with 5 short teeth. *Corolla* white; tube long, slender; limb obscurely bilabiate; lobes 5, sub-equal, sub-valvate, the 2 upper connate to near the middle. *Stamens* 4, didynamous, with no rudimentary fifth, shortly exsert, inserted on the mouth of the tube; anthers 1-celled, the second cell rudimentary, hooked. *Disk* annular, cushion-like. *Ovary* sub-sessile, cylindrical-conical; style slender, stigma bi-lobed, ovules numerous, in about 4 rows on each placenta. *Capsule* linear, compressed parallel to the septum, septicidally 2-valved. *Seeds* very many, flattened, surrounded on 3 sides by a thin hyaline wing —DISTRIB. A single S E. Asiatic species.

MILLINGTONIA HORTENSIS, Linn. f. Suppl. 291 (1781). A tall erect tree reaching a height of 80 feet and a girth of 6 to 12 feet; bark corky, deeply fissured; branches stout, drooping; branchlets somewhat slender, flattened, lenticellate; innovations and young leaves slightly pubescent. *Leaves* opposite, 2-3 pinnate, about 1.5 to 2 feet long or longer; rachis angular, channelled; leaflets ovate or ovate-lanceolate, acuminate at apex, truncate at base, membranous; glabrous when old, pubescent when young; margins entire or (in young plants and shoots chiefly) broadly crenate; 1 to 2 in. long, 1 to 1.5 in. broad; midrib prominent, raised on both surfaces as are the 4-5 pairs of main-nerves; petiolules slender, in upper leaflets often none. *Panicles* 8 to 12 in. long, branches divaricate; rachis somewhat angular, flattened; peduncles

1 to 3 in. long; bracts and bracteoles very small, caducous; pedicels slender, .3 to .4 in. long; flowers white. *Calyx* cupular, .1 in. long, lobes very shallow, rounded, recurved. *Corolla-tube* very slender, 1.5 to 2.5 in. long, about .07 to .1 in. broad, glabrous; lobes ovate-oblong, acute, pubescent within, .5 to .6 in. long, .2 to .3 in. broad. *Stamens* inserted at the top of the tube, filaments slender, .4 to .5 in. long; anthers rounded, ovate. *Ovary* slender, style very slender, exsert, stigma-lobes ovate. *Disk* cushion-like, .05 in. high. *Capsule* about 12 to 15 in. long and .75 in. broad, acute at both ends; valves woody, septum ultimately free. *Seeds* in several rows along the margins of the septum, much overlapping, including the wing about 1 in. by .5 in.; wing narrow at the apex, hyaline. DC. Prod. IX 182, Wight Ill. 16 *bis* fig. 6, Bureau Monog Bign. t. 8, Bedd Fl. Sylv. Madr. t. 249, Brandis For. Fl 347, Kurz For Fl. II 238; Clarke in Hook f Fl. Br. Ind. IV 377, Cooke Bomb. Fl. MALACCA. *Mangay* (K D) 1215. SINGAPORE: *Deschamps* —
DISTRIB. India, Burma (*vide* Kurz), Sumatra (*Miq. Fl. Ind. Bat. Suppl.* 565)

Whether the specimens were gathered from really wild trees there is nothing to show, but if Kurz is right in his statement that the cork-tree, so well known in India in cultivation, is wild in tropical forests from Martaban to Tenasserim, it may well occur in a wild state further south in the Peninsula

Order LXXXVIII. PEDALINEÆ.

[By D. PRAIN.]

Herbs or undershrubs. *Leaves* opposite or the upper alternate, entire toothed or lobed, stipules 0. *Flowers* irregular, solitary or, rarely, clustered or racemose, usually axillary; pedicels short; bracts minute or 0. *Sepals* 4-5, slightly connate below. *Petals* connate in a tubular-ventricose corolla, limb 5-lobed, obscurely 2-lipped, lobes imbricate. *Stamens* 4, didynamous, rarely 2. *Carpels* 2, connate in a 2-celled, rarely 1-celled ovary, ovules many or few, superposed, style filiform; stigma shortly 2-lobed. *Fruit* hard, indehiscent, or a 2- (less often 3-4-) valved capsule. *Seeds* without wings, albumen 0.—DISTRIB. Species about 40, in tropical and sub-tropical countries.

SESAMUM, Linn.

Erect or prostrate herbs. *Leaves* opposite below, alternate above, entire toothed, lobed, or divided. *Flowers* axillary, solitary or few and

ridges inside the tube, anthers linear-oblong or sagittate, free or connivent in a cone and adhering to the stigma by the connective; cells 2, longitudinally dehiscent, sometimes produced at the base in barren spurs; pollen granular, usually spherical, with 3 pores or 2 to 3 rounded protuberances. *Disk* none, or annular or cupular, or reduced to 2 to 5 scales or glands. *Ovary* superior, free or somewhat adnate to the disk, 1-celled with 2 parietal placentas, or 2-celled with axile placentas, or of 2 distinct or partially connate carpels, ovules in each cell 2 or few or many and 2- to ∞ -seriate, rarely solitary, anatropous, usually pendulous; style 1, entire or divided at the base, stigma various, usually ending in a bifid apiculus and frequently with a ring or other appendages, often viscous. *Fruit* a dry or fleshy drupe, berry or samara, or of two baccate or follicular mericarps. *Seeds* various, often compressed, sometimes winged, sometimes with a tuft of hairs at one or both ends; testa coriaceous, crustaceous or membranous, albumen hard, fleshy or scanty or none, embryo straight; cotyledons flat, concave, convolute or contorted, radicle superior.—**DISTRIB.** Chiefly tropical, genera about 110 to 120, species probably about 1000, or even more.

Anthers included, free from the stigma, cells rounded at the base; corolla-lobes usually overlapping to the left:—

Ovary of 2 wholly combined carpels, 1-2 celled, fruit large, usually fleshy or pulpy within, seeds without wing or pencil of hairs (coma) (Tribe I. *CARISSEÆ*) —

Ovary 1-celled, with parietal ovules. —

Fruit indehiscent, albumen none 1. *WILLUGHBEIA*.

Fruit 2-valved; albumen present 2. *CHIOCARPUS*.

Ovary 2-celled, with axile ovules —

Flowers 4-merous; albumen none; corolla-throat naked 3. *LEUCONOTIS*.

Flowers 5-merous, albumen present; corolla-throat with lobed scales 4. *MELODINUS*.

Ovary of 2 distinct carpels, united by the style; fruit various, seeds peltate (Tribe II. *PLUMERIÆ*) —

Calyx eglandular within, carpels 1-2, rarely 4-6-ovuled; fruit of 2 1-seeded drupes or berries, rarely moniliform (Subtribe 1. *RAUWOLFINÆ*) —

Leaves usually whorled:—

Albumen ruminant; erect or climbing shrubs with more or less coriaceous leaves 5. *ALYXIA*.

Albumen even; erect shrubs with fleshy or soft leaves, membranous when dry 6. *RAUWOLFIA*.

Leaves opposite, disk none; albumen smooth 7. *HUNTERIA*.

Calyx glandular within:—

Carpels 2, rarely 4-ovuled, ovules on opposite sides of a thick placenta; fruit a 1- or 2-seeded drupe or berry (Subtribe 2. *CERBERINÆ*) —

- Leaves alternate or scattered, corolla funnel shaped, large, lobes overlapping to left, fruit drupaceous, over 2 in long 8 CERBERA
- Leaves opposite or whorled, corolla hypocrateriform, lobes overlapping to right —
- Leaves usually whorled, fleshy when green, membranous when dry; fruit drupaceous, over 2 in long 9 OCHROBIA
- Leaves opposite, membranous to subcoriaceous, fruit capsular, angled 10 KOPSIA
- Carpels 6-∞ ovuled, fruit of 2 follicular mericarps (Subtribe 3 EUPLUMERINÆ) —
- in whorls, main nerves prominent, cotyledons
- Follicles slender, long, cylindric, seeds small, ob long, with ~~tuft~~ of hair at the ends, style filiform, stamens usually near the top of the tube 11 AISTONIA
- Follicles very large, stout, seeds large with a membranous wing, style none or minute, stamens usually at the middle of the tube 12 DYERA
- Leaves opposite —
- Follicles slender, with comose seeds, style short, cotyledons complicate 13 HOLARRHENA
- Follicles stout short with arillate non comose seeds, style filiform, cotyledons flat 14 ERVATAMIA
- Anthers included or exserted conniving in a cone around the top of the style and adherent to the stigma by a point on the connective, cells produced downwards into empty spurs, ovary of 2 distinct rarely connate carpels united by the style, fruit of 2 follicular mericarps, seeds comose at one or both ends (Tribe III ECHITIDÆ) —
- Anthers more or less exserted (Subtribe 1 PARSONSIINÆ) —
- Corolla lobes valvate, carpels connate in flower 15 PARSONSIA
- Corolla lobes imbricate, carpels separate —
- Corolla throat naked, cotyledons flat —
- Corolla rotate, connective of anthers thickened at back 16 VALLARIS
- Corolla hypocrateriform connective not thickened 17 POTISIA
- Corolla throat usually with scales rotate or hypocrateriform, cotyledons convolute 18 WRIGHTIA
- Anthers included —
- Corolla throat with 5-10 scales (Subtribe 2 NERIINÆ) —
- Corolla lobes long or tailed . 19 STROPHANTHUS
- Corolla throat naked (Subtribe 3 LCHITIDINÆ) —
- Corolla lobes valvate or overlapping to the left —
- Corolla lobes valvate tube urceolate flowers minute 20 URCEOLA
- Corolla lobes overlapping to left tube subcampanulate, flowers small 21 PARAMFRIA
- Corolla lobes imbricate overlapping to the right —
- Corolla minute, urceolate lobes scarcely twisted to left in bud 22 ECDYRANTHURA

Corolla hypocrateriform, lobes twisted to left in bud:—

Seeds beaked:—

Lobes of corolla not markedly spiral in bud; beak of seed with tufted coma:—

Albumen of seed present; flowers, leaves and foliicles very large 28. *CHONEMORPHA*.

Albumen of seed none; flowers, leaves and foliicles moderate-sized.. .. 24. *RYNCHODIA*

Lobes of corolla markedly spiral in bud, coma of seed decurrent on the beak 25. *ANODENDRON*.

Seeds not beaked:—

Seeds narrowed at the end, cotyledons linear:—

Albumen scanty, corolla lobes entire, rounded  26. *CLETHRONIA*.

Albumen copious, corolla-lobes fimbriate, acuminate 27. *ICHNOCARPUS*

Seeds usually broadened at the end.—

Cotyledons oblong, or linear-oblong; corolla rather large, lobes more or less rounded:—

Calyx 5-partite, lobes lanceolate; cymes corymbose —

Apex of seed slender below the tuft of the coma, foliicles terete 28. *AGANOSMA*.

Apex of seed broadly flattened below the tuft of the coma, foliicles more or less flattened 29. *TRACHELOSPERMUM*.

Calyx 5-fid, lobes narrow; cymes paniculate 30. *EPIGYNUM*.

Cotyledons narrowly linear; corolla very small, lobes very oblique, usually forked .. 31. *MICRECHITES*

The following plants of this Family are cultivated, and seem to be occasionally found run wild in the Peninsula --

1. *ALLAMANDA CATHARTICA*, Linn. Mantiss II. 214 (1771). A scandent milky shrub, native of South America. It has oblanceolate acuminate leaves in whorls of 2 to 4 and large yellow flowers. *PENANG*. *H. King*, *Deschamps*. SINGAPORE *T. Anderson*

2. *CARISSA CARANDAS*, Linn. Mantiss. I. 52 (1767). A large evergreen thorny shrub, native of India, with small white flowers and an edible fruit. *MALACCA* *Maingay*.

3. *LOCHNERA ROSEA*, Reichb. Conspl. Reg. Veg. 134 (1828). A garden shrub with shining obovate leaves and white or pink flowers, common in gardens, and also found run wild on roadsides especially near the coast. It is probably native of the West Indies. *PENANG*. *Curtis* 1067

There are probably others, which, like *Pluneria acutifolia*, Poir., *Nerium Oleander*, Linn., and *Thevetia nerifolia*, Juss., are commonly cultivated in gardens in the Peninsula, but do not run wild. We have, however, seen no specimens.

Tribe I.—CARISSEÆ

1 WILLUGHBEIA, ROXB

Large sarmentose or climbing shrubs, generally bearing tendrils which are modified peduncles. *Leaves* opposite, shortly petiolate, penninerved. *Flowers* in dense, rarely in lax, axillary cymes, pedicels enlarged in fruit. *Calyx* 5-partite, eglandular. *Corolla* hypocrateriform, the mouth naked; lobes broad or linear, overlapping to the left, nearly straight in bud. *Stamens* inserted near the base of the tube, included, anthers lanceolate, the connective apiculate, the cells rounded at the base. *Disk* none. *Ovary* entire, 1-celled; style short, its top obconic or urceolate, stigma capitate or ovoid-conical, often slightly annulate at the base and slightly bifid at the apex, ovules numerous, on two parietal placentas. *Fruit* a large globose berry with a hard pericarp. *Seeds* numerous, embedded in pulp, ellipsoid, compressed, albumen none, cotyledons fleshy, thick, plano-convex, radicle short.—**DISTRIB** India, Ceylon, Burma, Malay Peninsula and Archipelago, about 12 species.

Cymes with stout peduncles and pedicels; stamens usually near the base or middle of the corolla-tube, stigma conical, on a short style (Subgenus I *EUWILLUGHBEIA*).—

Main nerves of leaves 6 to 8 pairs, leaves orbicular or elliptic, pale when dry, glaucescent beneath; corolla-lobes 1 in. long 1. *W. grandiflora*.

Main nerves of leaves 10 to 16 pairs, rather distant —

Corolla-lobes .3 to .4 in. long, leaves scarcely coriaceous:—

Cymes few-flowered, nearly glabrous; leaves long acuminate 2. *W. ciliata*.

Cymes many-flowered, pubescent; leaves obtuse or with a short blunt tip 3. *W. oblonga*.

Corolla-lobes under .25 in. long, leaves coriaceous or nearly so —

Main nerves flattened on lower surface of coriaceous leaves 4. *W. coriacea*.

Main nerves sharp and slender on lower surface of thinly coriaceous leaves 5. *W. firma*.

Main nerves of leaves over 20 pairs, parallel and close —

Corolla-lobes .3 in. long, leaves thinly chartaceous, up to 10 in. long, blunt acuminate at apex 6. *W. martabanica*.

Corolla-lobes .4 to .7 in. long; leaves thinly coriaceous, hardly over 6 in. long, sharply acuminate at apex 7. *W. tenuiflora*.

Cymes with slender peduncle and pedicels; stamens near the top of the corolla-tube; stigma cylindric, seated on the obconic top of the slender style (Subgenus II *URNULARIA*).—

Main nerves of leaves under 20; corolla-lobes ovate, recurved in flower 8. *W. flavescens*.

Main nerves of leaves over 20; corolla-lobes narrowly oblong, erect in flower 9. *W. rufescens*.

1 *WILLUGHBEIA GRANDIFLORA*, Dyer in Herb Kew, Hook f. Fl Br Ind III 625 (1882) A stout climbing shrub, branchlets stout, dark brown to nearly black, tendrils woody, thick, branched. *Leaves* coriaceous orbicular or elliptic, obtuse or with a very short blunt broad acumination at apex rounded at base, glabrous and shining, pale reddish yellow on the upper surface, cinnamon-coloured, soft and glaucescent on the lower, margins slightly recurved, 3 to 5 in long, 3 to 3.5 in broad midrib stout, impressed on the upper surface somewhat flattened on the lower, main nerves 6 to 8 pairs distant, impressed above, raised beneath, at an angle of about 60° with the midrib, at first straight then curving near the margin to meet in an irregular intramarginal nerve, secondary nerves few and chiefly near the apex reticulations transverse, distinct but not prominent, petiole stout, rugose or corrugated, channelled above, 5 to 1 in long. *Cymes* sub-sessile crowded puberulous, bracteoles broadly ovate, ciliate pedicels stout, .05 to 1 in long buds cylindric-clavate, .15 in long flowers white, reddish at base. *Calyx* broad, thick, 1 in long lobes rounded much imbricate, obtuse, ciliate, longer than the short tube. *Corolla* tube slender 5 in long, slightly dilated near the base opposite the stamens, villous within above the stamens lobes 1 in long, oblong spatulate long ciliate on the margins rounded at tip. *Antthers* lanceolate apiculate base cordate, .06 in long filaments slender, short curved. *Ovary* broad conical style short, cylindric, unshaped at top stigma conical bifid branches slender. *Fruit* not seen. *Ancyclocladus glaucinus*, PIERRE in Bull Soc Linn Par nouv ser 98.

MALACCA *Giffith*, *Derry* 101 *Harvey*, *Irving* 228, *Curtis* 3476. SINGAPORE *Munton* 58. *Cantley* 95, *Ridley* 1421, 4431, 5713, 6522. *DISTRIB* Sumatra, Borneo (*Beccari* 2273, *Ridley* 9055, &c.)

This species is with difficulty distinguished from *B. coriacea* but its leaves are less coriaceous, and the main nerves are usually closer and are slender and sharp instead of being broad and flattened. The fruit is edible, and the stems give a kind of gutta percha or rubber (*Curtis*). *Curtis's* specimens bear the Malay names 'Gutta Garok, Gutta Garok, 'Getah Ujol 'Getah giep betina. The *Fl Br Ind* gives 'Gutta Singanip' after *Munton*. As *Stapf* remarks in *Hook Ic t* 2344, the Kew material shows that, in Borneo especially, there are varieties locally known by different names, and differing chiefly in the fruit, which ought to be studied on the spot.

King's Collector 7729 from Gunong Budo Perak, at 500 to 800 ft, seems to be a large leaved variety of this species. The leaves reach 7 in in length and 3.5 in in breadth, when dry they are greenish on the upper and shining brown on the lower surface. The flowers are in sessile cymes, and the corolla has oblong blunt lobes.

6. *WILLUGHBEIA MARTABANICA*, *Wall Cat* 1619 (1827), and *Pl As Rai III* 45, t 272 (1832). A large glabrous climbing shrub, branches stout, dark brown, branchlets dark brown, lenticellate, tendrils long, branched. *Leaves* thinly chartaceous, oblong or ovate-oblong, or ovate-lanceolate, or obovate, shortly, bluntly and abruptly acuminate at the rounded apex, or with a short broad obtuse or emarginate point, acute or cuneate at base, both surfaces shining, the lower paler, margins recurved, undulate, 3 to 10 in long, 1.25 to 3.5 in broad, midrib stout, slightly channelled above, raised beneath, main nerves very many, 20 to 26 pairs more or less, parallel, at an angle of from 70° (middle) to nearly 90° (ends) with the midrib, straight to near the edge and then rather suddenly curving and anastomosing, secondary nerves very many, between and often difficult to distinguish from the main-

nerves, frequently recurrently branching, reticulations many, prominent, all more or less raised on the upper surface, petiole 25 to 5 in long, slender. *Cymes* axillary, sessile, about twice as long as the petiole, dense flowered, pedicels scarcely 0.5 in long, pubescent, bracteoles ovate-lanceolate, sheathing the cyme branches, buds oblong-clavate, about 5 in long, flowers pink or orange-yellow. *Calyx* deeply lobed, nearly glabrous, 1 in long, lobes broadly ovate, obtuse, ciliate. *Corolla*-tube cylindric, slightly dilated in the middle opposite the stamens, 1.75 in long, slightly pubescent within, lobes oblong-falcate, obtuse, 3 in long, margins sparsely ciliate. *Anthers* sagittate, the tips nearly reaching the throat of the corolla tube, filaments slender. *Ovary* broadly ovoid, glabrous. style slender, stigma cylindric-conical. *Berry* ovoid globose, 3 to 4 in in diameter, pericarp orange yellow, thick, hard, the seeds embedded in a fibrous edible yellowish pulp. *Seeds* flattened, nearly orbicular in outline, testa leathery, cotyledons thick, conform to the seed plane convex, radicle minute. A DC Prodr VIII. 321, Kurz For Fl II 165. *W. dulcis*, Roxb., Hook f Fl Br Ind III 623 (in part). *W. dulcis*, Ridley in Trans Linn Soc Ser 2, III 319.

7 WILLUGHBYIA TENUIFLORA, Dyer in Herb Kew, Hook f Fl Br Ind III 625 (1882). A large climbing shrub, branches with black bark, branchlets greyish brown, lenticellate, striate when dry, innovations puberulous. *Leaves* thinly coriaceous, membranous when young, elliptic, elliptic-oblong or oblanceolate, sharply and somewhat abruptly acuminate at apex, cuneate at base, both surfaces glabrous and somewhat shining when dry, the upper dark olivaceous brown, the lower bright reddish brown, margins cartilaginous, recurved, almost revolute, 4 to 6 in long 1.25 to 2 in broad, midrib slender, prominent, red, main nerves 20 to 30 pairs, very slender, the middle ones at from 70° to 80° with the midrib, the upper at a less angle, the lower nearly or quite at right angles, straight to near the margin where they branch and curve slightly, prominent beneath, less so above. secondary nerves occasional, between and similar to the main-nerves, reticulations invisible except in very young leaves, petiole 5 to 6 in long, channelled above. *Cymes* axillary, about twice as long as the petioles, densely crowded with many short few-flowered branches, rusty-pubescent like the calyx, pedicels and bracteoles, bracteoles ovate, acute, deciduous, pedicels 0.5 to 1 in long, buds oblong-clavate, elongate, reaching nearly 1 inch, flowers white. *Calyx* campanulate, lobes ovate, obtuse, ciliate, 1 in long. *Corolla*-tube narrowly cylindric with a nearly globular dilatation close above the base and opposite the stamens,

4 in long, villous within above the stamens, lobes 4 to 7 in long, oblong falcate, obtuse *Anthers* cordate lanceolate, 0.75 in long, filaments slender, puberulous, bent close to the back of the connective and there attached to a broad swelling *Ovary* hemispheric, top nearly truncate, style short, thick, ellipsoid stigma conical *Berry* 4 in long, "pyriform, abounding in caoutchouc, pericarp thick, leathery, seeds many, naked cotyledons pink, fleshy (*Mangay*)

PERAK *Ridley* 3075, *Wray* 3773 DINDINGS *Curtis* MALACCA (*Huffth*, *Mangay* (K D) 1049, *Curtis* 3484 *Hervey*, *Canthly* 105, *Goodenough* 1785 SINGAPORE *Ridley* 11333 — *DISTRIB* Sumatra (*van Romburgh* 469)

Curtis says that the caoutchouc of this species is of no use *Wray* No 3773 is a specimen in young fruit, the fruits terminal! but otherwise like other specimens. The apparently terminal fruits probably arose from the cymes of the uppermost axis the much enlarged pedicels having absorbed the rest of the small inflorescence or caused it to fall. The Sumatra specimen has a less puberulous inflorescence, but otherwise does not seem to differ.

8 WILLUGHBIA FLAVESCENS Dyer in Herb Kew Hook f Fl Br Ind III 625 (1882) A slender climbing shrub, all parts glabrous, bark dark grey, rough, with large elliptic lenticels, branchlets dull greyish or reddish brown when dry, obtusely angled, the nodes swollen, bases of fallen leaves tuberculate *Leaves* coriaceous, elliptic, shortly and bluntly acuminate at apex, rounded or sometimes shortly cuneate at base both surfaces glabrous, the upper dark greenish brown the under pale reddish brown when dry, margins cartilaginous, recurved, 2.5 to 4.5 in long, 1.25 to 2.25 in broad, midrib stout, impressed above, main nerves slender, 16 to 20 pairs, rather irregular in angle and spacing, usually at from 70 to 80° with the midrib, and curving gently to and along the margin, raised beneath, secondary nerves many, between the main nerves and similar to them, reticulations very oblique, sometimes nearly parallel to the nerves, raised beneath, petiole 4 to 6 in long, bordered by the decurrent margins of the blade *Cymes* axillary, sessile, as long as or up to twice as long as the petioles, dichotomous, branches slender, pedicels 1 in long, bracteoles minute, acute, buds conoidal at tip, 2 to 3 in long *Calyx* 0.6 in long, campanulate, with 5 deep ovate, acute, ciliate lobes *Corolla* hypocrateriform, the tube elliptic-ovoid 1.5 in long, mouth much constricted, lobes ovate-falcate, acute, recurved in flower, 1.5 in long, margins involute *Stamens* near the apex of the tube, included, ovate, filaments short, geniculate *Ovary* elliptic-ovoid, glabrous, narrowed into the 0.75 in long slender style, which is obconic at top, stigma small, cylindric, rounded at tip

Berry yellow or greenish yellow turning to red, ovoid cordate or nearly globose, 3 to 4 in in diam, pericarp thick, coriaceous, smooth. Seeds few, large, embedded in pulp, elliptic, about 6 in long by 4 in broad, testa membranous, cotyledons plano convex, thick, radicle minute. *Chilocarpus flavescens*, Kew Gard Report, 1880, 47. *Urularia flavescens*, Stapf in Hook & Pl t 2711, p 2.

PERAK *King's Collector* 7286, 7848. PROVINCE WELLESLEY *Ridley* 9389. MALACCA *Hervey*. SINGAPORE *Murton* 120, *Ridley* 6936, 10123, *Cantley* 52.

We do not propose to separate '*Urularia*' from '*Willughbeia*'. Dr Stapf has kindly explained that he proposed the new genus under the belief that the seeds were albuminous, which however he finds now they are not. The mistake arose from a fruit of another *Apocynacea* presumably one half of a follicle of a species of *Rejoua* having been mixed up with the flowering specimens of *Urularia otatjolia*.

9 WILLUGHBEIA RUFESCENS, Dyer in Herb Kew, Hook & Pl B Ind III 626 (1882). A large climbing shrub, glabrous. Branches dark greyish brown, swollen at the nodes, obtusely angled, rough. Branchlets cinereous brown when dry, slender. Leaves coriaceous, elliptic oblong or lanceolate, very obtusely short acuminate at apex, cuneate or rounded, often unequally, at base glabrous on both surfaces, olivaceous brown and shining above, dull and reddish brown beneath. Margins recurved. 2 to 4 in long, 5 to 1.5 in broad, midrib stout, deeply impressed above, raised beneath, main nerves 20 to 25 or more (the apex ones very close and difficult to count) pairs, at an angle of about 75° with the midrib, straight to near the margin where they curve, secondary nerves many, between the main nerves and similar to them, reticulations oblique, all faint on the upper, rather thick and distinct on the lower surface, petiole 2 to 3 in long. Cymes axillary, sessile, slightly longer than the petioles with few slender short lax few flowered branches, bracteoles minute, ovate, pedicels 2 in long, slender, buds linear oblong, .25 in long, flowers yellow. Calyx under 1 in long, deeply lobed. Lobes broadly ovate, subacute, ciliate on the margins. Corolla hypocrateriform, tube ellipsoid, glabrous, .15 in long, lobes narrowly oblong, obtuse, erect when open, .15 in long, margins incurved. Anthers ovate, apiculate, filaments geniculate, slender, inserted below the middle of the tube. Ovary broadly ovoid, as long as the calyx, style short, .06 in long, ending in an obconic top, stigma narrow, cylindric. Berry (immature) globose, 1.5 to 2 in in diam, pericarp thick, leathery, smooth. Seeds embedded in pulp.

2 CHILOCARPUS, Blume.

Sarmentose or scandent woody shrubs. *Leaves* coriaceous or chartaceous, opposite, petiolate, penninerved, the main-nerves numerous, nearly at right angles to the midrib, sometimes indistinct. *Flowers* usually small, slender, in dense axillary cymes or terminal or axillary trichotomous panicles, pedicels enlarged in fruit. *Calyx* 5-partite, the lobes short, glands none. *Corolla* hypocrateriform, the tube cylindric, slightly dilated at the insertion of the stamens, the throat without scales; lobes 5, short, broad, twisted, overlapping to the left, twisted to the right. *Stamens* inserted at or below the middle of the tube, included, anthers lanceolate, acute, the cells rounded at the base, inappendiculate. *Disk* none. *Ovary* entire, 1-celled, with 2 parietal prominent multi-ovular placentas; style short, stigma conical or ovoid, faintly bifid, ovules 2- or many-seriate on each placenta. *Fruit* a fleshy berry, ultimately bivalved, dehiscent; pericarp thick. *Seeds* embedded in pulp with fibrous and corky arils, numerous, compressed or thick, often grooved near the hilum, either with thin testa and horny albumen, or with thick granular testa and thin albumen, albumen equable or ruminant, cotyledons flat sub-foliaceous, broad or narrow, radicle elongate, terete.—*DISTRIB.* India, Burma, Malay Archipelago and Peninsula, and tropical Australia, species about 16 to 18.

The nature of the corky processes which we call "arils" above is a little difficult to understand. They are well shown in the excellent figure of the fruit of *C. suaveolens*, Bl., in t. lin. in Blume Mus. Bot. Lugd.-Bat. I, but the author gives no explanation of his drawings. We prefer to use the word aril, as it seems to us the most explanatory. When the fruits and seeds of all the species are known, it may be possible to make two genera, or, at any rate, two subgenera, according to the testa and albumen.

Flowers small, corolla-tube under .8 in. long (where known); leaves medium-sized or small, nerves not very prominent:—

Flowers in terminal or axillary cymes as long as or longer than the leaves:—

Flower-pedicels without imbricate bracteoles, only bracts at the bases of the pedicels; secondary nerves of the leaves recurrently branched.—

Leaves 2.25 to 3 in. long, thinly coriaceous; main nerves many, easily visible when dry; peduncles under 1 in. long, seeds with thin testa and horny albumen . . . 1. *C. atro-viridis*.

Leaves 3 to 5 in. long, chartaceous, main nerves many, not easily seen when dry, peduncles over 1.5 in. long; seeds not known 2. *C. embelloides*

Flower-pedicels with many imbricate bracteoles, seeds with the testa thick and granular and the albumen thin; secondary nerves of the leaves not recurrently branched . . . 3. *C. decipiens*

Flowers in axillary cymes much shorter than the leaves, flower pedicels with imbricate bracteoles —

Leaves coriaceous, more or less obovate —

Cymes nearly sessile; leaves obtuse at the apex, fruit pericarp usually tubercled without; seeds with thin testa and horny albumen 4. *C. enervis*

Cymes on peduncles nearly 5 in long, leaves shortly apiculate, fruit unknown —

Leaves coriaceous, upper surface dull brown, lower pale when dry, main nerves nearly at right angles to the midrib, corolla lobes rhomboid falcate 5. *C. Cantleyi*

Leaves chartaceo coriaceous, upper surface nearly black shining, lower dark greyish brown when dry, main nerves at about 75° with the midrib, corolla lobes linear falcate 6. *C. nigrescens*

Leaves scarcely coriaceous, oblong lanceolate, fruit 2 to 2.5 in long, about 1 in broad, seeds with granular testa and thin fleshy albumen 7. *C. minutiflorus*

Flowers rather large corolla tube 7 to 1 in long, leaves large, nerves very prominent, seeds with thin testa and horny albumen

8. *C. costatus*

1 *CHILOCARPUS ATRO-VIRIDIS*, Blume Mus Bot Lugd-Bat I 153 (1850) A glabrous slender climbing shrub, young branches not much thicker than a crow quill, pale brown, terete, sparsely lenticellate, swollen at the nodes. Leaves thinly coriaceous, narrowly elliptic-oblong or -lanceolate, shortly and bluntly caulate-acuminate at apex, cuneate at base glabrous on both surfaces, dull when dry, the upper pale brown the lower yellowish, puncticulate, margins thinly cartilaginous, slightly recurved, crispate 2.25 to 3 in and even 5 in long, 5 to 1.25 in, even 1.75 in, broad midrib prominent, impressed above, main nerves very numerous, parallel, irregularly spaced, about 25 to 30 pairs, at an angle of about 75° with the midrib, straight to the margin to meet an intramarginal looped nerve very close to it (under .05 in), secondary nerves very many, between the main nerves, recurrent from the marginal nerve and branched backwards, the branches forming the only visible reticulations, petiole 3 to 4 in long slender. Cymes very slender, terminal and axillary, reaching 2 to 4 in in length, trichotomous, peduncles 5 to 1 in long, flattened, branch peduncles slender, nearly as long, ultimate cymules corymbose or subumbellate pedicels slender, 1 to 1.5 in long, bracts leafy, caducous, one or two always at the base of each pedicel minute and scarious, buds clavate, 2 in long, tip globose, flowers deep yellow (calyx campanulate, under 1 in long, lobes ovate obtuse, margins hyaline Corolla tube short, 1 to 1.5 in long, dilated in the middle opposite the stamens, glabrous except a ring of hair within below the stamens, lobes 1 in long, falcate, broadly

notched on one side, recurved when open, acute at tip. *Anthers* very small, under .05 in. long; filaments scarcely any, pubescent. *Ovary* conoidal; style slender .05 in. long; stigma oblong, apiculate; ovules many. *Berry* ovoid, 1.75 in. long, 1.25 in. in diam., dehiscent in 2 concave valves, pericarp thick, hard, woody, smooth and yellow with-out. *Seeds* numerous, black, .35 in. long, .3 in. broad, oblate-globose, deeply grooved at the hilum, about one-third surrounded by an aril consisting of yellow angular corky masses and a tuft of minute net-like fibres, testa shining, thin, granular, albumen thick, horny, cotyledons ovate, obtuse, somewhat cordate, flat, .225 in. long, radicle slender, .15 in. long. Miq. Fl. Ind. Bat. II. 393, Hook. f. Fl. Br. Ind. III 626 *Hunteria* ? *atro-viridis*, Wall. Cat. 1614, A DC Prodr. VIII 351. *Winchia atro-viridis*, Kurz For. Fl. II. 170.

PERAK: on Maxwell's Hill, *Scortechini* 321, at 2,500 to 3,000 feet, *King's Collector* 6303, 8317. SELANGOR: at Batang Barjuntai, *Ridley* 7563, at Kent Estate 8557 (flowers white).—DISTRIB. Tavoy, Mergui.

We do not quote "Malabar" in the distribution because we think that *Chilocarpus malabaricus*, Bedd 1c Pl Ind Or. t 175, is probably distinct from *C. atro-viridis*.

2. *CHILOCARPUS EMBELIOIDES*, King & Gamble, n. sp. A climbing shrub, branchlets slender, pale dull brown, almost smooth. *Leaves* chartaceous, elliptic-oblong, shortly acuminate at apex, narrowed somewhat unequally at base; glabrous on both surfaces and dull, the upper olivaceous when dry, margins pale, thin, crispate, 3 to 5 in. long, 1.25 to 2 in. broad; midrib slender, prominent on the lower, somewhat impressed on the upper, surface, main nerves 24 to 26 pairs, very slender, at an angle of 70° with the midrib, straight, meeting close to the margin a slender faint intramarginal nerve, secondary nerves alternate with the main nerves and joining both the intramarginal nerve and midrib, branched recurrently; reticulations obscure, petiole 2 to 4 in. long, slender, slightly rugose. *Cymes* axillary, lax, many-flowered, nearly as long as the leaves, peduncles slender, 1.5 to 1.75 in. long, branches trichotomous slender, about 1 in. long; ultimate cymes subumbellate, pedicels slender .15 in. long, bracts very small, ovate, acute, at the bases of the rachis-branches and pedicels; buds very short, clavate, tip globose. *Calyx* campanulate, .05 in. long, lobes very small, rounded, with hyaline, ciliate margins. *Corolla*-tube cylindric, 1 in long, slightly constricted at the base and the naked throat, glabrous except for a ring of white villous hairs below the stamens, lobes broad, ovate-falcate, acute, .05 to .1 in. long. *Stamens* inserted a little above the middle of the tube; anthers lanceolate, apiculate, filaments very short. *Ovary* conical, attenuated into a short style just reaching the

stamens, stigma conical *Berry* (immature) globular, smooth when fresh, wrinkled when dry *Seeds* embedded in pulp

PERAK at Haram, *Scortechini* 711

3 *CHILOCARPUS DECIPIENS*, Hook f in Fl Br Ind III 627 (1882) A glabrous slender climbing shrub, young branches twice as thick as a crow quill, terete, dull brown when dry, with numerous elongate pale lenticels, swollen at the nodes *Leaves* thinly coriaceous, narrowly elliptic oblong or -lanceolate, obtusely and often obliquely long acuminate at apex, cuneate at base, glabrous on both surfaces and olivaceous-brown, the lower paler and minutely dotted, margins slightly recurved, crispate, 3 to 3.5 in long, 1 to 1.5 in broad, midrib prominent, pale, channelled above, main nerves 20 to 25 pairs, slender, parallel, at about 75 to 80° with the midrib, straight to the margin, close to which they join an intramarginal nerve visible on both surfaces, secondary nerves many, usually alternate with the main nerves, also running to the intramarginal one, occasionally branched, but not recurrently, petiole slender, .25 in long *Cymes* terminal and axillary, 2 to 3 cymotomous, forming a terminal leafy panicle up to 9 in long and 6 in broad, main peduncles 1 to 1.25 in long, successive branches gradually shorter ultimate cymules subumbellate, pedicels stout, covered with minute bracteoles spirally arranged, up to 2 in long, bracts leafy caducous, those at the bases of the branches and pedicels ovate acute, sheathing, with pale margins, flowers not known *Berry* linear oblong, cylindric, .25 in long by nearly 1 in broad, on a stout many bracteolate pedicel and calyx of ovate acute lobes, splitting when ripe, pericarp woody, minutely granular, green when fresh, reddish-brown when dry, nearly 1 in thick *Seeds* of various shapes about .5 in long, partly enclosed in a corky aril with fibres at its base, testa granular deeply furrowed as is the thin fleshy albumen, cotyledons flat, nearly orbicular, .15 in long, radicle 1 in long

PERAK at Ulu Bubong, in dense jungle at 300 to 600 feet, *King's Collector* 10017, 10268 MALACCA *Mungray* (H D) 1043, 1060 SELANGOR on Kent Estate, *Ridley* 8557

4 *CHILOCARPUS ENERVIS*, Hook f Fl Br Ind III 626 (1882) A stout woody glabrous climbing shrub, branchlets as thick as or thinner than a goose quill, pale brown when dry, obtusely angled, the nodes raised and marked by a ridge terminal buds resinous *Leaves* coriaceous, narrowly obovate or oblanceolate, rounded or very briefly apiculate or sometimes shallowly emarginate at apex, long cuneate at base, both surfaces shining, the lower very pale when dry and often minutely punctulate, the margin slightly cartilaginous, recurved, 3 to 5 in long, 1.25 to 2 in broad midrib stout prominent beneath,

channelled above; main nerves numerous, about 25 to 30 pairs, at about 80° with the midrib, faint on the upper surface, invisible on the lower; secondary nerves nearly as many as and between the main nerves, reticulations not visible; petiole .5 to .75 in. long, usually twisted. *Cymes* small, in dense axillary clusters, shorter than the petiole; pedicels very short, thick, spirally corrugated by the scars of fallen bracteoles, very much thickened in fruit, buds clavate, the tip globose; flowers minute, white. *Calyx* .05 in. long or less, deeply divided in 5 ovate, hyaline, puberulous, rounded lobes. *Corolla*-tube cylindric, slender, .3 in. long, inflated about one-third of the way up, opposite the stamens; throat naked, lobes obliquely falcate, apiculate on one side, .1 to .15 in. long. *Anthers* lanceolate, very small, rounded at the base, filaments very short. *Ovary* ovate, acuminate, stigma small, conoidal; placentas prominent. *Berry* orange-coloured, ellipsoid or obovoid, 1.5 to 2 in. long and 1 to 1.5 in. broad, pericarp thick, fleshy, smooth or much corrugated and tubercled externally, woody, dividing into two concave or flat valves. *Seeds* embedded in a fibrous pulp and enclosed in a pale orange corky lobed arillus on one side, .4 in. long, oblong or ovoid, sometimes flattened at the ends, deeply grooved at the hilum, testa black, shining, thin, albumen horny, thick, cotyledons flat, orbicular-cordate, .2 in. in diameter, radicle .1 in. long.

PERAK at Thaipeng, Kalan Tujor, &c., Wray 593, 1118, 1804, 4026, Scortechini 189, King's Collector 3203, 3786, 7532, 8328, at 100 to 500 feet, Cantley 25. MALACCA Marngay (K.D.) 1044

5. *CHILOCARPUS CANTLEYI*, King & Gamble, n sp. A glabrous climbing shrub, young branches as thick as a goose-quill, smooth, at first yellowish afterwards dark brown, obtusely angled, raised at the nodes and ridged. *Leaves* coriaceous; elliptic or oblanceolate, the apex obtuse or with a short blunt apiculus, long-attenuate at base; both surfaces dull when dry, the upper dark greenish-brown, the lower very pale greenish-yellow when fresh, punctulate, margins slightly recurved, 3.5 to 4 in. long, 1.25 to 1.5 in. broad, midrib thick, channelled above, broad and conspicuous beneath, main nerves extremely faint on the upper surface when dry, invisible on the lower, apparently about 30 pairs at nearly right angles with the midrib and with many intermediate secondary nerves, petiole about .6 in. long, channelled above. *Cymes* axillary, glabrous, on stout somewhat flattened peduncles .4 to .5 in. long, many- (about 20-) flowered, few-branched, pedicels .1 in. long, with many obtuse imbricate bracteoles which are caducous and leave rough pits behind; buds clavate, the tip obtuse; flowers yellow. *Calyx* .075 to .1 in. long, lobes elliptic-rotund, thick with hyaline margins. *Corolla*-tube cylindric, .2 in. long, dilated slightly below the middle opposite the

stamens, constricted at throat; glabrous within except at the base; lobes .15 to .2 in. long, broadly rhomboid-falcate, plicate in bud. *Stamens* in the dilated part of the tube; anthers lanceolate, rounded at base, .05 in. long, filaments slender, pubescent below, as long as anthers. *Ovary* ovate, compressed, tapering to a .075 in. long style with short subglobular stigma. *Fruit* not known.

PERAK: near Ulu Kerling, 500 to 700 feet, *King's Collector* 8823; swamps in lower Perak, *Cantley* 227. SELANGOR: at Kwala Lumpor, *Ridley* 2839; *Curtis* 2354.

Curtis's specimen has more narrowly lanceolate leaves and a rather longer apiculus, with more slender branches, and has also, with Ridley's specimen, shorter peduncles to the inflorescence, but they seem both to be correctly this species, which comes very near to *C. enervis*, but has much less slender flowers and larger inflorescence.

6. *CHILOCARPUS NIGRESCENS*, King & Gamble, n. sp. A glabrous climbing (?) shrub, branchlets rather stout, nearly black, terete, the nodes somewhat swollen and usually ridged. *Leaves* chartaceo-coriaceous, elliptic-oblong or -oblanceolate, shortly and abruptly blunt-acuminate at apex, cuneate at base, often from nearly the middle of the blade, upper surface shining, nearly black when dry, lower a little paler and greyish-brown, minutely punctulate, margins slightly recurved, 3 to 5 in. long, 1.5 to 2 in. broad, midrib rather slender, slightly impressed above, raised beneath, main nerves 12 to 16 pairs at an angle of about 75° with the midrib, nearly straight to meet an arching intramarginal nerve at about .1 in. from the edge, faint on both surfaces, secondary nerves many, often recurrently branched, reticulations obscure, petiole .5 to .6 in. long. *Cymes* axillary, up to 1.5 in. long, more or less pyramidal, crowded, peduncle stout, flattened, .3 to .5 in. long, branches 3-chotomous, short, cymules subumbellate, pedicels about .15 in. long, densely strobilate with imbricate, rounded, pale-margined bracteoles; the bracts at the bases of the branches acute and sheathing, buds clavate, .4 in. long, the tip globose. *Calyx* campanulate, .05 to .075 in. long, lobes rather deep, broadly ovate, rounded, minutely ciliate. *Corolla*-tube narrowly cylindric, dilated at about one-third of the height from the base opposite the stamens, contracted at the naked mouth, glabrous without, slightly puberulous below the stamens within, lobes linear-falcate, acuminate, much twisted, about .2 in. long. *Stamens* inserted below the middle of the tube, anthers lanceolate, apiculate, rounded at base, .05 in. long, as long as the slender curved filaments. *Ovary* conoidal, glabrous, style slender, obconic above; stigma conical. *Berry* not known.

PERAK: on Government Hill and West Hill, *Curtis* 1040, 1121, 3086.

The same number, "*Curtis* 1040," is quoted by D. Oliver in Hook. Icon. t. 1758 (1888) as the type of *Melodinus coriaceus*, Oliver, but all our specimens have more or less the imbricated bracteoles of *Chilocarpus*, and are destitute of scales in the throat of the corolla, or of laciniae to its lobes. A comparison of the specimens of *Melodinus coriaceus* in the Kew Herbarium shows clearly that two species have been given the same number, but that the resemblance is superficial only. The real *M. coriaceus* has the leaves pale brown, and not black, when dry.

7. *CHILOCARPUS MINUTIFLORUS*, King & Gamble, n. sp. A glabrous climbing shrub; young branches thicker than a crow-quill, obtusely angled, striate, with thin scaly bark, pale when dry; nodes swollen, joined by a ridge. Leaves thinly coriaceous, elliptic or oblong-lanceolate, shortly obtusely-acuminate at apex, narrowed or almost rounded at base, upper surface green, lower waxy-white when fresh, both pale greenish-yellow when dry, margins slightly recurved, 2 to 2.5 in. long, .75 to 1.25 in. broad, midrib slender, prominent beneath, main nerves 9 to 12 pairs, at an angle of about 65° with the midrib, straight, joined at about .05 in. from the margin in an obscure intramarginal nerve, faint on both surfaces or sometimes not distinguishable, secondary nerves present, but, like the reticulations, not easily visible, petiole slender, .15 to .2 in. long. Cymes axillary, few-flowered, scarcely exceeding the petioles, peduncles very short, as are the branches and pedicels, which are sometimes enlarged and bear many imbricate bracteoles, bracts ovate-acute, sheathing, buds clavate, 1.5 in. long, the tip globose, flowers white or yellow. Calyx campanulate, .05 in. long, lobes very small. Corolla-tube inflated in the middle opposite the stamens, constricted above and below, .1 in. long, glabrous except a ring of hairs under the stamens within; lobes ovate falcate, acuminate, about .2 in. long. Anthers ovate-lanceolate, .05 in. long, nearly sessile. Ovary ovoid, tapering into a short style with conical tip. Berry on a stout pedicel, narrowly obovoid or pyriform, surmounted by a mamillate apex, splitting into 2 valves marked by slight vertical ridges, 2 to 2.5 in. long, .75 to 1.25 in. broad, pericarp thick, woody, dull green with specks when fresh, yellowish when dry. Seeds numerous, oblong, angular, .25 in. long, embedded in pulp and partly enclosed in a papery aril, sulcate at the hilum, testa granular, dark brown, albumen thin, fleshy, cotyledons ovate.

PERAK: King's Collector 5368, 5494, 7550, in dense jungle.

No. 5368 has broader leaves than the rest and pedicels with imbricating bracteoles, which the others only show a tendency to, but we see no reason to keep it separate.

8. *CHILOCARPUS COSTATUS*, Miq Fl Ind Bat II. 393 (1856) A stout climbing shrub, young branches as thick as a goose-quill, shining and purplish-brown when dry, sometimes obtusely angular, nodes swollen. *Leaves* chartaceous, elliptic or elliptic oblong, shortly and very obtusely acuminate at apex, attenuate at base or sometimes rounded, both surfaces glabrous, upper shining, when dry the upper greenish- or dull purplish-brown, the lower yellowish brown, margins recurved, 4 to 8 in long, 2 to 3.5 in broad, midrib stout, broad above and impressed, sharply angled beneath when dry main nerves 12 to 20 pairs, nearly parallel, very conspicuous, impressed on the upper, raised on the lower surface, starting at an angle of from 65° to 75° with the midrib and gradually curving to join in a prominent intramarginal slightly looped nerve 0.5 to 1 in from the margin, secondary nerves many, usually alternate with the main nerves but sometimes at irregular angles with the midrib, recurrent from the intramarginal nerve and branching backwards, reticulations few, oblique, inconspicuous, petiole .5 to 1 in long, bordered by the decurrent margins of the blade *Cymes* axillary, puberulous, trichotomous, reaching about 3 in in length and breadth, many flowered, apparently whorled, peduncles .5 to 1.5 in long, stout, flattened, branch peduncles 3 to 6 in long, these again branched ultimate cymes subumbellate pedicels 1 to 1.5 in long, bracts caducous bracteoles ovate acuminate, grey puberulous, the margins hyaline, at the base of the pedicels, buds clavate with globose tips, .75 in long flowers yellowish *Calyx* campanulate, .075 in long, lobes ovate, rounded, margins hyaline minutely ciliate *Corolla* tube very slender, .7 to 1 in long, dilated a little above the base opposite the stamens, pubescent at the base within, otherwise glabrous lobes ovate lanceolate, acuminate, reaching .5 in long and about .25 in broad *Anthers* lanceolate .075 in long, cells rounded at base filaments slender, as long as anthers, villous at base *Ovary* ovate, acuminate, compressed, smooth, glabrous, style slender, 1 in long, stigma ovoid apiculate *Berry* large, ovoid when young, elliptic when ripe, with a smooth boss at the apex, and flattened base, .25 to .3 in long .15 to .2 in broad, pericarp thick, orange yellow, smooth *Seeds* embedded in fibrous pulp and half surrounded by a fleshy yellow arillus, oblong subquadrate, deeply channelled at the hilum *Testa* thin, brown, albumen thick, horny, cotyledons ovate orbicular, flat, radicle short (*C. Mangay*, Dyer, Hook f Fl Br Ind III 627)

PENANG at Ayer Etam, *Curtis* 475 PERAK at Sungie Larut, *Wray* 2428, *Scortechini*, *King's Collector* 3261, 5264, 10848 PAHANG *Ridley* in Trans Linn Soc Ser 2, III 319 (*C. Mangayi*) MALACCA *Mangay* (K D) 1045, 1046, *Curtis* 3479 SELANGOR *Ridley* 2726

We are unable to separate *C. Maingayi* from *C. costatus*. Teysmann's specimen of the latter in the Kew Herbarium has only immature flower-buds, rather smaller than the buds of *C. Maingayi*, but some of our specimens have them in quite as immature a stage. Curtis says it gives a very white rubber.

3. LEUCONOTIS, Jack.

Erect or climbing shrubs. *Leaves* opposite, distantly penninerved. *Flowers* in pedunculate axillary cymes, 4-merous. *Calyx* 4-lobed or -partite, thickened at the base, eglandular or minutely glandular within. *Corolla* hypocrateriform, tube slightly dilated in the middle opposite the stamens, throat naked; lobes 4, short, overlapping to the left. *Stamens* 4, included in the tube, anthers linear-lanceolate, the cells rounded at the base. *Disk* none. *Ovary* 2-celled; style short, stigma thickened, with a very short bifid apiculus; ovules 2 to 3 in each cell, axile, laterally affixed. *Fruit* an ovoid or globose berry, pulpy within. *Seeds* 1 to 6, ovoid-oblong, testa membranous, albumen none, cotyledons thick fleshy, the inner surfaces irregular, radicle short —
DISTRIB. Malay Peninsula and Archipelago, about 6 species

Calyx 4 partite, lobes long linear; intramarginal nerve of leaves very prominent; ovules 3 in each cell, seeds up to 6 .. 1. *L. eugenifolius*.

Calyx 4-lobed, lobes short rounded, intramarginal nerve obscure, ovules 2 in each cell, seeds usually 2. —

Corolla-tube 25 in. long, peduncles very stout; calyx and bracteoles very thick fleshy; berry obovoid 2. *L. Maingayi*.

Corolla-tube 3 to 4 in. long, peduncles rather thick; calyx and bracteoles moderately large and thick; berry ellipsoid .. 3. *L. Griffithii*.

1. LEUCONOTIS EUGENIFOLIUS, A. DC. Prodr. VIII. 331 (1814)

A small erect or climbing shrub, branchlets thinner than a goose-quill, dark-rusty-puberulous at first, afterwards glabrous, obscurely angled. *Leaves* chartaceous; elliptic-oblong, sometimes oblanceolate, abruptly and often obliquely obtuse-caudate-acuminate at apex, rounded at base or sometimes slightly cuneate, upper surface dull olivaceous-brown, lower surface pale yellowish-brown, minutely punctate and rusty-puberulous on the nerves; 2.5 to 4.5 in. long, 1 to 2 in. broad, main nerves 8 to 10 pairs, very prominent on the lower surface, at right angles to the midrib, straight to join in a conspicuous intramarginal nerve at nearly 1 in from the edge, the said nerve joining the midrib below the acumen, secondary nerves usually 1 or 2 between the main nerves, reticulations obscure; petiole slender, .3 to .5 in. long, rusty-pubescent. *Cymes* 1 to 1.5 in. long, erect, rusty-pubescent, usually about 6- to 12-flowered; peduncle .5 in. long; branches 3, the side ones few-flowered, the mid one usually again branched, pedicels about .2 to

3 in long, bracts leafy, linear or spatulate, 5 to 1 in long, bracteoles linear, obtuse at tip, similar to calyx lobes, buds clavate, the tip ovoid, flowers yellowish. *Calyx*-tube very short, lobes linear, 2 in long, pubescent and with few hispid hairs near the obtuse tip, slightly recurved glands few, minute. *Corolla*-tube 3 to 4 in long, glabrous except near the base inside, lobes 15 to 2 in in diameter, ovate cordate, densely pubescent, the margins incurved. *Anthers* 4, linear-lanceolate, apiculate, 15 in long, filaments 0.5 in long, slender, decurrent in the tube. *Ovary* conoidal, more or less 4 angled, glabrous or pubescent, style slender, 12.5 in long stigma globose, apiculus bifid, cells 2, ovules 3 in each cell. *Berry* ovoid, about 1.25 to 1.5 in long and 1 in in diameter, pericarp leathery, shining without, wrinkled when dry, pulp very scanty, septum thin. *Seeds* up to 6, ovoid oblong, 6 in long by 3.5 in broad, slightly grooved at the hilum, testa membranous, brown cotyledons very thick, unequal. *Miq Fl Ind Bat II* 397 *Hook f Fl Br Ind III* 628 *L cuspidata*, Blume Mus Bot Lugd Bat I 112 *Miq l c* 398 *Melodinus pugenifolius*, Wall Cat 1616

2 *LEUCONOTIS MAINGAYI*, Dyer in Herb Kew *Hook f Fl Br Ind III* 628 (1882). A climbing shrub, branchlets stout, nearly as thick as a goose quill, nearly black when dry, obtusely quadrangular, the nodes swollen and crossed by a slender ridge joining the bases of the petioles. *Leaves* opposite or in whorls of 3, coriaceous, elliptic oblong, abruptly and obtusely caudate acuminate at apex, attenuately rounded at base shining on the upper surface and very dark brown when dry, pale and dull on the lower, margins recurved, 3 to 5 in long, 1.5 to 2 in broad, midrib strong, channelled above, raised beneath main nerves 6 to 10 pairs, the lowest very near the margin and starting the rather obscure intramarginal looped nerve, to which the others, which start from the midrib at about 60, gradually curve, secondary nerves none or very few, reticulations obliquely transverse, rather prominent, petiole 1.25 in long, channelled above by the decurrent margins of the blade, which become connivent. *Cymes* very stout, about as long as the petiole, about 15 to 20-flowered, peduncle very thick, flattened, 2.5 to 5 in long and 1.5 to 2.5 in broad, much enlarging in fruit, branches about 4, these again 2-chootomously branched, very stout, as are the very short (up to 1.5 in long) pedicels, bracts ovate-acute, clasping the branches and bases of the pedicels, buds clavate, the tip conical

Calyx-tube very short, fleshy; lobes 4, ovate, rounded, the two outer broader and shorter than the two inner, which are .2 in. long, all glabrous but very slightly ciliate; glands very many, very minute, in bud scarcely more than papillæ. *Corolla*-tube cylindric, .25 in. long, puberulous at the base within, lobes 4, broadly ovate, recurved, thickly puberulous, the margins incurved slightly. *Stamens* in the upper half of the tube, anthers lanceolate, apiculate, .125 in. long, filaments short, broad. *Ovary* somewhat depressed, 4-grooved, tapering to a broad .1 in. style, stigma rounded with a short apiculus, cells 2, ovules 2 in each cell. *Berry* obovoid, 1.5 to 1.75 in. long by about 1 in. in diam., pericarp thick, smooth and shining without. *Seeds* about 3, oblong, somewhat flattened, .75 in long by .5 in. broad and .25 in thick, dark brown, testa very membranous, cotyledons thick, fleshy, radicle cylindric, about .15 to .2 in. long.

SINGAPORE: *Mangay* (K.D.) 935, *Ridley* 2826, 3710, 8908

3 *LEUCONOTIS GRIFFITHII*, Hook. f. in Fl. Br. Ind. III. 628 (1882). A glabrous climbing shrub, branchlets stout, as thick as a goose-quill, obscurely angled, dark brown when dry with a few pale lenticels, ultimate ones quadrangular. *Leaves* coriaceous, elliptic-oblong, obtusely and abruptly short acuminate at apex, rounded or slightly cuneate at base, upper surface shining, pale olivaceous-brown when dry, lower dull and paler chocolate-brown, often glandular-dotted, margins recurved, 3.5 to 5.5 in long, 1.5 to 2.25 in. broad, midrib slender, impressed above, sharply prominent beneath, main nerves 5 to 7 pairs, starting at an angle of 70° with the midrib and curving upwards to meet in a faint looped intramarginal nerve, impressed above, raised beneath, fairly conspicuous when dry, secondary nerves few or none; reticulations obliquely transverso, petiole 5 to .75 in. long, bordered by the decurrent margins of the blade, which are connivent. *Cymes* axillary, erect, as long as the petiole, peduncle 5 in. long, somewhat flattened, stout, branches 3 at first, again subdividing, crowded; pedicels quadrangular, .1 to .2 in long, bracts ovate, acute, sheathing the bases of the joints and pedicels, buds clavate, the tip oblong, flowers yellow. *Calyx* .1 in long, thick at base, lobes 4, ciliate, the two outer ovate-acute, the 2 inner oblong rounded, all with many small glands at the base within and 1 to 2 fairly large ones. *Corolla*-tube cylindric, .3 to .4 in. long, glabrous except the puberulous lower third inside, lobes broad, blunt, ovate, .15 to .2 in. long. *Stamens* occupying the upper half of the tube, filaments short, broad; anthers linear-lanceolate, apiculate, .125 in. long. *Ovary* conical, 4-angled, glabrous, with an angled style and acute stigma; cells 2-ovuled. *Berry* ellipsoid, 1.5 in. long, 1 in. in diameter; pericarp leathery, smooth, shining. *Seeds* usually 2 only, on a thin

septum and with little pulp, .7 in long, 4 in broad, testa membranous, cotyledons very thick, wrinkled on the inner face, radicle small, included between the cotyledons

PERAK *Scortechini* 1475, Wray 28, 592, 1366, 4009, King's Collector 2663, 3080, Curtis MALACCA *Crichton*, Manray (K D) 1050, 1051 SELANGOR, *Ridley* 1963 SINGAPORE *Kurz*, *T Anderson* 60, *Ridley* 2735, 9166

Ridley's specimen from Upper Bukit Mandai, Singapore, has dark rough branchlets, smaller leaves with closer main nerves and less crowded cymes, but does not seem otherwise to differ, at any rate not sufficiently to warrant its being made a variety

F. Crichton is an india rubber producer, and the product is said to be good, very probably as good as that of the neighbouring *L. elasticus*, Bccc 'Nelle foreste di Borneo' pp 354 562 fig 59 and Hook Ic Pl t 2733

1 *MFLODINUS* FOIST

Direct or scandent shrubs. *Leaves* opposite pinninerved the nerves thin, parallel reticulations transverse. *Flowers* in terminal trichotomously paniculate cymes or in axillary and condensed cymes, 5 rarely 4 merous, white or pale pink, often sweet scented. *Calyx* 5 partite, glandular within. *Corolla* hypocrateriform tube cylindric dilated more or less opposite the stamens the lobes overlapping to the left, entire or imbricate at the tips, the mouth with thick cleft or lobed scales. *Stamens* 5 or 4, at or below the middle of the tube, anthers included, oblong lanceolate cells rounded at the base filaments short. *Disk* none. *Ovary* 2 celled style short, stigma thick bifid ovules many in each cell, axile. *Fruit* a globose berry, pericarp coriaceous or hard. *Seeds* many, embedded in pulp, albumen fleshy cotyledons thin, ovate, foliaceous radicle long - DISTRIBUTION India, Malaya, Southern China and Australasia, about 20 species

1 flowers rather large, in terminal panicled cymes, corolla lobes oblong rounded, entire (Subgenus I *LUMINOINUS*)

1 *M. monogynus*

1 flowers small, in short axillary cymes, corolla lobes dentate at tip, often imbricate (Subgenus II *PIEUROPHACEINUS*)

Leaves chartaceous, both surfaces brown and nearly similar in colour, the lower only slightly paler than the upper -

Cymes scarcely longer than the petiole, 25 to 5 in long -

Corolla tube thick, not much dilated, lobes bifid, one branch bicuspidate, buds 25 in long, leaves with 20 to 30 pair main nerves.

2 *M. orientalis*

Corolla tube slender, dilated in middle, lobes bifid, one branch imbricate dentate, buds 15 to 2 in long -

Leaves rather broad, reaching 2.25 in, main nerves 10 to 15 pairs, cymes many flowered

3 *M. micranthus*.

Leaves narrow, reaching only 1.25 in broad, main nerves 18 to 22 pairs, cymes few flowered

4. *M. citrifolius*

Cymes longer than the petiole, .75 to 1 in long, leaves greenish brown when dry

5. *M. perakensis*

Leaves coriaceous, upper surface olivaceous brown, shining, lower surface pale and dull, cymes scarcely longer than the petioles, corolla lobes scarcely bifid, much oblique, fimbriate at tip

6. *M. coriaceus*

1. *MFLODINUS MONOGYNUS*, Roxb Fl Ind II 56 (1832) A large glabrous climbing shrub, young branches thinner than a goose quill, smooth, nearly cylindric, dull brown when dry. Leaves chartaceous, oblong or oblong lanceolate, acuminate at apex, cuneate or rounded at base, glabrous on both surfaces, the upper shining, the lower rather dull and paler brown when dry margins slightly recurved, somewhat cuspate when dry, 4.5 to 6 in long, 1.5 to 2 in broad, midrib slender impressed above raised beneath main nerves about 20 pairs, slender, at about an angle of 70° with the midrib, very slightly curved to meet an intramarginal looped nerve close to the edge secondary nerves many, similar to main nerves but thinner, often forked, sometimes with recurrent branches reticulations transverse, irregular all faint on both surfaces petiole 2 to 3 in long, rather stout Cymes terminal, puberulous reaching 3 in in length (occasionally more) and 2 to 3 in in diam peduncles 0 to .75 in long branches trichotomous pedicels variable, bracts of the inflorescence and primary branches leafy, caducous, those at the bases of the branches and pedicels ovate, acute bracteoles 1 to 2, small, obtuse, on the pedicel itself, buds elongate, tip oblong, acute, flowers white, fragrant Calyx campanulate, lobes 5, oblong-orbicular, sometimes emarginate, ciliate, 1.5 to 2 in long, the margins hyaline Corolla tube cylindric, .5 to .75 in long, widening upwards, glabrous or slightly puberulous without, densely villous within, above the stamens, lobes oblong-falcate, rounded, 3 to 5 in long, more or less auricled, each with a 2 to 3-lobed glabrous scale near the base, throat with a corona of 5 bifid villous linear-falcate lobes Anthers oblong lanceolate, .06 in long, filaments slender, short Ovary rounded style slender, 1 in long stigma thick, cylindric, with a sharp bifid apiculus, very gummy, embraced by the anthers Berry globose, smooth, pulpy, reaching 3 in in diam, pericarp coriaceous, orange-coloured, smooth Seeds numerous, flattened, integuments 2, outer thick rugose, inner membranous, albumen copious, cotyledons oval A DC Prod VIII 329, Wall Cat 1603, Wight Ic t 394, Bot Reg 834, Bot Mag t 2527, Hook f Fl Br Ind III 629, Prain Beng Plants 668 *Echallium piscidium*, Wight Ic t 472, excl fig of fruit *Nerium piscidium*, Roxb Fl Ind II 7, excl descr of fruit

6 *ALYXIA FORBESII*, King & Gamble, n sp A climbing shrub, branchlets as thick as a crow-quill, 3-angled, pale brown, shining,

glabrous, the nodes slightly swollen, ridged. *Leaves* chartaceous, opposite or in whorls of 3 to 4, lanceolate, oblong lanceolate or elliptic lanceolate, obtusely rather long-acuminate at apex, cuneate at base both surfaces glabrous, green when dry, the lower slightly paler and dull, margins very slightly recurved, thinly cartilaginous, 2.5 to 5 in long, .75 to 1.5 in broad, midrib slender but prominent, unpressed above, raised beneath, main nerves very numerous, 27 to 30 pairs, at an angle of about 80° with the midrib, slender, straight to join a slender intramarginal nerve less than .05 in from the edge, difficult to distinguish from the very numerous, often branching, secondary nerves. Reticulations irregular, all nerves rather faint on the upper very obscure on the lower surface, petiole .05 to 1 in long, bordered by the decurrent, usually connivent margins of the blade. *Cymes* axillary slender, lax, glabrous, 3- to 5 flowered, reaching in all about 1 in in length, peduncles .25 in long, pedicels very slender, 1 to 1.5 in bracts 0 or linear, leafy, caducous, buds clavate, .5 in long, tip ovate flowers white. *Calyx* shortly campanulate, deeply 5 lobed, lobes ovate acute spreading, 1 in long. *Corolla*-tube cylindric, 4 to 6 in long, slightly dilated near the top opposite the stamens, contracted at the throat, which is annulate within, glabrous except the upper part within lobes ovate cordate, 1.5 to 2 in long, recurved. *Anthers* lanceolate, rounded at base filaments short slender. *Disk* undulately 5 lobed, white villous, enclosing the ovary. *Ovary* of 2 rounded glabrous carpels, style very slender, stigma globose, with a bifid apiculus. *Fruit* of 1 or 2 ellipsoid drupes on very short pedicels each drupe 4 to 5 in long and 3 in broad, grooved on one side opposite the placenta, pericarp thin, almost membranous. *Seed* 1, conform to the drupe, testa membranous, albumen horny, deeply lunate cotyledons oblong, 1.5 in long, radicle stout, 1 in long, the base oblique. *A stellata*, Wall Cat 1604 Hook f Fl Br Ind III 636 (not of Roem and Sch.) *Gynopogon stellatum*, Kurz in Journ As Soc Beng XLVI ii 251, and For Fl II 176 (not of Labill.)

PENANG Wallich 1604 PERAK at Gunong Iras, 4,000 feet Wray 4165, on Larut Peak, 3,000 to 4,000 feet, King's Collector 2124, *Scortechinii* PAHANG at Kluang Terbang, W D Barnes 10898 — DISTRIBUTION Sumatra (*Forbes* 2268, on Mount Dempo, at 4,000 to 5,000 feet, 2256) Java (*Forbes* 1043)

On following up the suggestion made in the Fl Br Ind that this plant is not identical with the Polynesian *A stellata*, we feel bound to agree, and consider it best to give it a new name

7 *ALYXIA SCORTECHINII*, King & Gamble, n sp. A climbing shrub, young branches thinner than a goose-quill, pale brown, shining, angled,

minutely rusty-puberulous, nodes swollen. *Leaves* thinly coriaceous, in whorls of 3 or opposite; oblong-oblancoate, shortly cuspidate-acuminate at apex, narrowed at the base from above the middle; upper surface dark-olivaceous, glabrous, shining when dry, lower surface almost dull, paler and in young leaves minutely puberulous especially along the midrib; margins thin, slightly recurved; 4 to 6 in. long, 1·5 to 2 in. broad; midrib stout, impressed above, raised beneath; main nerves extremely numerous, probably more than 50, but difficult to distinguish from similar secondary nerves, usually at an angle of 80° with the midrib, straight to join an intramarginal nerve at a little less than ·05 in. from the edge, much branched recurrently, raised on the upper surface, reticulations in a minute network; petiole ·3 to ·5 in. long, transversely corrugated when dry and bordered by the decurrent edges of the blade. *Cymes* sessile, axillary, densely crowded, about twice as long as the petioles, bracts numerous, linear-lanceolate, pubescent, pedicels very short, bracteolate below the calyx, buds clavate, ·5 in. long, tip oblong obtuse. *Calyx* ·15 in. long, campanulate, deeply cleft in 4 to 5 linear lobes, ·1 in. long, pubescent outside, glabrous within. *Corolla*-tube cylindric, dilated near the top opposite the stamens, contracted at the mouth, which is annulately folded within, pubescent within and on the upper half without, ·4 in. long; lobes 4 to 5, ovate, erect or recurved, pubescent, margins incurved, ·15 in. long. *Anthers* ovate-lanceolate, apiculate, ·05 in. long, filaments slender. *Disk* villous, appressed to the ovary. *Ovary* of 2 conical carpels, style very slender, ·3 in. long, stigma minute, capitate. *Fruit* of 2, more usually 1, ellipsoid, long-pedicelled drupes, about 1 in. long and ·5 in. broad. pericarp ribbed when dry, especially opposite the placenta. *Seed* conform to the drupe, albumen ruminant, cotyledons oblong, radicle cylindric, rather long.

PERAK. *Scortechnii*, at lower camp, Gunong Batu Poteh, Wray 1091, at Kwala Kangsa, Ridley 2895.

Ridley's specimen is the only one with fruit and its leaves are rather thinner than those of the other specimens, but otherwise it corresponds well enough. To this species probably also belong Burbidge's specimens in leaf only from Borneo, and Beccari's No 333 from Sumatra. all in the Kew Herbarium.

SPECIES IMPERFECTLY KNOWN.

8. *ALYXIA SELANGORICA*, King & Gamble, n. sp. A slender climbing shrub; branchlets the size of a crow-quill, pale brown, shining, angled. *Leaves* coriaceous, opposite or in whorls of 3 to 4; obovate or oblanceolate, shortly and abruptly acuminate at apex, long cuneate at base;

olivaceous and shining on the upper surface, dull and rather paler and minutely rusty-puberulous on the lower; margins recurved; 3 to 4 in. long, 1 to 1.25 in. broad; midrib stout, impressed above, raised beneath, main nerves very many, 25 to 30 or more, difficult to distinguish from the similar but rather fainter secondary nerves, these latter recurrent-branched, all meeting an obscure intramarginal nerve, nearly at right angles to the midrib, obscure on both surfaces but slightly raised on the upper; petiole .25 in. long, rusty-pubescent, bordered by the decurrent margins of the blade. *Flowers* not known, but fruiting cymes axillary, scarcely longer than the petiole, few-flowered. *Fruit* of 1 or 2 long-pedicelled drupes; pedicels .3 to .4 in. long, drupes oblong ellipsoid, acute at both ends, .75 in. long, .35 to .45 in. broad, pericarp black and wrinkled when dry. *Seed* conform to the drupe but rounded at the ends, grooved on one side where it is attached to the placenta, testa thin, separated; albumen horny, much ruminant in horizontal lamellæ, cotyledons oblong, .2 in. long, .075 in. broad, radicle stout, cylindric, .225 in. long.

SELANGOR. at Gua Batu, Ridley 8558.—DISTRIB. Sumatra (*Forbes* 3212).

6. RAUWOLFIA, Linn.

Trees or shrubs, glabrous or rarely pubescent. *Leaves* 3- to 4-nately whorled or opposite (rarely), nerves slender. *Flowers* in corymbose or umbellate cymes, usually compound, alternate with the terminal leaves or axillary to the upper leaves. *Calyx* short, 5-lobed, eglandular. *Corolla*-tube cylindric, sometimes dilated opposite the stamens, constricted at the mouth, the throat usually hairy within, lobes 5, broad, overlapping to the left. *Stamens* included in the corolla-tube above the middle, filaments short; anthers small, acute, rounded at base. *Disk* cup-shaped or annular. *Carpels* 2, distinct or connate, style filiform, stigma broad, calyptriform or peltate, ovules 2, collaterally placed, in each carpel. *Fruit* of 2 connate or distinct drupes, each with a crustaceous 1-seeded pyrene. *Seeds* ovate; testa thin, albumen thin, fleshy, cotyledons flat, radicle large, superior.—DISTRIB. About 50 species, chiefly tropical American; about 10 from India and the Malay Peninsula and islands.

Corolla-tube cylindric, inflated opposite the stamens; carpels distinct; pyrenes flattened; leaf-nerves rather distant (Subgenus I. *OPHIOXYLON*) 1. *R. perakensis*.
Corolla-tube campanulate, not inflated opposite the stamens; carpels connate; pyrenes rounded and beaked; leaf-nerves many, close (Subgenus II. *CYRTORIPHONIA*) 2. *R. sumatrana*.

1 *RAUWOLFIA PERAKENSIS*, King & Gamble, n sp A small shrub, branchlets somewhat fleshy, pale brown, as thick as a goose-quill, sparsely lenticellate *Leaves* fleshy in texture when green, membranous when dry opposite or whorled, variable in size, glabrous, lanceolate or spatulate, rather long acuminate at apex, narrowly attenuate at base bright green above turning dark brown when dry, greyish-green beneath turning buff, 4 to 8 in long, 1 to 3 in broad, midrib broad, often sinuous when dry, main nerves 12 to 15 pairs, pale, starting from the midrib nearly at right angles and curved upwards to and along the margin secondary nerves and reticulations obscure, petiole slender, 5 to 75 in long *Cymes* corymbose, long-peduncled, 1 to 4 together from the axils of upper leaves, peduncle 15 to 35 long, branches dichotomous, ultimate ones subumbellate, pedicels slender, 1 in long, 25 in fruit, bracts minute, triangular, caducous *Calyx* lobes ovate-acuminate, 06 in long, glabrous *Corolla*-tube slender, 3 to 5 in long tubular, inflated towards the top, glabrous on both sides, lobes ovate, blunt, about 1 in long *Disk* annular, 04 in long *Stamens* short blunt anthers as long as the filaments *Ovary* rounded, style filiform 15 to 2 in long, stigma cylindric calyptriform *Drupe*s crimson connate only at the base, obliquely ovate, 5 in long, 25 in broad flattened exocarp fleshy *Pyrenes* crustaceous, prominently rugose, albumen thin cotyledons ovate, radicle as long as cotyledons, together 25 to 3 in long

PERAK *Scortechini* 920 1161, 8410 *Wray* 3692 *Ridley* 2898, 5523 PAHANG *Ridley* 1166

This species is very near *R. densiflora*, Benth., of Ceylon & India, and the Khasia Hills but differs in the much shorter calyx lobes, the narrower corolla tube, and the flattened drupes From *R. serpentina*, Benth., it differs in the veins of the leaves starting nearly at right angles instead of obliquely, and in the larger, usually more separated and flatter drupes and more pitted pyrenes

2 *RAUWOLFIA SUMATRANA* Jack Mal Misc 22 (1820) A small tree reaching 40 to 50 feet in height and 6 to 10 in in diameter, with erect stout branches and milky juice, branchlets more or less quadrangular, lenticellate *Leaves* pergammaceous, opposite or verticillate, generally in threes, sometimes in fours, elliptic oblong to obovate spatulate, shortly acute or acuminate at apex, long attenuate at base, margins entire, slightly reflexed, both surfaces glabrous, the lower pale, 6 to 8 in long, 2 to 3 in broad, midrib slender, very prominent, impressed above, much raised beneath, main nerves parallel, 32 to 35 pairs, nearly at right angles (80°) to the midrib, then straight, joining in a looped intra-marginal nerve near the edge, secondary nerves similar but fainter, usually one only between each pair of main nerves, reticulations very

few, petiole 75 to 1 in long, slightly winged by the decurrent margins of the blade *Flowers* in terminal compound umbels, primary peduncles 3 to 5, stout, 3 to 4 in long, secondary peduncles 6 to 8, 1 to 15 in long, tertiary peduncles 3 to 5, about 5 in long, quaternary peduncles and pedicels slender, 1 to 25 in long, umbellules of about 4 to 6 flowers, bracts subulate, recurved, bracteoles very minute, buds subglobose, flowers white *Calyx*-lobes imbricate, nearly orbicular, 05 in long on a tube of same length *Corolla* tube campanulate, 2 in long, lobes rounded, recurved, 05 to 1 in long, tube tufted pubescent within at the mouth and a little below it, lobes short, rounded, 075 in long *Anthers* sagittate mucronate, 04 in long filaments very short *Disk* thick, short, barely 025 in long, obscurely 5 lobed *Ovary* 2-celled, furrowed, style slender, 1 in long stigma peltate, cells 2-ovuled *Drupe* oblong-globose, smooth, 6 to 7 in long, 5 to 6 in broad, pyrenes two, compressed at top, enlarged below, beaked, longitudinally furrowed and rugose, woody *Seed* flattened, testa membranous, albumen thin, embryo flattened, cotyledons ovate, 1 in long radicle thick, as long as cotyledons *Hook Bot Misc* II 73 *Blume Bijdr* 1034, *A DC Prodr* VIII 337, *Hassk Fl Bot Zeit* (1845) 263 *Spanoghe in Linnæa* XV 325, *Koord & Val Bijdr* I 93 *Cyrtosiphoniu sumatranu*, *Miq Fl Ind Bat* II 401

II. 412. *Cerbera fruticosa*,

Ker Bot. Reg. t. 391; Roxb. Fl. Ind. I. 691, and ed. Carey & Wall. II. 526; Wall. Cat. 1583.

SINGAPORE: cultivated, *Maingay* (K.D.) 1055.—DISTRIB. Burma. This shrub is very commonly cultivated in Indian and Malayan gardens.

VAR. *albiflora*, King & Gamble. Differs but little from the species, but has white flowers, a glabrous acutely pointed capsule, more oblong leaves, and rather larger corolla-lobes. *Calpicarpum albiflorum*, Teysm. & Binn. in Tijds. Ned. Ind. XXV. (1863) 402. See also Ridley in Trans. Linn. Soc. Ser. 2, III. 320.

SINGAPORE: *Goodenough* 59, *King's Collector* 1232, *Ridley*.—DISTRIB. Java, Ceram (*Teysmann* 5035).

2. *KOPSIA PAUCIFLORA*, Hook. f. Fl. Br. Ind. III. 639 (1882) A shrub (?); branchlets slender, pale brown, uppermost angled. *Leaves* chartaceous, elliptic or elliptic-lanceolate, obtusely caudate-acuminate at apex, acuminate at base, olivaceous-green and somewhat shining on the upper, yellowish and dull on the lower, surface, 4 to 6 in. long, 1.5 to 2.5 in. broad, midrib fairly prominent, impressed on the upper, much raised on the lower, surface; main nerves 6 to 10 pairs, distant, starting at an angle of 60° with the midrib and curving upwards to join in an obscure intramarginal nerve quite close to the edge, secondary nerves and transverse reticulations prominent on the lower surface, petiole .25 in. long, stout. *Cymes* terminal, few-flowered, the rachis .25 to .5 in. long, with many ovate-acute persistent bracts. *Calyx* .15 in. long, lobes ovate, obtuse, rather shorter than the tube. *Corolla*-tube very slender, cylindric, 1.5 to 2 in. long, villous inside, dilated at the top, lobes linear-oblong, 1 in. long, at length reflexed in flower. *Antlers* small, near the top of the tube. *Fruit* not known.

MALACCA: on Mount Ophir, *Maingay* (K.D.) 1056.

3. *KOPSIA SCORTECHINI*, King & Gamble, n. sp. A tree, reaching 40 to 50 feet in height; the branchlets swollen at the nodes. *Leaves* chartaceous, elliptic oblong, briefly acuminate at apex, unequally narrowed at base, somewhat shining on the upper, pale on the lower surface; margins slightly recurved; 2 to 5 in. long, 1 to 2 in. broad; midrib slender, impressed above, ending in a gland at the apex, main nerves 8 to 16 pairs, at an angle of about 70° with the midrib, curving upwards to join in an intramarginal nerve immediately close to the edge; reticulations inconspicuous; petiole .1 in. long, glandular at the base inside. *Cymes* terminal, pseudo-terminal or lateral, on peduncles of varying (.25 to 2 in.) length; branches spreading, corymbose; bracts ovate-triangular, acute, .1 to .15 in. long, glabrous, pedicels short variable, each with a pair of small bracteoles; flowers large, white; buds clavate. *Calyx*-tube scarcely any, lobes ovate

acuminate, with a gland at the point behind, ciliate on the margins, .1 in. long. *Corolla*-tube slender, dilated at the top then constricted, .75 to 1 in. long, pubescent within below the stamens and half-way down, lobes spreading, linear-oblong, .5 to .75 in. long. *Anthers* lanceolate-acuminate, .1 in. long; filaments short. *Disk*-scales longer than carpels, broadened below, beaked above. *Carpels* glabrous, style very slender, stigma short, cylindric. *Fruit* not seen

PERAK · *Scortechini* 1878.

4. *KOPSIA GRIFFITHII*, King & Gamble, n. sp. A small tree (?); branchlets pale brown, slender, enlarged at the nodes. *Leaves* coriaceous, ovate to ovate-oblong, abruptly obtusely caudate-acuminate at the apex, which is often emarginate, attenuate at the base, shining above, pale beneath, 3.5 to 5 in. long, 1.5 to 2 in. broad, midrib slender, prominent and channelled above, main nerves many (22 to 30 pairs), close, parallel, starting at an angle of about 70° with the midrib, and slightly curving to meet in an intramarginal nerve close to the edge, raised and prominent on the upper, less so in the lower surface, reticulations few, petiole .25 in. long, bordered by the decurrent margins of the blade, those of each pair of leaves embracing the branchlet so as nearly to meet. *Cymes* axillary and pseudo-terminal, sessile or on very short peduncles, corymbose, primary branches few and irregular in length and number of flowers (sometimes 1 flower only), bracts ovate-acute, very small, glabrous; pedicels slender, 4 to 6 in. long, with 2 to 3 minute bracteoles near the middle, flowers apparently large, white, buds long, clavate. *Calyx*-tube almost none, lobes nearly orbicular, .05 in. long, ciliate on the margins, a gland on the back near the top. *Corolla*-tube very slender, 1 to 1.5 in. long, inflated at the top, slightly pubescent within below the stamens, lobes ovate, ovate-oblong or oblong, obtuse, .75 to 1 in. long. *Anthers* lanceolate-acuminate, .15 in. long, filaments short. *Disk*-glands subulate, slender. *Carpels* obtuse, densely long-hairy, style slender, stigma oblong, bifid. *Fruit* not seen.

MALACCA · *Griffith*

VAR. paucinervia, King & Gamble. A shrub, 4 to 6 feet high, flower very white. Similar to the species, but the leaves with fewer, 12 to 15 main nerves leaving the midrib at an angle of about 50° only, and not so abruptly or caudately acuminate. The carpels show the same shaggy hairs, and the disk-glands are the same.

PERAK *King's Collector* 10707, in dense jungle, on limestone hills, at 500 to 800 feet.

5. *KOPSIA LARUTENSIS*, King & Gamble, n. sp. A shrub reaching 10 feet in height, or a small tree up to 25 feet, branches pale brown,

rather smaller than a goose-quill, corky-barked and somewhat scurfy when dry. *Leaves* coriaceous, oblong-lanceolate, obtusely long caudate-acuminate at apex, cuneate at base, margins recurved, upper surface shining, lower pale, both reddish when dry, 4 to 10 in long, 1.5 to 2.5 in broad, midrib stout, ending in a gland at the extreme apex, main nerves parallel, 15 to 22 pairs, impressed on the upper, raised on the lower surface, starting at an angle of about 70° to the midrib and gently curving upwards to meet in a looped intra-marginal nerve close to the edge, secondary nerves and reticulations few, petiole very short or almost none, at most 2 in long, stout, those of each pair of leaves joined by a slight ridge at the nodes. *Cymes* axillary or pseudo-terminal, sessile, few- (up to 10-) branched, very short at first but lengthening gradually to 5 in, the branches covered with very small ovate-triangular densely imbricate bracts, flowers small, cream-coloured, buds clavate. *Calyx* tube short, lobes ovate, obtuse, with a gland on the back near the top, ciliate on the margins. *Corolla* tube cylindrical, slender, 3 to 4 in long, slightly dilated at the top opposite the stamens, pubescent within, lobes spreading, much twisted, 3 in long, oblong spatulate. *Anthers* lanceolate, apiculate, the bases rounded, filaments very short. *Disk* glands subulate. *Carpels* 2, glabrous. *Fruit* of 2 (often only 1) urn shaped capsules, triangular in shape, inflated on the dorsal, grooved on the ventral margin where they dehisce, 7 in long on the ventral margin, 6 in broad, 2.5 in thick, striate, beak sharp. *Seeds* 1, ovoid, 4 in long, testa membranous, albumen none, cotyledons fleshy, thick, radicle very small.

PLRAB in low lying woods near Larut, Wray 2736, 3956, *Scortechinii* 57, 59, 1704, *King's Collector* 462, 2082, 4269, 6165

6 KOPSIA RIDLEYANA, King & Gamble, n. sp. A low shrub, reaching a foot or so in height, branchlets smooth, the size of a crow quill. *Leaves* chartaceous when dry, lanceolate, obtusely acuminate at apex, cuneately attenuate at base, shining above, pale below, 4 to 4.5 in long, 1 to 1.5 in broad, midrib slender, ending in a gland at the apex, main nerves 12 to 14 pairs at an angle of about 60° with the midrib, curving upwards to meet in a slender looped intramarginal nerve, raised above as are the few secondary nerves and oblique reticulations, petiole 1.5 in long, somewhat stem clasping and slightly fimbriate scaly at the base. *Cyme* terminal or apparently so, sessile, branches very few (2 to 3), about 3 to 5 in long furnished with many ovate-acute broadly sheathing glabrous bracts, flowers on very short pedicels, pure white, buds clavate. *Calyx*-tube very short, lobes ovate, obtuse or almost emarginate, with a gland on the back, glabrous, 1 to 1.5 in long.

Corolla very slender, 1 in. long, dilated in the middle, pubescent at the mouth, glabrous within; lobes spreading, oblong-obovate, .75 in. long, .25 in. broad. *Anthers* lanceolate, acute, rounded at base, .1 in. long; filaments very short. *Disk-glands* subulate. *Carpels* 2, 2-celled, each cell 2-seeded; style very slender; stigma cylindrical, bilobed. *Fruit* not known.

NEORI SEMBILAN: at Perhutian Tinggi, Ridley 10093.

7. *KOPSIA MACROPHYLLA*, Hook. f. Fl. Br. Ind. III. 639 (1882). A shrub, 6 to 10 feet high; branchlets dark brown, the size of a goose-quill, smooth. *Leaves* thinly coriaceous when fresh, chartaceous when dry; elliptic-oblong or oblong-obovate, obtusely short caudate-acuminate at apex, cuneate at base, margins only slightly or not recurved; upper surface light green with yellow towards the centre when fresh and with a metallic lustre when dry, lower surface pale brown, very minutely pubescent especially on the nerves; 5 to 9 in. long, 2 to 2.5 in. broad, midrib stout, ending in a gland at the apex; main nerves 18 to 22 pairs, raised on both surfaces, sometimes branched, at first straight and parallel, starting at an angle of about 55° with the midrib, then slightly curving to join in an intramarginal nerve close to the edge, secondary nerves few and reticulations prominent above when dry, petiole none or at most .1 in. long, those of each pair of leaves joined by a slight ridge at the node. *Cymes* pseudo-terminal, with a short (.5 to .7 in.) stout peduncle and few, usually 2, thick branches, 1 to 3 in. long, densely covered with small broadly ovate pubescent imbricate ciliate bracts, .1 to .15 in. long; the branches not again branched, pedicels very short, stout, bracteoles 2, obtuse, ciliate, pubescent, under the calyx, flowers very white; buds clavate. *Calyx*-tube very short, lobes 5, imbricate, oblong, obtuse or emarginate, with a gland on the back, minutely pubescent and ciliate, 1 in. long. *Corolla*-tube very slender, 1 in. long, dilated in the middle, glabrous within except for a slight ring below the anthers, lobes obovate, .5 to .75 in. long, .4 to .5 in. broad, rounded. *Anthers* lanceolate, .1 in. long; filaments very short, slightly pilose at base. *Carpels* rounded, minutely pubescent at apex; style slender. *Fruit* not seen, said to be pale green in colour.

PERAK: in rich soil on low ground, King's Collector 4963. SINGAPORE: Lobb.

Haviland's No. 3042 from Borneo comes very near this, but the tube of the corolla is dilated near the top; the bracteate branches of the inflorescence are longer; and the leaves have a dark upper surface, more irregular main nerves and the marginal nerve farther from the edge, and with another more slender outside it. But the material is insufficient for description.

Subtribe 3.—EUPLUMERINÆ.

11. ALSTONIA, Br

Trees or erect shrubs; branches often in whorls. *Leaves* usually whorled, rarely opposite, frequently with numerous nearly horizontal nerves; stipules sometimes represented by glands or a ridge between the leaf-petioles. *Inflorescences* of terminal or pseudo-terminal corymbose or umbelliform cymes, sometimes verticillate on the rachises. *Calyx*-tube short, sometimes urceolate, sometimes almost none, lobes 5, short, eglandular. *Corolla* hypocrateriform; tube cylindric, dilated opposite the stamens, usually at the top, the throat naked, annulate or with reflexed hairs; lobes overlapping either to the right or left. *Stamens* usually at the top of the tube, sometimes lower, included, anthers free, usually lanceolate; filaments short, filiform. *Disk* none, or annular or lobed, the lobes 2 alternate with the carpels. *Carpels* 2, distinct; style filiform, stigma oblong or cylindric, usually bifid at apex, ovules in each cell many, pluriseriate. *Fruit* of 2 follicular mericarps, usually long, cylindric, slender. *Seeds* oblong, compressed, peltate on flattened tough placentas, ciliate and usually with tufts of long hairs at the ends; testa membranous, often papillose, albumen fleshy, rather scanty, cotyledons oblong, flat, radicle about as long as the cotyledons, superior.—*DISTRIB.* Species about 30, found in India, Malaya, tropical Australia and Polynesia, one in tropical Africa

Leaves with close parallel nerves, apex usually obtuse; corolla-lobes overlapping to the left; follicles over 6 in. long, equally broad throughout; seeds rounded at both ends (Subgenus I. *PALA*):—

Ovary villous; corolla-tube pubescent without; leaves 3 to 7 in. long 1. *A. scholaris*.

Ovary glabrous; corolla-tube glabrous without:—

Corolla-tube rather broad, follicles glabrous; leaves 2 to 4 in. long 2. *A. spatulata*.

Corolla-tube slender, follicles pubescent, leaves 2·5 to 5 in. long 3. *A. angustiloba*.

Leaves with close parallel nerves, apex usually acute; corolla-lobes overlapping to the left; follicles under 6 in. long, broadest in the middle; seeds oblong, dentate at the ends (Subgenus II. *BLABEROPS*) 4. *A. Curtisi*.

Leaves with distant more or less parallel nerves; corolla-lobes overlapping to the right; follicles long, slender, equally broad throughout, seeds acute or acuminate at one end, rounded at the other (Subgenus III. *DISSURASPERMUM*):—

Stamens inserted at the top of the corolla-tube, which is

glabrous without, leaves 5 to 12 in long, main nerves 20 to 24 pairs; seeds rounded at one end, bifid and acute at the other 5 *A. macrophylla*.
 Stamens inserted near the middle of the corolla tube, which is pubescent without, leaves usually 4 to 6 in long, main nerves 12 to 16 pairs, seeds rounded at one end, long acuminate at the other 6. *A. angustifolia*.

IMPERFECTLY KNOWN

7 *A. GRANDIFOLIA*8 *A. PANGKORENSIS*

1 *ALSTONIA SCHOLARIS*, Br in Mem Wern Soc Edinb I 76 (1811) A large evergreen tree, reaching 60 feet or more in height and 6 feet or more in girth, stem buttressed branches verticillate, branchlets smooth, swollen at the nodes, juice milky, bitter as is also the wood, glabrous except the inflorescence *Leaves* coriaceous, verticillate, 4 to 7 in a whorl, oblong obovate, oblong or elliptic oblong, obtuse or sometimes shortly and bluntly acute, occasionally emarginate at apex, cuneate at base, bright green and shining above, white or grey glaucous beneath, 3 to 7 in long, 1.5 to 2.5 in broad, midrib thick, main nerves parallel, 30 to 40 pairs, at first almost at right angles to the midrib, slightly curving upwards to an intramarginal nerve close to the edge, secondary nerves many, similar but more slender, reticulations few, petiole stout, 25 to 75 in long, with a hooked process on the upper side near the base *Inflorescence* pseudo terminal *Cymes* umbellately branched, main peduncles stout, 3 to 5, variable in length, usually 2 to 3 in, secondary peduncles slender, 5 to 7, supported often by a spatulate leafy bract pedicels short, terminal flowers subsapitate bracteoles oblong or ovate flowers greenish white buds obovoid whole inflorescence more or less tawny pubescent *Calyx* tube very short, lobes ovate, obtuse, ciliate, sometimes unequal in size *Corolla* tube cylindric, slightly enlarged below, much dilated at the top, hairy on both sides, 25 to 35 in long, annulate within at the mouth, lobes ovate, obtuse, 15 in long, cordate at base, rounded at top *Disk* none *Anthers* lanceolate, acute, rounded below, pollen grains spherical, with small prominences *Ovary* densely pale-villous, style slender, stigma cylindric, bifid at apex *Fruit* of 2 folioles, 1 to 2 feet long and 10 to 15 in broad, pendulous, terete *Seeds* oblong, peltate, on a narrow placenta, flattened, 3 in long, 0.75 in broad, scabrous-papillose on both surfaces, reddish-brown, furnished at each end with tufts of slender tawny hairs up to 5 in long, albumen very thin, cotyledons oblong, about 1 in long, radicle slender, as long as cotyledons A DC Prodr VIII 408, Wall Cat 1644, Wight Ic t 422, Hook f Fl

6 *ALSTONIA ANGUSTIFOLIA* Wall Cat 1650 (1829) A tall tree, branchlets dark brown, somewhat quadrangular and channelled, stout *Leaves* nearly coriaceous, ternately whorled or opposite obovate or oblanceolate, obtusely abruptly acuminate at apex, long cuneately attenuate at base for about half their length, glabrous and green above, pale and glabrous or when young pubescent beneath, margins slightly

recurved, 4 to 6 in. long, 1 to 1.75 in. broad; midrib slender, channelled above; main nerves 12 to 16 pairs, at an angle of from 60° to 70° to the midrib, curving upwards to meet in a very faint intramarginal looped nerve, secondary nerves few; reticulations many, transverse; petiole .5 to 1 in. long. *Inflorescence* pseudo-terminal, sessile, grey-pubescent, peduncles 2 to 6, variable in length, usually from 1 to 2 in. long, ending in branched 2- to 3-chotomous corymbose spreading cymes, bracts none; bracteoles minute, triangular; pedicels slender, short but variable; flowers small, grey-pubescent, white (?), buds shortly clavate. *Calyx*-tube urceolate, glabrous within, .05 to .1 in. long, lobes ovate, reflexed, pubescent on both surfaces, .005 in. long. *Corolla*-tube cylindric, slightly dilated a little above the middle, pubescent on both surfaces, .125 in. long; lobes spreading, .075 in. long, rounded, nearly glabrous within when open, except for the tuft of hairs above the base. *Stamens* inserted a little above the middle of the tube, anthers ovate, apiculate, .035 in. long, filaments very short. *Disk* annulate, wavy at margin, very short. *Ovary* glabrous, ovoid-acute, style slender; stigma conical, penicillate below, bifid above. *Fruit* of two erect (?) follicles, reaching 18 in. in length and .15 in. in diameter, stiff, ribbed when dry. *Seeds* peltate, on narrow, ribbon-like, tough placentas, oblong, rounded below, long acuminate above, .4 in. long, .1 in. broad, bordered by tawny hairs which are short and reflexed at the sides and plumose at the ends, reaching .3 in. in length, testa thin, minutely papillose on the inner, villous on the outer surface, albumen flattened; cotyledons oblong, as long as the straight radicle. A. DC. Prodr. VIII. 409, Hook. f. Fl. Br. Ind. III. 643.

PENANG: *Griffith*; *Mangay* (K.D.), 1066, 1067, 1070. MALACCA: *Derry* 1080. JOHORE: *Ridley* 10942. SINGAPORE: *Wallich* 1650; *Kurz*; *T. Anderson* 140, *Ridley* 2716, 5571.

VAR. *elliptica*, King & Gamble. *Leaves* opposite or in whorls of three, elliptic, acute at apex and at base, glabrous except on the lower surface when quite young, 3 to 4 in. long, 1.25 to 1.75 in. broad, main nerves regular, raised beneath, petiole .75 to 1 in. long with a callus on the inner surface near the base, branchlets rough, dark brown.

PENANG: *Curtis*. Scarcely a variety, but the shape of the leaves is very distinct.

VAR. *latifolia*, King & Gamble. *Leaves* larger, obovate, 5 to 7 in. long, 2.5 to 3 in. broad, glabrous. *Flowers* rather larger; calyx-lobes shallower. A small tree with spreading branches, reaching 15 to 20 feet in height and 3 to 4 in. in diameter.

PENANG: *Mangay* (K.D.) 1070/1, 1070/2; *Curtis* 2491; *Fox* 80; *Ridley* 9306; *Stoliczka*; *King's Collector* 1341.

This species comes very near to *A. villosa*, Blume, of the Malay Archipelago, but we hesitate to join them, as there are important characters of difference, e.g., the very villous inside of the corolla tube in *A. villosa*

SPECIES IMPERFECTLY KNOWN

7 *ALSTONIA GRANDIFOLIA*, Miq Fl Ind Bat Suppl 555 (1862) A lofty tree, the branchlets very stout, sharply angled, transversely rugose. *Leaves* chartaceous, in whorls of 4 to 6, those of each whorl usually more or less unequal, elliptic-oblong or obovate, acute at apex, gradually narrowed from the middle downwards at the base, brown and glabrous and somewhat shining on the upper, glaucous on the lower, surface, margin undulate, 7 to 13.5 in long, 2.5 to 5 in broad, midrib very stout, flat on the upper, much raised on the lower, surface, main nerves 20 to 30 pairs, very regular, parallel, at an angle of from 60° to 70° with the midrib, straight to the margin to meet a nerve which forms the margin itself, all raised beneath, secondary nerves very few, chiefly near the apex. *reticulations* transverse, forming an elegant network on the lower surface. *petiole* 1 to 1.25 in long, stout. *Follicles* elongate, woody (Miq) Rest unknown

SINGAPORE *T. Anderson* 119 —DISTRIB Sumatra (*Teysmann*)

A. ezima, Miq, l.c., seems to differ only in the main nerves being more nearly at right angles (80°) with the midrib. It also comes from Sumatra

8 *ALSTONIA LANGKORENSIS*, King & Gamble, n. sp. A large tree (?), branches very stout, smooth, somewhat fleshy, grey. *Leaves* membranous, obovate or oblanceolate, abruptly and shortly and bluntly acuminate at apex, cuneate at the base for the lower two thirds, glabrous above, minutely pubescent beneath, especially on the nerves, margins recurved, 12 to 14 in long, 4 in broad, midrib very stout, impressed above, strongly raised beneath, main nerves about 18 pairs, stout, parallel, raised beneath, usually about 7.5 in apart along the midrib, starting at an angle of about 75° and gently curving upwards to the margin, secondary nerves few, *reticulations* bold, fairly prominent on the lower surface, *petiole* stout, about 7.5 in long. *Follicles* very slender, 10 to 12 in long, glabrous, striate, the margins reflexed after the fall of the seeds. Rest unknown

DINDINGS Pangkor Island, *Scortechini* 1024

12 DYFRA, Hook f

Glabrous trees with verticillate branches and thick angular channelled branchlets, laticiferous. *Leaves* in whorls, large, coriaceous, oblong or obovate, with prominent main nerves and long petioles,

stipular ridges between the petioles. *Inflorescence* of pseudo-terminal and axillary umbellately branched cymes, flowers small. *Calyx* 5-lobed, very small, eglandular, tube very short, adnate to the base of the ovary. *Corolla* hypocrateriform, 5-lobed; tube short, hardly dilated opposite the stamens; the throat naked, lobes 5, folded in bud and overlapping to the left. *Stamens* 5, in the middle of the tube, included, filaments very short, anthers oblong-ovoid, cells small; the connective produced in a thickened terminal fleshy appendage. *Disk* annular, obscure. *Ovary* 2-celled, short, entire, conic, obtuse at the top, which is pubescent, style none or minute; stigma obpyriform, minutely bifid at apex; ovules many in each cell on intruded placentæ. *Fruit* of two cylindric follicular mericarps of very large size, connate at the base, at first divergent, afterwards curling back and opening flat. *Seeds* elliptic, large, flat, peltate, surrounded by a broad membranous striate wing, longer at the ends than in the middle, testa very thin, glandular-papillose, albumen flat, rather scanty, cotyledons elliptic, very thin, radicle small, superior.—**DISTRIB.** Three species, of the Malay Peninsula and Archipelago.

Leaves usually under 6 in long, main nerves starting nearly at right angles to midrib; corolla-tube nearly as long as lobes, cymes with rather short peduncles 1. *D. costulata*.
 Leaves under 8 in long, main nerves starting at about 60° with the midrib. corolla-tube very much shorter than lobes; cymes with long peduncles 2. *D. laxiflora*

1. **DYERA COSTULATA**, Hook. f. in Journ. Linn. Soc. XIX. 293 (1882). A very large tree, reaching 100 to 150 feet in height and 3 to 4 feet in diam., branches verticillate with reddish thick bark, branchlets thick, angular and channelled, at any rate when dry. *Leaves* coriaceous, in whorls of 6 to 8; broadly elliptic or elliptic-oblong, rounded and sometimes very shortly and abruptly acute at apex, rounded at base or sometimes attenuate, upper surface bright green shining, lower pale bluish-green glaucous, especially when young; margins somewhat undulate, slightly recurved, 3 to 7 in long, 1·5 to 3 in. broad; midrib stout, very prominent beneath, impressed and keeled above; main nerves 16 to 20 pairs, at first nearly at right angles to the midrib, then curving upwards to join in a looped nerve at the margin, raised on both surfaces when dry, as are the prominent reticulations; petiole 1 to 1·25 in. long, ribbed, furnished with a rounded cone-like gland on the upper surface at the base, the glands of the uppermost whorl of leaves conniving in a cone over the bud. *Cymes* pseudo-terminal, or from the penultimate leaf-whorl; peduncles of varying length, 1 to 3 in. long, rather slender, branches umbellately whorled; secondary peduncles ·25 to ·5 in. long,

pedicels slender, short, bracteoles triangular, minute, flowers yellowish, buds linear oblong *Calyx*-tube adnate to the base of the ovary, lobes ovate rounded, glabrous, 6 in long *Corolla*-tube short, 1 in long, glabrous, except a ring of scanty reflexed hairs within near the base below the insertion of the filament, narrow raised folds between the stamens, lobes oblong, cordate at base, folded in bud, rounded at top, 15 in long *Stamens* inserted a little above the base of the corolla tube, pollen globose with small pits *Follicles* very large, on greatly thickened peduncles (5 in in diam), 9 to 15 in long, 1 to 15 in broad, after splitting open nearly 3 in broad, connate at the base, at first straight, but after dehiscence curved backwards so as nearly to touch at the points *Seeds* peltate, flat, elliptic, surrounded by a membranous striate wing, broader at the ends than in the middle, 25 in long, 1 in broad, the seed part 125 by 75 in, testa thin, granular papillose, albumen thin, cotyledons ovate, 7 by 4 in, very thin and difficult to separate, radicle short Fl Br Ind III 644 *Alstonia costulata*, Miq Fl Ind Bat Suppl 556

14 ERVATAMIA, Stapf

Shrubs or small trees, usually glabrous, branchlets usually dichotomous. *Leaves* opposite, herbaceous to coriaceous, usually membranous when dry, axillary stipules usually distinct, axillary glands small, often numerous. *Flowers* small to middle-sized, sometimes showy, in terminal, pseudo-terminal or axillary cymes, usually corymbose and often in pairs, branches dichotomous. *Calyx* small, lobes 5, free or connate at the base, glandular or not within. *Corolla* salver-shaped, tube cylindric, slightly dilated at the mouth or rarely lower, opposite the stamens, lobes overlapping to the left, rarely to the right. *Stamens* erect, included, filaments short, usually decurrent in ridges inside the tube, anthers linear, bilobed at base, acute or mucronate, dehiscing throughout their length. *Disk* 0. *Ovary* of 2 carpels, distinct or slightly cohering, style long, filiform, stigma clavate, with a slender bifid apiculus, ovules numerous, pluriseriate. *Fruit* of two follicular mericarps, obliquely ovoid to lanceolate or cylindric-lanceolate, often curved and beaked, sometimes 1- to 3-keeled; dehiscing along the ventral suture and at length often opening out flat. *Seeds* few to many, enveloped in a bright-coloured aril, more or less irregularly ellipsoid, grooved or hollowed ventrally; testa crustaceous, finely sulcate, the furrows protruded into the copious often waxy albumen; cotyledons flat, cordate, radicle cylindric — *DISTRIB*. Species about

30 to 35 in tropical Asia, Australia, and Polynesia, 1 species in Madagascar

Leaves with main nerves curving upwards; stamens near the top of the corolla tube —

Leaves chartaceous or coriaceous; branchlets stout, calyx lobes thick, broad, short —

Cymes glabrous or very slightly pubescent 1. *E. corymbosa*.

Cymes hirsute 2. *E. hirta*.

Leaves membranous; branchlets slender. —

Calyx lobes very small, under 1 in long —

Calyx lobes ovate, acute, foliicles oblong, keeled, beak slightly recurved; seeds 3 to 6 3. *E. coronaria*.

Calyx lobes ovate, rounded, foliicles twisted, beak much recurved, seeds 1 to 2 4. *E. peduncularis*.

Calyx lobes lanceolate, over 1 in long —

Calyx lobes over 3 in long, foliicles 1.5 to 3 in long, narrowly cylindric, not keeled 5. *E. cylindrocarpa*.

Calyx lobes 1.5 to 2 in long, foliicles .75 to 1.25 in. long, oblong falcate, 3 keeled 6. *E. malaccensis*.

Calyx lobes 1 to 1.5 in long, foliicles 1 to 1.5 in long, ovoid, long acuminate, not keeled 7. *E. Cusson*.

Leaves with main nerves at right angles to midrib and straight or very slightly curving, branchlets stout, stamens near the middle of the corolla tube 8. *E. polyneura*.

1 *ERVATAMIA CORYMBOSA*, King & Gamble. A shrub or small tree, reaching 30 to 40 feet in height and 8 to 10 in in diameter, branchlets stout, smooth, uppermost internodes somewhat flattened. Leaves chartaceous, elliptic-oblong or elliptic-lanceolate, obtusely acuminate at apex, cuneately narrowed at base, dark green above, pale beneath, margins sometimes slightly recurved, those of each pair often very unequal in size, 6 to 16 in long, 2 to 6 in broad, midrib stout, raised beneath, main nerves 12 to 16 pairs, leaving the midrib at an angle of 65° to 75° and at first nearly straight, then curving upwards to and along the margin, usually impressed above and strongly raised beneath, reticulations few, inconspicuous, petiole stout, 5 to 8 in long, base enlarged half-stem-clasping, axillary glands prominent, meeting at the nodes. Cymes many-flowered, much-branched, usually in pairs in the axils of the second uppermost pair of leaves, dichotomous, peduncles variable, 5 to 25 in long, stout, secondary peduncles similar, 1 to 1.5 in long, pedicels slender, 5 to 1 in long, somewhat clavate, bracts obsolete, flowers spreading, corymbose, waxy cream-colour, buds clavate, the top large, globose, often minutely grey-pubescent. Calyx-tube campanulate, 5 in long, thick, lobes ovate, rounded, ciliate, 1 in long, glands, if present, two at the base of the lobes inside. Corolla-

tube cylindric, slender, slightly dilated at top, opposite the stamens, .75 in. long, lobes oblong-falcate, .5 in. long or rather more; pubescent without, crispate on one edge and auricled on that edge at the base. *Anthers* linear-oblong, blunt or mucronate, .125 in. long, the basal lobes adherent to the connective; filaments short, decurrent in lines inside the corolla-tube. *Ovary* of 2 ovoid, glabrous carpels; style filiform; stigma clavate, tip entire or bifid. *Follicles* thick, globular-ovoid, recurved, very shortly beaked, obtusely keeled, rough outside, 1.5 in. long, 1 in. in diameter, ventral suture impressed. *Seeds* very many, oblong-obtuse, deeply hollowed ventrally, .5 in. long, .2 to .25 in. broad and deep, testa crustaceous, glandular-papillose, with deep ridges within, which extend into the copious albumen, cotyledons cordate, 15 in. long; radicle cylindric, .25 in. long. *Tabernaemontana corymbosa*, Roxb Fl. Ind II. 25, A DC. Prodr. VIII. 376, Wall Cat. 1772 and Bot Reg. under t. 1273, Hook. f. Fl. Br Ind. III. 646, Miq. Fl. Ind. Bat II. 420.

VAR. *Kelsall*, *King & Gamble* Leaves thinner than in the type, oblong-lanceolate, main nerves fewer (10 pairs) and at a more oblique angle (50°). *Cymes* nearly sessile, much fewer-flowered.

SELANGOR at Bukit Etam, *Kelsall* 1992.

VAR. *pubescens*, *King & Gamble*. Inflorescence covered with slight greyish-yellow pubescence.

PERAK *King's Collector* 4830 MALACCA: *Goodenough* 1638.

(This is scarcely a variety. In many of the specimens of the species the corolla in bud is thickly tomentose outside, and thus we have a gradation from the glabrous to the pubescent form)

2 *ERVATAMIA HIRTA*, *King & Gamble* A large shrub (?), branchlets stout, somewhat flattened, dark brown, lenticellate. Leaves coriaceous, elliptic-ovate or -oblong, long acuminate at apex, acute at base, dull on both surfaces, dark olivaceous-brown on the upper, much paler on the lower, margins recurved, 4 to 12 in. long, 2.5 to 5 in. broad, midrib rather slender, flattened on the upper, raised on the lower surface, main nerves 10 to 15 pairs, starting at about 70° with the midrib and curving upwards to anastomose near the margin, impressed above, raised beneath; secondary nerves apparently none, reticulations obscure; petiole .25 to 5 in. long, stout. *Cymes* almost hirsute, many-flowered, much branched, usually in pairs in the axils of

the second uppermost pair of leaves, 2- to 3-chotomous; peduncles flattened, curved, 1.25 to 1.75 in. long; secondary peduncles similar but rather shorter; pedicels slender, about .5 in. long; bracts and bracteoles obsolete, buds clavate, reaching .75 in. long, nearly glabrous, the top globose. *Calyx* sometimes 7-lobed, cup-shaped, eglandular, hispid without, glabrous within; tube .15 in. long; lobes ovate-acute, as long as tube. *Corolla*-tube cylindric, .5 in. long, slightly inflated opposite the stamens near the top, glabrous, lobes oblong-falcate, crispate on one edge and auricled on that edge near the base, much twisted to the right, .25 in. long (in bud) *Anthers* lanceolate, with a hooked mucro at tip, .075 to .1 in. long, the basal lobes adherent to the connective; filaments short. *Ovary* of 2 ovoid glabrous carpels, style filiform; stigma clavate, with a slender, usually bifid tip. *Follicles* ovoid, falcate, recurved, obscurely keeled and obtusely beaked, 1 to 1.5 in. long by .5 to .75 in. broad, smooth outside, ventral suture impressed before dehiscence. *Seeds* many, crescent-shaped, deeply hollowed ventrally, .5 in. long, .25 in. broad and deep, testa crustaceous, ribbed, and with deep ridges which extend into the albumen, cotyledons ovate, .05 in. long, radicle slender, .1 in. long. *Tabernaemontana hirta*, Hook. f. Fl. Br. Ind. III. 646.

MALACCA: Griffith, Mungray (K D.) 1059, Derry 77.

This species comes near to *E. corymbosa* var. *pubescens*, but the hirsute inflorescence at once distinguishes it

3. *ERVATAMIA CORONARIA*, Stapf in Dyer Fl. Trop. Afr. iv. 127 (1902). A shrub, branches many, dichotomous, corky, pale brown. *Leaves* membranous, lanceolate or oblanceolate or oblong-lanceolate, long-acuminate at apex, acuminate at base, the pairs often unequal-sized, deep green on the upper, paler on the lower surface; 3 to 6 in. long, .75 to 1.5 in. broad; midrib slender, main nerves 7 to 9 pairs, distant, curving upwards to and along the margin, secondary nerves and reticulations indistinct; petiole .3 to .4 in. long, slender, the base half-stem-clasping, axillary glands present. *Cymes* few- (2- to 10-) flowered, peduncles 1.5 in. long, pedicels slender, about .25 in. long, bracteoles minute, usually 2 to each pedicel, one below the calyx, one lower down, flowers white, fragrant, buds clavate. *Calyx*-tube short, lobes ovate, acute or rounded, ciliate, biglandular within. *Corolla*-tube slender, 7 to .9 in. long, scarcely dilated slightly below the middle opposite the stamens, pubescent within below the stamens, mouth with flattened glands, lobes as long as the tube, ovate oblong, obtuse, one edge slightly crispate. *Anthers* lanceolate, .05 in. long, minutely hooked at tip, filaments hairy. *Ovary* of 2 glabrous carpels, style short, stigma cylindric, bifid

at tip. *Follicles* spreading at about 90° to 100° apart, oblong, 1 to 2 in. long, with 1 to 3 keels and a recurved acuminate tip, opening out flat when fully ripe. *Seeds* 3 to 6, irregularly oblong, angular, .25 in. long, enclosed in a red pulpy aril; deeply grooved ventrally with a branching groove; testa crustaceous, sulcate, glandular, the furrows protruded into the albumen, which is copious, cotyledons ovate-cordate, .1 in. long, radicle cylindric, as long as the cotyledons. Cooke Fl. Bomb II, 134. *Tabernaemontana coronaria*, Willd. Enum. Hort. Berol. 275; Mit. Hort. Kew ed 2, II. 72; A. DC Prodr. VIII. 373, Roxb. Fl. Ind. II. 23; Wall. Cat. 1568, Wight Ic. 477, Lodd. KASOOM. *Curtis* 3243 PENANG: back of West Hill at 2000 feet, *Curtis* 3460. PERAK. *King's Collector* 5153 MALACCA. at Bukit Buring, *Goodenough* 1423 SINGAPORE *Wallich* 1568.—DISTRIB. Apparently wild in N. India. The shrub is commonly cultivated in gardens throughout India and Malaya

4 *ERVATAMIA PEDUNCULARIS*, King & Gamble A small shrub (small tree, *King's Collector*), branchlets slender, dichotomous, curved. *Leaves* membranous, elliptic or elliptic-oblong or oblong-lanceolate, obtusely long caudate-acuminate at apex, acute at base, glabrous, pale beneath, 4 to 9 in. long, 1.5 to 3 in. broad, midrib slender, main nerves 12 to 20 pairs, parallel, starting at an angle of about 60° with the midrib and curving upwards to join in an intramarginal looped nerve, secondary nerves none, reticulations transverse, faint, petiole .25 to .4 in. long, slender at first, afterwards thickening, the base enlarged, half-stem-clasping with a stipular scale within. *Cymes* glabrous, usually in pairs, axillary, on 2 to 5 in. long slender peduncles, branches widely divaricate, secondary peduncles .75 to 1 in. long, pedicels capillary, .2 to .3 in. long, bracteoles minute, flowers white; buds slender, clavate. *Calyx*-tube short; lobes ovate, rounded, glandular within on the middle, .025 in. long. *Corolla*-tube very slender, straight or slightly curved, .4 to .5 in. long, inflated at the top opposite the stamens; mouth naked, slightly pubescent within below the stamens. *Anthers* lanceolate, slightly mucronate. *Ovary* of 2 glabrous carpels, carpels elongate, style very slender; stigma clavate, bifid at apex just beneath the anthers. *Follicles* stipitate, twisted, oblong or rhomboid,

practically sessile, the base half-stem-clasping and forming a stipular ridge at the node, with a ligule-like gland within. *Cymes* axillary, usually to the second pair of leaves from the top of the branchlet, generally in pairs, about 6- to 10 flowered, peduncles slender, 5 to 1 in long, pedicels very slender, about 5 to 6 in long, buds slender, clavate, somewhat acute at tip. *Calyx* tube almost none, lobes linear-lanceolate, unequal, 1 to 1.5 in long, with a large round gland at the base within, usually supporting 3 smaller linear ones. *Corolla* tube slender, 6 to 7 in long, slightly inflated at top opposite the stamens, glabrous within and without, lobes narrow, oblong, undulately crispate, 5 in long. *Anthems* linear, acute or slightly mucronate, .08 in long, filaments short, decurrent in lines within the tube. *Ovary* of two rounded carpels, style very slender, stigma clavate, bifid at tip. *Follicles* horizontally divaricate, ovoid, long-acuminately beaked, not keeled or recurved, bright orange in colour, 1 to 1.5 in long about 4 in broad. *Seeds* about 6 to 8 obtusely angular, .25 to .35 in in diameter, deeply hollowed ventrally, enveloped in a crimson aril, testa brown, glandular, furrowed, the furrows deeply indented in the copious waxy albumen, cotyledons cordate, 1 in in diameter, radicle cylindric, .15 in long.

PENANG at the Waterfall Curtis 1775. PERAK at Kuala Wok, Wray 852. *Scortechini* 63.

We have been somewhat in doubt whether Wray's and Scortechini's fruiting specimens really belong to the same plant as Curtis's excellent flowering ones but after long consideration believe we are right in considering that they do.

8 *ERVATAMIA POLYINFURA* King & Gamble. A slender glabrous shrub, reaching 20 feet in height, branchlets thick, very milky, dark brown, very prominently marked by the broad scars of fallen leaves. *Leaves* very coriaceous, elliptic or elliptic ovate or elliptic oblong, obtuse or bluntly acute at apex somewhat rounded at base, yellowish brown when dry, upper surface green when fresh, wrinkled when dry, lower pale dotted, margins recurved, slightly so in flower, strongly in fruit. 6 to 12 in long, 2 to 3 in broad, one of each pair usually smaller than the other, midrib very stout, prominently raised on the lower, depressed and keeled on the upper, surface, main nerves 20 to 35 pairs, parallel, starting at right angles to the midrib and only very slightly curving to meet in a looped intramarginal nerve, all very indistinct, as are the reticulations, petiole stout, 4 to 8 in long, bordered by the decurrent margins of the blade, bases enlarged, furnished with axillary glands, and those of each pair joined by a stipular ridge. *Cymes* axillary, usually in pairs in the axils of the uppermost pair of leaves but one, dichotomous, 12 to 16 flowered, corymbose,

peduncles very stout, 15 to 25 in long, pedicels thick, curved, about 3 to 6 in long, in fruit the non-fruitle pedicels caducous, leaving broad prominent oblong scars, bracts small, entire, rounded, flowers scented, buds clavate, with large obtuse heads, 3 in in diameter. *Calyx*-tube short, thick, lobes ovate, obtuse, 1 to 15 in long, with many small subulate glands in a row at the base within. *Corolla*-tube cylindric, 5 in long, slightly dilated at two fifths of the way up, funnel-shaped at the mouth, glabrous on both sides, lobes overlapping to the left, folded in bud, oblong, obtuse, up to 1 in long. *Stamens* inserted at the dilatation, anthers linear, mucronate, 15 in long pollen-grains globose with small protruded round knobs. *Ovary* of two separate conical carpels, style short, stigma clavate, the apiculus bifid. *Follicles* orange, 1 to 15 in long, 5 in broad, falcate, dorsal edge straight, ventral edge much rounded, keels 3, beak long, usually hooked. *Seeds* about 4 to 6, ovoid or rhomboid, enveloped in a scarlet aril, deeply sulcate ventrally, testa crustaceous, glandular, ridged within, albumen copious. *Tubernæmontana polyneura*, Scortechini MS in Herb. Calc.

PERAK at Bujoy Malacca, Scortechini 1867 MALACCA Miller 9

A very distinct plant quite different in texture and appearance to any other herein described, but coming near to *Tubernæmontana dichotoma*, Roxb., of S India and Ceylon. The description is largely after Scortechini.

Tribe III — ECHINIDÆ

Subtribe 1 — PARSONIINA

15 PARSONIINA, Bl

Twining shrubs. *Leaves* opposite. *Flowers* small, white, in terminal or axillary dichotomous cymes or thyrses. *Calyx* 5 parted eglandular or 5 scaled or minutely many glandular at the base within. *Corolla* tubular, tube short, cylindric or subglobose, naked at the throat, lobes 5, slightly twisted, overlapping to the right. *Stamens* inserted on the tube, filaments often twisted, anthers half-exsert, oblong lanceolate or linear, acute, conniving round the stigma and adhering to it, the cells produced at the base into empty rigid appendages. *Disk* of 5 lobes or scales. *Ovary* 2 celled ovules many in each cell, style filiform, dilated at the top, truncate, stigma columnar or elongate cone. *Fruit* cylindric, of two follicular mericarps, long cohering but at length separating from the two placentas. *Seeds* linear or oblong, attenuate and comose at the apex, albumen scanty, cotyledons oblong linear, flat, radicle superior. — *DISTRIB.* About 12 species, of Tropical Asia, Australia and New Zealand.

Filaments of the stamens twisted spirally around the style, corolla lobes 2 in long —

- Leaves more or less oblong, with 6 to 8 pairs of main nerves, corolla glabrous without, fruit 4 to 7 in long .. 1 *P spiralis*
 Leaves more or less ovate, with 10 to 12 pairs of main nerves, corolla pubescent without, fruit 2.5 to 3 in long .. 2 *P Kunsteni*

Filaments of the stamens not twisted spirally around the style

- Corolla tube cylindric urceolate, lobes spreading, .075 in long, disk deeply lobed, calyx lobes with no or very small scales at base within, main nerves of leaves 6 to 8 pairs 3 *P stenocarpa*
 Corolla tube campanulate, lobes erect, 3 in long, disk entire or undulate, calyx lobes with a broad thin scale at base within, main nerves of leaves 8 to 10 pairs . 4 *P penangiana*

1 *PARSONSIA SPIRALIS* Wall Cat 1631 (1828) An evergreen twining glabrous shrub, branchlets terete *Leaves* subcoriaceous when green, membranous when dry, ovate oblong or oblong lanceolate, shortly somewhat abruptly and often obliquely acuminate at apex, acute or rounded at base, pale when dry, especially on the lower surface 3 to 7 in long, 1.5 to 3.5 in broad, midrib rather broad, slightly raised beneath main nerves 6 to 8 pairs, the lowest pair close to the base, starting at an angle of about 60° and arching upwards to anastomose near the margin, secondary nerves few, also the reticulations, petiole slender, 5 to 1 in long, often twisted at base, stipular glands small, subulate, the bases of each pair connected by a stipular ridge *Cymes* axillary, many flowered corymbose, 1.5 to 3 in in diameter, peduncles variable in length 1 to 4 in long, secondary peduncles usually 3, 5 to 1 in long, branches usually 3 chotomous ultimate pedicels slender, about .25 in long, bracts and bracteoles small, ovate, flowers greenish or yellowish with a red centre, buds clavate, with short tube and obtusely conical top *Calyx* tube short, lobes ovate, acute, ciliate, sparsely pubescent without, 1 in long, furnished with an ovate acute sometimes bifid scale at the base of each inside *Corolla* tube cylindric, .125 in long glabrous on both surfaces, villous at the throat, lobes 2 in long oblong, acute, erect or spreading *Disk* lobes triangular *Stamens* inserted near the base of the tube, the filaments spirally twisted together, sparsely pubescent, anther-tails incurved at the base, anther tips acuminate hooked *Ovary* ovoid, glabrous, style slender stigma columnar with a bifid apex and short basal auricular ring *Fruit* linear lanceolate, acuminate, 4 to 7 in long, .75 in broad, somewhat compressed, smooth, striate, glabrous *Seeds* 5 to 7.5 in long, slender, enlarged below, narrowed and cut away on one side above, and furnished with pale golden-brown coma, .75 to 1.5 in long, cotyledons narrow, oblong about .25 in long, radicle

2 PARSONSIA KUNSTLERI, King & Gamble, n sp A slender climbing shrub, branchlets terete, pale to dark brown Leaves membranous, ovate or ovate-lanceolate, acuminate at apex, rounded or acute at base, yellowish-green when fresh with reddish nerves beneath, dark brown and dull when dry, lower surface paler, sometimes slightly puberulous, especially on the nerves beneath, 3 to 6 in long, 1.5 to 3 in broad, midrib slender, raised above and sinuate when dry, raised beneath main nerves 10 to 12 pairs, the lowest usually close to the margin, starting at an angle of 60° and curving upwards to and along the margin, raised on both surfaces when dry, secondary nerves few chiefly between the upper main nerves reticulations obliquely transverse, prominent on the lower surface, petiole slender, twisted, variable in length from .25 to 1.25 in long, the base swollen, those of each pair joined by a nodal ridge with small acute stipular glands Cymes axillary, corymbose, many-flowered, 2-chotomous, reaching 7 in in length and about 3 in in diam peduncles slender, curved, 3 to 5 in long, secondary peduncles usually 3, 1.5 to 2 in long, cymes about 10 to 12 flowered, pedicels slender, .15 to .25 in long, bracteoles ovate-acute, puberulous, .05 to .1 in long, buds clavate, with short tube and conical head, flowers dark yellow without, reddish within Calyx-tube short, lobes ovate, acute, ciliate, pubescent without, .1 in long, furnished each with an ovate acute, sometimes emarginate scale at its base within Corolla tube cylindric below, .15 in long, pubescent without, villous within at the mouth and between the filaments, lobes oblong, acute, .2 in long, pubescent without, glabrous within Disk-lobes triangular, blunt, .025 in long, glabrous Stamens inserted near the base of the tube, the filaments twisted, sparsely villous, anther-tails incurved at the base, anther tips blunt with a small membranous tip Ovary ovoid, glabrous, style slender, stigma columnar with a conical sometimes bifid tip and basal spreading annular ring Fruit linear lanceolate,

acuminate, 2.5 to 3 in long and 2 to 3 in broad, glabrous, terete, slightly compressed, the mericarps at length separating. *Seeds* slender, 4 to 5 in long, narrowly linear, constricted above and acuminate below, tipped with a 1 in long coma of pale silky hairs, cotyledons narrow, radicle slender.

PERAK in low-lying localities, *Kunstler* (*King's Collector*) 1824, 5650

3 *PARSONSIA STENOCARPA*, King & Gamble, n. sp. A slender twining shrub, branchlets terete, older somewhat channelled, innovations minutely rusty-pubescent. *Leaves* membranous, ovate-lanceolate shortly acute at apex, cuneate or sometimes slightly rounded at base, both surfaces sparsely but minutely pubescent when young, glabrous when old, margins recurved. 2 to 4 in long, 1 to 2 in broad, midrib slender, main nerves 6 to 8 pairs, slender, at about 50° with the midrib, the lowest pair less curving upwards to anastomose near the margin, faint but apparent on the lower surface, as are the reticulations. *Petiole* variable in length, .25 to 1 in long, slender, often twisted near the base. *Stipular glands* very small. *Cymes* axillary, few (8 to 10) flowered umbellate, pubescent. *Poduncles* about 1 in long, *pedicels* slender. 2 in long in flower. 3 in long and rather thick in fruit. *Bracteoles* minute subulate. *Flowers* light yellow. *Buds* short, oblong conical. *Calyx* tube very short. *lobes* ovate acuminate, .125 in long, scales very small or none. *Corolla* tube cylindric urceolate, .15 in long, densely pubescent within in the upper part. *lobes* ovate acuminate, spreading, .075 in long. *Disk* lobes oblong emarginate .025 in long. *Stamens* inserted near the base of the corolla tube. *filaments* slender, radiating to the centre but not spirally twisted. *anthers* hastate acuminate, the tails spreading outwards. *Ovary* ovoid conical. *style* slender, *stigma* columnar with a bifid apiculus at tip and a ring at base. *Fruit* linear, terete, 5 to 7 in long, 2 in broad, rather quickly separating into two terete mericarps. *placenta* flat, very thin. *Seeds* 5 in long, slender, slightly enlarged below, narrowed above and furnished with a coma of golden silky hairs about 1 in long. *cotyledons* oblong, .15 in long. *radicle* slender. 1 in long.

PERAK *Scortechini* 1292. *Wray* 3263. *King's Collector* 6062—in dense jungle, at 300 to 500 feet, clinging to trees.

P. curtisepala K. Schum. of New Guinea, is very near this indeed, and scarcely seems to differ, except in the greater hairiness in the corolla lobes being quite valvate (*Lyonsia*?), and in the calyx lobes being much recurved.

4 *PARSONSIA PENANGIANA*, King & Gamble, n. sp. A climbing shrub. *branchlets* slender, dark brown, terete, internodes long. *Leaves* membranous. ovate, acuminate at apex, truncate or rounded at base,

both surfaces olivaceous brown, the lower the paler, margin slightly recurved, 5 to 7.5 in long, 3 to 4 in broad, midrib slender, prominent beneath, main nerves 8 to 10 pairs, the lowest pair close to the margin, those succeeding gradually further apart to above the middle, at an angle of 60° to 70° with the midrib, curving upwards to anastomose near the margin, secondary nerves none reticulations transverse, distant, oblique, petiole 1 to 1.25 in long, slender, bordered above by the decurrent margins of the blade *Cymus* in axillary, corymbose, puberulous panicles peduncle slender, 1.5 in long, flattened branches few, also flattened but shorter, bracteoles ovate acute pedicels 1 to 2 in. long, slender, buds ovoid acute flowers yellowish white *Calyx* tube short, lobes triangular ovate, 0.75 in long, bluntly acuminate, ciliate, each with a broad short very thin scale nearly equalling the base within *Corolla* tube campanulate, not at all constricted, 3 in long, lobes as long as tube, ovate acute, the tip entire or notched pubescent without, glabrous within, except the shaggy villous ring at the insertion of the filaments *Stamens* half exsert, inserted a little below the top of the tube filaments long shaggy villous curved inwards to meet and then upwards but scarcely spiral anthers long sagittate the spurs much incurved the tip membranous apiculate *Disk* cylindrical, entire or slightly undulately lobed .06 in high, glabrous fully enclosing the carpels *Carpels* rounded, glabrous, at first connate afterwards separating style slender, conical above stigma conical, with a spreading ring below and short often bifid tip *Fruit* unknown

PENANG at the Waterfall, *Curtis*

Curtis says this is a rare plant. It differs from the other species in the not constricted campanulate corolla tube, the very broad scale at the base of the calyx within and the entire cylindrical disk. When the fruit is known it may perhaps be found to require a new genus.

16 VALLARIS, Burin

Climbing or erect shrubs, or trees. *Leaves* opposite, minutely dotted. *Flowers* white, in axillary fascicles or in dichotomous pseudo axillary cymes. *Calyx* 5 partite, glandular or not within lobes narrow. *Corolla* hypocrateriform or subrotate, throat naked, tube short, lobes broad, contorted, overlapping to the right. *Stamens* inserted at the top of the tube of the corolla, partly exsert, filaments short, anthers sagittate, acuminate, conniving in a cone around and adherent to the stigma, the connective furnished with a large or small dorsal gland, cells with rigid basal spurs. *Disk* annular or cupular, with 5 lobes or scales. *Ovary* of 2 carpels, which are at first connate, ovules many in each carpel, style filiform, stigma thick, obscurely annular at base, often 2 lobed at the tip. *Fruit* oblong, acuminate, separating into 2

follicular mericarps *Seeds* biseriate, ovate, acuminate or beaked, the apex furnished with a coma, albumen scanty or copious, cotyledons thin or fleshy, large, radicle cylindric, superior — **DISTRIB** Tropical Asia, in India and Malaya, species 5 or 6

A climbing shrub, flowers in branching cymes, anthers with a large dorsal gland 1 *V Pergulana*.

18 WRIGHTIA, B.

Shrubs or small trees, with often slender branches. *Leaves* opposite, penniveined. *Flowers* red, white, or yellowish, in terminal or pseudo axillary corymb like cymes. *Calyx* short, 5-partite with glands or scales inside, lobes obtuse. *Corolla* hypocrateriform tube cylindric, usually short, usually slightly constricted at the throat. lobes 5, overlapping to the left, the throat or the lower part of the lobes usually (absent in *W. villosa*) furnished with a corona of 5 to 10 scales, which are often lobed or fimbriate, and either distinct or connate in a ring. *Stamens* inserted on the mouth of the tube. filaments short, dilated, anthers exserted (almost included in *W. dubia*), sagittate, conniving around and adhering to the stigma, cells usually near the summit, base produced in solid spurs. *Disk* 0. *Ovary* of 2 free or connate, many ovuled, carpels, style filiform. stigma ovoid, with usually a toothed basal ring. *Fruit* of 2 connate or distinct follicular mericarps. *Seeds* linear, attenuate at the apex, base with a deciduous coma, albumen scanty or 0, cotyledons broad, convolute, radicle short, superior. — *DISTRIB* Tropical Asia and Australia about 10 species.

Throat of corolla furnished with a corona of scales or fringes. —

Corona scales 10, 5 alternate with lobes of corolla, free,

2 lobed, 5 opposite those lobes, adnate below, free above,

- 3-lobed; leaves and inflorescence very tomentose; foli-
 connate 1. *W. javanica*.
 Corona-scales many, fimbriate from the base; leaves and
 inflorescence glabrous; foli-connate 2. *W. laevis*.
 Corona-scales 5, small, alternate with the lobes of the corolla,
 not lobed; stamens almost included; flowers large; leaves
 scarcely pubescent; foli-connate distinct, connate at the tip
 only 3. *W. dubia*
 Throat of corolla without a corona; flowers very small as are
 also the leaves; pedicels capillary; foli-connate distinct .. 4. *W. religiosa*

1 *WRIGHTIA JAVANICA*, A. DC Prodr. VIII. 405 (1844). A small tree, reaching a height of 40 feet and a diameter of 12 to 14 in (Curtis), branchlets slender, tomentose, as are the innovations and linear leaf-buds. *Leaves* membranous, elliptic or elliptic-lanceolate, abruptly and obtusely acuminate at apex, acute at base, upper surface minutely pubescent, glabrate when old, lower surface densely tomentose with ferruginous hairs, 3 to 5 in long, 1 to 2.5 in. broad, midrib rather broad, scarcely raised, main nerves 10 to 12 pairs, nearly straight, reddish and sufficiently conspicuous beneath; reticulations obscure, petiole .25 in. long, densely tomentose. *Cymes* terminal, tomentose, 1 to 1.5 in. long and 2 to 3 in. broad, many- (about 15- to 20-) flowered, peduncle none, or about 2.5 in. long, branches 3-photomous, about .4 in. long; pedicels slender, 2 to .3 in. long, bracteoles minute, subulate, buds clavate, the tube short, the head ovoid, inflated, often .5 to .6 in. long and .2 to .3 in. broad, flowers pale waxy-white with greyish centre. *Calyx*-lobes ovate, acute, glabrous within, .05 in long, glands 2 to each lobe, elliptic, the two nearly covering the inside of the lobe. *Corolla*-tube short, .15 in. long, slightly constricted at mouth, glabrous within, lobes oblong, rounded, 5 in long, at last spreading, puberulous on both surfaces. *Scales* 10, 5 alternate with corolla-lobes, free, inserted at base, .2 to .3 in. long, entire or bifid at apex, villous, 5 opposite the corolla-lobes, upper free part inserted nearly half-way up, very short and 2- to 3-lobed, villous, lower part adnate to the tube, glabrous or pubescent, twice as broad as the free ones. *Anthers* hard, stiff, pubescent, .25 in. long, apiculus penicillate, filaments very short, thick, sometimes furnished behind with 2 minute subulate glands. *Fruit* 10 to 12 in. long, rough, prominently beaked, foli-connate. *Seeds* very slender, about .6 in. long, excavate above; testa thin, striate; coma white, silky, 1.5 to 2 in. long, cotyledons broadly ovate, cordate, convolute, .25 in. long, with prominent nerves, radicle short, stout, .075 to .1 in long. Miq Fl. Ind. Bat. II 432, Koord. & Val. Bijdr. I. 112. *W. pubescens*, Blume Bijdr. 1041 not of Br.

3. *WRIGHTIA DUBIA*, Spr. Syst. Veg. I. 638 (1825). A shrub, 2 to 8 feet high, branches stout, lenticellate, branchlets also thick, terete, pale brown, innovations minutely pubescent. *Leaves* chartaceous, oblong- or obovate-lanceolate, acuminate at apex, attenuate at base, sometimes almost rounded; dull on both surfaces, on the upper scaberrulous, scarcely pubescent, dark, paler beneath; 3 to 6 in. long, 1 to 1.5, rarely to 2, in. broad; midrib slender, smooth, pale, prominently raised beneath, main nerves 8 to 12 pairs, the lowest very close to the margin,

the rest at irregular distances but rather oblique, arching upwards to and along the margin, secondary nerves few, reticulations distinct, all pale and easily seen on the lower surface, petiole extremely short, 0 to 2 in long. *Cymes* axillary and pseudo-terminal, few- (1- to 6) flowered, secund, peduncles very short, pedicels pubescent, 25 in long, bracteoles very small, pubescent, ovate-acute, sheathing the bases of the pedicels and at intervals along them, buds oblong-ovoid or fusiform, 1 to 1.5 in long, flowers scarlet, orange without. *Calyx*-tube short, lobes ovate acute, ciliolate, otherwise glabrous, 1.25 in long, 3 of them with two small, thin, rounded, membranous, lobed scales at base, the scales one third to one-half the length of the lobes. *Corolla* hypocrateriform, tube campanulate, 2.5 to 3.5 in long, lobes spreading, 4 to 5 in long, linear-oblong or acuminate, glabrous on both surfaces as in the tube, mouth with 5 small, ligulate, rounded, corona scales alternate with the lobes and sometimes joined by a slightly thickened ridge. *Stamens* only slightly exsert, filaments very broad, anthers sagittate, produced in a short membranous tip, the basal spurs straight or incurved, connective faintly pubescent on the back. *Ovary* glabrous, conical, style thick, 1 in long, stigma conical, with an annular ring. *Follicles* distinct, at first cohering at the apex, 8 to 12 in long, 2.5 in broad, acuminate, striate. *Seeds* linear, 7.5 in long, pointed at both ends, the lower furnished with a long, deciduous, white, silky coma, testa thin, striate, albumen very thin, cotyledons convolute, cordate, 2.5 in long, radicle cylindric, 1.5 in long. *Cameraria dubia*, Sims Bot Mag t 1646 (1814). *Strophanthus Jackianus*, Wall Cat 1643, A DC Prodr VIII 419, Miq Fl Ind Bat II 442, Hook f Fl Br Ind III 655, Hook Ic Pl t 1521, Pax in Engl Bot Jahrb XV 380, Frauchet in Nouv Arch Mus Paris, 3, Ser v 260, Gilg in Engl Monog 12.

TRANG in open jungle, on hilly ground at 200 to 300 ft, *Kunstler* 1400. JUNKSEYLO (Tongka) *Curtis*. PENANG *Jack*, *Wallich* 1643, *Curtis* 188.

We consider that this species is rightly placed in this genus rather than in *Strophanthus* on account of the structure of the seeds but the stamens are much less exsert than is usual in *Wrightia* and the corona lobes are not cleft. There is in the Kew Herbarium an excellent drawing of a flowering and fruiting branch by Mrs Hutton.

Curtis's No 2915, from Junkseylo (Tongka), marked *Strophanthus* sp, an erect shrub 4 to 5 ft high, with brick red flowers, has exactly the flowers of *Wrightia dubia* but the leaves are membranous, elliptic short acuminate at apex, cuneate at base, 7.5 in long and 2.75 in broad. It cannot, however, be separated as a species, and may be called var *membranifolia*, King & Gamble.

4 *WRIGHTIA RELIGIOSA*, Benth in Gen Pl II 713 (1876) A small shrub or tree, branches stiff, grey, branchlets also stiff, twiggy, innovations scabrous-papillose. Leaves membranous, small, ovate lanceolate, obtusely acuminate at apex, cuneate at base, those of young shoots linear oblong, glabrous on the upper surface except for the crisped pubescence on the midrib, glabrous on the lower, the midrib only slightly pubescent, 5 to 15 in long, 3 to 7 in broad, those of the shoots 2 to 25 in long and 5 in broad, midrib slender, crisped pubescent, main nerves about 4 pairs (shoot-leaves up to 10 pairs or more), curved upwards to join in a faint intramarginal nerve, secondary nerves and reticulations inconspicuous. Petiole slender, scarcely 1 in long. Cymus terminal, few (up to 12) flowered, main peduncles fairly stout, flattened, 2 in long, secondary peduncles 1 to 4, about 1 in long, pedicels capillary, 5 to 7 in long, curved and twisted. Bracteoles minute ovate, buds ovate oblong. Flowers white. Calyx lobes ovate, acute, ciliate, with a few (about 5) blackish scales near the top of the tube inside. Corolla tube cylindric, glabrous, 15 in long, lobes ovate orbicular, very thin, nervose, 25 to 3 in long, glabrous, corona-scales none. Stamens long exsert, filaments rather slender, 1 in long, anthers linear lanceolate, cells near the summit, connective thickened. Ovary ovoid, glabrous. Style slender, stigma conical. Isthmus straight, linear, to 3 to 6 in long divergent at an angle of about 20° to 40°. Seeds linear, 3 to 4 in long somewhat blunt at both ends, furnished below with a white silky coma 1 to 15 in long. Testa striate, faintly puberulous. Hook f Fl Br Ind III 653, Kunz For Fl II 194. *Echites religiosa*, Teysm & Binnend Hort Bogor 126.

19 SIROPHANTHUS, DC

Small trees or shrubs, often climbing. Leaves opposite, pinnately veined. Flowers usually large in terminal cymes. Calyx 5 partite, scales 5 to many within at the base of the lobes. Corolla funnel shaped, tube short, campanulate or urceolate at the mouth and furnished with 10 free or connate corona-scales, lobes 5, twisted, overlapping to the right, sometimes produced in long or short tails, rarely ovate acute. Stamens inserted at the top of the tube, included, filaments short.

* The corona scales may be either considered as 10, free or connate, or as 5, often cleft to the base.

anthers sagittate, more or less acuminate or produced in a long bristle, connivent around the stigma and adhering to it, cells pollen-bearing near the top only, produced at the base in empty spurs *Disk* none *Carpels* 2, distinct, style slender, stigma thick, columnar or conical with a membranous reflexed frill at the base, tip simple or bifid, ovules many in each carpel, many-seriate *Fruit* of two follicular mericarps, oblong or elongate, hard, divergent or divaricate *Seeds* compressed, fusiform, narrowed into a long, feathery-plumose point, base with a deciduous coma, albumen scanty, fleshy, cotyledons oblong, plano-convex -- **DISTRIB** Tropical and South Africa and Tropical Asia, about 40 species

Lobes of the corolla exceeding the tube in length --

Lobes of the corolla more than 1 in long, main nerves of leaves conspicuous, corona scales falcate acuminate --

Leaves 8 to 5 in long, calyx lobes acuminate from an ovate base, 25 in long, bracts short

1 *S. dichotomus*

Leaves 15 to 3 in long, calyx lobes subulate lanceolate 5 in long, bracts long similar to calyx lobes

2 *S. Wallichii*

Lobes of the corolla scarcely 75 in long, blunt at tip, main nerves very obscure, corona scales a short crenate fold

3 *S. perakensis*

Lobes of the corolla almost as long as the tube, leaves 2 to 4 in long, main nerves conspicuous, corona scales linear falcate, calyx lobes ovate acute, 1 in long

4 *S. singapuriensis*

1 **STROPHANTHUS DICHOTOMUS**, DC in Bull Soc Philom Paris III 123 (1802) An erect or straggling sarmentose shrub, 9 to 10 ft high, branches stout, as are the branchlets, bark of branchlets dark brown with prominent lenticels *Leaves* chartaceous, often membranous when dry, elliptic, elliptic oblong or -obovate, more or less abruptly shortly acuminate at apex, cuneate at base, both surfaces glabrous, margins recurved, 3 to 5 in long, 2 to 3 in broad, midrib prominent, impressed above, raised beneath, main nerves 8 to 9 pairs, impressed above, raised beneath, starting at an angle of about 70° with the midrib and slightly curved upwards to meet in a prominent intramarginal looped nerve at a little distance from the edge, secondary nerves few, between the main nerves, reticulations oblique, impressed above, petiole 25 in long, articulate *Cymes* dichotomous, peduncle short, stout, up to 5 in long, branches short, corymbose, with ovate-acuminate, caducous bracts about 15 in long, pedicels stout, 3 to 5 in long, bracts small, ovate-acute flowers whitish or greenish with dark purple corolla-tails *Calyx* with very short tube, lobes glabrous, acuminate from an ovate base, 25 in long, furnished within at the base with a pair of ovate-acute, entire or bifid scales *Corolla* tube slightly cylindric at first, then funnel-shaped, 75 in long, lobes rounded at first, 5 in.

long, ending in very long, up to 4 in. or more, slender tails; corolla-scales alternate with the lobes, cleft nearly to the base, divisions linear-falcate on a broad base .2 to .25 in. long. *Anthers* pubescent on the back; tips produced in a very long, slender bristle, filaments broad, decurrent within the tube. *Ovary* glabrous; style stout, upper part rugose; stigma with a reflexed fringe. *Follicles* very large, divergent, about 8 in. long by 2 in. broad, broadest at the base where united, tapering to a broad rounded point. *Seeds* compressed, fusiform, 7 in. long, produced in a long beak, the upper part of which, about 1 in. long, is furnished with a brush-like coma of white silky hairs, 1 in. long or more, testa thin, dark brown, albumen very thin, cotyledons oblong, somewhat auricled at base, .4 in. long, .15 in. broad, radicle cylindric, .25 in. long. Subtribe 3 — ECHITIDINÆ

20 URCEOLA, Roxb

Large climbing shrubs. *Leaves* opposite, pennineined. *Flowers* small, in dense corymbosely paniced cymes at the ends of the branchlets. *Calyx* 5-partite, without glands within lobes oblong or linear. *Corolla* urceolate or subglobose, throat naked, lobes 5, short, valvate, subinduplicate. *Stamens* attached to the base of the corolla, included, filaments very short. anthers sagittate, scarcely acuminate, connivent around the stigma and adhering to it at their middle. cells produced at the base in empty spurs. *Disk* cupular or annular, truncate or shortly 5 lobed. *Ovary* of 2 distinct cupels, longer than the disk, many ovuled, style short. stigma oblong conic, subinnulate at the base. *Fruit* of 2 spreading follicular mericarps, thick and acuminate or elongate, contracted or not between the seeds. *Seeds* oblong or linear, compressed, villous. tip contracted, bearded with long persistent brown hairs and crowned with a long white deciduous coma. albumen scanty, cotyledons flat foliaceous. radicle short. — *DISTRIB* Malay Peninsula and Archipelago. about 7 to 8 species

Follicles straight even, terete, slender not constricted between the seeds —

Follicles in one line or very slightly curved either way —

Leaves rusty pubescent beneath, calyx lobes linear, 1 to 15 in long, much recurved

1 *U. elastica*

Leaves nearly or quite glabrous beneath —

Leaves somewhat glaucous beneath, calyx lobes broad obtuse little recurved, corolla urceolate

2 *U. Mangaya*

Leaves reddish brown beneath, calyx lobes ovate, very small, under 0.5 in long, corolla globose

3 *U. brachysepala*

Follicles recurved, leaves red brown beneath when dry, calyx lobes longer than corolla

4 *U. malaccensis*

Follicles porriard shaped thickened in the lower part, long pointed above, calyx lobes very short, leaves red brown when dry

5 *U. lucida*

Follicles torulose, thickened opposite the seeds and constricted between them, leaves red brown when dry

6 *U. torulosa*

SPECIES IMPERFECTLY KNOWN 7 *U. reticulata* 8 *U. sp*

1 URCEOLA ELASTICA, Roxb in As Res V 167 (1799) with fig (excl fruit). A large climbing shrub, branches thick, with dark brown bark, branchlets slender, often flexuose, innovations pubescent. *Leaves* coriaceous, ovate or elliptic ovate, abruptly acuminate at apex, rounded at base, upper surface glabrous except on the midrib and main nerves, lower rusty-pubescent, but reddish brown when dry, margin strongly

recurved, often with thicker pubescence beneath; 4 to 7 in. long, 2 to 3·5 in. broad; midrib stout, slightly impressed above; main nerves 10 to 12 pairs, strongly marked beneath, slightly impressed above, at an angle of about 60° with the midrib, straight at first and then curving and anastomosing near the margin; secondary nerves none, reticulations transverse, fairly regular; petiole ·5 to 1 in. long, rusty-pubescent, twisted at the base, the bases of each pair joined by a ridge at the node. *Inflorescence* finely rusty-pubescent, trichotomous, up to 12 in. long and 8 in. broad; main branch peduncles 2 to 2·5 in. long, secondary branch peduncles 1 to 1·5 in. long; cymules terminal, corymbose or subumbellate, many- and densely-flowered, ·05 to ·1 in. long; bracts leaf-like, bracteoles linear-subulate, ·1 to ·25 in. long, flowers very small. *Calyx*-tube short, lobes linear, ·1 to ·15 in. long, recurved. *Corolla* urceolate, tube ·05 in. long, glabrous within, except a tuft of reflexed hairs between the stamens, lobes oblong, a little longer than the tube. *Anthers* acuminate, pollen-cells at the top, filaments broad, short, minutely pubescent. *Ovary* globose, pubescent, style short; stigma conical. *Follicles* connected at the base, straight, horizontal or sometimes recurved, cylindric, acuminate, brown-velvety-pubescent when young, smooth and glabrous when old, about 6 in. long and ·3 in. broad. *Seeds* linear-oblong, 5 in. long, flattened, surmounted by a ring of tawny bristles, from the centre of which arises a coma of white silky hairs 1·5 to 2 in. long, testa slightly tawny-villous, albumen very scanty, cotyledons oblong, radicle rather long. A DC. Prod. VIII 358, Wight Ic t. 473 (*excl figure and description of fruit*), Miq Fl Ind. Bat II 416, Hook f Fl Br Ind. III 656. *Tabernaemontana elastica*, Spreng Syst Veg 1. 639 ? *Vahea gummifera*, Poir Dict. Suppl. V. 409

As noted by Hook. f in Fl. Br. Ind., the fruit figured and described by Roxburgh, Wight, and A. DC. as that of *U. elastica* is that of *Orchipeda fatida*, Blume, a Javanese tree

2. URCEOLA MAINGAYI, Hook. f. in Fl. Br. Ind III 658 (1882). A large climbing shrub, branchlets nearly black, terete, more or less rusty-pubescent as are the innovations. *Leaves* coriaceous, elliptic, abruptly acuminate at apex, narrowed or rounded at base, glabrous and shining greenish brown on the upper surface, pale and dull and more or less glaucous on the lower, glabrous or minutely pubescent, margins recurved, 2·5 to 5·5 in. long, 1·5 to 3 in. broad, midrib prominent,

dark, impressed on the upper surface, main nerves 8 to 10 pairs, prominent, starting at an angle of about 70° with the midrib and curving upward to anastomose near the margin, secondary nerves few, reticulations transverse, prominent, more or less raised above petiole 4 to 6 in long. *Inflorescence* minutely rusty pubescent, trichotomous, up to 8 in long and 5 in broad, main branch peduncles 2 to 2.5 in long, secondary rather shorter, cymules terminal, corymbose or subumbellate, pedicels slender, 1 in long, lower bracts leaf like, bracteoles linear subulate, 2 in long, flowers very small. *Calyx* tube very short lobes ovate oblong, little recurved, obtuse at tip, 1.25 in long. *Corolla* urceolate, tube very short, glabrous within, lobes oblong, rather longer than the tube. *Anthers* sagittate, obtuse at apex, the tails diverging. *Ovary* globose, pubescent. style obconical stigma conical with a short bifid apiculus. *Stamens* connected at the base, diverging nearly horizontally 6 to 8 in long, 2.5 in broad, usually hooked at the tip. pericarp terete dark brown glibrous. *Seeds* linear oblong flattened 6 in long surmounted by a ring of tawny bristles and a coma of white silky hairs 1 in long. testa softly tawny villous. albumen very scanty. cotyledons oblong radicle rather long.

PERAK *Kings Collector* 4743, 5134. *Wray* 2367 (young follicles curving inwards almost to a circle). MALACCA *Hullett*. SINGAPORE *Murray* (K D) 1083. *Ridley* 2717. —DISTRIB Borneo (*Haviland* 1527, 1767 3497).

3 URCEOLA BRACHYSEPALA Hook f in Fl Br Ind III 659 (1882). A climbing shrub, branchlets slender dark brown terete. *Leaves* chartaceous perhaps coriaceous when green elliptic abruptly obtusely acuminate at apex rounded at base both surfaces smooth, red brown when dry margins slightly recurved 4 to 5.5 in long, 1.5 to 2.5 in broad midrib prominent rather slender main nerves 6 to 8 pairs, starting from the midrib at an angle of 70° to 75° and curved upwards to and along the margin only the upper few meeting in an intra marginal nerve rest anastomosing, all prominent raised on the upper surface as are the prominent transverse reticulations, petiole slender, 5 to 1 in long, articulate near the base. *Inflorescence* puberulous, trichotomous, terminal on main or side branchlets, up to about 6 in long and 5 in broad, main peduncle 1 to 2 in long, terete, secondary peduncle also about 1 to 2 in long flattened as are further branches, cymules corymbose, pedicels slender, often recurved, bracts leafy, bracteoles subulate, reddish, numerous, buds globose, flowers minute (*calyx*-lobes very small, ovate, .03 to .04 in long, very slightly puberulous. *Corolla* globose, villous without, glabrous within, except for tufts of hair between the stamens, inflated .075 to 1 in long lobes induplicate

Anthers acute or very minutely apiculate, spurs slightly incurved *Ovary* villous, style obconical, stigma conical, annulate at base. *Follicles* usually horizontal, in one line, sometimes slightly curved backwards, terete, 6 to 8 in long, 2 in. broad, acuminate and slightly hooked at apex *Seeds* flattened, 4 to 5 in long, ending in a tuft of bristles and a milky-white coma about 1.5 in long testa tough, densely rusty-villous

3 PARAMFRIA DINNIFLORA, Oliv in Hook Ic Pl t 1520 (1886) A shrub, branchlets stout, about 25 in in diameter, fistular, densely rusty tomentose *Leaves* chartaceous obovate oblong or oblanceolate, abruptly acuminate at apex, cuneate and at last rounded at base, glabrous and shining on the upper surface, sparsely pilose on the lower surface, especially on the nerves margins recurved, 5 to 8 in long, 1.75 to 2.5 in broad, midrib stout, main nerves 6 to 8 pairs, at an angle of about 30° with the midrib, at first nearly straight, then curving upwards to anastomose near the margin, impressed above, secondary nerves short, reticulations transverse, distant, not promi-

ment, petiole stout, channelled, about 2 in long. Inflorescence terminal, or axillary to the upper leaves, rusty-pubescent, densely corymbosely paniculate, sessile, reaching 6 in in length, and about 4 to 5 in in breadth, main peduncles 1 to 15 in long, flattened, stout, branches opposite or verticillate, also flattened, as are the minor and much shorter branches, pedicels slender, about 15 in long bracts leafy, bracteoles small, ovate, acute buds broadly clavate. Calyx very small, lobes ovate, acute, pubescent without glabrous within, 0.3 in long, scales 3 to 5 to each lobe, obscure. Corolla funnel shaped tube rather slender, minutely pubescent without 1.5 in long lobes ovate oblique, twisted to the right, glabrous. Anthers apiculate filaments very short. Ovary almost glabrous, style short, obconic, stigma conical. Follicles slender, 11 to 14 in long, nearly at right angles and curved inwards distantly torulose, the spaces 1 to 1.25 in long the swellings ellipsoid 5 in long, interspaces less near the tip pericarp brown, minutely rusty puberulous at first, afterwards glabrescent. Seeds 10 to 12, 4 in long oblong, curved obtuse at the tip glabrous, dark reddish brown, the tip with a tuft of tawny bristles surrounding a white silky coma 1 in long integuments 2 the outer hard.

PRANG on Government Hill Curtis 158 Hullett 159

22 POLYANTHERA Hook & Arn

Glabrous climbing shrubs. Leaves opposite, acuminate with distant main nerves. Flowers small, white or pink, in terminal or axillary lax trichotomous paniculate cymes. Calyx small, deeply 5 fid, with few or no glandular scales at the base within. Corolla subuiceolate, the throat naked lobes 5 very short, obtuse, overlapping to the right, hardly twisted. Stamens inserted at the base of the corolla tube included, filaments short anthers sagittate, conniving over and adhering to the stigma cells produced at the base in empty spurs. Disk annular. Ovary of 2 distinct cupels, longer than the disk style short, stigma obpyriform ovules many. Fruit of 2 divaricate, terete acuminate follicular mericarps. Seeds few oblong or linear, compressed, little contracted at the apex and crowned by a persistent ring of short hairs and a long deciduous coma albumen scanty cotyledons oblong or ovate, leafy, radicle short.—DISTRIB India, Malaya and Southern China, about 4 or 5 species.

Cymes terminal, branches rather stout, leaves with main nerves very oblique (45°) to the midrib

1 *P. micrantha*

Cymes lateral, branches slender leaves with main nerves at about 60° with the midrib

2 *P. multiflora*

1 *ECDYBANTHERA MICRANTHA*, A DC Prodr VIII 442 (1844)
 A large climbing shrub, branches slender, pendulous, lenticellate, branchlets brown, terete, lenticellate, innovations sometimes puberulous. *Leaves* membranous, ovate-lanceolate to oblong lanceolate, obtusely acuminate at apex, acute or cuneate at base, glabrous on both surfaces, often reddish-brown when dry, 2 to 7 in long, 1 to 2 in broad, midrib slender, main nerves 3 to 5 pairs, at about 45° with the midrib, curved upwards to and along the margin and prominently connected by the transverse reticulations, often with a small tuft of hairs in the axils beneath, petiole 3 to 5 in long, somewhat twisted. *Cymes* puberulous, trichotomous, reaching about 5 in in length and breadth, main peduncles stout, variable, branch peduncles spreading, 1 to 2 in long, cymes corymbos, many flowered. *Pedicels* slender, short, about 1 in long, bracts linear, caducous. *Bracteoles* very small, ovate-acute, buds ovoid. *Calyx* very small lobes ovate, acute, pubescent, ciliate. *Corolla* urceolate glabrous, very small (0.5 in long) lobes falcate, spreading. *Anthers* obtuse, sometimes with a small apiculus. *Ovary* puberulous, twice as long as the disk. *Follicles* 3 to 4 in long, 7.5 in broad near the base, horizontal, slightly recurved, narrowed from above the base to the point. *Exocarp* fleshy, punctate, *endocarp* shining, crustaceous. *Seeds* elliptic lanceolate, 7.5 in long, 2.5 in broad, compressed, narrowed above and bearing a ring of short tawny bristles and ending in a white silky coma 1.5 to 2.5 in long, testa rusty pubescent, thin, cotyledons oblong, leafy, about 3 in long, radicle cylindric about 1.5 in long. Hook f Fl Br Ind III 662, Miq Fl Ind Bat II 451. *E. brachiata*, A DC l c 443, Kurz in Journ As Soc Beng XLVI 11 255, and For Fl II 189. Miq l c 452. *Echites ? micrantha* and *brachiata*, Wall Cat 1667, 1668 (7 Don Gen Hist Dichl Pl IV 75).

PEKAL SCORTECHINI — DISBUR India (Sikkim, Assam, Khasia Hills and Cachar), Burma

The only specimen available is rather a poor one but we see no reason to doubt its identity. The description of the fruit and seeds is taken from Indian specimens.

2 *ECDYBANTHERA MULTIFLORA*, King & Gamble, n sp. A large climbing shrub. Branchlets pendulous, terete, prominently lenticellate, innovations slightly puberulous. *Leaves* membranous, ovate or ovate-lanceolate, long acuminate often abruptly and obtusely at apex the acumens oblique, attenuate and almost rounded at base, glabrous on both surfaces, margins slightly recurved, 2 to 3 in long, 1 to 1.5 in broad, midrib slender, impressed above, raised beneath, main nerves 4 to 5 pairs, the lowest close to the margin, all at about 60° with the midrib and curving upwards to and along the margin and connected by

the parallel transverse reticulations, often with minute tufts of hair in the axils beneath, petiole .4 to .6 in. long, slender, articulate. *Cymes* lateral, trichotomous, rusty-puberulous. very many-flowered, reaching 6 in. or even more in length and breadth, main peduncles 1 to 2.5 in. long, slender; branches many, slender, gradually lessening, ultimate cymes corymbose, pedicels filiform, .1 to .2 in. long, bracts none or very caducous, bracteoles minute, ovate-acuminate, buds oblong. *Calyx*-lobes ovate acute, with minute glands at the base within, pubescent without. *Corolla* urceolate, .06 in. long, lobes short, very slightly twisted to the left. *Anthers* acuminate, basal spurs rather long. *Fruit* not seen.

PERAK. on Larut Peak at 2000 to 3000 ft, *King's Collector* 2294, 2401.

23. CHONEMORPHA, G. Don.

Stout woody climbing shrubs. *Leaves* opposite, broad, with arching pinnate nerves. *Flowers* large, white, in lax terminal and pseudo-axillary, bracteolate, panicle cymes. *Calyx* tubular, 5-fid or -partite, with a ring of glands at the base inside. *Corolla* hypocrateriform, tube cylindric, but slightly expanded both at base and apex, without scales, lobes 5, broad, overlapping to the right, twisted sharply to the left. *Stamens* 5, included, inserted on the throat of the corolla, filaments very short, broad, villous, anthers sagittate, acuminate, connivent over and adhering to the stigma, their cells shortly spurred at the base. *Disk* thick, annular or cupular, entire or 5-lobed. *Ovary* of 2 distinct carpels, ovules many, style filiform, cleft at the base, stigma conoid or sub-clavate. *Fruit* of 2 long, straight, woody, parallel, triquetrous follicular mericarps. *Seeds* ovoid or oblong, flat, produced in a beak, which is again surmounted by a long silky coma, albumen thin, cotyledons flat thick, oblong, radicle short.—*DISTRIB.* India and Malaya, 2 to 3 species.

CHONEMORPHA MACROPHYLLA, G. Don Gen. Hist. Dichl. Pl. IV 76 (1838). A large climbing shrub with copious milky juice, branches stout, warty; branchlets stout, soft, fistular, pubescent, becoming glabrous in age. *Leaves* coriaceous, broadly elliptic to elliptic-obovate or suborbicular, blunt, notched or shortly abruptly acuminate at apex, rounded or cordate at base; both surfaces glabrous or glabrescent when old, the lower pubescent, hirsute or tomentose when young; margins slightly recurved, 6 to 10 in. long, 3.5 to 6 in. broad, midrib very stout, impressed above, prominently raised beneath, main nerves spreading, 8 to 10 or sometimes 12 pairs, at variable distances and irregular and often branched, prominently raised beneath, secondary nerves many,

joining the irregular transverse reticulations, all much raised beneath, petiole stout, 5 to 15 in. long *Panicles* up to 10 in long and 8 in broad, pubescent, peduncles stout, 3 to 4 in long, branches also stout, angled or flattened, more or less racemose, bracteoles ovate, acute, persistent, pedicels about 3 to 4 in long, usually shorter than the calyces, buds clavate, the tip acute, flowers white *Calyx* tubular, wider than the corolla-tube and less than half its length, the mouth with 5 short rounded or subacute teeth *Corolla* 3 in or more across, tube 75 to 1 in long, villous within in 5 bands between the stamens, lobes spreading, obovate-cuneate *Anthers* 5 in long *Follicles* 12 to 18 in long, straight, boldly 3 angled, the tips incurved, 75 to 1 in broad, pericarp woody *Seeds* about 1 in long, ovate below, narrowed half-way up into a beak and again expanded to receive the coma, which is softly white silky and 25 in long, albumen very thin, cotyledons ovate oblong, thick, 5 in long, radicle cylindric, slender, 25 in long A DC Prodr VIII 430, Wight Ic t 432, Brandis For Fl 328 Kurz in Journ As Soc Beng XLVI n 257, and For Fl II 187, Miq Fl Ind Bat II 444, Hook f Fl Br Ind III 661, Trimen Fl Ceyl III 138, Cooke Bomb Fl II 139, Prain Beng Plants 678 *C. mollis*, Miq lc *Echites macrophylla*, Roxb Fl Ind II 13, Wall Cat 1657 *E. grandis*, Wall Cat 1658, Dalz & Gibs Bomb Fl 147, "*Beluttakaka kôdi*," Rheede Hort Mal IX tt 5, 6

PERAK. Scortechini 16, from Gunong Chabary, King's Collector 10808.—DISTRIB. Tavoy.

29. TRACHELOSPERMUM, Lemaire.

Climbing shrubs. *Leaves* opposite, penninerved. *Flowers* white or purplish, in lax terminal or pseudo-axillary cymes. *Calyx* small, 5-partite, with 5 to 10 small scales or glands at the base within. *Corolla* hypocrateriform, the tube cylindric, dilated opposite the stamens, con-

stricted at the mouth and sometimes almost closed with the folds; lobes 5, oblique, twisted to the left, overlapping to the right. *Stamens* inserted above the middle of the tube, included or the apices shortly exsert, filaments very short, broad, anthers sagittate, shortly acuminate, connivent around the stigma and adhering to it; the cells produced below in sharp spurs. *Disk* annular, truncate or 5-lobed. *Ovary* of 2 carpels, longer than the disk, style filiform; stigma columnar, base shortly ringed, tip conical; ovules very numerous. *Fruit* of 2 elongate incurved follicular mericarps. *Seeds* linear, not beaked, crowned at the apex with a long dense coma; albumen copious, cotyledons linear, flat; radicle short, superior.—*DISTRIB.* India, Malaya and Eastern Asia as far as Japan, about 8 species.

TRACHELOSPERMUM CURTISII, King & Gamble, n. sp. A climbing shrub, branchlets terete, slender, uppermost with innovations and inflorescence tawny-villous, nodes with a prominent pubescent ridge. *Leaves* membranous, elliptic or elliptic-ovate, abruptly acuminate at apex, auriculate cordate at base; strigosely hispid on both surfaces especially on the nerves, finally glabrous, 3 to 5 in. long, 2 to 3 in. broad, midrib slender, impressed and keeled in old leaves; main nerves 8 to 10 pairs, the lowest pair small deflexed, the rest at about 50° to 60° with the midrib, curved upwards to meet in an inconspicuous looped intramarginal nerve, and joined by the prominent transverse reticulations, petiole .3 to .5 in. long, tawny-villous. *Cymes* terminal, sessile, corymbose, tawny-villous, up to 6 in. long and 8 in. in diam.; main branches 3 to 5, cymules congested, pedicels short, 1 to .2 in. long, bracts leafy, caducous, bracteoles linear-subulate, densely tawny-villous at the joints and the bases of the pedicels, buds clavate, apex conoidal, flowers white, very sweet-scented. *Calyx*-lobes linear-lanceolate, slightly villous without, .1 in. long, longer than the tube, with small subulate scales at the base between the lobes. *Corolla*-tube narrowed below, then dilated opposite the stamens, then gradually narrowed to the constricted mouth, .5 to 6 in. long in all, glabrous within, lobes obliquely triangular-spathulate, dentate at apex, .4 to .5 in. long, twisted to the left, glabrous. *Stamens* inserted at or a little below the middle of the tube; filaments stout, short, rugose, decurrent below; anthers sagittate, membranously apiculate, spurs as long as or longer than the pollen-bearing cells, slender, incurved below. *Disk* annular, 5-lobed, fleshy, lobes slightly emarginate. *Ovary* of 2 carpels, villous above, rounded; style slender, gradually enlarged; stigma columnar, obscurely angled, with a short spreading ring below and conical point. *Follicles* 8 to 9 in. long, .25 in. broad, somewhat flattened, divergent at about right angles and curved inwards to an acute tip; pericarp scabrous-puberulous,

dark brown with a reddish tinge. *Seeds* oblong, 7 to 8 in long, 2 in broad, acute at base, slightly narrowed above and then broadening below the 1 to 1.5 in long white-silky persistent coma; testa thin, dark brown, albumen moderate, cotyledons lanceolate, 5 to 6 in long, 1 in broad, radicle short.

PENANG at Bahak Pulau, *Curtis* 838. PERAK *King's Collector* 5194.

We have been a good deal in doubt of the genus of this species, in the Kew Herbarium it was placed with *Chonemorpha*, but the comparatively small flowers and different seeds distinguish it from that genus, in some respects it comes most nearly to *Epigynum*, but on the whole we prefer to keep it where we first placed it in *Trachelospermum*, to which genus it seems to us to come most near, especially in the characters of the inflorescence and the fruit. There is in the Kew Herbarium a species (unnamed) which approaches very near to this. It has been sent from the Khasia Hills (*Hook f and Th*), from Manipur (*Watt* 7272), and from Yunnan (*Hemsl* 12136). When it comes to be described with full material it is by no means unlikely that the two will be found to require a new genus.

30. EPIGYNUM, Wight

Climbing shrubs. *Leaves* opposite, penninerved, the nerves arching. *Flowers* canescent-tomentose, in dense subcapitate corymbose or paniculate leafy cymes at the ends of the branches. *Calyx* small, 5 fid the lobes narrow, oglandular or with few glands. *Corolla* hypocyrtiform, the tube elongate, dilated opposite the stamens, the throat villous, without scales. *lobes* 5, twisted to the left or nearly erect, overlapping to the right. *Stamens* inserted below the middle of the tube, included filaments short. *anthers* linear-sagittate, acuminate, connivent around the stigma and hardly adhering to it, cells spurred at the base. *Disk* fleshy 5 lobed, lining the calyx tube. *Ovary* of 2 distinct carpels, dorsally adnate to the disk and surmounted by it, style filiform, stigma cylindric, with annular base and conical tip, ovules many in each carpel. *Fruit* of two linear terete distinct follicular mericarps sometimes torulose. *Seeds* elongate compressed, broad at the tip and crowned with a thick coma of silky hairs, testa very thin albumen moderate or scanty cotyledons oblong, narrow, foliaceous. *radicle* short, superior. — DISTRIBUTION: Malay Peninsula and Archipelago about 4 to 5 species.

Leaves elliptic, main nerves 6 to 7 pairs, straight at first. —

PERAK in open bamboo forests, 400 to 600 ft, *King's Collector* 8734 MALACCA *Mumgay* (K D) 1088 SINGAPORE at Kuala Lumpur *Ridley*

3 *EPIGYNUM CURTISII* King & Gamble, n sp A climbing shrub, branchlets slender, terete, uppermost and innovations puberulous *Leaves* membranous, lanceolate, acuminate at apex, attenuate and finally rounded at base, glabrous above, glabrous beneath except along the midrib and for the large hairy tufts in the axils of the main nerves margins slightly recurved, 3.5 to 4.5 in long, 1 to 1.5 in broad, midrib slender, raised beneath main nerves 7 to 8 pairs at an angle of 60°

with the midrib, curving upwards and branching to form an obscure intramarginal looped nerve, secondary nerves not conspicuous, reticulations irregular, prominent beneath, petiole 25 in long. *Cymes* terminal and axillary, pubescent, paniculate, few- (20 to 25-) flowered, reaching 3 to 3.5 in long and about 1.5 in broad, peduncles none or short, as are the branches, pedicels 15 to 2 in long, bracts leafy, persistent, bracteoles ovate-acute, small, 1 to 2 at the base of each pedicel, buds elongate-clavate, 5 to 7.5 in long, flowers white. *Calyx* tube 0.5 in long, lobes ovate acuminate, reflexed, with 1 or 2 small scales at base within. *Corolla*-tube cylindric, slightly dilated below opposite the stamens, greyish tawny tomentose without and with pubescent lines within, 6 in long, throat with a villous ring, lobes obovate, 3 in long, twisted slightly to left in flower, more so in bud, glabrous within, glabrous without on upper, pubescent on lower half which is exposed in bud. *Stamens* inserted a little above the base of the tube, filaments slender, anthers narrowly sagittate, long acuminate, 1.75 in long, spurs long and slender. *Disk* annular, shortly lobed. *Ovary* of 2 glabrous carpels attached by their backs to the disk and within it, style slender, stigma conical, 0.75 in long, with a spreading ring below. *Fruit* not seen.

PERANG on the road to Penang Bukit, at 2000 ft., *Curtis* 2441

4. *EPIGYNUM RIDLEYI*, King & Gamble, n. sp. A slender climber branchlets brown, terete, uppermost parts tawny pubescent, nodes slightly raised. *Leaves* chartaceous, lanceolate or elliptic lanceolate acuminate at apex, attenuate at base, glabrous on the upper surface, sparsely tomentose hirsute on the lower, especially on the nerves margin slightly recurved. 2 to 4 in long, 1 to 1.5 in broad, midrib slender but prominent, main nerves 8 to 10 pairs, at an angle of about 60° with the midrib, nearly straight to meet a looped intramarginal nerve, secondary nerves irregular, reticulations few, transverse. petiole slender, 2.5 to 5 in long, pubescent, channelled above. *Cymes* terminal, densely rusty villous, the branches sessile or pedunculate, few-flowered (7 to 8), trichotomous, bracts leafy, the lowest similar to the leaves, the succeeding ones smaller by degrees. bracteoles minute, ovate acute, on the short (2 to 3 in long) pedicels. buds very slender with narrowly conical tips, 1.5 to 1.75 in long, densely pubescent, flowers white. *Calyx* tube short, lobes ovate, acuminate, villous without, glabrous within, 1.5 in long. scales none or very minute. *Corolla* tube very slender, enlarged below opposite the stamens, gradually widening above, 1 to 1.5 in long, rusty-villous without, also in vertical lines within, otherwise glabrous, lobes rhomboid, crenate, glabrous except the lower part outside which is exposed in bud, 2.5 to 3 in long, twisted slightly

to the left *Stamens* inserted a little above the base of the tube, filaments 15 in. long, flattened, puberulous, anthers sagittate, 25 in long, with a membranous tip and long basal spurs. *Disk* 5-lobed, lobes sparsely long hirsute. *Ovary* of 2 glabrous carpels within the disk, style slender, stigma long cylindric, with a spreading fimbriate ring below and conical tip. *Fruit* not known

PERAK at Rawang, Ridley 7567.

The following species is here described as likely to be eventually found in the Peninsula —

EPIGYNUM FORBESII, King & Gamble, n. sp. A climbing shrub; branchlets slender, terete, uppermost minutely puberulous. *Leaves* chartaceous; elliptic or elliptic-oblong, acute or shortly acuminate at apex, cuneate at base; glabrous or with scattered hairs above, glabrous beneath; 3 5 to 5 5 in. long, 1 to 2 5 in. broad: midrib slender, prominent beneath; main nerves 8 to 10 pairs, arching upwards to and along the margin and meeting in an intramarginal looped nerve, raised beneath, secondary nerves many; reticulations distant, irregular; petiole 2 to 4 in long, twisted. *Cymes* terminal and axillary, about 20-flowered, congested, tawny-tomentose, sessile or very shortly peduncled, bracts leafy, bracteoles small, ovate-acuminate, 2 to 3 at the bases of the 1 in long pedicels; buds clavate with large conical heads, flowers white. *Calyx* lobes ovate acuminate, 1 to 1 5 in long, eglandular. *Corolla*-tube slender, cylindric, dilated below opposite the stamens, often twisted, 1 in long, lobes spatulate, crenulate, glabrous except the part exposed in the bud, twisted to the left, 6 in long. *Stamens* inserted a little above the base, filaments short, slender, anthers narrowly sagittate, acuminate. *Disk* glabrous, 5-lobed. *Ovary* of 2 glabrous carpels adnate to the disk, style slender, stigma cylindric, with a spreading ring below and conical tip. *Fruit* not seen

SUMATRA near Bijan Telok, 500 ft., Forbes 3236. Haviland's No 3018 from Kuching, Borneo, resembles this very closely, but has the leaves more lanceolate and longer acuminate

31 MICRECHITES, Miq

Large climbing shrubs with pubescent inflorescence, otherwise glabrous. *Leaves* opposite, pinnate-ovoid. *Flowers* small, in axillary and terminal dichotomous thyrsoid or brachiate panicle cymes. *Calyx* small, deeply 5-fid or 5-partite, with obtuse lobes, many-glandular within. *Corolla* subhypocrateriform, the tube ovoid-campanulate, naked at the mouth, lobes 5 falcate, very oblique, sometimes forked, the upper half deflexed in bud, overlapping to the right. *Stamens* inserted near the bottom of the tube, included, filaments short, anthers sagittate, conniving round and adhering to the stigma, cells produced at the base into empty spurs. *Disk* annular or cupular, entire or 5-lobed. *Ovary* of 2 distinct carpels, longer than the disk, style short, stigma ovoid or oblong, with a short obtuse apiculus. ovules very many. *Fruit* of 2 divaricate, thick, subterete, follicular mericarps. *Seeds* generally few, linear-oblong, compressed, not beaked, with a terminal persistent coma,

albumen scanty, cotyledons narrowly linear, elongate, radicle very short —DISTRIB India and Malaya, about 4 species

Leaves almost coriaceous broad, inflorescence many branched many flowered, corolla lobes short, often forked, reflexed .. 1 *M. polyantha*

Leaves chartaceous, narrow, inflorescence scarcely branched, very few flowered, corolla lobes long, not forked, spreading .. 2. *M. elliptica*
var *Scortechnii*

1 *MICRECHITES POLYANTHA*, Miq Fl Ind Bat II 457 (1856) A slender climbing shrub, branches obscurely angled, branchlets dark brown, terete, innovations sparsely pubescent. Leaves chartaceo-coriaceous, elliptic-obovate elliptic oblong or oblong-lanceolate, obtuse or obtusely acuminate at apex, cuneate attenuate or sometimes slightly rounded at base, glabrous on both surfaces, 2 to 4.5 in long, 1 to 2 in broad midrib stout, prominent beneath, main nerves 10 to 15 pairs, slender, at an angle of 60 to 70 with the midrib, nearly straight to join in an obscure intramarginal nerve, secondary nerves many, similar to and between but more slender than the main nerves, reticulations very oblique, petiole .5 to 1 in long, channelled above, often twisted. Cymes terminal and axillary, thyrsoid, rusty-tomentose, much branched, at length often elongating in slender bracteolate racemes, reaching 5 to 7 in in length and 3 in in breadth, rachises angular or flattened peduncle 0 to 2 in long, pedicels very short and stout, .05 to 1 in long, bracts lanceolate, caducous, bracteoles very many, persistent, ovate, acute or obtuse, conspicuous especially after the fall of the flowers, buds ovoid or conical flowers white. Calyx campanulate, lobes ovate, rounded, rusty tomentose without, glabrous within, .05 to .15 in long the base inside furnished with minute scales mixed with villous hairs. Corolla campanulate or urceolate, .15 to .2 in long, contracted at the mouth, glabrous without, puberulous within lobes falcately lanceolate with a knee at the base, or bilobed, the divisions unequal, much reflexed, pubescent at the mouth, .05 to .125 in long. Anthers acuminate. Ovary densely villous. Pollinia terete, cylindric, 6 to 12 in long, divergent at about 120 and curving upwards so as nearly or quite to meet again, acuminate at tip, pericarp thin, dark brown, glabrous. Seeds linear oblong, narrow, compressed, 1 to 1.5 in long, somewhat enlarged at the apex and furnished with a thick, close, persistent, tawny coma .2 in long, testa thin, dark brown, albumen scanty, cotyledons linear, very slender, 1 in long, radicle minute. India in Sikkim Himalaya at 4000 to 6000 ft., and Khasia Hills at 3000 to 4000 ft

VAR *Scortichinii*, King & Gamble A climbing shrub. Leaves chartaceous lanceolate, obtusely long-acuminate at apex, cuneate at base glabrous on both surfaces, 3 to 3.5 in long, 1 to 1.5 in broad, main nerves 10 to 12, very slender, not conspicuous, secondary nerves many, reticulation, oblique petiole .25 in long Cymes terminal or axillary, very few flowered, scarcely reaching 1 to 1.5 in long, minutely puberulous, podicels slender, .2 in long bracteoles ovate, persistent, buds ovoid, obtuse. Calyx lobes ovate, ciliate, rounded, .075 in long Corolla tube cylindric, 1 in long, constricted slightly at the mouth, lobes linear-oblong, 1.5 in long, twisted, glabrous, much turned to the left. Anthers sagittate, acuminate, filaments very short Ovary densely villous Fruit not known

PEKAL *Scortichinii*

This may prove when better specimens are available to be incapable of separation from the Indian type.

FAMILY LXXVI ASCLEPIADACEÆ

Herbs or shrubs, erect or more usually twining, often with a tuberous rootstock or fleshy roots juice milky or watery, stems simple or branched, usually woody, sometimes succulent. Leaves opposite or whorled, sometimes wanting, very rarely alternate, thin or fleshy, quite entire sometimes with an interpetiolar stipular line or teeth. Flowers hermaphrodite, very variable in size and form but always regular, solitary or few or many together, in umbels, umbel-like cymes, fascicles or racemes, axillary, lateral between the bases of the leaves or terminal. Calyx inferior, of 5 sepals or 5-lobed, lobes imbricate, usually with minute glandular scales at the base within. Corolla hypogynous, gamopetalous, regular, 5-lobed, various in shape, tube usually short (long in *Ceropegia*), sometimes furnished within or at its mouth with variously shaped processes forming a corolline corona, lobes imbricate, contorted or valvate in aestivation, often recurved, sometimes more or less erect and connate at their tips. Stamens 5, inserted at or near the base of the corolla and alternate with its lobes, rarely higher up, filaments some

times free, more usually connate in a tube around the ovary, forming with the anthers and their terminal appendages a *staminal column*, with the apex often united to the dilated part of the style, usually with more or less fleshy processes on the back forming a *staminal corona*, anthers free or united to the dilated part of the style, 2-celled, the cells dehiscing by apical longitudinal or transverse slits, the margins of the anthers or their basal prolongations below the cells more or less horny and wing like (the *anther wings*), usually projecting outwards, the adjacent wings of each pair of anthers nearly meeting and forming between them very narrow fissures leading to the stigmatic cavities, connectives of the anthers often produced into membranous rarely fleshy or inflated terminal appendages which are sometimes connate pollen contents of each anther cell granular or united into one or two waxy masses (*pollen masses*) formed of an indefinite number of pollen grains and attached in pairs or in fours, sometimes directly but more usually by means of arm like *caudicles* to each of the 5 small, usually horny turgid or bilobed *pollen carriers*, which rest one on each of the 5 angles of the dilated part of the style the whole forming the *pollinia* the masses attached to each pollen-carrier always being derived from the cells of two different but adjacent anthers, when granular, each granule is formed of about 4 pollen grains united together, and, on the dehiscence of the anthers, the whole is loosely contained in the horny spoon, trumpet, or trowel like or bird *appendicle* tapering downwards into a short or long *caudicle* attached to a soft (adhesive?) pollen carrier gland *Ovary* superior, of 2 one celled, many ovuled cupels free below the styles united above and dilated into a pentagonal disk (*style apex*) which is flat or depressed in the centre with or without a conical or otherwise shaped tip, and bears on its angles the pollen carriers and immediately beneath them, behind the fissures between the anther wings, the 5 stigmatic cavities, ovules usually numerous, rarely few or solitary, anatropous pendulous, imbricate in several series on the projecting placenta *Plat* of 2 (or 1 by suppression) divaricate or parallel follicular mericarps dehiscing by the ventral suture and usually liberating the placenta, pericarp usually smooth, sometimes echinate or winged *Seeds* usually flat, sometimes ovoid or cylindric, usually with a broad or narrow margin, generally crowned with a *coma* of long silky hairs, sometimes fringed, sometimes without any tuft, testa thin or thick, albumen usually thin, sometimes rather thick, sometimes none, embryo large, nearly or quite filling the seed, cotyledons flat, radicle usually cylindric, superior — **DISTRICT** A large Family of more than 1800 species, widely distributed over tropical and subtropical, with a few in temperate, regions

As in the Family *ATOCINACEÆ*, in which we were much assisted by Dr O Stapf's account of it in the 'Flora of Tropical Africa,' Vol IV Sect 1, so in *ASCLEPIADACEÆ* we have been indebted to that by Mr N E Brown in the same work, which has helped us properly to understand the morphology of a very difficult but most interesting Family of plants. We wish also to mention that much assistance was derived from the account of the Family and its Western India genera given by Dr T Cooke, CIL in Vol II of his 'Flora of the Presidency of Bombay'

ANALYSIS OF THE TRIBES

- | | |
|--|---------------|
| Pollen granular, loosely contained in the more or less spatulate or bird appendices, not attached to the latter | I PHYLLOCLAD |
| Pollen united into very minute waxy masses 1 or 2 of which are sessile upon a very minute quadrate pale coloured pollen carrier | II SECAMONIA |
| Pollen united in waxy opaque masses without pellucid margin usually of fair size and attached in pairs by caudicles to the dark coloured pollen carriers — | |
| Pollen masses pendulous | III CYNANCHIA |
| Pollen masses erect or horizontal, very rarely pendulous | IV MARSIPPIA |
| Pollen united in waxy masses pellucid on one margin or at the apex, and attached in pairs by caudicles to the pollen carriers | V CEROPEGIA |

Tribe I PHYLLOCLAD

Filaments of the stamens free, anthers acute or with the connectives produced in terminal appendages connivent over the style apex and frequently connate. Pollen-contents of each anther-cell of numerous loose granules, each granule formed of 3 to 4 pollen-grains united in lines or tetrads. Appendices spatulate, trumpet-shaped or trowel shaped, sometimes bipartite, horny, attached by short or long caudicles to an adhesive pollen-carrier gland at the base, which is itself attached to the angles of the style apex, holding the pollen-granules loosely but not attached to them.

1 PHYLLANTHERA, Blume

Glabrous climbing shrubs *Leaves* opposite, with nerves at right angles to the midrib, pale beneath *Flowers* long-pedicelled, subracemose, reddish, in lax pedunculate cymes from one axil of a pair of leaves *Calyx* short, 5-fid, lobes ovate, scales 5, alternate with the lobes within, membranous. *Corolla* campanulate rotate, fleshy, deeply 5-fid, papillose within, lobes suboblique, concave, overlapping to the right *Corona* none *Stamens* affixed near the base of the corolla, filaments free, anthers agglutinated with the style apex, not bearded, appendages erect, thick, naked, curving inwards at the tip *Pollen* granular, composed of 3 to 4 granules cross wise adherent, pollen-carriers globose, bearing short slender caudicles ending in obliquely funnel shaped appendices which carry the pollen-masses *Style apex* capitate, obscurely 5 angled *Fruit* of 2 slender divaricate follicular mericarps *Seeds* oblong, testa thin, with few silky hairs ending in a tufted long silky coma albumen thin cotyledons oblong, radicle cylindric, nearly as long as the cotyledons — *DISTRIB* Species 2, one of the Malay Peninsula, the other of Java

PHYLLANTHERA PLAKENSIS, King & Gamble, n sp A glabrous slender climbing shrub, with thin slender terete branchlets *Leaves* somewhat fleshy membranous when dry, oblong or oblong lanceolate, acuminate at apex, rounded at base, glabrous on both surfaces, the lower pale, almost glaucous, margins recurved 2.5 to 4 in long, .75 to 1.25 in broad, midrib prominent, impressed above, raised beneath, main nerves 8 to 10 pairs at right angles to the midrib, obscure, slender, straight to join an intramarginal looped nerve at the sinus of the loops, secondary nerves very few, between and parallel to the main nerves, very obscure, reticulations not visible, petiole slender, .25 to .5 in long, slightly thickened below *Cymes* few flowered peduncles slender, up to about .25 in long, branches usually 2, reaching .5 in in length, subracemose, with pairs of persistent small ovate acute scarious bracts, pedicels very slender, about .25 in long, buds globose, flowers reddish brown or mottled red and yellow *Calyx* lobes ovate, hyaline, .05 in long, scales 1 to 2 in long, membranous *Corolla* lobes orbicular, imbricate 2 to 3 in long, minutely papillose within, tube very short *Anthers* with appendages .05 to .075 in long *Follicles* slender, 6 to 7 in long, .25 in broad, the tip hooked inwards, divaricate in one straight line, pericarp smooth, thin, dark brown, striate *Seeds* many, oblong, ridged on the ventral surface, 3 in long, .06 in broad, with a few sparse white hairs and a deciduous silky white spreading coma 1.5 to 2 in long, testa thin, dark brown, albumen very thin, cotyledons oblong, rather fleshy, 1.5 in long, .05 in broad, radicle cylindric, 1 in long

PERAK at Kota, Wray 2407, 3005, *Scortechini*, at Larut, King's collector 2059, 2181, 7314

This species comes very near to the Javanese *P. binda* Blume but the latter has narrower and longer leaves, with very many (20 to 25) pairs of main nerves and many secondary ones with the intramarginal nerve much nearer the margin. The peduncles and branches of the cyme and the pedicels are stouter and longer and the corolla more fleshy. The anthers are similar, but the pollen carrier appendices are more obliquely funnel shaped (see t. xxii in Bl. Mus. Bot. Lugd. Bat. I). The only specimen in the Kew Herbarium is 'Coll. I. Lobb, India 1868,' and may be possibly from the Peninsula. In the Calcutta Herbarium are specimens from Sumatra (*H. O. Forbes* 2136).

2. PENTANURA, Blume

Glabrous climbing shrubs. *Leaves* opposite, with nerves at right angles to the midrib or nearly so. *Flowers* 1 to 3, on bracteate pedunculate racemose cymes in the axils of or opposite to one leaf of the panicle. *Calyx* small, 5 fid, with 5 membranous scales alternate with the lobes within. *Corolla* campanulate-rotate fleshy, deeply 5 fid, papillose within. Lobes oblong, concave, overlapping to the right. *Corona* none. *Stamens* affixed near the base of the corolla, the bases distant, geniculate, filaments free, anthers agglutinated with the style-apex, oblong, not bearded, appendages lanceolate, bearded, caudiform, erect at tip. *Pollen* granular, composed of 3 to 4 granules cross-wise adherent. *Pollen carriers* discoid, bearing slender caudicles and spatulate often truncate appendices which carry the pollen-masses. *Style-apex* capitate, sharply 5 angled. *Fruit* of 2 slender divaricate locular mericarps. *Seeds* oblong, with few silky hairs ending in a tufted long silky coma. *Testa* thin. *Albumen* thin, cotyledons oblong, radicle cylindric. — **DISTRIBUTION.** Species 2, one of the Khasia Hills and Yunnan, the other of the Malay Peninsula and Archipelago.

This genus comes very near to *Phyllanthera*, with which we are inclined to think it might be incorporated. It differs in the markedly pentagonal style apex, the bearded anther appendages, and the spatulate not funnel shaped appendices of the pollen carriers. *P. khasiana*, Kurz Fl. B. Ind. IV 4, hardly seems to us to belong to this genus.

PENTANURA SUMATRANA, Blume Mus. Bot. Lugd. Bat. I 125, t. xxi (1849). A glabrous slender climbing shrub, with thin angled or striate branchlets, bearing occasional round lenticels. *Leaves* chartaceous elliptic, rather abruptly acuminate at apex, cuneate at base, glabrous on both surfaces, the lower pale, almost glaucous. The margins strongly recurved. 3 to 4 in long, 1.25 to 1.75 in broad. Midrib slender slightly impressed above, raised beneath, main nerves 7 to 8 pairs, slightly raised beneath, at or a little less than right angles with

the midrib, straight to join an intramarginal looped nerve, secondary nerves few, very faint, reticulations not visible, petiole 25 in long, channelled above, sometimes bearing small stipular glands at the base. *Racemes* up to 2 in long, 1- to 3-flowered, with pairs of persistent ovate scarious bracts, pedicels slender, 15 in long, buds ovoid, acute, flowers deep red. *Calyx* lobes ovate, acute, hyaline, .1 in long, with ovate acute membranous scales .03 in long between each at the base within. *Corolla*-lobes oblong or obovate oblong, 5 in long by 3 in broad, minutely papillose within, tube salver shaped at base. *Appendages* of stamens erect, bearded, about .03 in long. *appendicles* of pollen-carriers as long. *Follicles* slender, 5 to 6 in long, 2 in broad, very acute, divaricate in a straight line, tips straight, pericarp thin, rough, striate, dark brown. *Seeds* many, oblong, ridged on the ventral surface, .275 in long .075 in broad, with a few sparse white curly hairs and a deciduous silky white spreading coma about 1.5 in long, testa thin dark brown. *albumen* thin, cotyledons oblong 15 in long by .05 in broad, radicle cylindric, 1 in long. *Miq Fl Ind Bat II* 471. *Engl & Prantl Naturl Pflanzenfam IV* 2, 211, fig 63, D E.

PERAK at Belan Tujoi *Wray* 1847 4025. *Scortechini* 1303. *King's Collector* 1825, 3514. — *DISTRIB* Sumatra (*Praetorius, Beccari* 640)

3 GONGYLOSPERMA King & Gamble, nov. gen.

A shrub. *Leaves* opposite strongly nerved. *Flowers* in axillary or pseudo terminal, bracteate paniculate cymes. the branches 2 to 3 photomous. pedicels slender. *Calyx* short, 5 partite. scales combined in a ring. *Corolla* rotate campanulate, the tube short. lobes oblong, overlapping to the right. *Corona* none. *Stamens* inserted on the corolla tube. filaments free, broad and nearly confluent at base. anthers short, appendages short, triangular incurved over the style apex, pollen granules elongate, of 3 to 4 pollen grains in one line, pollen carriers minute, appendicles spatulate. *Ovary* of 2 carpels. styles distinct below, combined above. style-apex obscurely 5 angled, flattened at top. *Fruit* of 2 short divaricate oblong follicular mericarps. pericarp thin, pubescent. *Seeds* very small, oblong-cylindric, with a white silky coma, albumen copious, cotyledons fleshy, radicle cylindric. — *DISTRIB* A single species only as so far known.

GONGYLOSPERMA CURTISII, King & Gamble, n. sp. A small shrub, branches smooth, brown. *Leaves* coriaceous lanceolate or oblong lanceolate, acute at apex, attenuate at base, both surfaces rugose, the upper slightly puberulous, the lower pubescent, both ashy grey, the lower much the paler. margins recurved. 2.5 to 4.5 in long, .75 to 1.75

in broad, midrib as well as all nerves and reticulations impressed above, raised beneath, midrib thick, main nerves stout, 18 to 20 pairs, at about 60° with the midrib, nearly straight to join an obscure intra-marginal looped nerve close to the margin, secondary nerves few, reticulations closely netted, petiole rather stout, 15 to 25 in long (limbs more or less grey-puberulous, reaching 15 in long and 2 in broad, peduncle stout, 25 to 5 in long, branches 3-chotomous, secondary branches again 3-chotomous, both furnished with pairs of small ovate acute bracts, pedicels slender, 15 in long, buds ovoid, acute. *Calyx* short, tube very short, lobes ovate, acute, hyaline on the margins, glandular dotted, scaling narrow. *Corolla* tube short, lobes oblong blunt, 15 in long. *Corona* none. *Stamens* few, filaments rather thick, enlarged and almost confluent at the base, anthers short, rounded, appendages triangular, black, curved over the style apex and connate. *Style* short, stout, style apex obscurely 5-angled, flattened at top. *Follicles* straight, thick, 1 to 1.25 in long, 25 in broad, divaricate in a straight line tip slightly incurved, blunt. pericarp thin, minutely grey pubescent. *Seeds* oblong cylindric, 1 in long and .05 in thick, ending in a sparse white silky coma 2 in long. testa granular, very thin, albumen copious, cotyledons elliptic, fleshy, .06 in long, radicle cylindric, a little shorter than the cotyledons.

SIAM STATES at Poongth, in the crevices of limestone rocks (no. 2951)

1. HINDUS, B.

Twining shrubs. *Leaves* opposite or in whorls of 4. *Flowers* small, greenish purple, in opposite crowded subsessile cymes. *Calyx* 5-partite, lobes acuminate, with 5 minute scales between them at their bases within. *Corolla* rotate, deeply 5-fid, with valvate fleshy lobes, tube very short. *Corona* processes 5, short, thick, on the throat of the corolla and alternate with its lobes. *Stamens* inserted at the base of the corolla tube, filaments distinct or subconnate at the base, anthers small, cohering at the apex terminated by inflexed appendages, pollen masses cohering in pairs in each cell, granular, the caudicles of the pollen-carriers thick below, then slender, bearing cucullate or spreading appendages. *Style* apex 5-lobed, flat on the top. *Fruit* of 2 slender divaricate terete follicular mericarps. *Seeds* oblong, flattened, ridged on the ventral face, ending in a broad tip bearing a long silky coma. albumen scanty. cotyledons oblong, fleshy, radicle cylindric.

DISTRIB India and Malaya, species 1 or 2

HEMIDESMUS INDICUS, Br. in Mem Wern Soc. Edinb. J. 57 (1811). A prostrate or twining shrub, with slender terete branchlets, older branches dark brown, with prominent wart-like lenticels. *Leaves* chartaceous, very variable, in pairs or whorls of 4, of which one pair shorter than the other, elliptic-oblong to linear-lanceolate, acute or mucronate at apex, rounded at base; glabrous on both surfaces, the upper sometimes variegated with white, the lower often pale, margins recurved, 2 to 4 in. long, .5 to .75 in. broad (our specimen), midrib slender, raised beneath or flattened, main nerves 4 to 5 pairs, curving upwards and meeting near the margin, reticulations obscure; petiole .15 to .25 in. long, slender. *Cymes* opposite, on very short peduncles, flowers on short pedicels with many ovate-acute bracts. *Calyx*-lobes ovate-acute, membranous, .05 in. long, scales minute. *Corolla*-lobes ovate-oblong, acute, tips incurved, 15 to 25 in. long. *Corona*-scales often emarginate. *Follicles* cylindric, 4 to 7 in. long, spreading at 180° apart or slightly curved backwards from the straight line, tips slightly hooked, pericarp thin, smooth. *Seeds* ovate-oblong, flattened, ridged on the ventral face, testa granulate on one side and the margin, smooth on the other, cotyledons oblong, radicle slightly shorter than cotyledons. DINDINGS at Bruas Road, *Curtis* - - **DISTRIB** India, Ceylon

The only specimen available was a very poor one with only one or two nearly rotten flowers, but there seems no reason to doubt its identification.

5. **FINLAYSONIA**, Wall

A lofty glabrous climbing shrub with milky juice. *Leaves* opposite. *Flowers* in 2- to 3-chotomous axillary cymes, moderate-sized, yellowish and purple. *Calyx* short, 5-partite. *Corolla* rotate, deeply 5-fid, the lobes broad, ovate, overlapping to the right. *Corona*-processes 5, filiform, close behind the stamens. *Stamens* inserted at the throat of the corolla, filaments slender, anthers adnate to the style-apex by the middle, ending in broad inflexed membranous acute appendages, pollen-masses cohering in pairs in each cell, pollen granular, pollen-

carriers glandular, attached to the angles of the style; pex appendicles slender, dilated above in a small rounded apex. Style slender, style apex large, fleshy, truncate and 5 angled at base convexly conical above. *Fruit* of 1 or 2 divaricate, fleshy, broad, follicular mericarps the sides with 1 to 4 longitudinal ribs, the tip incurved. *Seeds* lax, flattened, ovate, with short rufous hairs at the margins, coma none. *Testa* thin, albumen scanty, cotyledons broadly oblong, fleshy, radicle short, stout. **DISTRIB.** India and Malaya. 1 species.

FINLAYSONIA OBOVATA, Wall Pl. As. Rai II 48, t 162 (1831) and Cat 4466A. A lofty glabrous climbing shrub with milky juice, branches stout, obtusely angular, with pale brown papery, lenticellate bark. *Leaves* coriaceous, obovate, obtuse or shortly apiculate at apex, cuneate at base, both surfaces glabrous, the lower glaucescent, margins slightly recurved, 3 to 5 in long, 1.5 to 2.5 in broad, midrib broad, slightly impressed above, flattened beneath, minor nerves 7 to 9 pairs, at about 70° with the midrib, straight to join in an obscure looped intramarginal nerve, secondary nerves few, reticulations many, indistinct. *Petiole* .5 to 1 in long. *Cymes* 2 to 3 in long, peduncle thick, often reddish, .75 to 1 in long, branches divaricate, .25 to .5 in long, usually 3 subsequent branches usually 2, short, stout, pedicels slender, .15 in long, bracts ovate, acute, sheathing the bases of the branches, buds ovoid, flowers yellowish with purple markings. *Calyx* lobes ovate, acute, ciliate, .05 in long, scales very minute. *Corolla* lobes nearly orbicular, spreading, furnished within with long whitish hair on a pair only, glabrous without, 2 to 3 in long. *Corona* processes flexuose, .06 in long. *Follicles* thick, ventricose, about 3 in long by 2 in broad, broadest in the middle, tip thick, blunt, hooked, ribs 3 to 4 slightly winged, pericarp thin. *Seeds* ovate, 7 to 8 in long by 4 in broad, flat, the margins winged and bordered by a few long, reddish, appressed hairs, extending in a short tuft at the tip. *Testa* thin, brown, keeled on the ventral surface, albumen thin, cotyledons oblong, fleshy, .15 in long, .25 in broad, veined, radicle thick, .15 in long. **Wight** Contrib 65. **Wight** III t 182, fig 5. **Guthrie** Notul IV 70, and Ic Pl. A plant of the river deltas.

The description of Wallich is most detailed, and, it may be mentioned here, gives a brief account of Mr George Finlayson, in whose honour the genus was named

6 GYMNANTHERA, Bl

Glabrous climbing shrubs *Leaves* opposite *Flowers* in short axillary peduncled cymes, usually 2-branched, branches racemose pedicels slender *Calyx* short, 5-partite, with 5 or 10 or more minute membranous scales within at the base *Corolla* hypocrateriform or rotate, the lobes spreading, overlapping to the right *Corona*-processes 5, filiform on a broad base, often bifid, affixed to the corolla tube closely behind the stamens and subconnate with them *Stamens* inserted in the tube of the corolla, filaments short, slender above, dilated at the base and subconnate, anthers adherent to the style-apex, produced above in acuminate connivent appendages, pollen granular, in several masses in each anther-cell, the granules elongate, of 3 to 4 grains lineally arranged, pollen carriers large, glandular, caudicles slender, appendices spatulate, carriers attached to the style-apex *Style* short, style-apex convex, 5 lobed at base *Fruit* of 2 cylindric divaricate follicular mericarps *Seed* not known — *DISTRIB* About 5 species of the Malay Archipelago and tropical Australia

GYMNANTHERA INSULARUM, King & Gamble, n sp A climbing shrub, branches woody, thick, rough, with dark brown smooth bark and occasional lenticels *Leaves* chartaceous, elliptic or elliptic-oblong, rounded with a short acumen at apex, attenuate at base, upper surface dark brown when dry, lower greyish white, both surfaces glabrous, margins slightly recurved, 2.5 to 3.5 in long, 1 to 1.5 in broad, midrib prominent, pale, impressed above, raised beneath, main nerves 12 to 14 pairs, at about 70° with the midrib, slightly curved upwards to join a faint intramarginal looped nerve, secondary nerves faint, short, reticulations netted, impressed above when dry, petiole slender, 5 to 7.5 in long, channelled above *Cymes* puberulous, about as long as the petiole, peduncle short, 2 in long, branches 2, racemose, with many pairs of minute, ovate, acute bracts, pedicels rather stout, 15 in long, buds ovoid *Calyx* very small, lobes scarcely 0.25 in long, margins hyaline, scales very small, 5 opposite to and 5 alternate with the lobes *Corolla* tube very short, lobes ovate-oblong, acute, 1.5 to 2 in long, slightly overlapping to the right, reflexed in flower *Corona* processes 5, behind the filaments, bifid, the lobes subulate, inner one the longer, 0.3 in long *Stamens* inserted on the corolla tube filaments slender, broadened and connected at base, anthers rounded, connective produced in an acuminate tip, pollen granular, in many masses, each made up of 3 to 4

grains adherent lineally. *Style* short, rather slender. style-apex 5 angled below, convex above. *Fruit* and *seeds* not known.

KEDAH small islands near Langkawi, *Curtis* 3684

7 ATHERANDRA Dene

Slender glabrous climbing shrubs. *Leaves* opposite. *Flowers* in lax axillary and terminal peduncled dichotomous cymes. *Calyx*-tube turbinate, 5 partite, patent in end. scales 5, quadrate, crenulate. *Corolla* rotate. tube short, narrowed at the base. lobes elongate slender, linear-lanceolate, overlapping to the right, twisted to the left in end. *Corona* processes 5, filiform, at the back of the bases of the filaments. *Stamens* inserted at the base of the corolla-tube, filaments free, alternate with erect glands. anthers ovate, subhastate at base, connate with the style apex. appendages long acute, membranous, combined in a cone over the style apex. pollen-carriers of a viscid basal gland attached to the base of the style-apex. appendicles oblong-spathulate, bearing many pollen-granules of 4 grains arranged in line or in tetrads. *Ovary* conical sunk in the calyx-tube. style slender short, style apex long, conical, 5 lobed at base. *Fruit* not known. — **DISTRIB.** One species.

ATHERANDRA ACUTIFOLIA, Dene in DC Prodr. VIII 497 (1844). A slender twining shrub. branchlets dark brown, slightly rough. innovations puberulous. *Leaves* chartaceous when dry, oblong-lanceolate or obovate-oblong, acute or cuspidate at apex, attenuate and then rounded at base, glabrous on both surfaces and reddish or greyish black when dry, dark on the upper, almost glaucous on the lower, margins slightly recurved. 2 to 3.5 in long, .75 to 1.75 in broad, midrib slender, raised beneath, sometimes puberulous. main nerves 5 to 8 pairs, very slender, arching upwards to and along the margin. secondary nerves few, reticulations inconspicuous. petiole slender, 2 to 4 in long. *Cymes* very slender, reaching 3 in in length and about the same in breadth, peduncles slender, about 1 in long, branches capillary, nearly as long, bracts in pairs, linear subulate, 1 to 1.5 in long, podicles capillary, curved, .75 in long, somewhat enlarged under the calyx. buds conical, acuminate, .5 in long, flowers few, brownish yellow, distant. *Calyx*-tube turbinate, with 5 small scales at the throat, lobes spreading lanceolate, .06 in long. *Corolla*-tube very short. lobes linear, .75 in long, twisted in bud to the right, then straight, recurved in flower. *Corona*-processes filiform, nearly 1 in long, behind the stamens. *Fruit* and *seeds* not known. Tribe II. SICAMONÆ

Filaments of the stamens connate into a tube and adnate at top to the dilated part of the style. appendages of the anthers more or less fimbriate. Pollen-contents of each anther cell of two very minute distinct waxy masses sometimes combined into one. Pollen carriers minute, subquadrate, soft, the pollen-masses attached to them in fours or pairs.

Corolla lobes imbricate usually glabrous or merely puberulous within.

Corolla tube not lined by a toothed membrane, corona thin—

Corolla lobes small overlapping to right or left, style apex short rounded, obtuse, pollen masses in fours on a minute carrier.

9. SICAMONÆ

Corolla lobes overlapping to left usually rather large, style apex elongate conical or clavate, pollen masses in pairs (or very obscurely only in fours) on a minute thick carrier.

10. TONOCARIUS

Corolla tube lined by a toothed membrane, corona short thick.

11. GONIOPHEMMA

Corolla lobes valvate, villous within.

12. GENIANTHUS

9. SICAMONÆ, B1

Climbing or straggling shrubs or undershrubs. *Leaves* opposite. *Flowers* small, often minute, in lax axillary sessile or shortly peduncled 2-3 cymose. *Calyx* 5-partite, without scales within. *Corolla* small, rotate, 5-lobed, lobes overlapping to right or left, tube very short. *Corona* processes 5, adnate to the staminal column, compressed. *Stamens* inserted at the base of the corolla, filaments connate at the base only, anther-tips ending in a small inflexed appendage, connivent around the style-apex, pollen-masses very minute, globose or slightly oblong, in pairs in each cell, attached in fours to the minute pollen-carriers, without caudicles. *Ovary* of 2 carpels, style columnar,

dilated, ending in a flattened ring and produced in a beak above it style-apex rounded or bifid, exerted beyond the anthers *Fruit* of 2 divaricate follicular mericarps, terete or angular, acuminate, smooth *Seeds* flattened, oblong, ending in a long white silky coma, albumen scanty, cotyledons linear-oblong, radicle rather long, cylindric--
DISTRIB Species about 30, chiefly of South and Tropical Africa and the Mascarene Islands, a few in India, Malaya, and the islands, extending to Australia

SECAMONE MICRANTHA, Dene in DC Prodr VIII 501 (1844) A small climbing shrub, branchlets slender, terete, the size of a crow-quill, nodes enlarged *Leaves* membranous, ovate-lanceolate, acuminate and apiculate at apex, attenuate at base, both surfaces olive-green when dry, the lower paler, glabrous, margins recurved, 1.5 to 3 in long, .35 to 1 in broad, midrib slender, main nerves about 8 to 10 pairs, obscure, curving acutely upwards to meet an obscure intramarginal nerve reticulations scarcely visible, petiole slender, 1 to 2.5 in long *Cymes* spreading pubescent, 1 to 2 in long and the same broad, branches usually 2 chotomous below, 3 chotomous above, main peduncle variable, reaching 1 in long branch peduncles slender, flexuous often zigzag about 2.5 in long pedicels 1 in, bracts very small, ovate acute, hispidly hairy buds globose flowers pale yellow *Caly* deeply cleft lobes ovate, ciliate on the margins, scarious above, black gland dotted on the claw .05 in long *Corolla* lobes deeply cleft, glabrous, .075 in long obtuse 3 nerved *Corona*-processes very narrow, compressed, with a rounded tooth on the back *Follicles* 2, slender, divaricate in a straight line (180°) or nearly so, 3 in long, 3 in broad acuminate tips slightly incurved, pericarp thin, glabrous, striate *Seeds* ovate spatulate truncate at tip, flattened, submembranous on the margins, bearing a copious white silky coma, .5 in long, .125 in broad testa thin, brown shining *Miq Fl Ind Bat II* 472 *Tylophora maurantha*, Dene Herb Tim Desc in Nouv Ann Mus Se III (1834) 377

10 TOXOCARPUS, Wight & Aitn

Twining shrubs *Leaves* opposite *Flowers* small or moderate sized, in axillary dichotomous paniculate or racemose cymes *Caly* minute, 5 partite, with or without 5 minute scales within at the base

shrub, branchlets brown, striate, with purplish-brown rather stiff pubescence. *Leaves* coriaceous when old, almost membranous when young, ovate oblong or ovate, acuminate at apex, acute at base, both surfaces olive green when dry, rather dull, lower paler, glabrous except on the midrib beneath, margins recurved, 3 to 4 in long, 1 to 1.75 in broad, midrib prominent on the lower, impressed on the upper, surface, main nerves 7 to 8 pairs, pale, raised on the lower surface, starting at an angle of 50° with the midrib and curving upwards to meet in a looped intramarginal nerve, secondary nerves few, reticulations irregular, prominent on the lower surface, petiole 3 to 5 in long, rusty-pubescent. *Cymes* axillary, sessile, densely clothed as in the calyx with purplish-brown pubescence reaching 7.5 to 1 in long, branches few, few flowered bracts minute, deciduous, pedicels about 1 in long, thick buds oblong flowers rather large. *Calyx* lobes ovate oblong, glabrous within, 1 in long, scales 0 or minute, alternate with the lobes within. *Corolla* tube short 1 to 2 in long lobes obovate oblong, glabrous, 3.5 to 5 in long spreading in flower. *Corona* processes flat, truncate much shorter than the anthers when young, when older furnished with an erose tip as long as the anthers, minutely gland-dotted. *Style* apex pyriform clavate, 1 in long the tip conical, bifid, in acuminate lobes. *Follicles* 3 in long 4 to 5 in broad, cylindric, acute, pericarp smooth thick, brown. *Seeds* ovate, flattened, with a shining margin, 6 in long, .25 in broad testa brown thin.

PIRAK *Scottichini* 630 at Lurut Hill, 3000 ft Derry (*Curtis* 2706)

The leaves in the two specimens seem at first to differ considerably but the flowers agree and we believe the difference is merely due to *Scottichini*'s leaves coming from a much older plant.

4 *TOXOCARPUS PINANGIANUS* King & Gumble, n. sp. A slender twining shrub, branchlets pale brown, striate, hispid with ferruginous brown hairs. *Leaves* chartaceous lanceolate or oblanceolate cuspidately acuminate at apex, acuminate to cuneate at base, nearly black, shining and glabrous except on the midrib on the upper surface, pale and glabrous on the lower except on the midrib or main nerves, margins recurved 3.5 to 4.5 in long, 1 to 1.25 in broad, midrib stout, impressed above, raised beneath, main nerves 6 to 8 pairs, irregular but usually at an angle of about 50° with the midrib, slightly curved to meet an intramarginal looped nerve, secondary nerves few, reticulations irregular, prominently netted on the under surface, petiole .25 to .35 in long, bordered by the narrow decurrent margin of the blade, densely rusty pubescent. *Cymes* slender, rusty pubescent, divaricate, reaching 2 in in length and about .4 in in breadth, sessile or very shortly

pedunculate; branches usually dichotomous, slender, bearing clusters of flowers at rather long intervals; bracts minute, subulate, pedicels 0 to .1 in long, buds conical, flowers reddish-brown. *Calyx* hispidly rusty-pubescent, lobes ovate-acute or rounded, .05 in long, gland-dotted. *Corolla* campanulate, tube as long as lobes, lobes ovate, margins incurved, 1 in. long, shortly villous within. *Corona*-processes very small, as long as anthers, bifid at apex. *Style-apex* columnar, clavate when young. *Fruit* not known.

PENANG. at Moniot's road, *Curtis* 2303

5. *TOXOCARPUS LANKAWIENSIS*, King & Gamble, n sp. A slender twining shrub, branchlets thin with brown bark. *Leaves* chartaceous, elliptic, shortly cuspidate-acuminate at apex, rounded at base, both surfaces greyish-green when dry, glabrous except along the midrib beneath, margins slightly recurved, 3 to 3.5 in long, 1.75 to 2 in broad, midrib slender impressed above, raised beneath as are the 5 to 6 pairs of main nerves which start at an angle of 60° with the midrib and curve upwards to join in a looped intramarginal nerve, secondary nerves few, reticulations irregular, petiole slender, .25 to .3 in long, hispid. *Cymes* axillary, sessile, pubescent, .5 to 1 in long, corymbose, the flowers racemously clustered on the branches, bracts persistent, minute, ovate-acute, bracteoles similar, in sheathing pairs to each very short pedicel, buds conical, about .15 in long, flowers yellowish with purple glandular dots. *Calyx*-tube short, .05 in long, lobes ovate-oblong, acute, ciliate, .1 in long, scales 0. *Corolla* campanulate, tube .1 to .15 in long, lobes triangular-acuminate, blunt, irregular, .05 to .1 in long, pubescent within, both with glandular purple dots. *Corona*-processes adherent to the anthers and longer than them, each incurved over the style-apex and with an upturned lobe on the back. *Style-apex* columnar, on a broad annulate base. *Fruit* not known.

KEDAH. Langkawi Island, *Curtis* 2616

11 GONIOSTEMMA, Wight

Slender climbing shrubs with warted bark. *Leaves* opposite. *Flowers* in interpetiolar, lax, many-flowered, paniculate cymes. *Calyx* 5-partite, lobes rounded, with 5 glandular scales at the base within. *Corolla* campanulate-rotate, tube lined by a toothed membrane, lobes overlapping to the left. *Corona* short, thick, the 5 processes combined in a 5-lobed tube adherent to the base of the staminal-column, the lobes triangular, shorter than the column. *Staminal-column* attached to the base of the corolla-tube, fleshy, much shorter than the style, anthers slender; appendages erect around the style-apex, pollen-masses

single or in pairs in each cell attached to minute pollen-carriers without caudicles. *Ovary* of 2 carpels, style-apex 5-angled below, produced above in a long fusiform tip. *Fruit* of 2 follicular mericarps, follicles nearly parallel, thick, lanceolate. *Seeds* large, flattened, broadly winged, cotyledons elliptic, nerved, radicle cylindric — **DISTRIB** One species

GNONOTEMMA ACUMINATUM, Wight Contrib 62 (1834) A slender climbing shrub, stem glabrous, pustular, branchlets with smooth brown bark. *Leaves* somewhat fleshy when green, chartaceous and wrinkled when dry, ovate-oblong, acuminate at apex, cuneate to almost rounded at base, dark green, when dry dark olive green on the upper and pale brown on the lower surface. margins recurved, 3 to 5 in long, 1 to 1.75 in broad, midrib broad, conspicuous and usually pale on the upper, obscure on the lower surface, main nerves very obscure, about 10 to 14 pairs, at about 70° with the midrib, straight to join an obscure intramarginal nerve, secondary nerves many, irregular, reticulations indistinct, petiole slender, .75 to 1.25 in long, channelled above. *Cymes* axillary or terminal, paniculately corymbose, reaching 6 to 7 in in length and 5 to 6 in in breadth, 2 to 3 crotomous. main peduncles slender, 1.5 to 3 in long or sometimes 0, primary branches 1 to 2 in long, remainder smaller by degrees. pedicels slender, 2 in long. bracts minute, acute. flower buds oblong, 2 to 3 in long. flowers cream-coloured. *Calyx* lobes orbicular, .05 in long, ciliate on the margins, gland-dotted near the base, usually with 5 minute scales within, alternate with them. *Corolla* lobes oblong-acute, glabrous, 15 in long, tube 1 in long, lined within by a membrane which ends in 5 triangular acute ciliate teeth. *Style apex* fusiform, 1 in long. *Follicles* thick, recurved so as to lie nearly parallel and nearly meet at the tips, which are slightly hooked. 4 to 6 in long, .75 in broad, pericarp smooth. *Seeds* many, flat, ovate, .75 in long, .25 in broad, ending in a broad flat beak, surmounted by a 2 in long white silky coma. margins winged, testa thin, brown, albumen scanty, cotyledons oblong, 3 nerved, 2 in long, 1 in broad, radicle cylindric, 15 in long. Wall Cat 8242. Dene in DC Prodr VIII 504. *Toxocarpus acuminatus*, Benth in Gen Pl II 747. Hook f Fl Br Ind IV 15.

12. GENIANTHUS, Hook f.

Twining shrubs *Leaves* opposite *Flowers* small, in clusters in axillary, subsimple or dichotomously branched, often racemose or spicate cymes *Calyx* very small, 5-fid, scales 5, between the bases of the lobes within *Corolla* rotate, tube short, lobes narrow, spreading or recurved, villous on the inner face, valvate *Corona* of 5 often lobed processes adnate to the back of the staminal-column and often longer than it *Staminal-column* short, anthers erect, appendages short, around the style-apex and shorter than it, pollen-masses 2 in each cell, rounded, granular, on a small curved pollen-carrier without caudicles *Ovary* of 2 carpels, style thick, style-apex 5-angled below, tip capitate or long and slender *Fruit* of 2 divaricate, thickened, usually obtuse, follicular mericarps, testa thickened, often tomentose *Seeds* large, flattened, winged, with a long silky coma, cotyledons small, radicle cylindric — **DISTRIB** About 6 species, of India and Malaya.

Leaves more or less lanceolate, glabrous or nearly so beneath —

Leaves usually under 3 in long, shortly acuminate; cymes

rarely up to 4 in long, with close flower-clusters ..

1. *G. Maingayi*

Leaves usually over 3 in long, long-acuminate, cymes reach-

ing 6 in in length, with distant flower-clusters ..

2. *G. Ridleyi*

Leaves elliptic ovate or -obovate, ferruginous-tomentose beneath —

Main nerves of leaves at about 50° with the midrib; follicles

densely rufous-velvety

3. *G. rufo velutinus*

Main nerves of leaves nearly at right angles with the midrib;

follicles glabrous

4. *G. Blumei*

1 GENIANTHUS MAINGAYI, Hook f in Fl. Br Ind IV 16 (1883)
A slender climbing shrub, branchlets brown, terete, the uppermost purplish-pubescent, nodes swollen *Leaves* coriaceous, obovate or oblanceolate, shortly acuminate at apex, cuneate at base, greyish-green when dry, the lower surface somewhat paler than the upper, both slightly pubescent when young, margins strongly recurved, 2.5 to 3.5 in long, 1.25 to 1.5 in broad, midrib prominent, with a gland at the base, raised on the lower, impressed on the upper surface, as are the 6 to 7 pairs of main nerves which curve upwards to join a looped intramarginal nerve, secondary nerves few, reticulations few, irregular, rather broad, petiole 2.5 to 5 in. long, twisted. *Cymes* in pairs from the leaf-axils, up to 4 in long, bearing clusters of sessile flowers racemously arranged, rachis angular, purplish-pubescent; bracts minute, ovate-acute, buds clavate, flowers white with a reddish tinge *Calyx* purplish-pubescent without, lobes oblong, obtuse, .05 in. long, with minute scales alternate with them at the base within *Corolla*-

tube short, 0.25 in long, lobes linear-oblong, obtuse, recurved in flower, covered within with yellowish villous hairs. *Corona*-processes 2-lobed, dark, longer than the staminal-column. *Style-apex* clavate, acute, 0.5 in long. *Fruit* not known.

2 **GENIANTHUS RIDLEYI**, King & Gamble, n. sp. A slender twining shrub, branchlets striate, with scattered round tubercles and covered with thick ferruginous pubescence. *Leaves* fleshy when fresh, chartaceous when dry, ovate-oblong or -lanceolate, acuminate at apex, rounded at base, dark olive brown, dull and glabrous on the upper surface, pale and mottled and glabrous on the lower except along the midrib, margins recurved. 3 to 5 in long, 1 to 2 in broad, midrib slender, pale, raised on the lower surface, a cluster of small glands at the base, main nerves 6 to 8 pairs, pale, starting at an angle of about 70° with the midrib and curved upwards to meet in loops near the margin. Secondary nerves irregular reticulations obscure, chiefly transverse. Petiole rusty pubescent, twisted. 5 to 7.5 in long. *Cymus* slender, divaricate, rusty pubescent, racemously paniculate, reaching 6 in in length and 8 in in breadth. Peduncles none or short (up to 5 in long). Branches slender, the flowers in distinct clusters of about 3 to 5 bracts very small, ovate, deciduous, pedicels slender, up to about 1.5 in long. Buds ovoid. *Calyx* tube short, lobes ovate-oblong rounded, 0.5 in long, glabrous within, densely ferruginous villous without. *Corolla* lobes free almost to the base, oblong, bluntly apiculate, recurved in flower, 1.5 in long, covered in the upper half within with a dense white beard. *Corona* processes acuminate, longer than the anthers. *Pollen* carrier gland rounded, bifid, pollen masses obscurely in fours. *Style apex* columnar, 0.75 in long. *Fruit* not known.

PFRANK on Maxwell's Hill *Ridley* 2988 *Scottish* 1172 at Larut, 3000 to 3500 ft. *King's Collector* 2612

3 **GENIANTHUS RUFOVELUTINUS**, King & Gamble, n. sp. A climbing shrub, branches and branchlets stout, densely clothed with soft chocolate brown tomentum, nodes somewhat swollen. *Leaves* coriaceous, elliptic-ovate or -obovate, acuminate at apex, cuneate or attenuate or rounded at base, upper surface shining, glabrous or slightly villous, pubescent on the midrib and main nerves. Lower surface ferruginous villous, especially on the nerves, dull, margins strongly recurved, 4 to 6 in long, 2 to 3 in broad, midrib stout, impressed above, as are the 7 to 9 pairs of main nerves which, leaving the midrib at an angle of about 50°, are at first straight and then curve upwards to join a rather obscure intramarginal looped nerve, also impressed, secondary nerves

few, reticulations transverse, irregular, petiole stout, 75 to 1 in long, densely ferruginous-tomentose *Cymes* densely ferruginous-tomentose, few-branched, on 25 to 5 in long peduncles, reaching 4 in long and broad, branches spicate-paniculate, the flowers in small clusters, sessile or very shortly peduncled, bracts minute, ovate acute, deciduous, buds oblong-conical flowers cream-coloured *Calyx* campanulate, tube short, 0.25 in long lobes ovate, glabrous within, as long as tube, scales between them within 0 or very minute *Corolla*-tube short, 0.5 in long lobes linear oblong, 1 in long, densely white villous within *Corona* adherent to the staminal-column below, free above and longer, each process furnished with an upturned tooth on the back *Stamens* slender, appendages acute, pollen carriers semicircular, pollen-masses 2 to each cell, rounded *Style* apex columnar, ringed at the base *Follucles* divaricate in one straight line cylindric, very obtuse, 4 in long, about 1 in broad pericarp densely covered with chocolate brown soft wool *Seeds* oblong, slightly winged 75 in long, 25 in broad, produced above in a short beak broad at the tip which bears a copious whitish silky coma 2 in long testa thin, albumen scanty cotyledons (immature) oblong radicle stout

PIRAK on large trees in dense forest, *King's Collector* 5611, 6865, 6882

4 **GENIANTHUS BLUMERI**, King & Gamble A climbing shrub branches stout, the size of a swan's quill, brown, rugose, lenticellate, branchlets ferruginous tomentose *Leaves* elliptic-ovate or obovate, shortly acuminate at apex, attenuate when young, rounded when old at base upper surface glabrous except on the midrib, punctulate, lower surface densely ferruginous tomentose when young, less so when old, margins recurved, 3 to 6 in long, 2 to 4 in broad, midrib stout, impressed above, much raised beneath, sometimes with small glands at the base main nerves 7 to 10 pairs, strong, lower ones nearly at right angles to the midrib, upper at about 60°, at first straight, then curved to end along the margin, impressed above, secondary nerves none reticulations netted, obscure, petiole 5 to 75 in long, twisted at base, tomentose *Cymes* subsessile, lateral, up to 3 in long, branches divaricate, bearing sessile clusters of densely tomentose small flowers, buds ovoid *Calyx* lobes ovate, acute, densely ferruginous-pubescent without *Corolla*-lobes very short, white villous within *Corona*-processes ending in a linear truncate ligule *Style*-apex elongate apiculate *Follucles* 2, divaricate in a straight line, cylindric, obtuse tip slightly recurved, 3 to 4 in long, 75 in broad, pericarp very thick, smooth, glabrous *Seeds* ovate, 6 in long, 3 in broad, margin winged, tip truncate, bearing a 2 in long pale brown silky coma, cotyledons cordate, 25 in long, radicle cylindric, 15 in long *Toxocarpus Blumeri*, Dene in DC Prodr VIII

PERAK: at Sungie Larut, Wray 2287, *Scortechini*.—DISTRIB. Java

There is some doubt about this species, due to the only specimen of the Java plant available being very imperfect, while both Wray's and Scortechini's specimens are in fruit only

Tribe III CYNANCHEÆ

Filaments of the stamens connate in a column if present, anthers adnate to the upper part of the style, with membranous appendages. Pollen-contents of each anther cell united in a waxy mass, the pollen masses opaque, attached in pairs to the pollen carriers by short or long caudicles from which they are pendulous in the anther cells. Pollen-carriers turgid, rarely flattened with a dorsal suture, hard and horny, reddish brown to black, attached at the angles of the style-apex.

Corona of 5 processes adnate to the anther column —

Stem erect —

Corona processes laterally compressed, crenately cuneate at base

13 CALOTROPIS

Corona processes cucullate with an interior horn

14 ACETIFLUA

Stem twining —

Flowers large fleshy, corona processes 5 in long, adnate to the column

15 RHAPHISTEMMA

Flowers small thin, corona processes about 1 in long, attached to the base of the column..

16 ICHNOSIEMA

Corona annular, adnate to the base of the column and surrounding it

17 CYNANCHUM

13 CALOTROPIS, Bl

Erect large shrubs or small trees. *Leaves* opposite, broad, subsessile. *Flowers* medium-sized, in umbellate or subracemose pedunculate cymes, arising laterally from the stem between the bases of the leaves. *Calyx* 5 lobed, the lobes with small glandular scales at the base within. *Corolla* broadly campanulate or subrotate, divided more than half-way down in 5 broad valvate lobes which are usually reflexed in flower. *Corona* of 5 laterally compressed fleshy processes, adnate to and standing out as buttresses from the staminal-column, furnished at the base with an upcurved and involute spur, bifid at the apex or with two obtuse auricles. *Stamens* inserted at the base of the corolla, the anthers short, broad, somewhat horny at the angled wings, appendages short, broad, slightly lobed, membranous, inflexed over the style-apex, anther-cells a shallow membranous pouch, pollen-masses solitary, pendulous, flattened, spatulate, attached by slender jointed caudicles to the oblong, somewhat quadrate, pollen-carrier. *Ovary* of 2 distinct cells,

joined in a slender style bearing a depressed pentagonal style-apex
Fruit of 2 large, inflated, fleshy, thick, follicular mericarps. *Seeds* ovate, plano-convex, with broad apex surmounted by a coma of long slender silky hairs.—*DISTRIB* Species 4, of Tropical Asia in India, China, and the Malay Archipelago, one extending into Africa

CALOTROPIS GIGANTEA, Bt in Ait Hort Kew, ed 2, ii 78 (1811)
 A large shrub, sometimes almost a small tree, branches stout, fleshy, with ash-coloured bark, branchlets covered with soft white woolly tomentum. *Leaves* somewhat leathery when green, membranous when dry, elliptic-oblong or obovate-oblong, acute at apex, cordate at base, both surfaces when young covered with very short white cottony tomentum, when old the upper glabrous, the lower glabrescent, 4 to 8 in long, 2 to 4 in broad midrib broad, with a large gland at the base on the upper surface main nerves 6 to 8 pairs, the lowest curved downwards, the rest upwards to and along the margin, reticulations few, not prominent petiole none or extremely short. *Cymes* densely white tomentose, on peduncles 1.5 to 4.5 in long, branches none or few, 1 to 1.5 in long, bearing umbels of 6 to 12 flowers on thick pedicels reaching 1 to 1.25 in long, bracts linear oblong, deciduous buds ovoid, obtuse flowers greyish white with rose or lilac markings, 1 to 1.5 in in diam. *Calyx* lobes ovate acuminate, about 1.5 in long, cottony without, glands usually about 3. *Corolla* lobes ovate lanceolate, acute, reflexed in flower, 2.5 to 5 in long. *Corona* processes 2.5 to 3.5 in long, with obtuse auricles on either side near the apex and much incurved spur at the base the keel puberulous. *Anther* appendages 2 to 3 lobed, short, curved over the style apex. *Ovary* and style 3.5 in long, slender style apex star shaped, flat, 1.5 in broad, the umbo depressed, the horns of the star bearing the pollen-carriers. *Follicles* 3.5 to 5 in long, oblong, broad, thick, fleshy, ventricose, pale yellow or green when fresh, recurved. *Seeds* numerous, 2.5 to 3 in long by 2 in broad, broadly ovate, flattened testa brown, narrowly margined, minutely tomentose, coma 1 to 1.25 in long, cotyledons ovate-cordate, 1.25 in long, radicle .05 in long, ovate, acute. *Hamilt* in Trans Linn Soc XIV 245, *Wight Contrib* 53, and III t 155, 156A, *Dalr & Gibs Bomb Fl* 149, *Brandis For Fl* 331, *Griff Notul* IV 68, and *Le Pl Asiat* t 397, 398, *Dene in DC Prodr* VIII 535, *Bot Reg* t 58, *Miq Fl Ind Bat* II 481, *Hook f Fl Br Ind* IV 17, *Bot Mag* t 6862, *Kurz For Fl* II 200, *Trimen Fl Ceyl* III 148, *Cooke Fl Bomb* II 151, *Plain Beng Plants* 688, *Watt in Kew Bull* 1900, p 8 *Asclepias gigantea* Willd Sp Pl 1264, *Roxb Hort Beng* 20, and *Fl Ind* II 30 "*Eruc*" and "*Bel eruc*," *Rheede Hort Mal* II 52, 56, t 31

A small twining shrub, branchlets rather stout, brown, uppermost minutely puberulous. *Leaves* coriaceous, oblong-lanceolate, acuminate at apex, cordate at base, when young puberulous, when old glabrescent, except on the midrib, margins recurved, 3 to 6 in long, 1.25 to 1.75 in broad, midrib rather stout, keeled above, furnished with a tuft of small glands at the base just above the petiole, main nerves 6 to 7 pairs, acutely curving upwards to join in a looped intramarginal nerve, reticulations obscure, petiole .75 to 1 in long, curved. *Cymes* longer than the petioles, racemose, on .5 to .75 in. long, thickened, many-bracted rachises at the ends of the peduncles, peduncles thick, woody, .5 in long, pedicels 1.5 to 2 in. long, bracts ovate-acute, buds conical, flowers yellow. *Calyx*-lobes ovate-acute, glandular, ciliate, scarious, .05 in long, scales 10, minute. *Corolla* campanulate, broad, tube 1 in long, pubescent within, lobes triangular, ovate-acute, spreading, 1.5 in long. *Corona*-processes attached to the back of the staminal-column at its lower part, thick, fleshy, ligulate, bent in the middle and curving over the top of the staminal-column and style-apex. *Anthers* with a short, membranous, acuminate, incurved appendage, pollen-masses ovoid, attached by slender straight caudicles to the rather large pollen-carriers. *Style*-apex annular, obscurely 5-lobed, the apiculus convex. *Fruit* not known.

PERAK. at Gopong, *King's Collector* 721.

4. *GONGRONEMA WRAYI*, King & Gamble, n sp. A slender twining undershrub, branchlets terete, yellowish, very flexuous. *Leaves* coriaceous, bright green, ovate, bluntly acuminate at apex, rounded and

almost cordate at base, both surfaces glabrous, shining, margins recurved, 2.5 to 4 in long, 1 to 1.75 in broad, midrib stout, impressed above, raised beneath, with a large gland at its base, main nerves 5 to 7 pairs, at about 70° with the midrib, nearly straight at first, then often branched, joining an irregular looped intramarginal nerve, secondary nerves many, similar, but not meeting the sinuses of the intramarginal nerve, reticulations irregular, usually branched towards the midrib, petiole slender, 5 to 7.5 in long. *Cymes* axillary, umbellate, about 5- to 6 flowered, shorter than the petioles, peduncle thick, about 1 in long. *Bracts* triangular, small. *Pedicels* 1 in long, puberulous. *Flower buds* conical. *Flowers* yellow. *Calyx* cup shaped, pubescent without lobes orbicular ciliate, 0.75 in long. *Scales* minute. *Corolla* thick, campanulate almost hypocrateriform tube cylindrical, 1.5 to 2 in long, glabrous on both surfaces. *lobes* triangular, valvate, stellately spreading, nearly as long as tube. *Corona* of 5 erect processes adnate to the backs of the anthers, very fleshy, ovate glabrous dorsally flattened and concave below radially flattened and rounded at apex much longer than the staminal column. *Staminal column* short filament tube nearly free from the corona. *anther cells* parallel appendages scarious, ovate-acute, incurved over the style apex, pollen masses ellipsoid, granular, attached by very slender long curving caudicles to the small conical pollen-carriers. *Style-apex* 5 angled, thick, depressed, with a conical apex. *Fruit* not known.

PERAK at Relun Tujur Wray 2243

22 MARSDENIA, Bl

Climbing rarely erect shrubs or undershrubs. *Leaves* opposite. *Flowers* small or of moderate size in umbelliform cymes or in small sessile umbels or clusters scattered along the branches of the cymes or of panicles, which are lateral at the nodes or axillary. *Calyx* 5 partite with 5 to many glandular scales at the base within, sometimes eglandular. *Corolla* campanulate or urceolate lobes 5 overlapping to the right. *Corona* processes 5, membranous or fleshy, arising from the staminal column, the basal part adnate to it, the apical part free, often of two lobes one above the other. *Staminal column* arising from or near to the base of the corolla. *anthers* erect, with membranous appendages more or less incumbent over the style apex. *pollen masses* erect, solitary in each anther cell, oblong, waxy, attached in pairs by moderately stout caudicles to the ovate horny pollen-carriers. *Ovary* of 2 carpels, style short. *style apex* large, usually more or less hollowed above and then expanding into a convex or conical or depressed tip. *Fruit* of 2 (more usually 1 only by abortion) lanceolate or ponaud

shaped follicular mericarps, pericarp thick, smooth or wrinkled, or sometimes winged. *Seeds* comose.—*DISTRIB* About 70 species in the tropics of both hemispheres, one South European

Plant turning blue in drying, flowers small, in clusters in a thyrsoid panicle, corolla campanulate, lobes short with tufts of hair at the mouth, corona processes subulate acuminate, longer than the anthers

.. 1 *M. tinctoria*

Plant brown when dry, flowers in pedunculate corymbose cymes, corolla tubular campanulate, lobes linear glabrous, corona processes 2 lobed, outer flattened inner acute shorter than the anthers

2 *M. Scottichini*

Plant greenish brown when dry, flowers in clusters in a long spike or raceme corolla urceolate lobes lanceolate, corona processes none or small and then adnate to the anthers

3 *M. thuyasiflora*

Plant greyish when dry, flowers in pedunculate umbels corolla rotate lobes broadly rounded corona processes large round fleshy with an acute beak shorter than or equal to the anthers

4 *M. volubilis*

1 *MARSDENIA TINCTORIA* B. in Mem Wern Soc Edinb I 30 (1808)
A climbing shrub stem stout smooth, branchlets slender, smooth, uppermost pubescent, the whole plant when dry having a bluish black tinge. *Leaves* membranous when dry ovate or ovate oblong shortly and abruptly acuminate sometimes long caudate acuminate at apex, rounded or cordate at base both surfaces finely pubescent when young, afterwards glabrous 3 to 9 in long 1 to 3 in broad midrib slender, usually pubescent furnished above at the base and partly on the petiole with a group or string of small glands main nerves 7 to 8 pairs not conspicuous straight or slightly curved usually at about 50° with the midrib reticulations transverse slender obscure petiole slender puberulous .75 to 1.25 and even 2 in long twisted and curved in the middle. *Cymes* in densely flowered interrupted clusters along or on the branches of a thyrsoid panicle reaching 3 to 6 in in length and 5 to 1 in in diam, grey puberulous peduncles .5 to 1.5 in long pedicels slender .15 in long buds ovate flowers yellow, blue when dry. *Calyx* lobes ovate, pubescent without, ciliate, 3 to 5 nerved, membranous, .05 in long, glandular scales 5 minute. *Corolla* cylindric campanulate tube slightly constricted at mouth, furnished within with 5 lines of retroscissile stiff hairs .075 in long lobes rounded erect or spreading in flower, .025 to .05 in long, each furnished within with a tuft of stiff bristles. *Corona* processes membranous, the apex subulate acuminate longer than the anthers. *Anthers* with membranous incurved appendages pollen-masses oblong, attached by long somewhat clavate

caudicles to the rather small pollen-carrier *Style-apex* annular, 5-rayed the top depressed with a very short umbo *Follicle* 1, pendulous, linear-lanceolate, 3 in long, 5 in in diam, somewhat gibbous at base, acuminate and slightly hooked at tip, pericarp pubescent *Seeds* compressed, ovate, shortly beaked, 5 in long, 25 in broad, with a narrow wing Wight Contrib 40, and Icones t 519, Wall Cat 8173, Griff Notul IV. 52, and Ic Pl Asiat t 389, Dene in DC Prodr VIII 615, Miq Fl Ind Bat II 491, Hook f Fl Br Ind IV 34, Brandis For Fl 332, Kurz For Fl II 201 Prain Beng Plants 696 *M monostachya*, Wall MSS *Asclepias tinctoria*, Roxb Hort Beng 20, and Fl Ind II 43 *Pergularia tinctoria* Spreng Syst I 844 *P parviflora*, Blume Bijch 1056 *Cynanchum tingen*s, Hort Ham

VAR *penangensis*, Hook f in Fl Br Ind IV 43 A climbing shrub, branchlets densely ferruginous tomentose. *Leaves* subcoriaceous, ovate or ovate lanceolate, acuminate at apex, attenuate, rounded, or somewhat cordate at base, both surfaces ferruginous tomentose, the hairs with bulbous bases, 2 to 4 in long, 1 to 1.75 in broad midrib rather stout, main nerves 4 to 6 pairs, curved upwards to and along the margin, reticulations netted, petiole 5 to 7.5 in long, densely tomentose. *Cymes* ferruginous-villous, much branched, 1 to 5 in long, branches dichotomous. flowers in racemiform clusters on enlarged many-bracteate rachises, bracts ovate-acuminate, pedicels very slender, 2.5 to 5 in long. *Calyx* lobes pubescent, very small, 3 in long, ovate-acute. *Corolla* deeply cleft, lobes triangular-ovate, acute, 1 in long. *Corona* of 5 subglobose processes on the backs of the anthers and shorter than them. *Anther*-appendages short, incurved, pollen-masses nearly globose, horizontal, attached by slender slightly curved caudicles to the oblong pollen-carriers. *Style-apex* 5-angled, included within the anthers. *Fruit* not seen. *T. mollissima*, Wall Cat 8202

PENANG *Phillips* at Waterfall stone-quarry, *Curtis* -DISTRIB China? *Wallach* 8202 (cult in Hort Calc)

After examining specimens at Kew, we prefer to leave this plant in its present rather doubtful position, rather than to accept the suggestion in Fl Br Ind that it may be *T. villosa*, Blume, of Java. Its place will probably have to be reconsidered when better specimens are available.

6 *TYLOPHORA WALLICHII*, Hook f Fl Br Ind IV 45 (1883) A slender twining shrub branchlets slender, terete, younger puberulous. Leaves thickly coriaceous when green, chartaceous when dry, ovate lanceolate or ovate-oblong, acuminate at apex, rounded or slightly cordate at base both surfaces glabrous except the nerves beneath when young, margins slightly recurved, 3 to 6 in long, 5 to 2 in broad midrib rather stout, raised beneath, with a few minute glands at the base above the petiole main nerves 6 to 8 pairs, curving upwards to join in a rather obscure intramarginal looped nerve, reticulations transverse obscure petiole slender, puberulous, 75 to 1 in long, articulate at the base. Inflorescence lateral from between the bases of the petioles, often longer than the leaves divaricately branched, subsessile or on peduncles 5 to 75 in long branches slender long, flower-clusters racemose, pubescent with many minute ovate acute sheathing persistent bracts pedicels capillary 3 to 4 in long, pubescent buds globose flowers pale yellow. Calyx membranous lobes ovate-oblong, acute, 5 in long, ciliate, pubescent without scales minute. Corolla rotate campanulate tube 0.5 in long lobes ovate-oblong acute 1 in long, thin 5 nerved. Corona-processes thick, rounded, fleshy, ending in a cuspidately acute point, reaching to the level of the style apex. Lather narrow, appendages very short, pollen-masses very minute, nearly globose, attached by very slender straight caudicles to the minute pollen carriers. Style apex pentagonal top convex. Follicle 1, recurved to the horizontal, 3.5 to 4 in long, 1 in broad, oblong-ellipsoid ventricose, obtuse at the tip, pericarp light green, pale brown and chartaceous when dry and longitudinally striate. Seeds flattened, 5 in long, broadly ovate, with a broad wing, testa brown, shining, tip truncate, bearing a 1 in long white silky coma, cotyledons broadly ovate, 3-nerved, 1.5 to 2 in in diameter, radicle cylindric, 0.75 in long. *Gymnema Wallichii*, in part, Wight Contrib 46. *G. sagittatum*, Wall Cat 8194B.

7 *TYLOPHORA PERAKENSIS*, King & Gamble, n sp A climbing shrub, branches stout, fleshy, branchlets smooth, striate, pale brown

when dry, internodes long *Leaves* membranous when dry, ovate, acuminate at apex, deeply cordate at base, glabrous on both surfaces, 5 to 7 in long, 2 to 3 in broad, midrib slender, raised beneath, bearing a small cluster of glands at the base just above the petiole, main nerves 9 to 10 pairs, the lowest 1 or 2 pairs decurved into the basal lobes, the rest curving upwards to anastomose near the margin in an obscure looped nerve, reticulations few, transverse, prominent when dry, petiole fleshy, glabrous, 1 to 3 in long, articulate at the base *Inflorescence* lateral from between the petioles, as long as or longer than the leaves, divaricately branched, glabrous, peduncles stout, 1 to 1.5 in long, branches long, slender, flower-clusters umbellate, 6 to 8 flowered, bracts minute, usually soon deciduous, pedicels capillary, 1 to 2 in long, buds ovoid, flowers green *Calyx* pubescent without, lobes ovate-acute, 0.75 in long, ciliate, scales subulate *Corolla* campanulate-rotate, tube short, lobes oblong obtuse, 5 nerved, thickened, minutely pubescent above *Corona* processes nearly globose, fleshy, shorter than the anthers, point small, appressed to the anthers, acute *Anthers* slender above, appendages acuminate, incurved, pollen-masses nearly globose, very minute, attached by slender straight caudicles to the minute pollen carriers *Style-apex* pentagonal, top convex *Follicle* 1, ventricose, only slightly recurved, 5 to 6 in long, 1.5 in broad, oblong, very obtuse at tip, pericarp light green and glossy when fresh, chartaceous when dry, striate longitudinally, disseminations fibrous crustaceous *Seeds* flattened, 5 in long, broadly ovate, with a broad wing, testa brown, shining, tip with a .75 in long white silky coma, cotyledons broadly ovate, 3 nerved, 1.5 in long, radicle cylindric, 0.75 in long

PERAK at lower camp, Gunong Batu Pateh, 3400 ft., Wray 1227 in open jungle at 200 to 300 ft., King's Collector 5761, 7178, 8343, at Ipoh, Curtis 3186 — *DISTRIB* Borneo (Teysmann 11578, Motley 625)

This species comes very near to *Walluchii*, but is much larger and more glabrous, has more deeply cordate leaves, a larger inflorescence with umbellate instead of racemose flower clusters, a less beaked corona and longer anther appendages. Curtis No. 3186 has one inflorescence with the flower clusters racemose and the others umbellate, and seems to come between the two species, but in other respects it belongs to this

26. HETEROSTEMMA, W & A

Twining shrubs *Leaves* opposite, often 3 to 5 nerved at the base *Flowers* small, in lateral sessile or pedunculate umbellate or racemose cymes *Calyx* 5-partite *Corolla* campanulate, urceolate or rotate, lobes triangular, valvate or slightly overlapping to the right *Corona*

of 5 thin or fleshy processes spreading more or less horizontally from the staminal-column, usually with an erect tubercle on the upper side, the tips flat or dentate or laciniately cleft. *Staminal column* short, depressed, the anthers minute, ending in a small membranous appendage, pollen masses 1 in each anther cell, subquadrate or rounded, sometimes with a thin margin on the inner side, erect, sessile or attached by very short caudicles to the pollen-carriers. *Ovary* of 2 carpels, distinct or combined, style apex pentagonal, flat, not exerted beyond the anthers. *Fruit* of 2 distinct or adherent slender straight follicular mericarps. *Seeds* thin, winged, comose, the margin recurved.—**DISTRIB** About 10 species, Indian and Malayan.

Corolla rotate-campanulate, corona thin long entire or lacinate, spreading horizontally, leaves truncate or cordate at base .. 1 *H. piperifolium*
Corolla ovoid uiceolate, corona thick, short, much fimbriate, more or less erect, leaves cuneate at base 2 *H. fimbriatum*

1 *HYPEROSTYLMA PIPERIFOLIUM*, King & Gamble, n. sp. A slender twining shrub branchlets pale, terete, slightly channelled when dry, uppermost very minutely puberulous. *Leaves* membranous when dry, 3 to 5 nerved triangular ovate, acuminate at apex, broadly truncate at base sometimes slightly decurrent both surfaces minutely puberulous the lower the most 2.5 to 3.5 in long, 1.5 to 2.5 in broad midrib slender, furnished at the base with 1 or more rather conspicuous glands, main nerves 4 pairs, the lowest 2 pairs from the base, the first pair very small, the second strong and with the others curving upwards to join near the margin, reticulations few, obscure, irregular. *Petiole* slender, twisted 7.5 to 2 in long. *Cymes* few flowered, umbellately racemose, on stout 5 to 7.5 in long peduncles the rachis of the raceme thickened, with minute bracts, pedicels slender, 2.5 in long buds globose, depressed, flowers yellow. *Calyx* lobes ovate, .05 in long ciliate, the margins hyaline, scales minute. *Corolla* rotate campanulate, 3 in broad, puberulous without, the base short at first, then spreading, divided about half-way down, lobes triangular, incurved. *Corona* processes spreading, lying flat on the corolla, 1 in long, linear lanceolate, entire or variously lacinate, the upper part with a slight rounded protuberance or nearly flat. *Staminal column* short appendages membranous, curved over the style-apex, pollen masses erect, waxy, flattened on the inner, curved on the outer edge, sessile on the triangular elongate pollen-carrier. *Carpels* distinct, style apex thin, flattened, 5-gonal. *Follicles* slender, long acuminate, recurved to about 3 right angles, 4 to 5 in long, 1.5 to 2 in broad, pericarp thin, smooth. *Seeds* ovate-oblong, very thin, with broad thin margins, apex bearing a 7.5 in long white silky coma, testa very thin, brown.

PERAK at Kwala Dipang, Ridley 9619, at Larut, 200 to 500 ft, King's Collector 2338, 7973, at Ijuk, *Scortechini* 1097, 1150

At first sight this species closely resembles *H. chrysanthum* (*Symphysocarpus chrysanthus*, Hassk.), but differs completely in the corona and in the very divaricate foliicles

VAR *cordatum*, King & Gamble *Leaves* cordate to a depth of about 4 in, main nerves 5 to 6 pairs, the basal pairs 3, of which the lowest much deflexed in the lobes of the leaf *Corona*-lobes usually entire Rest as in the type

PERAK *Scortechini* Only one rather poor specimen of this is available

2 *HETEROSTEMMA LIMBIATUM*, King & Gamble, n sp A twining shrub stems pale brown, with 2 longitudinal lines of hairs *Leaves* fleshy, chartaceous when dry oblong or oblong lanceolate, acuminate at apex, cuneate at base both surfaces glabrous, lower pale, margins slightly recurved 3.5 to 4.5 in long, 1.5 to 2 in broad, midrib stout raised beneath when dry, furnished with a cluster of rounded glands at the base above the petiole main nerves 5 pairs prominent and raised when dry, with a slender obscure pair in addition from the very base, the second pair from about 2.5 in above the base, all obliquely curved upwards to join in a looped intramarginal nerve, reticulations not visible even when dry petiole stout, 5 to 7.5 in long much curved and swollen at the base *Cymes* racemose, on short (1.5 in) very stout peduncles, the rachises of the racemes about 3 in long, thick, suboblate, with cushion like bracts pedicels slender, angular, 5 in long, puberulous, buds rather large, ovoid orbicular *Calyx* very small, lobes minute, ovate-acute ciliate *Corolla* ovoid urceolate, thick, fleshy pubescent without, glabrous within, 3 to 4 in long, divided at most to one third of its length in triangular lobes slightly overlapping to the right and erect *Corona* processes nearly erect, attached to the staminal-column, thick fimbriate at the tips in 2 rows of subulate teeth *Staminal column* short anther cells rounded appendages very small, membranous, bifid, pollen masses rounded, with a thin straight margin on the inner side, nearly horizontal, sessile on a triangular pollen-carrier *Carpels* distinct, elongate style-apex 5 gonial, tip concave *Fruit* not known

PERAK at G Ijuk, *Scortechini* 1220

Only one rather poor specimen of this is available The plant seems to be an *Omanthus*, but that genus—as suggested by Hooker in the Fl Br Ind and by Bentham in his remarks to Ic Pl t 1191, under *O. urceolatus*, Benth., to which this species is very close—seems scarcely separable from *Heterostemma* In many ways our species strongly resembles *H. alatum*, Wight

27 HOYA, Br

Twining pendulous (rarely erect) or rambling and rooting, often epiphytic, shrubs. *Leaves* opposite, usually thick and fleshy or coriaceous. *Flowers* in axillary, lateral or terminal, umbelliform, racemose cymes, usually on a thickened tuberculate rachis, sessile or pedunculate. *Calyx* small, 5-partite, with 5 glandular scales. *Corolla* rotate or rotate campanulate, fleshy or waxy, lobes 5, often convex or spreading or reflexed, valvate in bud. *Corona*-processes 5, large, fleshy-membranous or horny, adnate to the staminal-column, the lower lobe stellately spreading or ascending, turgid or compressed, often concave on the upper surface, the upper lobe usually produced into a tooth or process which is erect and incumbent on the anther. *Staminal column* usually short, arising from the base of the corolla; anthers conniving over the style apex, membranous, appendages membranous, erect or inflexed; pollen masses 1 in each anther-cell, erect, waxy, usually flattened, often thickened on the outer margin, attached by caudicles of various shapes, usually short, sometimes enlarged thickened or cup-shaped, sometimes long, to the horny hard pollen carriers. *Ovary* of 2 distinct carpels; style apex 5-angled, tip flattened or conical apiculate. *Fruit* of 1 or 2 follicular mericarps, usually slender with a thin pericarp, rarely turgid with a thick one. *Seeds* small, oblong or ovate, comose, cotyledons flattened, thick, radicle cylindrical. **DISTRIB.** About 70 species, found in Tropical Asia and Australia.

Corolla reflexed, lobes longer than broad —

Staminal column stipitate, corona processes with long narrow lobes the upper erect, the lower horizontal with usually upcurved tip (Sect I CYRTOCERAS)

1 *H. multiflora*

Staminal column sessile, corona processes inflated —

Corona processes with lower lobe ovoid, laterally compressed, upper lobe, smaller rounded, erect, corolla tube densely villous (Sect II PTEROSTELMA)

2 *H. lasiantha*

Corona processes with lower lobe globose, hollow, upper shorter curved, corolla tube with a broad annular ring (corolline corona ?) (Sect III HETEROPHORA)

3 *H. curtisii*

Corolla spreading, lobes spreading or incurved, rarely reflexed, broader than long, staminal column sessile or subsessile, corona processes with lower lobes spreading, upper acute (Sect IV EUPHOYA) —

Corona with lower lobes of processes obtuse —

Lower lobes suberect, laterally compressed, leaf nerves horizontal —

Lower lobes rounded, inflated, upper lobes acuminate, veins thick, leaves thick, fleshy, over 4 in long —

Flowers yellow, corolla under 1.5 in in diam .. 4 *H. obtusifolia*

- Flowers dark purple; corolla much over 1·5 in. in diam. 5. *H. imperialis*.
 Lower lobes beaked; upper lobes short, acute; stems slender; leaves thin, under 4 in. long .. 6 *H. elliptica*.
 Lower lobes horizontal or nearly so, flattened above; leaf-nerves usually at an acute angle with the midrib —
 Flowers large, reaching 1·5 in. in diam; leaves velvety pubescent beneath, caudicles of pollen-masses long, slender, twisted .. 7. *H. coronaria*.
 Flowers small, rarely ·5 in. in diam., leaves glabrous beneath, caudicles short, usually thick —
 Lower lobe of corona very thick and blunt vertically, upper short, leaves ovate-lanceolate, cordate, faintly nerved .. 8. *H. Scortechinii*.
 Lower lobe of corona thin vertically, short —
 Leaves obscurely nerved, about 3 to 4 pairs, very thick, lower corona-lobes obtuse; upper long, acuminate, appendages very long acuminate . 9 *H. caudata*
 Leaves prominently 3- to 5-nerved, very thick, peduncles many from the axils, lower corona-lobes concave, obtuse .. 10 *H. latifolia*.
 Leaves not 3-nerved from the base, peduncles usually 1 only at the axils —
 Leaves small; main nerves at right angles to the midrib, indistinct .. 11 *H. lacunosa*
 Leaves moderate-sized, under 4 in. long; elliptic or obovate, main nerves indistinct, at about 60° with the midrib, climber .. 12 *H. diversifolia*.
 Leaves large, over 7 in long, oblanceolate, main nerves prominent, as are reticulations, trailer, epiphytic .. 13 *H. Maingayi*
 Corona with lower lobes of processes acute or nearly so —
 Leaves with nerves easily visible when dry —
 Leaves with 5 basal nerves, the lowest pair faint .. 14 *H. parantica*.
 Leaves pinnately nerved —
 Flowers moderately large, ·5 in. in diam in bud; leaves with not very conspicuous reticulations, folioles with very thick pericarp . 15. *H. coriacea*.
 Flowers small, ·25 in. in diam in bud —
 Leaves large, usually over 5 in in length and 1·5 in. in breadth, main nerves very prominent —
 Main nerves at 40° with the midrib, reticulations prominent, chiefly on upper surface, but not sharp 16. *H. Forbesii*
 Main nerves at 60° with the midrib; reticulations very prominent and sharp on both sides, folioles with thin pericarp .. 17. *H. Finlaysonii*.
 Leaves moderate sized, usually under 5 in. in length and 1·75 in. in breadth; main nerves nearly at right angles to midrib, rather faint on both surfaces . 18 *H. Ridleyi*
 Leaves with nerves not or very faintly visible when dry —

Flowers minute; corolla rarely over 15 in in diameter, pedicels filiform

Leaves lanceolate, margins only slightly recurved 19 *H. parviflora*

Leaves ovate or ovate lanceolate, margins very strongly recurved 20 *H. revoluta*

Flowers moderate sized; corolla 4 in broad, pedicels thick, broadly flattened when dry, leaf margins slightly recurved 21 *H. plicata*

Corolla rotate campanulate, lobes very short, broader than long, corona processes with lower lobes spreading, upper erect (Sect V CYSTIDIANTHUS) —

Flowers rather large, corolla over 1 in broad, leaves rather large, with conspicuous nerves, shrubby, apparently not rooting along the stems 22 *H. campanulata*

Flowers small, corolla 3 in broad, leaves small, with nerves not or scarcely visible, slender, rooting all along the stems 23 *H. Wrayi*

1 HOYA MULTIFLORA, Blume Cat Hort Buit 49 (1823), and Biji 1064. An epiphytic undershrub, rooting from the branches on the bark of trees, branches stout, smooth, pale, glabrous. Leaves coriaceous membranous when dry, oblong or oblong lanceolate, acuminate at apex, acute at base, both surfaces glabrous, more or less shining, margins reflexed. 3 to 8 in long, 1 to 2 in broad, midrib stout raised beneath when dry, main nerves 7 to 10 pairs, the lowest pair faint, close to the margin, the rest curving upwards to and along the margin where they join in loops. Secondary nerves few or none, reticulations transverse, irregular, netted, more obvious on the upper surface, petiole stout, 5 to 75 in long. Umbels racemose, many flowered (40 to 50), on a stout tubercular bracteate nearly globose rachis at the end of an interpetiolar peduncle. Peduncle stout 1 to 2 in long, pedicels slender, 1.5 to 2 in long, flowers white tipped with yellow or yellow tipped with brown, with waxy white corona. Calyx membranous, cleft about two thirds down, lobes oblong, 0.75 in long, scales rounded, flattened. Corolla rotate, completely reflexed when open, tube minutely bearded at base, 2 in long, lobes triangular, 2.5 in long, with small folds in the sinuses. Corona of 5 horny glabrous processes, with erect upper lobes, conical, longer than the anthers and a horizontal or upcurved horn-like lower lobe at the base, each about 1.5 to 2 in long. Staminal column 3 in long, stipitate, anthers erect or slightly inflexed, appendages very small, inflexed, pollen masses oblong, 0.5 in long, with a narrow thin outer margin, attached by short cup-like caudicles to the narrow usually clavate pollen-carriers. Style apex conical apiculate at tip. Follicle 1, slender, pendulous, 7 to 8 in long, 3 in broad, pericarp thin, smooth. Seeds small, oblong, .25 in long, narrowly winged above on both sides, broadly truncate, with a 2 in long white silky coma, testa very thin, brown.

cotyledons oblong, 0.75 in long, radicle cylindric, 0.5 in long Hook f Fl Br Ind IV 52 *H. coriacea*, Lindl Bot Reg 1839, t 18, not of Blume *Cyrtoceras multiflorum*, Benn in Herb Horsf, Miq Fl Ind Bat II 514 *Cyrtoceras reflexum*, Benn in Horsf Pl Jav Rar 90, t 21, Ridley in Trans Linn Soc Ser 2, III 321 *C. floribundum*, Maund Botanist, IV t 178 *Centrostemma multiflorum*, Dene in Ann Sc Nat Ser 2, IX 272, and in DC Prodr VIII 634, Blume Mus Bot Lugd-Bat I 45 Hassk Flor Bot Zeit IX (1845) 250, Bot Mag t 5173 (*Lindleyanum*, Dene in DC l c

2 HOYA LABIANHA, Korthals in Miq Fl Ind Bat II 526 (1856) A climbing and perhaps epiphytic undershrub, branchlets rather stout, smooth, yellowish when dry. Leaves thinly fleshy when fresh, chartaceous when dry, elliptic or lanceolate, cuspidate acuminate at apex, acute or rounded at base, both surfaces glabrous, upper shining, margins slightly recurved, 4 to 6 in long, 1 to 2.5 in broad, midrib slender, impressed above, raised beneath, with a small pit or gland just above the petiole, main nerves prominent, impressed above, 8 to 10 pairs, at an angle of 50° to 60° with the midrib, curving upwards to and along the margin, the upper ones forming a looped intramarginal nerve, reticulations netted most prominent on the upper surface, petiole stout, 5 to 7.5 in long. Umbels 8 to 12-flowered on short tubercular rachises at the ends of stout axillary or lateral peduncles 1 to 3 in long. Pedicels slender, 1.5 to 2 in long, glabrous. Flowers orange yellow with white soft hairs, the corona ochreous yellow, shining. Calyx membranous, hyaline with dark nerves, lobes ovate to nearly orbicular, scales subulate. Corolla about 8 in broad when spread open, tube very short, lobes lanceolate acuminate, densely white villous at the base, recurved in flower. Corona of 5 shining processes, horny when dry, adnate to the lower part of the anthers, the lower lobe ovoid, somewhat laterally flattened, inflated, cleft beneath into two wings, the upper also erect, tongue-like, rounded. Staminal-column moderately long, anthers closely appressed to the upper lobe of the corona, cells slightly divergent, appendages scarious, broad, obtuse, pollen-masses rather long, waxy, flattened, oblong, attached by short, rather thick, cup like caudicles to the conical pollen-carriers. Style-apex 5-angled, tip conical, acumi-

nate *Follicle* 1, slender, 7 in long, about 25 in broad, nearly horizontal, pericarp thin, striate *Seeds* 2 in long, elliptic with a short neck, truncate at tip, bearing a white silky coma 15 in long cotyledons fleshy, elliptic, 1 in long, radicle cylindric, .05 in long N E Brown in Gard Chron XVIII 333 (1882), fig 57 *Plocostemma lasianthum*, Blume in Rumph IV 30, and Mus Bot Lugd Bat I 60, t XIV, Bot Mag t 5081

PERAK *Scortechini* 605 SELANGOR at Semeniyeh, (goodenough for Ridley 8194 —DISTRIB JAVA, Borneo (*Korthals*)

The cultivated specimen imported from Borneo, represented in Bot Mag t 5081, and that collected by Curtis at Wyncoop's Bay, Java, and figured by N E Brown in the Gardeners Chronicle, appear to differ somewhat from the Malay Peninsula specimens in having larger leaves cordate at the base and rather larger flowers. But we fail to find any difference in the structure of the flowers. Another Java specimen (Curtis No 61) which was sent to Messrs Veitch & Co, agrees well with the Peninsular plants

3 HOYA CURTISII, King & Gamble, n sp. A twining small epiphytic undershrub, rooting at almost all the nodes on the bark of trees or on rocks, branchlets slender, pubescent. *Leaves* sessile, very thick orbicular abruptly triangular acuminate at apex, rounded or sometimes very slightly attenuate at base both surfaces scabrous punctulate when dry margin thickened 4 to 7 in long, 4 to 6 in broad midrib when dry faint other nerves invisible petiole none *Umbels* sessile, terminal or axillary, 10 to 16-flowered, on a 25 in long tuberous rachis pedicels slender, pubescent, 75 to 1 in long flowers rather large *Calyx* with very short tube or almost none lobes oblong, ciliate villous without, membranous 1 in long, much recurved scales minute *Corolla* also much recurved, tube very short, with an annular spreading ring (or corolline corona ?) a little above the base, lobes spatulate acute at the tip, minutely scurfy pubescent, 25 in long *Corona* corolline (see above), annular staminal, of 5 cucullate processes nearly globose when closed, but formed of 3 lobes, the two side ones rounded, the upper ovate, the three enclosing a cavity, and the whole corona much overtopping the staminal-column *Staminal column* short and shortly stipitate, attached at the base of the corolla tube, anther coils much divergent appendages ovate, membranous, dentate, pollen masses oblong-obtuse, about .03 in long, attached by oblong fleshy thick caudicles to the conical pollen carriers *Style-aper* shortly 5-angled, somewhat depressed, tip bifid, very short *Fruit* not known

PERAK at Waterloo, 2000 ft, Curtis 2894

4 HOYA OBTUSIFOLIA, Wight Contrib 38 (1834) A climbing (epiphytic ?) shrub, with stout fleshy branches reaching 5 in in diameter

and smooth puberulous bark. *Leaves* very thick, fleshy, oblong, rounded or emarginate and usually apiculate at apex, rounded or cordate at base; both surfaces shining, glabrous except on the midrib, margins recurved, 4 to 6 in. long, 2 to 3 in. broad, midrib very thick, channelled and pubescent above, raised and glabrous or puberulous beneath; nerves visible only when dry and then main nerves seen to be nearly horizontal, about 10 to 12 pairs, soon branching, petiole very thick, 5 to 1 in. long, puberulous. *Umbels* many-flowered, racemose, on thick tubercular rachises .5 to .75 in long and up to about .4 in. in diam., at the ends of thick 1 to 3 in. long puberulous peduncles which are apparently lateral, pedicels rather thick, 1 to 1.5 in. long, puberulous, slightly enlarged below the calyx and dotted, buds 5-angled, acute at tip, .4 in. long, flowers dull yellow. *Calyx* fleshy, lobes linear-oblong, obtuse, recurved, .15 in long, dotted and pubescent without. *Corolla* nearly 1 in in diam when open, pubescent without, glabrous within, lobes ovate-cordate-acuminate, generally erect, .4 in long. *Corona* of 5 processes, the lower lobe suberect, obtuse, inflated, concave above and channelled beneath, the upper erect, longer than the anthers, acuminate. *Staminal-column* short, anther-cells parallel with small divergent wings below, appendages membranous, erect, acute, pollen-masses oblong, rounded, thin on the outer margin, attached by rather long curved caudicles to the rather large conical pollen-carriers. *Style-apex* obscurely 5-angled, obconical, long-apiculate. *Fruit* not known. Wall Cat 8167, Dene. in DC Prodr VIII 638, Hook. f Fl Br Ind. IV. 58 *H. Teysmanniana*, Miq Fl Ind. Bat. II. 522

PENANG: ? *Wallich* 8167. PERAK *Scortechini* PAHANG. *Ridley* 2732. SINGAPORE at Serangoon, on mangrove trees, *Ridley* 8932.—
DISTRIB Tenasserim or Andaman Islands (*Helpe* 3790), Sumatra (*Teysmann* 1170), Java

The colour of the flowers seems to be a little in doubt. *Teysmann* gives it as "white," the Fl. Br Ind. says "dull yellow," *Ridley* says "white with a red centre." It would seem therefore probable that the corolla is white turning yellow and the corona red.

5. HOYA IMPERIALIS, Lindl. in Bot. Reg (1846) under t. 68, *in note*, and in Journ. Hort. Soc. V. 80 *with woodcut* (1850). A stout climbing shrub, rooting on trees and probably epiphytic, branches rounded, dark green, puberulous, punctulate and with papery bark when dry, reaching 5 in. in diam. *Leaves* fleshy or coriaceous, membranous when dry, elliptic or elliptic-oblong, obtuse or shortly acuminate or apiculate at apex, rounded at base or slightly cordate, both surfaces shining when dry,

glabrous above, puberulous or glabrate beneath, margins slightly recurved, 6 to 9 in long, 1.5 to 2.5 in broad, midrib stout and broad, pubescent on both sides, main nerves many, more than 12, but difficult to enumerate, nearly horizontal, at first straight, then branching and anastomosing petiole 2.5 to 5 in long, stout, pubescent. *Umbels* many-flowered (about 10), on short, often strongly tubercular and cushioned, rachises at the ends of stout pubescent axillary peduncles 3 to 10 in long, pedicels stout, pubescent, 2 to 3 in long, buds large, rounded above, produced below in 5 short recurved angles, flowers with corolla dark purplish-brown above, cinnamonaceous beneath, the corona white or pale yellow. *Calyx* membranous, puberulous without, scurfy within, lobes ovate-ovate, 2 in long, scales minute, triangular. *Corolla* leathery, 2 to 3 in diam, the puberulous tube a little shorter than the ovate triangular acute lobes, which are at first much incurved, afterwards spreading. *Corona* of 5 laterally compressed processes the lower lobes erect, obtuse, deeply 2-cleft and pubescent in the clefts, the upper lobes also erect subulate-acuminate. *Staminal-column* short, broad anther-cells broad, appendages membranous, broadly winged, acuminate, pollen-masses flattened, oblong, truncate at both ends, 0.75 in long, attached by short slender caudicles to the thick, trigonous, horny, brown pollen-carriers. *Style apex* pentagonal, the angles rounded below, ridged above, the ridges joining in an acuminate cone. *Follicle* 1, lanceolate acuminate, 8 to 9 in long, 1 in broad pericarp leathery, opening flat, at first puberulous, afterwards glabrous, striate when dry. *Seed*s obovate, flask-shaped, 2 in long, trigonous above, truncate at tip and bearing a silky white coma 2 in long, testa corky, pale brown, albumen copious, cotyledons thick, ovate, cordate at base, 1 in long, radicle 0.75 in long, thick. Hook Bot Mag t 3397, copied in Fl des Serres IV tt 393, 394, Ann de Grand (1848) t 228, Jour Hort Ser 3, XXV 185, Miq Fl Ind Bat II 527, Hook f Fl Br Ind IV 59. *H. splendens*, Maingay MS. *Asclepias Sassuela*, Roxb Fl Ind II 31 (excl. syn.)²

6 **HOYA** **ELLIPTICA**, Hook f in Fl Br Ind IV 58 (1883) A slender twining undershrub, branchlets pale, terete, glabrous. *Leaves* fleshy (?) when fresh, chartaceous when dry, elliptic, obtuse both at apex and base, glabrous on both surfaces and pale, especially beneath, margin hardened, nerve-like, slightly recurved, 1.5 to 2.5 in long, 1 to 1.5 in broad, nerves prominent when dry, midrib slender, main nerves nearly at right angles to the midrib, irregular, 8 to 10 pairs, straight to join a prominent intramarginal looped nerve at 1 to 1.5 in from the

edge, the said intramarginal nerve connected by many cross-nerves with the hardened marginal nerve, reticulations netted, petiole 15 to 25 in long, flattened. *Umbels* racemose, about 8- to 10-flowered, on a short tubercular rachis at the end of a thickened pink peduncle reaching 1 in in length, pedicels slender, 1 to 1.5 in long, puberulous, buds 25 in long, 5-angled, the incurved valvate corolla-lobes forming a central concavity, flowers "white" (Maingay), nearly black when dry. *Calyx* puberulous, pale pink, tube very short lobes ovate-oblong, obtuse, .05 in long, scales minute. *Corolla* 5 in broad when open, glabrous without, sparingly pilose within, lobes obcordate, apiculate, inflexed (when dry). *Corona* of 5 processes, the lower and large lobes suberect, laterally compressed, bladder-like (the interior of the cavity delicately hairy), ovate, slightly apiculate the upper short, flattened, slightly recurved, appressed to and covering the anther. *Staminal-column* attached to the base of the corolla tube, anthers short much inflexed so as to lie nearly horizontal, cells parallel above, divergent and empty below, appendages scarious, acute, pollen masses oblong falcate, pellucid on the outer margin, nearly horizontal, attached by thickened caudicles to the rather large elongate pollen-carriers which are obtuse above and 2-winged below. *Style apex* 5 angled, flattened, with a short central umbo having 5 divergent rays to the angles. *Fruit* not known.

7 HOYA CORONARIA, Blume Bijl 1063 (1825), and Rumph IV 31, t 182, fig 2 and t 184 (fruit). A stout twining shrub, the upper branches giving out roots on to the bark of trees and probably therefore more or less epiphytic. Branches thick, velvety pubescent the innovations especially so. *Leaves* thickly coriaceous, elliptic elliptic ovate or ovate oblong, shortly acuminate at apex, rounded at base upper surface when dry shining, wrinkled, puberulous especially on the midrib lower surface pale brown, velvety pubescent margins strongly recurved 3 to 4 in long, 1 to 2 in broad midrib stout, impressed above, raised beneath main nerves very obscure, about 5 to 7 pairs nearly horizontal, reticulations not visible petiole thick, velvety, 25 to 75 in long. *Umbels* racemose, rather few flowered, on thick rachises with large rounded tubercles 5 to 15 in long, at the ends of thick lateral velvety peduncles 5 to 75 in long, pedicels velvety, curved, thick, 5 to 1 in long, buds depressed at top, the lobes decurved in a hook, flowers large, fleshy, about 1.5 in in diam, greenish-white changing to ivory-white, then apparently to pink which darkens and becomes speckled with purple (Ridley), the corona white. *Calyx* thick, velvety without, lobes orbicular, 15 to 25 in long, scales subulate. *Corolla* very thick, glabrous within, villous without, lobes triangular

acuminate, cordate at base, 4 in long Corona of 5 spreading processes, horny when dry, the lower lobe nearly hemispherical, concave above, convex beneath, about 25 in long, the upper acuminate, curved far over the anthers Staminal-column short, thick, inserted at the base of the corolla-tube, anthers incurved, their cells parallel above, divaricate and empty below, appendages prominent, scarious, ovate-acute, pollen-masses broadly clavate, attached by means of long slender twisted caudicles to the rather large pollen-carriers which are rounded above and bifid below Style-aper circular, saucer shaped, with a small central umbo and 5 slender rays Follicle 1, 6 to 10 in long, 1.5 to .2 in diam, gibbous at base, subcylindric above, ending in an obtuse point, pericarp very thick, puberulous, striate, the endocarp woody and smooth the follicle at length opening nearly flat Seeds obovate, 4 in long, truncate at tip and bearing a copious white silky coma 2 to 2.5 in long, cotyledons elliptic 2 in long, fleshy, radicle cylindric, 1 in long Miq Fl Ind Bat II 517 Hook f Fl Br Ind IV 58, Ridley in Trans Linn Soc 2nd Ser III 321 *H. granuliflora*, Bl MSS, Dene in DC Prodr VIII 635 *H. velutina*, Wight Contrib 35, Wall Cat 8150, Dene l c

We have not quoted Hook Bot Mag 4969, which in some respects seems to represent more nearly *H. obtusifolia* rather than this As in other species, the colour of the flower is either very variable or in doubt Low's drawing in Herb Kew shows pink flowers, while *Scortechini* says they are white, *Kunstler* and *Wray* that they are 'very pale yellow,' and *Maingay* that they are "white or yellowish with purple spots"

8 HOYA SCORTECHINII, King & Gamble, n sp An epiphytic undershrub, rooting at intervals on the bark of trees, branchlets slender, terete, pale brown Leaves thick, fleshy, drying coriaceous, ovate or ovate-lanceolate, acuminate at apex, rounded or cordate at base, both surfaces glabrous, lower minutely glandular, margins recurved, 2 to 3.5 in long, .75 to 1.25 in broad, nerves only visible when dry, midrib thick main nerves 5 to 6 pairs at an angle of 50 to 60 with the midrib, branching early and anastomosing near the margin reticulations transverse, petiole stout, 2 in long Umbels apparently few flowered

on stout (25 in) rachises with small tubercles at the ends of rather long (15 to 4 in) slender peduncles, pedicels slender, 5 to 75 in long, buds hemispheric, 5 angled, flattened above, 25 in in diam. *Calyx* small, lobes ovate, ciliate, membranous, glandular, recurved, 03 in long. *Corolla* 5 to 6 in in diam when open, glabrous without, puberulous within, lobes ovate-acuminate, 2 in. long. *Corona* of 5 processes more or less upturned, lower lobes ovate, thick, very obtuse at tip, with a raised ovate ring above and deeply cleft valves below, upper lobe shorter than the anthers, erect, acute. *Staminal column* short, anther cells slightly divergent, appendages scarious, acuminate, pollen-masses thick, oblong, straight on inner side, attached by short caudicles embracing their base to the rather large conical pollen carrier. *Style-apex* 5-lobed, acute at tip. *Follicles* (immature) 1 or 2 very slender, narrow, pericarp very thin, smooth. *Seeds* small, oblong, truncate at tip with a 75 in long coma.

PENANG John Scott PERAK Scortechini 164, 1557

John Scott's specimen has rather thinner leaves but this is probably only due to youth. His specimen bears no flowers, only young fruit, so we think it best not to couple his name with the species.

9 HOYA CAUDATA, Hook f Fl Br Ind IV 60 (1883). A twining epiphytic shrub, rooting on trees, branches 1 to 2 in thick with corky rugose bark. *Leaves* thick, fleshy, coriaceous when dry, ovate, acuminate at apex, rounded or cordate at base, both surfaces glabrous, sparsely papillose, margins corrugate and recurved, 3 to 7 in long, 2 to 3 in broad, midrib slender, main nerves 3 to 4 pairs, distant, arching, very faint, reticulations not visible. *Petiole* up to 25 in long, very thick, so thick as to appear globose. *Umbels* many flowered on a 5 to 1 in long tuberculate rachis at the end of a thickened 1 in long peduncle, pedicels 5 in long, filiform, flowers white suffused with pink. *Calyx* very membranous, lobes linear lanceolate, glabrous, 05 to 075 in long. *Corolla* 5 to 75 in in diam lobes ovate, long caudate acuminate, silvery-pilose within. *Corona* fleshy lower lobes horizontal, elliptic-ovate, the broadest end outwards, concave above, the upper lobe produced in a long erect subulate spur shorter than the anther tips. *Staminal-column* short, anther wings straight, appendages membranous, long caudate-acuminate, pollen masses flattened, oblong, truncate, attached by cup shaped broad caudicles to the rather narrowly ovate brown pollen-carrier. *Style-apex* 5-angled, with a short conical tip.

MALACCA Maningay (K D) 1128

10 HOYA LATIFOLIA, G Don Gen Hist Diehl Pl IV 127 (1838)

A climbing (probably epiphytic) shrub, branches very stout, smooth lenticellate, giving out slender rootlets occasionally. *Leaves* very thick, fleshy, ovate or oblong-ovate, acute at apex, rounded or cordate at base often slightly peltate, glabrous on both surfaces, dull when dry, margins strongly recurved, shining, 5 to 10 in long, 3 to 7 in broad, midrib with a gland at the base, nerves 3 to 5 from the base, connected at intervals by few irregular cross-nerves, reticulations not otherwise visible, petiole very stout, 25 to 5 in long, articulated to a thick shining cup-like base at the node. *Umbels* racemose, on thick, pitted, up to 1 in long, tubercular rachises at the end of stout 1 to 2 in long peduncles, which are solitary or fascicled in the leaf axils or at the nodes of very long (sometimes 5 ft!) flowering branches, pedicels very slender, puberulous, 25 in long, buds flattened, 5 angular, flowers very small, grey, 35 in broad when open, 15 with the lobes closed. *Calyx* minute, membranous, lobes ovate, acute, 3 in long. *Corolla* small, rotate, pubescent within, lobes ovate, at first incurved over the staminal column afterwards spreading. *Corona* of 5 membranous processes, each consisting of an ovate lower horizontal or slightly upcurved lobe concave above and deeply grooved below, the tip apiculate recurved, and an upper shorter erect lobe with acute tip and a channel behind. *Staminal column* very short anther cells divergent, appendages membranous, acute pollen masses oblong falcate, pellucid on the outer margin, attached by short thick caudicles to the rather large 3 lobed pollen carriers. *Style* apex sharply 5 angled, conical apiculate. *Follicle* 1, very slender, 4 to 4.5 in long, 2 in broad pericarp thin, puberulous. *Seeds* oblong, acute at base, truncate at tip, 25 in long, bearing a white silky coma 1 to 1.25 in long, cotyledons thick, ovate oblong, 1 in long, radicle as long and broad as cotyledons, flattened. *Diagn.* in DC Prodr VIII 638, Miq Fl Ind Bat II 521, Hook f Fl Br Ind IV 57. *H. macrophylla*, Wight Contrib 38, not of Blume. *H. polystachya*, Blume Mus Bot Lugd Bat I 45, t 9. KIDAH Kunstler 1829 PENANG at Waterfall, Curtis PERAK at Sungei Larut, Wray 2273, at Bake Kuran, Scortechini 1626, at Ulu Bubong, King's Collector 10316 MALACCA Griffith, Mangay (K D) 1126, 1132, 1138 PAHANG Praman, near Pekan, Ridley in Trans Linn Soc Ser 2, III 321 SINGAPORE Ridley 1796, 8070 — DISTRIB India (Sikkim, Assam, Sundarbans, Chittagong, Andaman Islands)

Kunstler describes the colour of the flowers as "white with a pink centre" or "waxy white with a purplish tinge," but Wray says it is "pale greenish yellow with a few small spots of crimson" Roxburgh, who had it in cultivation, says the

flowers are "pearl-coloured," and this is what the Fl Br Ind says of the corolla, giving the corona processes as 'white with pink at the junctures' Maingay (MS Notes IV. p 41) says, "petals white, faintly greenish towards the tips, corona white. These remarks, for what seems clearly to be the same plant, explain the difference between Lindley's and Paxton's drawings alluded to in the Fl Br Ind. As remarked in Fl Br Ind, *H. cinnamomifolia*, Hook Bot Mag 4347, from Java, "has very similar flowers and leaves" But for the corolla being green and the corona purple in that fig, we should be inclined to place it under *H. parasitica*

15 HOYA CORIACEA, Blume Bijl 1063 (1826), and Rumph IV t 187 A climbing shrub, nearly glabrous, branches shining, smooth, angled when dry, branchlets pubescent. Leaves coriaceous (Blume) or fleshy (Wight), chartaceous when dry ovate or ovate-lanceolate, acute or acuminate at apex, rounded at base glabrous and more or less shining on both surfaces margins slightly recurved, 3 to 6 in long, 1 to 2.5 in broad midrib slender, raised on the lower surface, sometimes with one or more glands just above the petiole, main nerves distinct, 4 to 6 pairs, at about 40 to 50 with the midrib, straight and then branching and anastomosing with a looped intramarginal nerve reticulations netted, prominent, petiole slender in young leaves, thick in old ones, 25 to 75 in long Umbels racemose, many-flowered (30 to 40), on stout tubercular rachises 25 to 75 in long and 1.5 to 2 in thick at the ends of stout lateral puberulous peduncles 2 to 5 in long, pedicels slender, 75 to 125 in long buds flattened, 5 angled, 5 in broad, 15 in high, flowers straw-coloured, yellow or reddish, the corona white Calyx pubescent without tube short lobe linear, sparsely ciliate, 15 in long, scales minute Corolla 75 in in diam when expanded lobes triangular ovate, acuminate, villous within and grey when dry ("hairs like collapsed hollow tubes" -Wight), at first incurved over the column, at last recurved Corona of 5 spreading processes, shining and horny when dry lower lobes ovoid, acute, inflated, 2 winged below with the wings connivent, upper lobes erect, acute, connivent with but shorter than the anthers Staminal-column short, anther-cells parallel above with divergent empty ones below appendages scarious, ovate-acute, pollen-masses slender, oblong-falcate, straight and thickened on the inner edge, attached by spatulate caudicles with a raised margin above to the very narrow slender pollen carriers Style-apex 5-angled, rather thick, depressed above with a small umbo Follicle 1, 4.5 to 5 in long, 5 to 75 in. broad, lanceolate, obtusely beaked, pericarp very thick, woody, rugose Seeds oblan-ceolate, thick, 25 in long, truncate at tip and bearing a silky coma 1.25 in long, cotyledons elliptic, fleshy, 15 in. long, radicle cylindric, .075 in long Mus Bot.Lugd-Bat I 44, Miq Fl Ind Bat II 521, Dene in DC Prodr VIII 638, Bot Mag t 4518; copied in Fl des

16 HOYA FORBESII, King & Gamble, n sp A climbing shrub,
 rooting on trees and probably epiphytic, branchlets somewhat angular,
 lenticellate, with pale brown shining bark *Leaves* coriaceous when
 dry, elliptic oblong or -obovate, shortly and bluntly acuminate at apex,
 rounded at base upper surface glabrous, shining, lower surface
 minutely papillose, both pale brown when dry margins somewhat
 recurved 4 to 7 in long, 2.5 to 4 in broad midrib strong, much
 raised beneath, bearing on the upper surface a gland just above the
 petiole, main nerves about 7 pairs, irregular but usually at 40° with
 the midrib more or less curved and branching secondary nerves
 frequent, especially near the top between the main nerves reticula-
 tions transverse, irregular, clearly visible only on the upper surface
 petiole very thick, bent, articulate in the middle about 5 in long
Umbels apparently few-flowered, on 7.5 in long rachises with small
 tubercles at the end of short (about 7.5 in) peduncles, pedicels filiform
 5 in long, puberulous buds flattened, 2.5 in in diam, flowers having
 greyish white corollas with purple tips (*Forbes*) *Calyx* membranous
 lobes about twice as long as tube, ovate, ciliate, puberulous without
 no scales *Corolla* 4 in in diam, puberulous without lobes broadly
 triangular ovate acute incurved *Corona* of 5 inflated processes
 closely adnate to the staminal column, lower lobes horizontal, narrow
 oblong, slightly ridged above, 2 valved below, nearly 1 in long, upper
 lobe a minute erect tooth *Staminal column* short, anthers incumbent
 over the style-apex cells divergent, appendages acute, scarious, pollen
 masses flattened, falcate, attached by short straight caudicles to the
 narrow pollen carriers *Style apex* very thin, deeply 5 lobed with a
 conical tip *Fruit* not known

17 HOYA FINLAYSONII, Wight Contrib 38 (1834) A climbing
 shrub stem stout, branchlets pale brown, smooth, lenticellate, flexuose
Leaves coriaceous, thick, hard and tough when dry, ovate or oblong
 lanceolate, obtusely acuminate at apex, more or less rounded at base
 both surfaces at first minutely papillose, afterwards glabrescent or
 dotted, when fresh greenish red above, dark red beneath margins with

a wavy nerve close to the edge, 5 to 7 in long, 1.5 to 2.5 in broad, nerves very prominent and raised on both surfaces when dry, midrib stout, with a large gland just above the petiole, main nerves about 5 to 7 pairs besides the marginal one, at about 60° with the midrib, nearly straight to join a second and prominent looped intramarginal nerve, secondary nerves many, irregular, reticulations irregular, netted, petiole very thick, 2.5 to 5 in long. *Umbels* very many flowered, without any prominent tubercular rachis, peduncles 7.5 to 2 in long, rather slender, pedicels almost capillary, 5 to 7.5 in long, buds 5-angled, hemispheric below, flattened and depressed above, 2.5 in across, flowers with cream-coloured and pink corolla and waxy-white corona. *Calyx* thin, nearly hyaline, with a few brown veins, lobes obtuse, 0.5 in long, pubescent within. *Corolla* 4 in broad when open, pubescent within, lobes triangular ovate acute, usually inflexed. *Corona* of 5 spreading inflated processes, the lower lobes ovate acute, concave at first, afterwards more or less ridged, 2 winged below, the upper lobe erect, short, acute. *Staminal column* short, attached to the top of the corolla-tube, anther cells divergent, appendages short, rounded, scarious, pollen-masses oblong-falcate, obtuse at tip, attached by very short thick caudicles to the conical pollen carriers. *Style-apex* 5 angled, with 5 rays leading to a short apiculus. *Follicle* 1, very slender, 7.5 in long, 2.5 in broad, straight, acuminate, pericarp thin, glabrous, striate. *Seeds* cylindric, 3 in long, acute at base, truncate at tip, and bearing a 1 to 1.5 in long silky coma, testa very thin, brown cotyledons fleshy, lanceolate, 1.5 in long, radicle cylindric, 1 in long. Wall Cat 8166, Dene in DC Prodr VIII 638, Miq Fl Ind Bat II 527, Hook f Fl Br Ind IV 62.

PERAK *Wray* 2724, *King's Collector* 4800 SINGAPORE *Wallich* 8166 DISTRIB Siam? (*Finlayson*)

The specimens in the Kew Herbarium have no flowers, but we see no reason to doubt the identification of the leaves of our specimen.

18 HOYA RIDLEYI, King & Gamble, n. sp. A twining epiphytic undershrub, rooting at intervals on the bark of trees, branchlets pale, terete, lenticellate, rather slender when dry. *Leaves* fleshy, coriaceous when dry, variable, ovate or ovate-oblong or oblong-lanceolate, acute at apex, rounded or narrowed or sometimes cuneate at base, both surfaces glabrous, margins recurved, 3 to 5 in long, 1.25 to 1.75 in broad, midrib slender, faint, as are the nerves generally, even when dry, main nerves about 5 to 6 pairs, the lowest pair starting from the base and curving along the margin, the others nearly at right angles, quickly branching and joining the marginal one, reticulations irregularly

netted; petiole very thick, .25 to .75 in. long, broad at the junction with the blade. *Umbels* many-flowered, on .25 to 1 in. long rachises with small tubercles at the ends of stout lateral peduncles 1 to 4 in. long; pedicels slender, .5 to .75 in. long, buds flattened, .25 in. in diam. *Calyx* papillose without, lobes oblong, acute, .06 in. long; no scales. *Corolla* rugose without, puberulous within; lobes cordate, almost 3-pointed, points acuminate, especially the end one. *Corona* of 5 shining inflated processes; lower lobe horizontal, ovate, sharply acute, concave on the upper surface with a median ridge, 2-valved below, upper lobe on acute erect tooth, shorter than the anthers. *Staminal-column* short, inserted on the tube of the corolla, wings of filaments ear-like, anther-cells divaricate, appendages scarious, acuminate, incurved, pollen-masses flattened, oblong, truncate at top, attached by short thick caudicles to the 3-lobed rounded rather large pollen carriers. *Style-apex* membranous, 5-angled, tip long conical. *Fruit* not known.

Wray No 3962, from Blanda, Mabok Plains Larut is a fruiting specimen which may possibly belong to *H. revoluta* Wight, but the leaves are lanceolate and not ovate, and the flowers are described as yellow instead of pink The following is the description —

A climbing undershrub, branches terete, pale brown *Leaves* fleshy, coriaceous when dry, lanceolate acuminate at apex narrowed at base, glabrous on both surfaces, margins strongly recurved, 1.5 to 2 in long .5 to .75 in broad, midrib and main nerves only very faintly visible when dry the latter curving upwards at an acute angle, petiole very thick, .25 in long on a much enlarged base *Flowers* not seen *Follicle* lanceolate, poniard shaped, acutely angled, .25 in long, .4 in broad, pericarp thick *Seeds* very small, 1 in long, trigonous oblong with a broad truncate apex, bearing a white silky coma 1 to 1.5 in long, testa thin brown albumen rather thick,

cotyledons elliptic 02 in long; radicle 01 in long, flattened perpendicularly to the cotyledons

21 HOYA PLICATA, King & Gamble, n sp A climbing, probably epiphytic, undershrub, branchlets rather stout, terete, yellowish *Leaves* fleshy, coriaceous when dry, ovate-lanceolate, acuminate at apex, acute at base, smooth and glabrous on both surfaces, margins slightly recurved, 3 in long, 1 in broad, midrib very faint and then only when dry, remaining nerves invisible, petiole stout, 25 in long, flattened *Umbels* many-flowered, racemose, on stout tubercular rachises, 25 to 5 in long at the ends of stout 75 to 1 in long peduncles pedicels fleshy, broadly flattened when dry, 1 in long, buds 5-angled, flattened (*alyx* small, lobes ovate, acuminate, hyaline, scales subulate *Corolla* 4 in broad, with a raised 5-angled villous ridge in the tube above the insertion of the staminal column, puberulous on both surfaces lobes triangular, 1 to 15 in long *Corona* of 5 shining horny processes attached to the backs of the anthers lower lobe ovate, obtuse or bifid at apex, with a broad fold on the upper surface upper lobe erect, acuminate, as long as the anthers *Staminal column* short, anther cells parallel, appendages scarious, acuminate, pollen masses flattened, granular, thin on the margin, truncate at top, seated on the face of spatulate horizontal caudicles, which connect them with the rather large lobed pollen-carriers *Style-apex* 5-angled, fleshy, with a short conical apiculus *Fruit* not known

PERAK at Maxwell's Hill, 3000 ft, *Scortechini* 323

22 HOYA CAMPANULATA, Blume Bijdr 1064 (1825) A small twining shrub branches fleshy branchlets pale brown and shining when dry, the bark scaling off *Leaves* fleshy and bright green when fresh coriaceous when dry, elliptic-oblong, acuminate at apex cuneate or attenuate, sometimes rounded at base both surfaces glabrous more or less shining, pale when dry margins recurved 25 to 65 in long, 1 to 25 in broad midrib stout, raised below, impressed above when dry, with a rounded gland at the base above the petiole main nerves 6 to 7 pairs, straight to meet, often at scarcely more than half way to the edge, a prominent (when dry) looped intranigral nerve, secondary nerves few, similar reticulations many, irregular, prominent, and raised above when dry petiole 25 in long, stout *Umbels* about 16 to 20 flowered, peduncles stout, 1 to 2 in long, the bracteate portion 25 to 5 in long, pedicels very slender, 1 to 125 in long, buds globose, depressed flowers cream-coloured (*alyx* lobes membranous, hyaline, subulate *Corolla* glabrous, about 1 to 15 in broad or broader, lobes ciliate, boat-shaped, 6 in long, scales very short, apiculate *Corona* of 5 processes lower lobes of spreading spurs 15 to 2 in long

smooth, shining, horny when dry, upper lobes somewhat similar, erect *Follicles* straight, cylindric, 6 to 8 in long, 2 in broad, pericarp smooth, green with white stripes when fresh *Seeds* oblong, obspathulate, 3 in long, 1 in broad, with a short wing at the base, the tip truncate with a white silky coma 1 to 1.5 in long, testa very thin, smooth, cotyledons oblong, 1.5 in long, radicle cylindric, 1 in long Wall Cat 8171, Dene in DC Prodr VIII 633, Miq Fl Ind Bat II 513, Hook f Fl Bt Ind IV 62 *H. campanulata*, Blume Bijdr 1064, Lendl Bot Reg (1847) t 54, Hook Bot Mag t 4545 *Cystidanthus campanulatus*, Hassk Cat Hort Bog 126, Blume Mus Bot Lugd-Bat I 57, Miq l c 515 *Physostelma Wallichii*, Wight Contrib 40, Wall Cat 8171 Dene in DC l c, Miq l c 513, Hook f Fl Bt Ind IV 62 *P. ? campanulata*, Dene l c

PERAK at Relau Tujoi, Wray 1841, 3139, 4014, 4024, *Scortechini* 171, 336, at Bujong Malacca, Ridley 9712 King's Collector 2587, 3457, 3819 SINGAPORE Wallich 8171 — DISPERSE Sumatra, Java (*Forbes* 416), Borneo (*Haviland* 1971)

A specimen of Forbes's from Sumatra has flowers quite twice as large as those from the Peninsula, but the structure is the same. He says, "Flowers cream white with a flush of rose purple, very fragrant." The description of the follicles is taken from those sent by Wray with his No 1841 but as they are not attached to the plant and we have seen no others for comparison we do not feel quite sure of their identification.

23 HOYA WRAY, King & Gamble, n. sp. A slender creeping epiphytic undershrub, rooting on the branches of trees. Stems slender, very rough when dry. *Leaves* fleshy, thinly coriaceous when dry, lanceolate, obtuse and glandular apiculate at apex, long attenuate at base. Upper surface glabrous smooth, lower minutely papillose, both greyish when dry. Margins recurved, 3.5 to 4 in long, 1 to 1.25 in broad, midrib slender, broadened at base, main nerves very inconspicuous even when dry, about 4 pairs, at about 30° with the midrib. Reticulations not visible, petiole very thick, rugose, jointed at the junction with the blade. *Inflorescence* not seen, rachis minutely tuberculate, pedicels slender, 7.5 to 1 in long, scurfy. *Calyx* hyaline, papillose without, tube short, lobes linear-oblong, 0.5 in long, scales subulate. *Corolla* campanulate rotate, 3 in broad when open, villous within with cellular hairs, margins fimbriate crispate, lobes very short, triangular. *Corona* of 5 processes, attached above the filament tube, horny and yellow when dry, lower lobe a slightly upcurved linear-lanceolate ridged spur, upper similar, erect, dorsally flattened, longer.

than the anthers *Staminal-column* with filament-tube free from the corona, otherwise short, anthers short, cells parallel, appendages scarious, ovate, curved over the style-apex, pollen-masses flattened, oblong, obliquely truncate with membranous margins, attached by broadly inflated cup-like caudicles to the conical pollen-carriers *Style-apex* 5-angled, thick, concave above with a conical apiculus *Fruit* not seen

PERAK at Gunong Batu Pateh, 4300 ft, *Wray* 371

28 DISCHIDIA, Br

Herbs or undershrubs, usually epiphytic, climbing and rooting on trees or pendulous from them, sometimes almost leafless *Leaves* usually opposite, fleshy, sometimes converted into pitchers (*ascidia*), sometimes convex and sessile, rugose or bullate *Flowers* very small, often minute white yellow or red in axillary racemose or umbellate cymes or fascicles the rachis short, thick, tuberculate peduncles stout *Calyx* small, 5 partite, membranous, with 5 glandular scales *Corolla* campanulate tubular or urceolate the tube ovoid or globose or cylindric, the mouth usually contracted, lobes 5, thick, valvate *Corona* staminal, of 5 membranous processes, adrate to the back of the staminal column, erect, the tips entire, notched or bifid or with incurved or recurved arms, sometimes none or replaced by a corolline corona (Subg I CONCHOPHYLLUM) *Staminal column* very short filaments connate in a tube anthers erect, with membranous appendages pollen masses 1 in each cell compressed, waxy, attached by long curved caudicles, usually of cornucopia shape, to the hard oblong pollen carriers, caudicles in *D. coccinea* very short *Ovary* of 2 carpels styles short, style apex flat or with a conical sometimes capitate tip *Fruit* of 2 or 1 small slender or thick acuminate follicles pericarp smooth *Seeds* very small, flask shaped, tipped with a long silky coma

DISTRIB About 50 species in tropical India, the Malay Peninsula and Archipelago, the Philippine Islands, New Guinea and Australia

Staminal corona absent (Subgenus I CONCHOPHYLLUM) —

Corolla with a corona like a toothed hanging fold, leaves of two kinds — (1) orbicular, flattened (2) reniform markedly convex and bullate, under 75 in long and 1 in broad

1 *D. astephana*

Corolla with a corona like a thickened undulate fold, leaves of one kind (so far as known), reniform, slightly convex and bullate, usually over 1 in long and 1.5 in broad

2 *D. depressa*

Staminal corona present, membranous, erect, with incurved or recurved arms (Subgenus II LUDISCHIDIA) —

Leaves sessile, usually reniform, convex above closely applied to the tree trunks or branches (Sect 1 *CORIARIA*) —

Leaves not bullate flowers white tipped with lilac 3 *D. elliptica*

Leaves strongly bullate flowers scarlet tipped with lilac 4 *D. coccinea*

Leaves partly or wholly converted into pitchers (ascidia) (Sect 2 *ASCIDIARIA*) —

Ordinary leaves orbiculate up to 1 in in diam pitchers 2 to 3 in long oblong curved more or less smooth 5 *D. Rafflesiana*

All leaves (so far as known) converted into subreniform compressed rugose pitchers about 2 in in diam 6 *D. complanata*

Leaves normal not (so far as known) converted into pitchers or convex and sessile (Sect 3 *NORMATA*)

Corona processes bifid emarginate or depressed above lobes incurved

Lobes of corona processes narrow

Lobes of corona processes horizontal or incurved leaves thick fleshy linear oblong or spatulate 7 *D. benghalensis*

Lobes of corona processes curved downwards spatulate leaves flat orbicular papillose beneath 8 *D. Nummularia*

Lobes of corona processes broad

Leaves ovate glabrous not lacunose corolla tube merely villous at the throat within 9 *D. alluda*

Leaves ovate often hirsute lacunose corolla tube villous at the throat within and with a ring of hairs half way down also 10 *D. hirsuta*

Corona processes rounded or semilunar above lobes incurved usually somewhat twisted

Corolla tube under 1 in long lobes short glabrous or villous within

Corolla urceolate tube globose lobes villous within leaves lanceolate or ovate lanceolate 2.5 to 4 in long 7.5 to 12 in broad corona processes extremely thin 11 *D. acutifolia*

Corolla campanulate lobes glabrous within leaves ovate 1.5 to 2.5 in long 1 to 1.7 in broad petiole flattened 12 *D. cinctifolia*

Leaves ovate lanceolate 1.5 to 3 in long 7 to 1 in broad petiole not flattened 13 *D. monticola*

Corolla tube over 1 in long lobes elongate villous within —

Corolla urceolate gradually contracted at the throat tube 12 in long leaves ovate lanceolate 2 to 2.5 in long 14 *D. Deschampsii*

Corolla tubular 3 to 4 in long contracted and again slightly swollen leaves ovate or ovate lanceolate 7.5 to 12 in long 15 *D. tubuliflora*

SECTIONS OF WHICH LEAVES ONLY KNOWN

Leaves elliptic or elliptic ovate 1.5 to 3 in long 7.5 to 1 in broad 16 *D. Deschampsii*

1 *DISCHIDIA ASTEPHANA*, Scootchini MS in Herb Cal. A slender creeping epiphytic herb, closely appressed to and rooting on the trunks and branches of trees, stems minutely scabrous-papillose and hirsute. *Leaves* fleshy, sessile, appressed to the stem, dark red beneath, of two kinds (1) orbicular villous, papillose, 25 to 35 in diam, midrib slender main nerves about 2 pairs, very obscure, and (2) reniform, very obtuse, upper surface convex bullate, lower concave with broad pits, papillose with minute annular papillae, strigosely hirsute, 5 to 75 in long, 75 to 1 in broad, nerves visible on the under surface only, irregular, branching, central one (midrib?) thick. *Umbels* few flowered, on a thick tubercular rachis 25 in long at the end of a thick peduncle somewhat shorter pedicels 1 in long, angled, buds 5 angled, conical, 15 in long flowers white. *Calyx* membranous lobes oblong obtuse ciliate, hirsute beneath 05 in long, scales minute. *Corolla* urceolate tube 5 angled, 125 in long, contracted at the mouth furnished within with a ring of stiff hairs below the mouth, and about half way down a corolline corona consisting of a reflexed membranous hanging annular fold with 5 bilobed teeth, otherwise glabrous lobes ovate, 025 in long, erect, pubescent within. *Staminal corona* none. *Staminal column* conical, attached to the base of the corolla tube filament-ring short anther wings horny, large, 2-folded, spreading outwards anthers erect, cells parallel appendages very thin acuminate connivent pollen masses oblong or clavate truncate, granular seated on rather long caudicles with cup like apex which connect them with the large oblong shining pollen carriers. *Style* apic long conical. *Follicle* 1, lanceolate, 125 to 175 in long, acuminate pericarp very thin, opening out flat and 2 keeled placenta membranous. *Seeds* not seen.

PERAK at Bujong Malacca, Scootchini 1897. SELANGOR at Bukit Hitam, Ridley 6570 (in part)

This very interesting species is closely allied to *Onchophyllum imbricatum*, Bl., the "Pustula arborum" of Rumph. Herb. Amb. V. 473 t. 175 fig. 3. Beccari, in Malacca II. 258 maintains Blume's genus *Onchophyllum* characterized by the absence of a staminal corona. As however, in all other respects the species seems to us to bear the characters of *Dischidia*, we have preferred to retain it in that genus as was done by Scootchini whose manuscript description in the Calcutta Herbarium has been followed closely.

2 *DISCHIDIA DEPRESSA* C. B. Clarke, MS in Herb Kew. A slender creeping epiphyte, closely appressed to and rooting on the stems and branches of trees, stems very slender, many rootlets extremely numerous. *Leaves* fleshy, sessile orbicular reniform, flattened or somewhat convex and slightly bullate on the upper surface, glabrous or

very slightly papillose on the lower surface, and with small pits, 1 to 1.25 in long, 1.5 to 1.75 in broad, midrib stout, main nerves 2 to 3 pairs, the lowest pair from the base spreading horizontally, the others slightly acutely and early branching. *Inflorescence* not seen. *Calyx* very thin, hyaline, lobes glabrous, rounded, 0.3 in long, obscurely 3-nerved. *Corolla* urceolate, much depressed, tube when at full length 0.75 in long, glabrous within and furnished in the middle with a 5-lobed undulate fold or corolline corona, the throat closed, with stiff inflexed decumbent shining white hairs, lobes triangular, 0.5 in long, thickened, villous within. *Staminal-corona* none. *Staminal-column* short, pyramidal, anther wings spreading outwards, horny, appendages very thin obtuse, connivent. pollen masses cylindro-clavate attached by cornucopia shaped caudicles as long as themselves to the ellipsoid pollen carriers. *Style-apex* conical, tip capitate. *Fruit* not known.

MALACCA *Mangay* (K D) 1115

3 DISCHIDIA COLYRIS, Wall Cat 4207 (1829). A creeping epiphyte, trailing over and rooting on the stems and branches of trees. stems slender terete rootlets very numerous and spreading. *Leaves* fleshy, coriaceous when dry, sessile orbicular, convex above with reflexed margins, mucronate or not at apex, slightly cordate at base in young leaves. wrinkled above, papillose and often lanose beneath. 1 to 1.5 in in diam, midrib and nerves distinct on the lower surface. midrib stout. main nerves 2 to 3 pairs, nearly at right angles to the midrib, soon branching and spreading. reticulations very few visible. *Umbels* on stout tuberculate rachises in pairs at the ends of short stout clavate peduncles. pedicels very short, slender. flowers white, tipped with pale lilac. *Calyx* membranous, hyaline lobes ovate, ciliate, 0.25 in long. *Corolla* urceolate, tube globose, about 0.5 in long, glabrous on both surfaces, the mouth much contracted, forming a ridge within, lobes triangular, thickened, glabrous, erect. *Corona*-processes 5, very thinly membranous and hyaline, linear, with a spreading emarginate top with incurved broad flattened lobes. *Staminal-column* short, conical, appendages erect, acute, pollen masses oblong, obtuse, seated on cornucopia-shaped flattened caudicles as long as themselves and joined by them to the oblong hard brown pollen-carriers. *Style-apex* pyramidal, tip somewhat capitate. *Follicles* (1 or 2) linear-lanceolate, curved, tip recurved, 2 to 2.5 in long, .25 in broad, base slightly gibbous, pericarp thin, pale brown. *Seeds* cylindrical, 1.5 in long by .025 in broad, base winged and slightly bifid, testa very thin, brown, albumen rather copious, cotyledons ovate, fleshy, .05 in long, radicle cylindric, thick, .075 in long. Hook f Fl Br Ind IV 51. *D. albiflora*, Griff Notul IV 47, and Ic Pl As t 410A, fig 8, Beccari Malesia II 263. *Colyris*

major, Vahl in Trans Nat Hist Soc Copenh VI. 110 Wight Contrib 66 (in part)

MALACCA *Maingay* (K D) 1114 (perhaps also, but doubtfully, K D 1116, with rather large flatter leaves and frequent pustules), *Griffith* 3779 SINGAPORE *Walker*.—DISTRIB Burma (*Wullich* 4207), Java

We do not feel (any more than, apparently, did the author of the Fl Br Ind) quite sure of the identification of Griffith's specimens with those herein described (*Maingay* 1114), but believe that they correctly belong to this plant, representing terminal small leaved sprays *Conchophyllum imbricatum*, Bl Bydr 1061, cannot be this species, as it is described as having no staminal corona processes

4 DISCHIDIA COCCINEA, Griff Notul IV 45 (1854) and Ic Pl Asiat CCCCIX A small creeping epiphyte, trailing over and rooting on the stems and branches of trees, stems slender smooth or pilulose or with rounded warts rootlets very numerous and spreading Leaves fleshy coriaceous when dry, sessile orbicular, convex above, the margins broadly recurved, wrinkled above and with prominent large bullate protuberances pitted below by the protuberances and minutely pilulose, white when young, red when old, 5 to 1 in in diam mid rib and 1 to 2 pairs of branching nerves prominent beneath Umbels about 5 to 6 flowered, on short enlarged rachises at the ends of thick peduncles about 1 in long, the peduncles in pairs in the axils of the leaf-pairs pedicels slender, clavate, 15 to 2 in long, buds broadly conical, flowers scarlet with lilac tips Calyx membranous, hyaline, lobes very small, obtuse, glabrous Corolla uncelolate tube gradually attenuate upwards from an inflated base, 1 in long, slightly puberulous without, glabrous within, with an undulately 5 lobed ridge at a little above half height, lobes triangular ovate, thickened 0.3 in long, glabrous Corona-processes 5, membranous, linear, with an emarginate top bearing broad incurved lobes Staminal-column slender the anther-wings minutely horned, appendages ovate acute, connivent over the style apex, pollen masses oblong, slender, attached by minute cup-shaped caudicles to the ovoid dark brown pollen-carriers Style-apex 5 angled, conical with a subulate capitate tip Follicles (usually 2) about 1 in long, curved and much recurved, rather broad, pericarp crustaceous, smooth Seeds obovoid, 0.5 in long, the base minutely winged, the wing dentate, testa thin, pale brown, albumen scanty, cotyledons very small, 3 to 4 times smaller than the ovoid fleshy radicle Hook f Fl Br Ind IV 51

MALACCA *Maingay* (K D) 1119, *Griffith* 3780 PERAK at 4000 to 1500 feet near Larut, *King's Collector* 3840, 6905, at Gunong Ijuk, *Scortechini* 1185

The chief peculiarity of this species is in its pollen masses being elongate and having very small caudicles, and being therefore quite different from those of any other species we have examined. The Perak specimens have no flowers, and can therefore only be referred here tentatively, but we believe them to be correctly identified.

5 DISCHIDIA RAFFLESIANA, Wall Pl As Bar II 35, t 142 (1831), and Cat 4208. A creeping epiphytic undershrub, milky, much branched, rooting on the trunks and branches of trees and often pendent from them, stems glabrous or slightly pubescent, terete, lower ones as thick as a goosequill. Leaves fleshy, coriaceous when dry, changing into pitchers, orbiculate or ovate-orbiculate, obtuse or mucronate sometimes acuminate at apex, rounded at base, slightly peltate both surfaces glabrous margins recurved, 75 to 1 in in diam, nerves faintly visible beneath midrib slender main nerves about 3 to 4 pairs, the lowest pair from the base and making an intramarginal nerve which the others join petiole stout flat, 15 to 25 in long, sometimes longer, pitchers (*ascidia*) 2 to 5 in long, fleshy, thick, oblong or ovate-oblong, slightly curved, obtuse, gibbous at base, the cavity filled with rootlets from the adjoining node. Umbels about 6 to 8 flowered small, rounded, on a thickened tubercular rachis at the end of a long or short (usually 5 in long) stout peduncle in the axil of the leaves pedicels slender, buds ovoid flowers pale yellow. Calyx membranous, lobes lanceolate, acute ciliate hirsute without. Corolla fleshy unicolour tube ovoid, pubescent without, 15 in long, lobes short, obtuse, villous with somewhat tortuose stiff white hairs within, erect, 05 in long. Corona of 5 processes, attached to the base of the staminal column, each process on a stout base, deeply bilobed lobes spatulate, incurved. Staminal column short, conical, anther-cells parallel, appendages acuminate, erect, membranous, pollen-masses rather long, linear-oblong-spathulate, seated on cup shaped clavate brown caudicles, which attach them to the oblong hardened dark pollen-carriers. Follicle 1, 2 to 3 in long, curved, 3 in broad below the middle, tapering thence to both ends pericarp thin, smooth. Seeds 1 in long, somewhat angled, oblong obovate, narrowly winged on the margin, broadly winged and often dentate at base, truncate at tip, bearing a silky coma 1 in or more long, albumen very scanty, cotyledons elliptic, obtuse, 025 in long radicle 5 in long, cylindric. Scortechini 1135 is probably this species, but the leaves are slightly ovate. The
specimen has no flowers. We cannot separate *D. Gaudichaudii* even by the retrorse
hairs in the throat of the corolla for the character is most difficult to be sure
about in such minute flowers and otherwise there seems to be no point of difference.

9 DISCHIDIA ALBIDA, Griff Notul IV 46 (1854) A slender twining
epiphytic herb or undershrub, rooting on the trunks and branches of
trees, stems very slender, scabrid puberulous or glabrous. *Leaves*
fleshy, coriaceous when dry ovate acute and mucronate at apex,
rounded or cordate and slightly peltate at base, glabrous and shining
on both surfaces margins slightly recurved, 5 to 75 in long, 1 in
broad nerves very faint when dry, midrib slender, main nerves 3 to
4 pairs, the lowest pair opposite starting from the base and forming an
intramarginal looped nerve up to the apex, the remaining 2 to 3 pairs
nearly horizontal joining the intramarginal nerve at the sinuses of the
loops reticulations few netted petiole stout, 1 to 15 in long, puberu-
lous. *Umbels* few flowered, on minutely tubercular, more or less thick
and elongated, rachises at the ends of 5 to 75 in long rather stout
peduncles, pedicels none or very slender, up to 06 in long, buds
ovoid, acute flowers white tipped with pink. *Calyx* membranous,
lobes ovate acute, 04 in long scales minute. *Corolla* unicolate, tube
ovate globose, 15 in long, white-villous at the throat lobes triangular,
erect, very small, with thickened margins. *Corona* very small, mem-
branous, of 5 processes attached to the base of the staminal column,
linear bifid, the lobes broad, flat, recurved. *Staminal-column* rather
long, obconic below, conic above base with a rounded protuberance,
anther-wings prominent, anther-cells parallel, appendages acuminate,
pollen-masses ellipsoid, granular, seated on cornucopia like flattened
caudicles as long as themselves, which connect them with the ovoid-
oblong rather large brown pollen-carriers. *Style apex* with conical tip.

11 *DISCHIDIA ACUTIFOLIA*, Maingay MS, Hook f Fl Br Ind IV 51 (1883) A slender twining epiphytic undershrub, rather distantly rooting on the stems and branches of trees, stems terete, glabrous, striate when dry. *Leaves* coriaceous, pergamaceous when dry, lanceolate or ovate-lanceolate shining and glabrous on both surfaces, margins recurved, 2.5 to 4 in long, .75 to 1.25 in broad, midrib slender, impressed above when dry. main nerves 6 to 8 pairs, the lowest pair close to the lower margin, all at from 40° to 60° with the midrib, straight or curving to join an intramarginal looped nerve, reticulations netted, petiole stout, .25 in long. *Umbels* few-flowered, in pairs on thickened rachises at the ends of .5 to 1.5 in long peduncles, pedicels very short, buds conical flowers pale yellow with pink tips. *Calyx* very thin membranous, hyaline lobes ovate acute, .025 in long. *Corolla* uiceolate tube globose, .05 in long, throat with a row of usually erect stiff hairs lobes as long villous within, triangular, acute, thickened. *Corona* of 5 exceedingly thin membranous hyaline processes, stem subulate from a broad base top obtuse, rounded, with 2 rather short spatulate recurved arms. *Staminal column* somewhat elongate, filament portion membranous, anther wings rounded appendages crenate with erect acuminate tips pollen masses oblong truncate, on cornucopia shaped curved caudicles as long as themselves, and connected by them to the very slender lanceolate brown pollen carriers. *Style* apex pyramidal. *Fruit* not known.

PIRAK *Scortechini* MALACCA *Maingay* (K D) 1122

We were only able to dissect one flower and that with some difficulty. In his MS notes (Vol IV pp 48-67) Maingay says: "Leaves of staminal corona minute so closely adpressed to the anthers that I question if in dried specimens of so minute a plant (flower?) they could be discoverable at all obtuse with short brachia. The corona processes are in fact, excessively thin, but they can be separated with care."

12 *DISCHIDIA CORDIFOLIA*, King & Gamble, n. sp. A creeping epiphytic undershrub, rooting on the trunks and branches of trees, stems about as thick as a crowquill terete internodes long. *Leaves* fleshy, thinly coriaceous when dry ovate, bluntly acute at apex, rounded or slightly cordate at base both surfaces glabrous, margins slightly recurved 1.5 to 2.5 in long, .1 to 1.75 in broad 5 to 7-nerved at the base midrib slender marginal pair of nerves very short and faint, second pair curving up to about half the length of the leaf, third pair at an angle of about 30° with the midrib, curving near the margins to form an intramarginal nerve rejoining the midrib a little below the tip, other main nerves none secondary nerves about 2 pairs, reticulations irregularly netted, petiole .5 in long, broad, flattened. *Umbels* few flowered, in pairs on tubercular rachises about .15 in long at the ends of stout

peduncles 5 in long pedicels very short, slender, buds ovoid *Calyx* membranous, lobes ovate-acute, 05 in long, scales small *Corolla* campanulate, tube 1 in long, glabrous on both sides, lobes 075 in long, thickened, glabrous *Corona* of 5 very thin hyaline processes, about 04 in long from the back of the anthers between the wings, linear-stalked with orbicular rounded tops and sagittate lobes *Staminal-column* attached to the base of the corolla-tube filament part short, anther cells parallel, appendages short, acute, pollen-masses ellipsoid, on caudicles nearly as long as themselves, which attach them to the narrowly oblong pollen-carriers, the caudicles curved upwards to a cup like oblique mouth, and broadly membranously winged on the inside *Style apex* short, blunt *Fruit* not known

PERAK at Maxwell's Hill, 3000 ft, *Scortechini* 424, 516

13 DISCHIDIA MONTICOLA, King & Gamble, n sp A trailing epiphytic undershrub, rooting at intervals on the trunks and branches of trees stems slender, terete, internodes long *Leaves* fleshy, thinly coriaceous when dry, ovate or ovate lanceolate, acuminate at apex, rounded or attenuate at base both surfaces glabrous, margins slightly recurved 15 to 35 in long, 75 to 1 in broad 5 nerved, the midrib slender outer pair of basal nerves short, reaching about the middle of the leaf, second pair at an angle of about 20 with the midrib, forming a looped intramarginal nerve till close to the midrib, main nerves 2 to 3 pairs, short, inconspicuous, joining the midrib to the sinuses of the looped nerve, reticulations netted, irregular petiole 25 in long somewhat twisted *Umbels* few-flowered (?), in pairs on tubercular rachises 2 to 3 in long at the end of a 75 to 175 in long straight lateral peduncle pedicels very short, slender, buds ovoid, flowers pale green (Wray) *Calyx* membranous lobes ovate acute, puberulous without, 05 in long scales rather large *Corolla* campanulate, 125 in long, tube glabrous, lobes also glabrous, thickened, scarcely over 025 in long *Corona* of 5 very thin membranous processes, each linear stalked with a rounded bluntly sagittate head *Staminal column* short, anther wings broad, anther cells parallel, appendages very long-acuminate, pollen-masses ellipsoid, on cornucopia shaped caudicles as long as themselves, which connect them to the slender oblong pollen carriers *Style-apex* with a short conical tip *Fruit* not known

PERAK at camp on Ulu Batang Padong, 4900 feet, Wray 1503, on Canfield's Hill, 4000 feet, *Scortechini* 423, &c

Scortechini has marked his specimens '*D sagittata*, Dene,' but they do not agree at all well with the descriptions in DC Prodr VIII 631 There are no specimens of *D sagittata* in the Kew Herbarium, but the descriptions give the leaves as obtuse at apex and attenuate into the petiole at base, which hardly suits

D. monticola. In the glabrous flowers *D. monticola* and *D. cordifolia* come very near to each other.

14 DISCHIDIA SCORTECHINII, King & Gamble, n sp A slender glabrous creeping epiphytic undershrub, sparingly rooting on and often pendulous from the trunks and branches of trees, stems terete, internodes long, 2 to 4 in or more Leaves fleshy, pergamaceous when dry, ovate-lanceolate, attenuately acuminate at apex, rounded at base, glabrous on both surfaces, 2 to 2.5 in long, about .5 in broad 3- to 5-nerved, midrib slender, raised beneath, sometimes with a gland at the base, lowest pair of nerves short and faint, next pair prominent forming an intramarginal looped nerve 1 to 1.5 in from the midrib nearly or quite to the tip, main nerves about 4 to 5 pairs, leaving the midrib at nearly right angles, and joining the intramarginal nerve at the loop-sinuses reticulations netted petiole 1.5 to 2 in long, rugose Umbels few (5 to 6) flowered on short rounded tubercular thick rachises at the ends of stout axillary 3 in long peduncles pedicels reddish, slender, .05 in long buds lanceolate ovoid, 1.5 to 2 in long flowers white tipped with scarlet Calyx membranous lobes ovate acute, .05 in long slightly puberulous without scales very minute Corolla unicolate tube ovoid, glabrous without, pubescent above within, 1.25 in long throat gradually contracted lobes erect, 1 in long, thickly villous within, especially in their lower half Corona of 5 exceedingly thin membranous processes, attached to the backs of the anther part of the column, each process on a narrow base, soon spreading into a rounded obtusely sagittate tip Staminal column rather long filament portion free anther wings broad shining, horny anther-cells parallel, with acuminate, erect, connivent, membranous appendages pollen masses oblong ellipsoid, attached by slender caudicles as long as themselves to the very narrow slender pollen carriers the caudicle cornucopia shaped, with a narrow membranous wing on the inside edge Style apex long conical, membranous Pollen not known

PIRAK *Scortechinii* 543

We at first thought that this was *D. lanceolata* Dene (*Leptostemma lanceolatum*, Bl Hydr 1857), but in that species the bases of the leaves are markedly attenuate into the broad flat petiole, and the venation is more strongly 3 to 5 nerved

15 DISCHIDIA TUBULIFLORA, King & Gamble n sp A slender creeping epiphytic undershrub, rooting on the trunk and branches of trees, stems wiry, puberulous Leaves fleshy coriaceous when dry, ovate or ovate-lanceolate, acute or acuminate at apex, rounded at base glabrous on both surfaces, shining above and wrinkled when dry margins recurved, .75 to 1.25 in long, 3 to 6 in broad, nerves only

clear on under-surface when dry; midrib slender, with usually a gland at the base above; main nerves 3 to 5 pairs, acutely curved to join in a looped intramarginal nerve; petiole .1 to .25 in. long, pubescent. *Umbels* few-flowered, on a cylindrical tubercular rachis about .25 in. long at the end of a thick .15 in. long peduncle, buds slender, cylindric-clavate, reaching 4 to .5 in. long. *Calyx* membranous; lobes ovate-acute, .05 in. long, pubescent without. *Corolla* tubular, urceolately inflated below, then contracted in a neck having a small swelling in the middle; glabrous without, glabrous within, except a densely villous ring at the swelling, tube 3 to .4 in. long; lobes linear, erect, .1 to .15 in. long, villous within. *Corona* of 5 exceedingly thin hyaline processes, which are inserted between the anther-wings, have narrow stalks, and are broadly rounded above and sagittate below. *Staminal-column* elongated, filament part cylindric, .075 in. long, anther-wings horny, tailed at base, anther-cells parallel, with long-acuminate erect connivent appendages, pollen-masses oblong-ellipsoid, on slender caudicles as long as themselves, and connecting them with the ovoid-acute pollen-carriers, the caudicles cornucopia-shaped, and having a hyaline inner margin. *Style-apex* long, subulato-acuminate. *Follicle* 1, slender, curved, 2 in. long, 1 in. broad, acuminate at tip, pericarp thin, strate, glabrous. *Seeds* minute, linear, .1 in. long, tipped with a white silky coma, testa thin, pale.

PERAK *Scortechium* 256, 465, *King's Collector* 2100

The description is from *Scortechium* 465, the only specimen with flowers and fruit, and the only one, consequently, quite certain

SPECIES OF WHICH LEAVES ONLY KNOWN

16 *DISCHIDIA DESCHAMPSII*, King & Gamble, n. sp. A twining apparently epiphytic undershrub, rooting on the stems and branches of trees, branches slender, terete. *Leaves* coriaceous, elliptic or elliptic-ovate, bluntly acute at apex, somewhat rounded at base, glabrous on both surfaces and somewhat shining, margins recurved, 1.5 to 3 in. long, .75 to 1 in. broad, midrib slender, raised beneath when dry, main nerves about 5 pairs, the lowest pair from the base forming a looped intramarginal nerve, which is joined at its sinuses by the others, which are at an angle of about 70° with the midrib, reticulations irregular, prominent, all raised on both surfaces when dry, petiole thick, .15 to .25 in. long. *Umbels* on thickened rachises often 5 to 7.5 in. long, at the ends of stout peduncles about 1 in. long. *Flowers* and *Fruit* unknown.

SINGAPORE roadsides, *Deschamps*

5 FAGRAA Thunb

Trees or shrubs, often epiphytic, sometimes scandent. *Leaves* opposite, entire (crenulate in *F. crenulata*) petioles dilated at the base or united by a stipular sheath. *Cymes* terminal or axillary, corymbose racemose or paniculate, bracts small. *Flowers* large or small, white or yellowish, rarely pink. *Calyx* deeply 5 fid its lobes thick, broad, much imbricate. *Corolla tube* narrow or funnel shaped sometimes much elongate lobes of its limb broad twisted to the left in bud. *Stamens* 5 anthers oblong on slender filaments. *Ovary* 2 celled, or 1 celled above style filiform stigma capitate ovules numerous in each cell. *Berry* 1 to 2 celled. *Seeds* numerous immersed in pulp, testa crustaceous albumen horny embryo small, straight—*DISTRIBUTION* About 50 species, in India China, Japan Malaya Australia and the Pacific Islands

Cymes few flowered solitary sessile or nearly so —

Flowers 3 to 6 in long —

Corolla salver shaped its tube narrowly cylindric very little dilated at the throat —

Tube of corolla nearly 3 in long and only about 1 in in diam, limb less than 1 in across

1 *F. tubulosa*

Tube of corolla 4 in long and 35 in in diam limb more than 2 in across

2 *F. canosa*

Corolla funnel shaped from near the base —

Corolla 6 in long

3 *F. auriculata*

Corolla 35 in long

4 *F. Curtisii*

Flowers 125 to 25 in long —

Limb of corolla 1 in across, stamens only slightly exerted —

Corolla lobes oblong blunt, fruit elliptic ovoid, leaves

3 to 5 in long and 1 to 225 in broad

5 *F. obovata*

Corolla lobes rotund oblong fruit globose crowned by the remains of a stout style, leaves 2 to 4 in long and

1 to 175 in broad

6 *F. lincolnata*

Limb of corolla about 75 in across stamens much exerted

7 *F. Walluchiana*

Cymes few flowered but numerous arranged in long usually pedunculate sometimes interrupted terminal racemes

Flowers 2 in long corolla widely funnel shaped, its limb 15 in across

8 *F. Muirgayi*

Flowers 1 to 125 in long corolla widely funnel shaped, the limb 75 to 9 in across

9 *F. racemosa*

Cyme solitary on the apex of a short, slender, terminal or axillary peduncle, flowers 115 in long, corolla narrowly funnel shaped, its limb about 75 in across

10 *F. ligustrina*

Cymes spreading corymbose many flowered —

Flowers 15 to 2 in long stamens slightly exerted —

Leaves crenulate 7 to 12 in long, flowers 15 in long

11 *F. crenulata*

Leaves entire, 5 to 9 in long, flowers 2 in long

12 *F. vaginata*

Flowers 5 in long stamens much exerted

13 *F. fragrans*

SPECIES INDIRECTLY KNOWN

Leaves broadly obovate, very coriaceous, fruit 2 in or more in length, ovoid apiculate 14 *F. Ridleyi*

Leaves elliptic oblong, thin when dry, fruit narrowly ovoid tapered to the base, crowned by the remains of the thick style . 15 *F. oblonga*

1 *FAGRÆA TUBULOSA*, Blume Mus Bot Lugd -Bat I 167 (1850) A straggling, glabrous, climbing shrub branches half as thick as a goose quill, terete, pale, sending out rootlets at intervals on the bark of trees. *Leaves* thinly coriaceous, oblong elliptic, shortly abruptly acuminate, the base cuneate, both surfaces pale yellowish green, and dull when dry, main nerves 5 or 6 pairs, inconspicuous on both surfaces, midrib conspicuous length 4 to 8 in, breadth 1.75 to 2.5 in, petiole 8 to 1 in long. *Flowers* about 3 in long, sessile, 3 or 4 crowded in a sessile glomerulus at the apex of a branch, with a subcampanulate bract, 1.5 in long, at the base of each. *Calyx* 4 in long, fleshy, tubular, the mouth with 5 short broad, imbricate teeth. *Corolla* 3 in long, salver-shaped, the tube slender, cylindric, very slightly wider at the throat, 1 in in diam, limb divided to its base into 5 oblong oblanceolate lobes 4.5 in long. *Stamens* attached near the mouth of the tube and slightly exserted beyond it. *Ovary* narrowly ellipsoid, tapering into a glabrous style about as long as the corolla, stigma capitate. *Fruit* unknown. 1028, 1030, 1031, *Derry* 1012 JOHORE *Ridley* 6312—DISTRIB Malay Archipelago, British India

Following Mr Clarke in Hooker's 'Flora of British India, we have reduced to *F. obovata*, Wall, not only the forms which have received specific names as above quoted, but also those found in British India, there being no constant characters that we can discover to separate them. Some of the specimens from India have however, longer flowers, and the main nerves of their leaves are more distinct than in the majority of Malayan specimens.

6 *FAGRÆA LANCEOLATA*, Blume Bijdr 1021 (1826) Scandent, 30 to 40 ft long, glabrous young branches about as thick as a goosequill, the nodes close together, cinereous when dry. *Leaves* coriaceous, oblong oblanceolate, subacute, the base much narrowed, both surfaces very dark cinereous when dry, main nerves invisible, midrib bold on the lower surface, faint on the upper, length 2.5 to 4.5 in, breadth 1 to 1.75 in, petiole .35 to .5 in long. *Flowers* terminal, pedunculate, solitary or in pairs or in threes, then peduncles subclavate, about 3 in long, bracteolate at the apex, and sometimes with larger bracts at the base. *Calyx* 5 in long, obconic, 5 lobed the lobes coriaceous, fleshy below, rounded, with membranous margins. *Corolla* 3 in long, funnel-shaped, the lobes of the limb spreading, oblong-rotund. *Stamens* 5, exerted. *Anthers* oblong, obtuse, dorsifixed, filaments slender. *Ovary* ovoid, style filiform. *Fruit* obovoid, globose, smooth, shining, nearly 1.5 in in diam, crowned by a short stout fragment of the style, the calyx at its base with 5 subrotund lobes .45 in broad and with broad scarious edges. Blume Rumph II 31, t 77, and Mus Bot Lugd Bat I 167, Miq Fl Ind Bat II 376.

6 STRYCHNOS, Linn

Trees or scandent shrubs, usually with short, axillary, clavate tendrils *Leaves* opposite, with 3 to 5 or more ribs starting at or a little above the base, other nerves less conspicuous *Flowers* usually white or yellowish, in terminal or axillary, usually corymbosely paniculate, cymes, bracts and bracteoles small *Calyx* small, 5- or 4-partite *Corolla* hypocrateriform or campanulate, lobes 5 or 4, valvate *Stamens* 5 or 4, inserted at the throat of the corolla-tube or below it, filaments short, filiform, anthers ovate or oblong, with distinct parallel cells

Ovary 2-celled (or 1 celled in the upper part) ovules many in each cell, style long or short, stigma capitate or obscurely 2 lobed *Fruit* a berry, usually globose, indehiscent, with a hardened pericarp *Seeds* many, or by abortion 1 to 2 only, immersed in pulp, variously compressed, or if solitary globose, the hilum ventral albumen usually copious, generally horny, embryo short, with flattened foliaceous cotyledons and short terete radicle *DISTRIB* Tropical and subtropical regions of both hemispheres, species about 100

In describing the characteristic leaves of this genus we have distinguished between the prominent ' ribs and the less conspicuous nerves

Corolla tube shorter than the lobes, berry usually small, seeds very few —

Corolla tube scarcely any at most 0.25 in long tawny villous within leaves elliptic 1 *S. Maingayi*

Corolla tube about 0.5 to 1 in long —

Corolla lobes about 1.5 to 2 in stamens glabrous inserted at the top of the tube leaves ovate 2 *S. Curtisi*

Corolla lobes about 0.75 in stamens villous inserted at the middle of the tube, leaves elliptic ovate or oblong 3 *S. laurina*

Corolla tube equal to or nearly equal to the lobes berry small, seeds few —

Corolla tube and lobes together less than 1.25 in long, leaves chartaceous, ovary rounded glabrous —

Corolla tube and lobes glabrous on both sides, stamens inserted a little above the base of the tube, leaves glabrous brown when dry 4 *S. ovatifolia*

Corolla tube and lobes sparsely villous without tube glabrous and lobes slightly villous within, stamens inserted at the throat of the tube leaves glabrous yellowish green when dry 5 *S. flavescens*

Corolla tube and lobes glabrous on both sides but lobes within with a dense tuft of bristles at the base, stamens inserted at about two thirds of tube leaves softly pubescent 6 *S. rufa*

Corolla tube and lobes 1.25 to 2.5 in long leaves more or less coriaceous —

Stamens inserted at the top of the tube —

Ovary glabrous, corolla lobes within furnished with a dense tuft of bristles at the base, leaves 3 to 5 ribbed 7 *S. malaccensis*

Ovary villous, corolla lobes within villous tufted, leaves 5 to 7 ribbed 8 *S. septemneris*

Stamens inserted at the middle of the tube —

Lobes of corolla glabrous within behind a dense tuft of bristles, leaves usually 5 ribbed, more or less pubescent 9 *S. pubescens*

Lobes of corolla villous within behind a dense tuft of bristles leaves 3 ribbed, nearly or quite glabrous 10 *S. Ridleyi*

principal pair of ribs at the loop sinuses, secondary nerves few, branching, reticulations many, in an elegant network, inconspicuous, petiole 2 to 3 in long, channelled above. *Cymes* pubescent, in rather short axillary sessile corymbs, or in elongate terminal panicles reaching 5 in in length, rachises angular, bracteoles ovate-acute, ciliate, flowers very numerous, the buds obovoid. *Calyx* very small, tube short, lobes ovate-obtuse, ciliate, 0.3 to 0.5 in long. *Corolla*-tube 0.75 in long, glabrous without and at the base within, upper part within and lobes densely long tawny villous, lobes 0.75 to 1 in long. *Stamens* inserted at the middle of the tube, filaments slender, villous, 0.5 in long, anthers as long, sparsely retrorse villous at the base. *Ovary* rounded, villous, tapering into a conical style stigma capitate. *Berry* globose 5 to 1 in in diam, endocarp slightly rough and spotted. *Seeds* 1 to 2, orbicular, flattened on one surface, convex on the other. testa coriaceous. A DC Prodr IX 13, Benth in Journ Linn Soc I 102 Kunz For Fl II 166, Clarke in Hook f Fl Br Ind IV 88 (excl var).

MALACCA *Mamgay* (K D) 1035 PAHANG *Rulley* 2161 —DISTRIB India (Cachar, Burma, Griffith 3727, 3729)

May 1236 from 'lower camp' Gunong Batu Puteh. Perak is also probably this species but the leaves are rather thinner and more lanceolate. So, too, probably are *Scortechini* 295 and *Kings Collector* 7193 which have very quadrangular branchlets and large leaves, but the specimens are too incomplete for certainty.

4 *STRYCHNOS OVALIFOLIA*, Wall Cat 1592 (1828). A large climbing shrub, branchlets slender, terete, with dark brown shining bark. lenticels few. nodes swollen and with a faint raised line, tendrils none (or not known!). *Leaves* chartaceous ovate lanceolate or -elliptic acuminate at apex, cuneate at base, glabrous on both surfaces, 3 to 5 in long, 1.5 to 2.5 in broad, brown when dry. 3 to 5 ribbed. midrib rather slender, slightly impressed above, raised beneath, as are the 2 inner ribs which start from 2 to 4 in above the base and are curved acutely upwards to the apex, looped only in the upper half, outside them and close to the margin another pair more or less conspicuous with a marginal looped nerve. main nerves 4 to 5 pairs, faint, straight from the midrib to join the principal pair at the loop sinuses. secondary nerves many. reticulations irregular, faintly prominent. petiole slender, 2.5 to 5 in long. *Cymes* axillary, paniculate, reaching about 2 in in length, few flowered, rachis angular, pubescent, bracteoles ovate acute, ciliate, buds obovoid, short. *Calyx* very small, lobes ovate obtuse, pubescent, ciliate, 0.5 in long. *Corolla* tube 0.6 in long, glabrous, as are the lobes on both sides. lobes as long as tube. *Stamens* inserted a little above the base of the tube, filaments slender, anthers elongate, apiculate. *Ovary* rounded glabrous gradually contracted into the slender style, stigma

capitate *Berry* globose, about 75 in in diam, endocarp thin, smooth
Seeds 1 to 3, oblong-orbicular, 8 by 5 in, flat, the margin undulate,
 testa crustaceous cotyledons cordate A DC Prodr TX 13, Benth

5 *STRYCHNOS FLAVESCENS*, King & Gamble, n sp A large climbing
 shrub, branchlets slender, stiff, somewhat angular, with pale grey bark,
 nodes swollen tendrils none (or not known) *Leaves* chartaceous,
 elliptic or elliptic-lanceolate, acute or acuminate at apex, attenuate or
 occasionally truncate or cordate at base, both surfaces glabrous, light
 yellowish green, 3 to 5 in long, 1.5 to 2.75 in broad, 3- to 5-ribbed
 from close above the base, midrib strong, somewhat impressed above,
 as is the inner pair of ribs which start at an angle of about 30° and
 curve upwards to the apex, faintly looped only near the top, outer
 pair of ribs quite inconspicuous close to the margin and regularly
 looped main nerves many, irregular, arched, only from 3 to 6 pairs
 joining the sinuses of the loops of the inner pair of ribs to the
 midrib secondary nerves many reticulations in an elegant network
 petiole 3 in long, channelled above *Cymus* terminal, corymbose,
 minutely yellow-pubescent, reaching 4 in in length and diam,
 peduncle about 1 in long rachis angular bracts linear or lanceolate
 often leathery bracteoles ovate acute, enclosing the very short pedicels
 buds globose flowers minute, pale green *Calyx* campanulate, tube
 short lobes rounded, ciliate, .05 in long, glabrous within *Corolla* tube
 cylindrical, .05 in long glabrous within lobes 4 or 5, as long as tube,
 sparsely villous without, more thickly so within *Stamens* inserted on
 the throat of the tube, filaments extremely short, anthers ovate-acute,
 not villous, .025 in long *Ovary* globose, glabrous style very short,
 stigma punctate *Berry* obovoid, about 1 in long, .5 in in diam per-
 carp very thin, greenish, smooth *Seeds* 2, inner face flattened, outer
 convex, 6 in long, .5 in broad

6 *STRYCHNOS RUFA*, Clarke in Hook f Fl Br Ind IV 89 (1883)
 A climbing (?) shrub branches pale brown, smooth, lenticellate branch-
 lets slender, patently rufous pubescent, slightly angular, nodes somewhat
 swollen, tendrils none (so far as known) *Leaves* chartaceous elliptic or
 elliptic-ovate, acute at apex, cuneate or rounded or subcordate at base,
 upper surface sparsely pubescent or glabrate, lower surface softly rufous
 pubescent 2.5 to 4.5 in long, 1.5 to 2 in broad, 3 to 5 ribbed midrib rather

stout, inner pair of ribs more slender from a short distance only above the base, at about 40° with the midrib, slightly looped above, outer pair inconspicuous, much looped, main nerves 3 to 4 pairs, joining the midrib and side nerves and nearly straight, secondary nerves many, arched, reticulations fairly conspicuous, petiole 15 in long. *Cymes* small, axillary, scarcely reaching 5 in long, 75 in broad, sessile, rufous pubescent branches trichotomous, pedicels slender, 1 in long, bracteoles linear, small, buds small, oblong. *Calyx* very small, lobes ovate, acute, 05 in long. *Corolla*-tube campanulate, 06 in long, glabrous within, puberulous without, lobes a little shorter than tube, also glabrous within, but with a thick white tuft of bristly hairs at the base of each. *Stamens* inserted at about two thirds of the height of the tube filaments very short anthers ovate, apiculate, retrorsely villous hairy below. *Ovary* globose, glabrous, style very short, stigma capitate. *Berry* globose or oblong, 5 to 1.25 in in diam, few seeded pericarp thick. *Seeds* ovate oblong, compressed, 75 in long by 5 in broad albumen thin.

PERAK at Tapa and Relau Tujur Wray 1334, 4033 at Campar, Ridley 9698, King's Collector 3973, 6199, 10187 MALACCA Mangay (K D) 1034 SILLANGOR at Kwali Lumpur, Curtis 2398

We have felt a little doubt about this species which is merely represented by one fruiting specimen in the Kew Herbarium but believe the identifications to be correct. The flowers are described from Curtis's specimen the fruits from Mangay's and Wray's 1334.

7 *STRYCHNOS MALACCENSIS*, Benth in Journ Linn Soc I 101 (1857). A climbing shrub, branchlets dark brown, toment puberulous nodes slightly swollen tendrils pubescent, single or in pairs reaching 1 to 2 in in length, circinate thickened upwards but again reduced at the tip, each replacing a leaf at the ends of the branchlets. *Leaves* subcoriaceous, ovate or elliptic ovate, acute at apex, cuneate to rounded at base, glabrous on both surfaces, except in young leaves and on the midrib beneath. 2 to 4 in long, 1.5 to 2 in broad, 3 to 5 ribbed midrib slender, impressed above, inner pair of ribs from about 5 in above the base, starting at an angle of about 30° with the midrib, curving upwards to the apex, looped in the upper third outer pair intra-marginal, slender, looped, main nerves about 5 pairs, straight from the midrib to the inner ribs, reticulations many, in an elegant network, petiole 2 to 3 in long, slender. *Cymes* axillary, corymbose, reaching 1 in long and broad, fulvous pubescent peduncles 3 in long, bracteoles very small, pedicels slender, flowers small, greyish white, buds obovoid (*Calyx* very small, tube short, lobes ovate, acute, ciliate, puberulous, 05 in long. *Corolla* tube campanulate, 06 to 07 in long, minutely

pubescent in the upper part within or nearly glabrous, puberulous without, lobes as long as or a little shorter than tube with a dense tuft of pale bristles at the base within, otherwise glabrous. *Stamens* inserted at the top of the tube, filaments very short, anthers ovoid, 0.3 in long, densely hairy, especially with retrorse hairs at the base. *Ovary* conoidal, glabrous, gradually attenuated into a rather thick style 0.5 in long, stigma capitate. *Berry* ovoid, 1 in long by .75 in in diam., pericarp of two layers, outer pergamaceous, shining, thin, inner hard, woody. *Seed* 1, oblong, albumen horny, copious, cotyledons ovate acute, strongly nerved, 1 in long, radicle thick. *Miq Fl Ind Bat II* 379, 1080. *Clarke in Hook f Fl Br Ind IV* 89. *S. cranthierana* Poir. 8. *STRYCHNOS SIPTIMNERIS* Clarke in *Hook f Fl Br Ind IV* 88 (1883). A climbing shrub, branches stout, obscurely angled, pale brown, sparsely lenticellate, swollen at the nodes and prominently ringed, tendrils none (or not known!). *Leaves* coriaceous, elliptic, shortly acuminate at apex, attenuate at base, glabrous on both surfaces, 2.5 to 4.5 in long, 1.5 to 2.5 in broad, 5 to 7 ribbed, midrib stout, more or less raised on both surfaces, inner pair of ribs from about 2.5 in above the base, strong, acutely angled (about 10° at first) with the midrib and curving upwards to the apex, looped in the upper half, next pair much less conspicuous, outer pair faint or absent, main nerves many pairs, arched between the midrib and first side ribs, reticulations strong, prominent on both surfaces, petiole 3 to 4 in long. *Cymes* axillary, sessile, many flowered, reaching 5 in in length but usually shorter, rusty pubescent, rachis somewhat angled, bracts small, ovate, acute, ciliate, flowers rather large, buds oblong-obovoid. *Calyx* very small, lobes ovate, acute or obtuse, ciliate, .05 in long. *Corolla* tube campanulate, 1.5 in long, glabrous without, pubescent within in upper part and with villous tufts at the throat, lobes 1 in long, recurved, pubescent within. *Stamens* inserted at the top of the tube, filaments short, villous, .025 in long, anthers oblong, apiculate, .05 in long, exserted, villous. *Ovary* conical, villous, gradually narrowed into a 1.5 in long exserted style, villous below, stigma capitate or obsoletely lobed. *Berry* rather small, reaching .5 in in length, ovoid, pericarp smooth, crustaceous, thin. *Seed* 1, flat, round.

PENANG at Penang Bukit *Curtis* 1021. MALACCA *Murray (K D)* 1036.

9 *STRYCHNOS PUBESCENS*, Clarke in Hook f Fl Br Ind IV 89 (1883) A large climbing shrub, branchlets rather slender, tawny-pubescent, brown, somewhat striate, nodes swollen, with a ring, tendrils single, circinate, tawny-pubescent, enlarged upwards, 1 to 1.5 in long, each replacing a leaf in end branchlets or occasionally axillary. *Leaves* yellow when dry, subcoriaceous, ovate, acute at apex, rounded or sometimes attenuate at base, sometimes cordate on ultimate branchlets, upper surface glabrous or puberulous, lower glabrescent when old, pubescent when young, 1 to 3.5 in long, .75 to 2.25 in broad, 3- to 5-ribbed, midrib and ribs conspicuous, strongly impressed above, inner pair of ribs from about 3 to 6 in above the base, starting at about 30°, outer pair at about 45° with the midrib starting from close to the base, main nerves joining them to the midrib arched, about 6 pairs, reticulations obscure, petiole 1 to 2 in long. *Cymes* small, axillary and subterminal, dense, up to .75 in in diam, tawny puberulous to pubescent, bracts lanceolate, small pedicels short, with 2 bracteoles, buds oblong, flowers white (*calyx* very small lobes rounded ciliate, .04 in long). *Corolla* tube a little longer than the lobes, cylindric, minutely puberulous without, glabrous within. lobes glabrous within, but each with a dense tuft of white bristles at its base, tube and lobes together 1.25 in long. *Stamens* inserted on the middle of the tube, sessile or with minute filaments, anthers ovate, .025 in long, apiculate, retorsely sparsely hairy at base only. *Ovary* glabrous, style very short, stigma capitate. *Berry* globose, 3 to 6 in in diam. pericarp thin, crustaceous. *Seeds* 1 to 2, flat or concave on one surface, convex on the other, 5 in long by 4 in broad.

PENANG *Curtis* 970, 3649 PERAK at Larut, *Scortechini* 1485, at Relau Tujoi, Wray 1916, at Taipeng, Wray 3048 at Selama, Wray 4278, at Larut, *King's Collector* 2441, 3623, 6276, 6477 MALACCA *Mammyay* (K D) 1040, *Curtis* 3494 NEGRI SEMBILAN at Perhentian Tinggi *Ridley* 10089 SINGAPORE at Bukit Timah, *Ridley* 6317

Scortechini, in his notes on his No. 1558 says he thinks that that specimen 'shows some differences from *S. pubescens* which may amount to specific distinction, the flowers being pedicellate, the apex of the anthers obtuse, and the style long. No. 1558 is clearly the very last part of a long climbing branch, and such parts often differ a good deal from the more typical parts so that we are doubtful of its being capable of separation and prefer to call it —

VAR *Scortechinii*, King & Gamble. *Leaves* ovate, acute at apex, rounded at base or almost cordate, densely, softly rusty-tomentose on the lower surface, ribs 3 to 5, starting close to the base. *Cymes* small, axillary. *Stamens* inserted above the middle of the tube of the corolla, not apiculate. *Style* longer than in type. *Berry* oblong.

PERAK at Dambung Batak, *Scortechini* 1858

10 *STRYCHNOS RIDLEYI*, King & Gamble, n. sp. A climbing shrub branchlets slender, terete, nearly black when dry, uppermost only sparsely pubescent, nodes slightly swollen, with a pale line, tendrils single, much circinate, much enlarged upwards, nearly 2 in long. *Leaves* subcoriaceous, nearly black when dry, ovate or ovate-lanceolate, acute at apex, attenuate or rounded at base, glabrous on both surfaces except for faint tufts in the rib axils beneath, 1.5 to 3.25 in long, 1 to 1.75 in broad, 3- to 5 ribbed, midrib strong, impressed above, inner pair of ribs more slender, from 1 to 2 in above the base, starting at an angle of about 30° with the midrib, curving upwards to the apex and distantly looped above, near the margin a very faint pair looped and intramarginal, main nerves few, 2 to 3 pairs, straight to the sinuses of the loops of the side ribs, secondary nerves many, reticulations slender, inconspicuous. *Petiole* 3 to 4 in long, rather stout. *Cymes* axillary, few flowered, puberulous, reaching 7.5 in in length and diameter, peduncles .25 in long. *Bracts* lanceolate, sheathing, ciliate, bracteoles minute rounded or acute. *Pedicels* about .05 in long, buds oblong black when dry. *Calyx* very small lobes broad, obtuse, .04 in long, ciliate. *Corolla* tube campanulate, .075 in long glabrous on both surfaces lobes as long as tube, glabrous without, densely villous within, and furnished at the base with tufts of pale bristles. *Stamens* inserted at the middle of the corolla-tube filaments very short anthers ovate, rounded, .035 in long, sparsely villous at the base. *Ovary* globose, glabrous, with a short style and capitate stigma. *Fruit* unknown.

SINGAPORE at Toas, *Ridley* 6313

This species resembles *S. pubescens* in having the stamens inserted at the middle of the corolla tube and in the globose ovary and short style, but the lobes of the corolla are villous within, and the leaves are quite different.

11 *STRYCHNOS TIEUTÉ*, Losch in Ann. Mus. Hist. Nat. XVI 479, t. 23 (1810). A large climbing shrub, branches grey, lenticellate, stiff, branchlets dark brown, slender, nodes somewhat swollen, tendrils single, circinate, much enlarged upwards and at length woody, 1 to 2 in long, glabrous, replacing an occasional leaf of a pair on ultimate branchlets. *Leaves* chartaceous or subcoriaceous, elliptic or elliptic-lanceolate, bluntly caudate-acuminate at apex, acute or rounded at base, both surfaces glabrous, olive-brown, upper shining, 2.5 to 3.5 in long, 1 to 1.5 in broad, 3- to 5 ribbed, midrib slender, impressed above, inner pair of ribs from about 1.5 in above the base, prominent, starting at an angle of 40° or less with the midrib and curving upwards to the apex, looped above the middle, outer pair obscure, forming a faint intra-marginal looped rib more or less to the apex, main nerves 3 to 6 pairs,

reaching the sinuses of the loops of the inner basal ribs, secondary nerves very many, similar to main nerves; reticulations prominent, irregular, petiole .2 to .3 in. long, curved. *Cymes* axillary, corymbose, usually sessile, reaching 1 in. in length and 1.25 in. in breadth, few- (12- to 18-) flowered, peduncles short, branches of rachis very slender, 3-chotomous, bracts linear, short, bracteoles minute, rounded, 2 to each pedicel below the calyx; pedicels puberulous, 1 to .25 in. long, flower-buds clavate, top rounded, flowers white, sweet-scented. *Calyx* very small, lobes ovate-lanceolate, acute, .05 in. long. *Corolla* infundibuliform, tube slender, .2 to .25 in. long, minutely puberulous without, glabrous within, lobes oblong, .1 in. long, glabrous. *Stamens* inserted at the top of the tube, filaments very short, but decurrent in lines down the interior of the tube, anthers oblong, .05 in. long, apiculate, glabrous. *Ovary* ovoid, glabrous, alternated into a .25 in. long style, stigma capitate, obtuse. *Berry* globose, many-seeded, 1.5 to 2.5 in. in diameter, pericarp thick, woody, shining, smooth, yellowish at first, afterwards red. *Seeds* immersed in pulp, rounded, ovoid or oblong, more or less flattened, usually .75 in. long, and about .25 in. broad, testa thin, silvery, albumen horny, cotyledons cordate, acute, 3- to 5-nerved, 15 in. long, radicle stout, cylindric, as long as cotyledons. Flowers 5 merous

2 *G. Koenigii* var
[oxyphylla]

Leaves oblong oblanceolate, much tapered to the long petiole, 7 to 12 in in length —

Cymes densely umbellate, crowded

3 *G. oboea*

Cymes laxly paniculate

4 *G. oblanceolata*

Leaves hairy beneath elliptic oblong, slightly narrowed at the base, petiole not very long

5 *G. grisea*

1 *GIAERTNERA VIMINEA* Hook f ex Clarke in Fl Bt Ind IV 91 (1883) A shrub, young shoots as thick as a crow quill, glabrous. Leaves membranous, narrowly lanceolate, apex caudate acuminate, the base much narrowed, both surfaces brown when dry, the upper glabrous the lower minutely scaly, length 2.5 to 3.5 in, breadth 6 to 8 in petiole about 1 in long. Flowers only about 25 in long, in small terminal trichotomous newly glabrous cymes. Lowest bracts linear, sometimes 4 in long, pedicels very short. Calyx cupular, with 4 spreading teeth. Corolla villous at the throat 4 lobed. Fruit obovoid globose 2 in long. *Psychotria viminea* Wall Cat 8354

SINGAPORE Wallich 8354, Ridley 4828, 9500

2 *GIAERTNERA KOENIGII* Wight Ic 1318 (1850), var *OXYPHYLLA*, Clarke in Hook f Fl Bt Ind IV 91 (1883) A small tree, all parts except the inflorescence glabrous, young branches thicker than a crow quill, pale brown, terete. Leaves thinly coriaceous, narrowly elliptic-oblong, sometimes somewhat oblanceolate, apex shortly caudate acuminate, base much narrowed both surfaces pale olivaceous brown when dry, the lower minutely scaly midrib distinct main nerves 6 to 8 pairs, curving upwards, thin but distinct on the lower surface, length 2.5 to 4 in, breadth 8 to 1.35 in petiole 2 to 4 in long. Stipules forming an oblong sheath, 5 toothed or bifid, 25 in long, the apex and ultimately the whole deciduous. Panicles terminal cymose, lax, less than half as long as the leaves when in flower, elongating in fruit, branches divaricate, opposite, the ultimate branches 3-flowered. Flowers 25 in long, on puberulous pedicels longer or shorter than themselves bracteolate near the apex. Calyx short, tubular, irregularly 5 toothed. Corolla tubular, glabrous outside, slightly curved, the mouth with 5 (sometimes 4) thick spreading subacute lobes. Stamens included, anthers linear, slightly bifid at the base, on short filaments. Ovary 2-celled, each cell 1-ovuled. Fruit globular, 3 in in diam, slightly compressed, with a deep vertical groove on each side (subdidymous), glabrous, smooth, the apex areolate, but without remains of the calyx. *G. thysiflora* Blume

3 GAERTNERA OBESA, Hook f Fl Br Ind IV 92 (1883) A small shrub, young branches compressed, as thick as a swan's quill or thicker, almost glabrous, pale brown, their apices often quite enveloped in the large stipules. Leaves subcoriaceous, large oblong-lanceolate or oblong-elliptic, shortly acuminate at apex, narrowed at the base into the stout winged petiole both surfaces drying brown, glabrous, the lower minutely lepidote when young, midrib broad main nerves 9 to 12 pairs, slightly curved, ascending, conspicuous on the lower surface, the intermediate nerves also distinct although thin length 9 to 12 in, breadth 3 to 3.5 in, petiole 1 to 1.5 in long, broadly channelled, its upper part winged. Stipules 1.25 to 1.5 in long, coriaceous, broadly oblong, acuminate when young, but afterwards, from the breaking off of the upper part, blunt or obscurely bifid, the base auricled. Cymes (including their peduncles) not much exceeding the leaf petioles in length, usually terminal, densely umbellate, about 1.25 in across, bearing about 3 umbellate main branches compressed and puberulous like the peduncle but much shorter and at the base several linear bracts about .5 in long. Flowers 3 in long, sessile or shortly pedicelled in short, few flowered, broadly bracteolate cymelets on the ultimate branchlets. Calyx campanulate, puberulous outside, the limb obscurely toothed, entire and truncate, enlarging with age. Corolla twice as long as the calyx, fleshy, tubular, the limb with 5 short acute inflexed lobes, glabrous outside densely hairy in the upper half inside. Anthers 5, oblong, blunt, cordate at the base, inserted by short filaments near the base of the tube. Fruit unknown. *Psychotria obesa*, Wall Cat 8328

JOURNAL

OF THE

ASIATIC SOCIETY OF BENGAL.

VOL. LXXIV., PART II.—Extra Number, 1907.

Materials for a Flora of the Malayan Peninsula.—By SIR GEORGE KING, K.C.I.E., LL.D., F.R.S., *late Superintendent of the Royal Botanic Garden, Calcutta, and J. SYKES GAMBLE, C.I.E., F.R.S., late of the Indian Forest Department*

No 20

The present Part contains the descriptions of three Families, No 89 *Acanthaceæ*, which was only finished by the late Mr. C. B. Clarke, F.R.S., just before his lamented death in August, 1906, and Nos 91 *Labiataæ* and 92 *Plantaginaceæ*, which have been done by Lt.-Col. Prain, C.I.E., F.R.S., Director of the Royal Gardens, Kew.

The 3 Families comprise 54 genera and 166 species. In the *Acanthaceæ* there are 35 genera and 134 species, of which 5 genera and 68 species are new. In the *Labiataæ* the genera are 18 and the species 31, one genus being newly described. But it is worthy of note that of the 31 species only 16 are really native in the Malay Peninsula, the rest being introduced plants. One species only is endemic, *Plectranthus Kunstleri*, Prain. In *Plantaginaceæ* there is merely one genus containing one species, an introduced weed.

It may here be usefully recorded that, in addition to his work on the Malay Peninsula *Acanthaceæ* herein given, the late Mr. Clarke also prepared an account of the species of the Malay Archipelago, which will shortly be published in the 'Journal of the Linnean Society.'

Part No. 21, which will contain two Families, No. 86 *Gesneraceæ* and No 90 *Verbenaceæ*, and thus complete the Gamopetalæ, may be expected to issue about the New Year.

Family LXXXIX —ACANTHACEÆ

[By C B CLARKE]

Herbs or shrubs, or twining plants (*Thunbergia*) Leaves opposite, often unequal, in *Polytrema* sometimes pseudalternate, stipules 0 Inflorescence various, spikes strobilate or heads or cymose or flowers solitary, bracts and prophylla large, small or 0 Flowers 2-sexual, irregular Calyx inferior, segments 5 or 4, nearly free or more or less united Corolla gamopetalous, tube campanulate or linear, limb 2 lipped or 5 lobed, more or less 1 sided Stamens on the corolla 4 didynamous, or 2 (with or without rudiments) anther cells 2 or 1, pollen ellipsoid (then usually ribbed or banded longitudinally) or globose (then often honeycombed or echinulate) Ovary superior, 2 celled ovules 2 to 1, or several, superimposed in vertical rows (or 2 collateral in *Thunbergia*), style long, simple, minutely 2 fid Capsule loculicidal, often elastically dehiscent seeds usually nearly as many as the ovules, held up on rigid curved retinacula (outgrowths of the funicle), albumen 0 DISTRIB Species 2000, throughout the warmer parts of the world

This Family is specially characterized by the retinacula and the seeds placed in a vertical line, this character fails in the first two Subfamilies The plants of Subfamily II NELSONIOIDEÆ are frequently mistaken for those of SCROPHULARIACEÆ from which they differ by the seeds being superimposed vertically

CONSPECTUS OF THE SUBFAMILIES, TRIBES, AND GENERA

- | | | | |
|---|---|--------------------------------------|---------------|
| Subfamily I THUNBERGIOIDEÆ | Seeds 4 to 2 in the capsule without retinacula | Twining | 1 THUNBERGIA |
| Subfamily II NELSONIOIDEÆ | Seeds 8 to 16, vertically superimposed in 2 rows in the capsule on small soft papillæ (not on hard curved retinacula) | Herbs small or of very moderate size | |
| Stamens 2 | | .. | 2 NELSONIA |
| Stamens 4 — | | | |
| Flowers in spikes, racemes, or panicles | | | 3 STAUROGYNE |
| Flowers axillary | | | 4 CARDANTHERA |
| Subfamily III RUELLOIDÆ | Retinacula present | Corolla lobes contorted in the bud — | |
| Tribe 1 RUELLEA | Capsule with more than 4 seeds, which are hygroscopically shaggy on the margin — | | |
| Pollen honeycombed | Flowers axillary | | 7 RUELLEA |
| Pollen echinate | Capsule seed bearing from the base | | 8 APORUELLIA |
| Pollen ellipsoid, with many longitudinal ribs | Capsule hardly stalked — | | |

- Corolla distinctly 2 lipped —
- Spikes continuous or axillary clusters .. . 5 *HYGROPHILA*
- Flowers in 1 sided axillary open racemes .. . 6 *NOMAPHILA*
- Corolla obscurely or scarcely 2 lipped —
- Thyrus terminal, 8 to 12 by 75 in .. . 9 *STENOXYRHUS*
- Spikes terminal or short peduncled heads . 10 *HEMIGRAPHIS*
- Tribe 2 *SIRONIANTHINÆ* Capsule with 4 (or 2) seeds —
- Pollen ellipsoid, longitudinally ribbed —
- Stamens 4 12 *STROBILANTHUS*
- Stamens 2 11 *ENDIOGON*
- Pollen globose, echinate Stamens 4 . 13 *ACANTHOALF*
- Subfamily IV *ACANTHOIDEÆ* Retinacula present Corolla with the posticous lip cut away, anticus lip 3 lobed, the middle lobe bifid 14 *ACANTHUS*
- Subfamily V *JUSICIODEÆ* Retinacula present Corolla lobes imbricated in the bud, 1 c one lobe wholly within, one wholly without, the others —
- Tribe 1 *GYMNOIACHYNÆ* Capsule with more than 4 seeds Bracts inconspicuous hardly as long as the small sepals which rarely attain one fifth inch in length Stamens 2 —
- (capsule cylindric at base seeds in the clavate top .. 16 *PHYTOCANTHUS*
- Capsule with parallel sides, seed bearing from the base —
- Corolla tube cylindric scarcely inflated —
- Seeds hygroscopically hairy on the margin .. 15 *GYMNOIACHYUM*
- Seeds glabrous, stony .. 17 *ANDROGRAPHIS*
- Corolla tube much inflated upwards 18 *CYCLACANTHUS*
- Tribe 2 *ASYSTASINÆ* Capsule with 4 seeds Stamens 4 —
- Sepals united at base for at least one third of their length 20 *PHYLACANTHUS*
- Sepals nearly free at base —
- Capsule at base cylindric, seeds in the upper wider part —
- Anther cells at equal height 19 *ASYSTASIA*
- One anther cell below the other . 21 *PIFFIA*
- Capsule conic, the 4 seeds near the base 22 *LEPIDAGATHIS*
- Tribe 3 *BARLERIINÆ* Capsule 2 to 4 seeded Stamens 2 fertile Calyx large 4 partite to the base Anther cells 2, rounded at base Pollen globose, reticulated Corolla yellow, 1 25 in long 23 *BARLERIA*
- Tribe 4 *ERANTHEMINÆ* Capsule 4 to 2 seeded Stamens 2 Anther cells 2, rounded at base Corolla tube linear, limb subequally 5 fid, spreading .. . 24 *ERANTHEMUM*
- Tribe 5 *JUSTICIINÆ* Capsule 4 to 2 seeded Corolla distinctly 2 lipped Stamens 2 Calyx small subequally deeply lobed Seeds smooth or tuberculate, but without needle like hygroscopic hairs —
- Sect 1 *MONOTHECIÆ* Anthers 1 celled —
- Corolla 1 25 in long, orange red .. 25 *CLINACANTHUS*
- Sect 2 *TYPICÆ* Anthers 2 celled The flower not appearing as though enclosed between two opposite bracts Placentæ in fruit not rising elastically from the base of the capsule —

- One anther cell below the other, tailed 26 JUSTICIA
 One anther cell somewhat below the other, its base
 rounded or acute, scarcely tailed —
 Corolla tube broad Shrub .. 27 ADHATODA
 Corolla tube linear, posticous lip small, twisted 28 RHINACANTHUS
 Anther cells at equal or nearly equal height, not tailed —
 Corolla 3 to 7 in long —
 Spikes, racemes or panicles terminal .. 29 LEDA
 Cymes small axillary . . 30 POLYTREMA
 Corolla 1.25 in long —
 Corolla green blue 31 EUCBOTIUM
 Corolla red 32 GRAPTOHYLLUM
- Sect 3 *HYPOCISTIS* flower appearing as though en-
 closed between two bracts Placenta in fruit not rising
 elastically —
 Anther cells 2 one placed higher 33 PFRIETROPHE
 Anthers 1 celled 34 HYPOCISTIS
- Sect 4 *SOEUA* Placenta rising in fruit elastically from
 the base of the capsule and throwing out the seeds —
 Flowers in spikes, with prominent bracts 35 RUNGIA

1 THUNBERGIA, Linn f

[Character narrowed, as throughout *Acanthaceæ*, to the Malay Penin-
 sula species]

Twiners *Leaves* petioled, opposite subequal, undivided, often
 toothed or lobed *Peduncles* solitary, axillary, running into terminal
 racemes, &c the upper floral leaves (or bracts) greatly reduced, incon-
 spicuous or obsolete *Bracteoles* (prophylla) large, often 5 in long,
 broad oblong from a truncate base *Calyx* of 8 to 14 small lanceolate
 teeth, or obsolete (appears a mere rim) *Corolla* large, tube cylindric
 or campanulate limb of 5 subequal lobes, contorted in the bud
Stamens 4, subsimilar, anther cells 2, parallel, sometimes strongly
 spurred at the base, pollen large (50 to 60 μ in diam), globose, smooth,
 with faint spiral bands or strongly spinous *Ovary* 2-celled, with 2
 ovules in each cell, stigma of 2 equal, opposite, triangular lobes *Cap-*
sule globose, with a long oblong-linear beak, seeds 4, or by suppression
 3 to 2, hemispheric, excavate on the plane face, wrinkled on the spheric
 face, sessile, not held aloft on retinacula — **DISTRIB** Species 100, in the
 warm parts of the Old World, most numerous in Africa, extending to
 Australia

Sect 1 *Calyx* a mere rim Anther cells spurred Pollen
 smooth —

- Leaves* broad oblong, entire or slightly toothed .. 1 *laurifolia*
Leaves round ovate, toothed or often lobed .. 2 *grandiflora*

Sect 2 Calyx of 8 to 12 teeth Anther cells not spurred

Pollen spinous —

Petioles not winged	Corolla pure white	3 <i>f. fragrans</i>
Petioles often winged	Corolla yellow, with claret eye	4 <i>f. alata</i>

1 THUNBERGIA LAURIFOLIA Lindl in Gard Chron p 260 (1856)
Scandent, up to 150 ft long (Kurz) Leaves 3.5 by 1.5 in, broad
oblong, wide at base, truncate or ovate, glabrous, sub-3 nerved, entire
or slightly toothed, petioles 5 to 1 in long Peduncles axillary,
solitary, distant or more often running into terminal close racemes
2 to 5 in long, bracteoles (prophylla) 1 in long, oblong, usually
slightly pubescent Calyx a mere rim Corolla 2 in long, blue or
blue and white, tube campanulate, only contracted for a very short
space at the base Stamens 4, subsimilar, filaments glabrous, anther
cells with a rigid long spur at the base, fringed with many long pilose
hairs, pollen globose, large (50 μ in diam), smooth, with obscure
broad spiral bands Pistil glabrous, the two stigmatic lobes sub-
opposite Capsule globose, smooth, brown, 25 in in diam, with 4 to
2 seeds beak 1 to 1.25 in long, oblong linear Seeds hemispheric,
cotyledon granular, excavated on the plane face Hook Bot Mag

2 NELSONIA, R B₁

A diffuse herb *Leaves* opposite, subequal *Flowers* small, in dense small spikes, bracts spiral or alternate (not opposite) *Calyx* small, sub 4-lobed *Corolla*-tube slender, limb 2-lipped *Stamens* 2, anthers 2 celled, subincluded in the corolla-tube *Ovary* 2-celled, ovules about 8 in each, arranged vertically in two rows on the double placental line in each cell *Capsule* ovoid-conic, with 8 to 16 seeds in the basal half retinacul⁰ —DISTRIB Species 1, in warm parts of Africa, India, Australia, America

N B - This plant is often sorted amongst SCROPHULARIACEÆ, nor does it differ except by the arrangement of the ovules and seeds in one vertical line on the margin of the carpellary leaf

1 NELSONIA CAMPFSTRIS, R Br Prodr 481 (1810) Prostrate hairy branches often 12 to 18 in long *Leaves* of stem 2 to 3 in long oblong or obovate, nearly entire, long petioled or nearly sessile basal leaves often 6 in long *Flowers* in small heads, 5 in in diam terminal or on axillary peduncles which lengthen out in fruit to 2 to 3 in bracts ovate, 15 in long bracteoles very small *Calyx* 125 in long 2 lipped one lip deeply 3 fid the other shortly 2 fid *Corolla* 15 in long, rose or white *Pistil* glabrous style shortly 2 fid *Stamens* 2 anther of 2 ellipsoid cells half divergent pollen globose, 25 μ in diam, subtetrahedral (almost as in *Scrophulariaceæ*) *Capsule* 15 in long, seeds ellipsoid, brown, granular Endl Iconogr t 79, Benth Fl Austral IV 543, C B Clarke in Hook f Fl Br Ind IV 394 (*with all syn*), Burkill in Dyer Fl Trop Afr V 28, Prain Beng Plants 797 *N. tomentosa*, Nees in Wall Pl As Bar III (1832) 79 Nees in DC Prodr XI 65, Miq Fl Ind Bat II 770 *N. brunelloides*, O Kuntze Revisio I 493, Lindau in Engl & Prantl Pflanzenfam IV 3 B, 289, t 110, fig c

KEDAH *Ridley* 8312 PENANG *Curtis* 50, 1750, *Deschamps* PAHANG *Ridley* 2181 —DISTRIB In warm regions of both hemispheres

The innovations are often densely white hairy, there are also often long white hairs at the base of the flower The var β *vestita*, of Fl Br Ind IV 395 (which has large leaves, up to 8 to 10 in long on the branches), is frequent in Lower Burma, but there is no example of it from the Malay Peninsula

3 STAUBOGYNE, Wall

Undershrubs, 6 to 24 in (rarely 3 to 4 ft) high, at base often woody, creeping, hairy (in *S. subglabra* nearly glabrous) *Leaves* opposite, equal, simple, entire, petioles usually long, rarely short, 25 to 5 in. *Flowers* in spikes (or spike like racemes, the pedicels up to 15 in), dense or lax, the spikes sometimes panicle. *Bract* usually a little longer than the calyx, sometimes considerably broader, two prophylla (often alternate), linear or nearly linear, a little shorter than the bract. *Calyx* 15 to 6 in long, divided nearly to the base into 5 narrow persistent segments (often called sepals), of these one is often longer and sometimes much broader than the others. *Corolla* 5 to 1 in long, tubular-campanulate, rather narrow, limb of 5 short rounded segments (often colorate). *Stamens* 4 didynamous, fertile, filaments sparsely hairy, and with gland-tipped hairs near the top, anthers of 2 ellipsoid cells, ultimately divaricate. *Pollen* globose, with three longitudinal bands not reaching the poles, 25 to 30 μ in diam. *Ovary* oblong, surrounded at base by a disk, glabrous or rarely with minute scattered hairs. *Style* long, sometimes with a few hairs in the lower part. *Branches* 2, unequal. *Capsule* oblong 2 to 25 in long, ovoid at base, acute at top, glabrous or sometimes slightly minutely hairy, 2 celled, separating loculicidally into 2 valves, bearing seeds from the base. *Seeds* 12 to 20 in each capsule, in vertical rows on the edges of the carpellary leaves. *Seeds* attached on very small papillæ, not on retinacula, short ellipsoid, 400 μ long, yellow brown ultimately black, smooth, more or less reticulate, minutely pitted. — **DISTRIB** Species 40 in South East Asia, 10 in Brazil.

Some of the Brazil species have flowers and capsules considerably larger than in the Asiatic species. The Asiatic species are so uniform in the corolla, stamens, and pistil—even down to the hairs thereon—that these are not described for the subjoined Malay species, which are separated mainly by characters of the bracts and calyx. The posticous stigmatic lobe (both in the type species *S. argentea*, and in some others) is occasionally somewhat 2 lobed.

Calyx 3 to 7 in long —

Sepals awned or with a stiff mucro —

the base *Leaves* glabrate on the surface blade 3 to 4 by 7 to 1 in , lanceolate, mostly narrowly lanceolate (but see the var below), base attenuate, tip triangular, subacute, petiole 1 to 2 in long *Spikes* terminal and on short axillary peduncles, in flower ovoid or ellipsoid, dense, in fruit often 2 to 3 in long *Bract* narrow oblong, aristate, with long hairs in the lower part *Calyx* unequal, the largest sepal 6 in long, the base narrow lanceolate, with long hairs the awn long, somewhat rigid, glabrous or with minute bristles (less than 40 μ long) the other 4 sepals nearly linear *Corolla* 6 in long, hairy without *Capsule* 2 in long thicker than in the neighbouring species *S argentea* O Kuntze Revisio I 497 part m (1891) (not of Wall) *Ebermaria angustifolia*, T Anders in Journ Linn Soc IX 451 (1867) C B Clarke in Hook f Fl Bt Ind IV 398 Puan Bong Plants 798 *I' Staurogyne* β *angustifolia* Nees in DC Prodr XI 75

PERAK Rudley 9766 Curtis MALACCA Goodenough 1689 —
DISTRIB Meigui (Falconer 860), Tavoy (Wallich 4906)

T Anderson has written *I angustifolia* on Falconer 860 but his name *angustifolia* (as well as Wallich 1906) may include other nearly allied forms. The true *I Staurogyne* Nees is a Khasia species in which the bract and sepals have no long several celled hairs. This plant is put with *S longifolia* not with *I Staurogyne*, by collectors. The leaves in all the examples seen have dried brown red.

5 STAUROGYNE KINGIANA C B Clarke n sp. *Stems* 2 to 3 ft high pubescent *Leaves* glabrous blade up to 8½ by 2 to 3 in elliptic narrowed at either end main nerves 12 to 15 pair petiole 1 to 2 in long *Spikes* 3 to 6 on a stem terminal and on short axillary peduncles 4 to 10 in long undivided dense even in fruit *Bract* linear 8 in long *Sepals* 5 nearly equal linear longest up to 75 in long very little dilated at the base, sparsely hairy at base glabrous or minutely scabrous in the upper half *Corolla* 1 in long, yellowish white lower lip pale red (collector's note) glabrous without *Stamens* and pollen of the genus *Pistil* glabrate *Capsule* 2 in long rather thick the endocarp much thickened almost corky Allied to *S angustifolia* T Anders.

PERAK on limestone hills, 500 to 800 ft alt, *Kings Collector* 10704 Goenong Panti, *Kings Collector* 208 PAHANG Rudley 2176

6 STAUROGYNE LONGIFOLIA, O Kuntze Revisio I 497 (1891) Suberect, 8 to 30 in high, hairy *Stem* (in large examples) woody robust below, and with erect branches *Leaves* glabrous on the upper surface, blade 5 by 1 in , lanceolate, attenuate at either end (in the type example, but the leaves are frequently longer, and there are examples with shorter, broader leaves) petiole 1 to 1½ in long *Spikes* short peduncled at the end of branches and in the axils short oblong (often nodding) when

young, in fruit 2 to 5 in long, somewhat dense, erect *Bract* and *calyx* softly hairy, without long, fine, several-celled hairs, bract narrow-lanceolate, aristate, 6 in long, sepals all linear, the longest one 5 in long, including its awn 16 in long, the awn hairy to the tip with spreading hairs varying in length, but all short *Corolla* long, hairy without, tube nearly white, segments and mouth pink to purple *Pistil* glabrate *Stamens* and pollen of the genus *Capsule* 2 in long Lindau in Engl & Prantl Pflanzenfam IV 3B, 288 *Ebermaiera longifolia*, Nees in DC Prodr XI 76, T Anders in Journ Linn Soc IX. 451 (1867), C B Clarke in Hook f Fl Br Ind IV 399, Ridley in Trans Linn Soc ser 2, III 332 (1893)

MALACCA *Cuming* 2350, *Lemann*, *Griffith* (K D) 6079, *Hullett* 403 PERAK *Scortechini* 155, *Wray* 1302, *Ridley* 1604, alt 300 to 800 ft, *King's Collector* 5821, 8678 SELANGOR *Ridley* 7590 N. GRI SEMBILAN *Ridley* 10098 PAHANG Tahan, fide *Ridley*

This species is very close both to *S. angustifolia* and to *S. comosa*, the former differs by having the awns of the sepals glabrous or microscopically scabrous, the latter differs in that the sepals have lanceolate linear soft tips, hardly awns

7 STAUROGYNE COMOSA, O Kuntze Revisio I 497 (1891) *Stem* 1 to 3 ft high almost woody below, hairy *Leaves* blade up to 8 by 3 to 3.5 in, cuneate at either end upper surface glabrous obscurely minute granular tuberculate petiole 1 to 2.5 in *Spikes* short, penduncled, undivided, dense, in flower 1 to 4 in long nodding, in fruit up to 5 to 7.5 in long, often deflexed rather dense (scarcely interrupted at base), softly hairy *Bract* and *sepals* softly hairy with long several-celled hairs, bract 4 in long in Wallich's type (often longer), lanceolate acuminate, point linear (hardly awned), with soft white hairs, sepals 3 in long in Wallich's type (often longer), the longest (wider than the others) lanceolate with a linear soft hairy tip *Corolla* in the bud densely clothed with deflexed hairs without *Pistil* glabrous *Stamens* and pollen of the genus *Capsule* 2 in long Lindau in Engl & Prantl Pflanzenfam IV 3B, 288 *Ruellia* ? *comosa*, Wall Cat 2414 *Ebermaiera axillaris*, Nees in Wall Pl As Rat III 80, and in DC Prodr VI 75, T Anders in Journ Linn Soc IX 452 (1867), C B Clarke in Hook f Fl Br Ind IV 399

PERANG *Wallich* 2414 PERAK *Scortechini* 777, *Wray* 2192, *Ridley* 2893, 500 to 800 ft, *King's Collector* 10705, Laut, 100 ft, *King's Collector* 1834 SELANGOR (*Ridley*) 7589, 8543, 10546

King's Collector notes the calyx "velvety claret coloured," the corolla blue white, darker inside. The corolla seems caducous as the large well collected material provides buds and fruit only. The type examples of Wallich from Penang

are unusually small specimens This species is generally distinguishable from *E. longifolia*, Nees, by its much broader (elliptic) leaves

8 STAUROGYNE PAUPPE, C B Clarke, n sp Stem 18 in long, undivided, glabrate, decumbent, woody at base Leaves glabrate, with few scattered, white, adpressed bristles on the upper surface, blade 4.5 by 2 in long, elliptic lanceolate, acuminate, acute, base cuneate, petiole 2.5 to 5 in long Inflorescence of one terminal poor panicle, 3 by 1½ in, with few distant flowers, bracts 5 in long, linear, soft, not awned Sepals subequal, 5 in long, linear, with soft hairs and many gland-tipped hairs Corolla 6 in long, pubescent without, "pale yellow with dark stripes" (King's Collector) Pistil of *Staurogyne*, glabrous except a few small hairs in the lower part of the style

PERAK alt 200 ft, King's Collector 2832

9 STAUROGYNE ELONGATA, O Kuntze Revisio I 497 (1891) Slightly hairy Leaves glabrate, blade 6 by 2 in, oblong-elliptic, cuneate at either end, nerves 8 to 10 pair, thin, petiole 2 to 3 in long Spikes up to 4 to 7 by 1 in, panicled, lax, pedicels often 1.75 in long, with alternate prophylla Bracts nearly 5 in long, lanceolate linear, with short white hairs, no gland-tipped hairs Sepals 5, linear, the longest nearly 5 in long, slightly widened at base Corolla (buds) 4 in long, scarcely pubescent without Capsule 2 in long, the upper half with scattered minute hairs Lindau in Engl & Prantl Pflanzenfam IV 38, 288 Adenosma elongatum, Blume Bijdr 757 Erythracanthus elongatus, Nees in DC Prodr XI 78, var β excl Ebermaura elongata, Nees in DC Prodr XI 721, var β excl T Anders in Journ Linn Soc IX 452 (1867), C B Clarke in Hook f Fl Br Ind IV 400 (not of Miquel)

PENANG Wallich (fide T Anderson) — DISTRIBUTION Java

The var β of Miquel (here excluded) is *Ebermaura debilis*, T Anders (in Journ Linn Soc IX 452, in note (1867)), a weak Philippine species *E. elongata*, Miquel (Fl Ind Bat II 775), was (so Miquel says) — *E. Griffithiana*, T Anders, and, from Miquel's description, it must have been largely (or wholly) that species As to *E. subpaniculata* Hassk (Retzia I 77 (1855)), there are now here examples both of the Salak wild plant and of that cultivated at Buitenzorg, they may be varieties of *E. elongata*, Nees, but do not match it The above description of *E. elongata*, Nees, is wholly from the Java type plant, no example from Penang has been seen

10 STAUROGYNE LASIOBOTRYS, O Kuntze Revisio I 497 (1891) Stem 18 to 20 in, suberect, hairy Leaves glabrate, blade 5 by 1.5 in, oblong or elliptic lanceolate, cuneate at either end, thin, petiole 1 to 3 in long Spikes up to 4 to 6 by 1 in, panicled, lax, softly viscous-hairy, pedicels often 1.6 in long Bracts 3.5 in long, linear, with several-celled hairs ended by a coloured gland Sepals 5, linear, the longest 3.5 in

long, with several-celled gland-tipped hairs *Corolla*, *stamens*, *capsule* as of *S elongata* *Ebermaiera lasiobotrys*, Nees in DC Prodr XI 721, Wall Cat 9084, T Anders in Journ Linn Soc IX 452 (1867), C B Clarke in Hook f Fl Br Ind IV 400

ceolate to linear, hispid, sessile. *Flowers* clustered in the axils, 4 to 6 of the outer bracts being strong spines an inch long. *Bract* .5 to 1 in long, lanceolate. *Calyx* .35 to .5 in. long, divided nearly to the base into 4 lanceolate lobes, one of which is broader and sometimes emarginate. *Corolla* 1 in. long, pale purple. *Anthers* and pollen of the genus. *Capsule* .35 in. long, linear-oblong, 4- to 8-seeded from the base. C. B. Clarke in Hook. f. Fl. Br. Ind IV 409, Burkill in Dyer Fl Trop. Afr. V. 31; C. B. Clarke in Dyer Fl. Cap V 11 (*with all syn*); Prain Beng Plants 802, *H. longifolia*, Kurz in Journ. As Soc Beng 1870, II 78 (*non* Nees). *Asteracantha longifolia*, Nees in Wall. Pl. As Rur III 80, and in DC Prodr XI. 247, Wight Ic t 449, Miq. Fl. Ind Bat II. 811, Lindau in Engl. & Prantl Pflanzenfam. IV. 3 B, 297. *A. auriculata*, Nees in DC. l. c 248

SINGAPORE *King's Collector* 249.—DISTRIB. Abundant in India and Africa

Hygrophila longifolia, Nees (in Mart Fl Brasil, IX. 22 (1847)), is a totally different plant, for this cause T. Anderson, when he transferred *Asteracantha longifolia* to *Hygrophila*, gave it the new name *H. spinosa*. Nevertheless, some botanists call the Asiatic *Asteracantha* by the name *H. longifolia*, thereby causing great confusion

6. NOMAPHILA, Blume

Inflorescence in numerous 1-sided, open, axillary racemes shorter than the leaves. *Bract* (and prophylla) inconspicuous, linear, or wanting. *Calyx* even in the bud deeply divided (two-thirds or three-fourths of the way down) into 5 lobes. Otherwise as *Hygrophila* — Species 14, viz 8 in South-east Asia, very closely allied, and 6 in Tropical Africa.

This genus is in essentials *Hygrophila*, and is sunk in *Hygrophila* by both Lindau and Burkill, but is easily distinguished from it, whether estimated a genus or a subgenus

1. *NOMAPHILA STRICTA*, Nees in DC Prodr XI 81 (1847). Nearly glabrous, drying a black-green. *Stems* 3 ft. *Leaves* blade 3 to 4.5 in long, narrowly elliptic, attenuate at either end, midrib beneath with fine patent hairs, petioles up to 2 to 3 in. long. *Corymbs* in many axils, 2 to 4 in. in diam., recurved in fruit, peduncles less than 1 in long, pedicels nearly glabrous, bract and prophylla linear, inconspicuous or 0. *Calyx* .25 to .35 in long, divided nearly to the base, segments 5, linear, glabrous or minutely scabrous or hispid (not viscid or glandular-hairy). *Corolla* .5 in long or more, bright blue. *Filaments* glabrous, pollen 20 μ in diam., globose, with 12 to 16 longitudinal ribs. *Ovary* and style pubescent. *Capsule* .35 to .6 in long,

seeds small, ovoid, flattened, brown, shaggy on the margin, with hygroscopic hairs C B Clarke in Hook f Fl Br Ind IV 409 *Justicia stricta*, Vahl Symb II 6 *Cryptophaagmum axillare*, Nees in DC Prodr XI 96, cf Vidal Phanerog Cuming Philipp 61 *in nota*, 132 *Hygrophila stricta*, Lindau in Engl & Prantl Pflanzenfam IV 3b, 297 (non Hassk)

PERAK *King's Collector* 367, *Curtis* 3152, *Wray* 4256, *Scortechini*
JOHORE *Ridley* 4173, 11133 —DISTRIB Borneo, Philippines

Nees himself, in DC Prodr XI 722, united this species to *N. corymbosa*, Blume Bijdr 804 (1825), the latter is (when dried) a smoky grey green, the pedicels and calyx have viscous (and often glandular) hairs The two are very close together

2 *NOMAPHILA MINOR*, C B Clarke, n sp Smaller in all its parts than *N. stricta* Leaves lamina scarcely 2 in long *Corymb*-branches slender glabrate Corolla 25 to 35 in long Anthers and pollen smaller Capsule 25 to 35 in long *N. stricta* (partim), C B Clarke in Hook f Fl Br Ind IV 409 *Ruellia ? paniculata*, Herb Rottler

PERAK *Scortechini* 1374 —The example in Herb Rottler is without locality

7 RUELLIA, Linn

Herbs or undershrubs Leaves opposite, subequal, entire, upper surface with rhaphidos Flowers axillary (or panicled in American species) bract 0 prophyll spatulate or subfoliaceous Exceeding the calyx Calyx deeply 5 fid segments subequal linear Corolla tubular ventricose, blue to white lobes rounded, twisted to the left in the bud Stamens 4, didynamous filaments glabrous, anthers of 2 oblong subequal, parallel, mucous, glabrous cells pollen globose, large (30 to 50 μ in diam), honeycombed Ovary glabrous, ovules 3 to 10 in each cell, style hairy, with one linear branch, the other obsolete Capsule clavate base solid, sterile, top ellipsoid or subglobose, with 6 or more close packed seeds, retinacula large, hooked Seeds ovoid, flattened, hygroscopically shaggy on margin —Species 150 (Bentham) or 200 (Lindau), in the warmer parts of the world, more abundant in America

But a considerable number of the species reckoned in *Ruellia* by Lindau have not "wabenpollen" (honeycombed pollen), but "stachelpollen" (prickly pollen), so that the species left in *Ruellia* may not be more than 120 to 150, and possibly may be much fewer, if (as in the above diagnosis) the genus is restricted to those plants which have a stalked clavate capsule [*Dipteracanthus* (genus), Nees]

1 *RUELLIA REPENS*, Linn Mant 89 (1767) (not of Burm) Sparingly hairy or glabrate Stem 6 to 20 in, weak, often much branched

Leaves 1 by 35 to 5 in, lanceolate, nearly always narrowed at the base, entire, upper surface sprinkled with raphides petiole 125 to 2 in
Flowers axillary, mostly solitary, bract 0 prophylla spatulate or foliaceous, exceeding the calyx *Calyx* 2 in long, divided nearly to the base into 5 subequal linear segments *Corolla* 75 in long *Capsule* 5 in long, contracted, sterile at the base, the seeds (usually 5 to 8) imbricated near the top Blume Bijdr 794, T Anders in Journ Linn Soc IX 460 (1867), C B Clarke in Hook f Fl Br Ind IV 412, Ridley in Trans Linn Soc ser 2, III 332 (1893), Lindau in Engl & Prantl Pflanzenfam IV 3B, 310, Hemsl in Journ Linn Soc XXVI 238 (1890), Ridley in Journ As Soc Straits, 121 (Singapore 1900) *Dipteracanthus lanceolatus*, Nees in Wall Pl As Rar III 82, and in DC Prodr XI 124, Miq Fl Ind Bat II 782 *D. subdenticulatus*, Miq ' Journ Bot Néerl I 117 (1861) *Rostellularia sarmentosa*, herb Buitenz ' (non Nees)

PENANG Curtis 1876 MALACCA Griffith SINGAPORE Lobb T Anderson, Hullett, Ridley 2698, 10725 KEDAH Ridley 5750 PAHANG fide Ridley PERAK Scottichini 1283 —DISTRIBUTION A common Malay plant, extending to Tenasserim on one side, to China and the Philippines on the other

The plate of Burmann (Fl Ind t 41, fig. 1) is good and represents a plant not of the genus *Ruellia* In the Addit to Mant 15 (1771) Linnæus says his *Ruellia repens* was Burmann, t 41 fig 1 it may be more correct to call this species *R. repens* Blume Nees in DC Prodr XI 370 says his *Rostellularia sarmentosa* had the capsule ' 4 seeded from the base, so that there is probably some error in the *Rostellularia sarmentosa* issued from Buitenzorg

VAR β *linearis*, C B Clarke *Leaves* 225 by 2 to 25 in
 PAHANG Ridley 2182 IPOH Deschamps

Ruellia prostrata, Lam Enceyl VI 349 (cf Hook f Fl Br Ind IV 411), differs a little from *R. repens* Linn., by having larger flowers and capsules and the leaves usually rather larger In the Kedah example Ridley n 5750 the flowers are more than 1 in long, and the capsules more than 75 in long, and Ridley has issued it as *R. prostrata* ' , the habit and small leaves are typical *R. repens*

R. angustiflora, Benth & Hook f Gen Pl II 1079 (*R. angustifolia* Lindau in Engl & Prantl Pflanzenfam IV 3B, 411), is a large flowered American *Ruellia*, which appears to spread from gardens in Malaya, it was collected in Penang by Stoliczka in Singapore by Deschamps and Hullett n 176]

8 APORUELLIA, C B Clarke, n gen

Pollen with minute prickles or papillæ or granulated not honey combed, otherwise as *Ruellia*

To *Aporuella* may be referred *Ruellia flagelliformis*, Hemsley, *R. trichotoma*, Nees, *R. acaulis*, R. Brown, *R. spiciflora*, Benth., *R. australis*, R. Brown, *R. Guppyi*, Hemsley, and several other South east Asian unnamed plants. Whereas all the Hindostan species of *Ruellia* have honeycombed pollen, the species of *Aporuella* come from Malaya, South China, and Australia.

1 *APORUELLIA SUMATRENSIS*, C. B. Clarke, n. sp. Stem 11 in high, with few or small leaves except at the base. Lower leaves lamina 5 by 1.5 in., entire, sparsely puberulous, tip obtuse, triangular, base attenuated, upper surface dotted, the raphides obscure, petioles up to 1.5 in. long. Flowers in distant small clusters on long-peduncled spikes. Floral leaves passing into bracts, ovate or obovate, minutely pubescent, very variable in size. Calyx 1.75 in. long, divided rather more than half way down, teeth 5, linear. Corolla 3.5 in. long, tube linear. Stamens 4, didynamous, anthers subsimilar, of two parallel mucous cells, filaments glabrous, pollen small globose, 25 μ in diam., granular. Style hairy, one branch linear, the other nearly wanting. Capsule 6 in. long, seed bearing from the base, seeds about 12, ovate, compressed, shaggy with hygroscopic hairs on the margin.

SUMATRA. R. Moesic alt 600 ft, H. O. I. orbis 2636.

Var. β *Ridleyi*, C. B. Clarke. Leaves more obovate than in the type, completely rounded at the top, flowers pure white (Ridley).

SELANGOR. Batu Caves, Ridley 8213, Kuala Lumpur, Curtis 2364.

2 *APORUELLIA AXILLARIS*, C. B. Clarke, n. sp. Branches (sec.) 1 foot long, undivided, internodes 2 in. long. Leaves opposite, equal, blade 3.25 by 1.5 in., ovate-triangular, subobtuse, slightly hispidulous, suddenly attenuate at base, petiole .25 in. long. Flowers in clusters of 1 to 3 in the axils, supported by oblong bracts .25 to .35 in. long. Sepals 5 linear, 2 in. long pubescent. Corolla 8 in. long, narrowly-funnel shaped. Stamens 4, anther cells 2, parallel, oblong, obtuse at base, pollen globose, 45 μ in diam., papillose, subechinate. Capsule nearly 5 in. long, stalked, with 7 flattened seeds in the clavate head.

MALAY PENINSULA. Songkah, Curtis.

This plant in habit, leaves inflorescence, corolla, capsule—simulates the very common *Ruellia prostrata*, Lam. var. *dejecta* the pollen is unlike.

9 *STENOXYRUS*, C. B. Clarke, n. gen.

Inflorescence a terminal, peduncled, compound, many-flowered, nearly glabrous, subebracteate linear panicle (8 to 12 by 7.5 in.), otherwise as *Hemigraphis*.

This genus agrees in character very closely with the Tropical African genera *Mellera* and *Paulo Hultemia* but the habit and hairs are very different.

1 *STENOHYRSUS* RIDLEYI, C B Clarke, n sp. *Upper leaf* blade up to 8 by 2 in., obovate lanceolate, acuminate at either end, acute, nearly glabrous, entire, reticulate, full of raphides. *main nerves* 12 pair, oblique, *petiole* 1.5 in. long. *Peduncle* 1 to 4 in., thyrus interrupted at base, of 20 to 50 flowers, clustered in very small opposite cymes, bracts inconspicuous, setaceous. *Calyx* 1.75 in. long, sepals 5, linear, full of raphides. *Corolla* 1 to 1.5 in. long, blue, tube cylindric, narrow-campanulate in the upper half, minutely hairy. *Stamens* 4, subsimilar, filaments glabrous, connected in pairs. anthers long, of 2 linear-oblong cells at equal height, pubescent, minutely 1 to 2 mucronate at the base, connective mucronate at tip, pollen globose, 40 μ in diam., longitudinally 20 ribbed. *Style* thinly hairy, with one oblong linear and one suppressed branch. *Capsule* (not ripe) narrowly ellipsoid, glabrate, seed bearing from the base, with eight ovate flattened seeds.

PERAK Tambun Loh, Ridley 9770, Ipoh, limestone rocks, Curtis 3149

Ridley placed this plant close to *Strobilanthes* the numerous capsules are all 8 seeded. There are, on one sheet three thyrsi 8 to 12 by 1 in. and one thyrus reduced (apparently accidentally) to a dense head.

10 *HELMIGRAPHIS* Nees

Herbs or undershrubs. *Leaves* opposite, subequal, often crenate, sometimes lobed, upper surface with raphides, which are sometimes altogether obscure. *Flowers* in terminal spikes, or rarely in 1 to 3 flowered small heads on axillary peduncles. bract usually exceeding the calyx, lanceolate or ovate. prophylla linear, short or 0. *Calyx* deeply 5 fid, segments lanceolate linear or linear, subequal. *Corolla* tubular campanulate, blue to white, lobes rounded, twisted in the bud. *Stamens* 4, didynamous, anthers of 2 oblong, subequal, parallel, mucicous, glabrous cells, filaments glabrous, or the 2 longer with many long hairs, pollen rather large, from short-ellipsoid to oblong ellipsoid, the 12 to 16 longitudinal ribs reaching to the poles, stopples 2. *Ovary* oblong, with 6 to 12 ovules, usually hairy at tip. style shortly hairy at base, stigma of one elongate and one suppressed lobe. *Capsule* oblong or linear-obovoid, slightly flattened, hardly stalked, seeds 6 to 12, ovoid, flattened, with much hygroscopic hair on the margin.—Species 30 perhaps, in South east Asia and Polynesia.

To this genus belong *Ruellia repanda* Linn., *R. Ravacensis* Nees, *R. nemoralis* Zoll., *R. colorata*, Nees, and, as Bentham says, most of Nees first section of *Ruellia*.

Sect 1 Flowers less than .75 in long, 1 to 3 together in small short peduncled heads 1. *H. Ridleyi*

Sect 2 Flowers less than .75 in. long, in rather loose spikes —

Sepals softly hairy, tips ligulate triangular —

Mature leaves nearly glabrate 2 *H. confinis*

This may be esteemed merely a hairy var of *H confinis* but was kept up by T Anderson There are several other Malay sp of *Hemigraphis* very closely allied

4 *HEMIGRAPHIS ALTERNATA*, T Anders in Journ Linn Soc VII 114 (1864) Stem 12 to 18 in, rooting near the base, pubescent Leaves blade 2.5 by .75 to 1 in, narrowed at either end obscurely crenate, mature sparsely hispid pubescent upper surface sprinkled with rhaphides, petiole .25 to .5 in long Spikes 5 to 1.5 in long, loose bract 5 to 7 in long, oblong subacute, hispid on margins calyx .35 in long sepals lanceolate with linear tips, lower part glabrate, densely covered with rhaphides, tips with some several celled white hispid hairs Corolla, stamens, ovary, as of *H confinis*, T Anders Capsule scarcely .25 in long, very little compressed, not obovoid, with 10 to 12 seeds placed subequally along its whole length, glabrous except at the tip *Ruellia alternata*, Burm Fl Ind 135 (excluding tab Rhceder) *R discolor*, Nees in DC Prodr XI 149 *R Blumeana*, Nees in DC Prodr XI 149, Miq Fl Ind Bat II 789 (as to his var (Zollinger 660) only)

PAHANG *Ridley* 2183 ("flower white") JOHORE *Ridley* 11129 —DISTRIB Java, Sumatra

Described from the Nees two types (Zollinger 343, 660) written up by his hand at Kew. Miquel's "*R Blumeana*" (named by his hand and the same plant issued as *R Blumeana* from the Buitenzorg Garden) is *Hemigraphis Decursivana*, T Anders a species that has the capsule hairy to the base, and the leaves tubercular scabrous

5 *HEMIGRAPHIS PLATYCARPOS*, C B Clarke, n sp Spikes longer, denser (than in *H Blumeana*), with broader bracts, more softly hairy, less hispid Capsule exceeding .25 in long, linear obovate, much flattened, with 8 seeds, sterile at the base, otherwise as *H Blumeana*

PAHANG *Ridley* 1408 JOHORE *Ridley* 11128

11 ENDOPOGON, Nees

Fertile stamens 2, otherwise as *Strobilanthes* — Species 20, in South (or East) India, extending to Singapore

This genus is hardly worth re-establishing as a split-off from *Strobilanthes*, but Lindau has introduced the point of "2 fertile stamens only" into his diagnosis of *Pseudostenophyllum*, so that it is necessary either to call *Endopogon* a genus or to re unite both in *Strobilanthes*. *Strobilanthes* is so very large that it is as convenient to treat it under 4 genera as under 4 subgenera.

1 ENDOPOGON RIDLEYI, C B Clarke, n sp. Puberulous. *Leaves* opposite, unequal, up to 6 by 2 in., elliptic, acuminate at either end, subentire, upper surface with scattered raphides. *Petioles* up to 1 in. long. *Peduncles* 0 to 7 in. long, one from each axil (*i.e.* in opposite unequal pairs), each carrying one green strobilate spike, pendent in flower, 1 to 1.5 in. long, bracts 7.5 in. long, elliptic, acute, almost papery, loosely but closely imbricate, adnate at the base. *Flowers* 2, sessile, under each bract, without prophylla. *Calyx* 1.25 in. long, 5 fid to the base, sepals pubescent, 2 lanceolate-linear, 3 linear. *Corolla* .25 in. long in the bud (perhaps not much longer when expanded), white. *Stamens* 2, fertile, filaments glabrous, pollen 60 by 40 μ , longitudinally ribbed. *Ovary* (and style) glabrous, with 2 ovules in each cell.

SINGAPORE. Stagmount, Ridley 5987, 11255.

Allied to *S. adnatus*, C B Clarke in Hook f 11 Br Ind IV 436 which is an *Endopogon*.

12 STROBIANTHES, Blume

Herbs or undershrubs. *Leaves* opposite, often very unequal, sometimes falsely alternate, crenate serrate or subentire, the upper surface usually full of raphides. *Inflorescence* various, the flowers often in heads or strobilate, sometimes solitary in lax panicles, sometimes in small clusters which are paniced, floral leaves prominent or small, persistent or caducous often passing into true bracts ("deckblaetter") in the upper part of a spike, bracteoles (prophylla) 2, often similar to the sepals, or wanting (but in the axil of a bracteole a bud is sometimes to be found). *Calyx* of 5 (usually rather large) segments, subequal, divided nearly to the base in the Malay species. *Corolla* tubular-campanulate, lobes rounded, twisted in the bud. *Stamens* (fertile) 4, didynamous, anther-cells 2, muticous, pollen large, ellipsoid (rarely subglobose), with 16 to 20 (rarely few) longitudinal ribs and 2 stopples. *Ovary* oblong or ellipsoid with 2 ovules in each cell, sometimes stalked, style with one long branch, the other suppressed. *Capsule* oblong or

narrow-ellipsoid, short-stalked, 4-seeded, or in many species with only 2 seeds — Species about 200, *i.e.* after the genera *Endopogon*, Nees, *Pseudostenosiphonium*, Lindau, and *Acanthopale*, C B Clarke have been taken out extending from warmer Africa to China and Australia

Sect 1 Heads capitate occluded (except the corollas) between two erect persistent bract like floral leaves —

1 STROBILIANIHS MAINGAYI, C B Clarke in Hook f Fl Br Ind IV 448 (1884) Perennial, 2 to 4 ft high, sparingly pubescent. Leaves opposite often very unequal, the larger 3 by 1 to 1.25 in crenulate tip acuminate midrib beneath minutely scabrid, surface beneath often microscopically tomentose puberulous, rarely at all hairy petiole 1.25 to .25 in pubescent. Flowers 1 to 5, capitate in an ovoid subsessile head enclosed by two ovate erect floral bract like leaves bract 1 by .25 in, quadrate oblong, keeled, tip rather wide subobtusate, crenate prophylla similar to sepals. Sepals 4 in long glabrous, oblong subacute, membranous. Corolla 2 in long, white (so noted on several collections) tube long, narrow, funnel shaped, linear at base. Stamens 4, fertile subsimilar anthers oblong filaments glabrous, except sometimes 2 or 3 hairs close to the base pollen ellipsoid, large (70 by 40 μ), with 12 to 16 longitudinal ribs and 2 stopples. Style with a few scattered hairs. Capsule (not seen in the type examples) oblong, .5 in long, with 4 seeds, shaggy all over with hygroscopic hairs.

PERANG Maingay (K D) 1182 alt 1800 to 2000 ft, Ridley 7167 King's Collector 1545, 1791 KLDAN Curtis 298 PFRAN 3000 to 4000 ft, King's Collector 8316 SILANGOR Kelsall 2004

The "type" of *S. Manqay* (K.D. 1182) has supplied neither flower nor fruit the above description is taken largely from Curtis 296. In King's Collector 1545, the collector notes "flowers dark blue, white inside", but I can find no difference between this n. 1545 and n. 1791 (noted as having white flowers) collected by the same collector in the same locality

2 *STROBILANTHES BIBRACTEATUS*, Blume Bijdr. 799 (1825). Rather more pubescent than *S. Manqay*. Leaves often with scattered hairs on the surface beneath. Tips of the bracts produced, conspicuously toothed. Filaments, in their whole lower half, with long, deflexed several-celled hairs, otherwise as *S. Manqay*. Miq. Fl. Ind. Bat. II. 801. *Goldfussia bibracteata*, Nees in DC. Prodr. XI. 174. *Dactyctenium* ? *crenata*, Miq. Fl. Ind. Bat. II. 844.

PERAK. Maxwell's Hill, Ridley 5516, Wray 174, 1674, *Scortechini* 337, 1413.—DISTRIB. Java, Sumatra.

There is another closely allied plant collected in Sumatra (Forbes 1906), which differs little but by having the flowers "pale purplish blue". *S. erosus*, Nees in DC. Prodr. XI. 181, appears to be this species, as Nees suspected, but I have seen no authentic example of *S. erosus*.

3 *STROBILANTHES HIRTISEPALUS*, C. B. Clarke, n. sp. More hairy than *S. bibracteatus*. Leaves minutely rufous hairy on the margins. Floral leaves (involucral bracts) with rufous hairs. Sepals linear, very hairy, with rufous several-celled hairs. Otherwise as *S. bibracteatus*.

PERAK. Larut, alt. 1000 to 1500 ft., King's Collector 2215. *Scortechini* 940.

4 *STROBILANTHES RUFOSEPALUS*, C. B. Clarke, n. sp. Branches 18 in long, rufous hairy, procumbent, divided, rooting near the base. Leaves opposite, one about twice as long as the other, longer one 2.25 by .25 in., elliptic-acuminate, crenate, sparsely hispid on the upper surface, rhaphides obscure, petiole 2 in long. Heads 1 in long, ovoid, few-flowered, terminal and axillary. Bracts linear, 5 in long, with several-celled bright-rufous hairs. Sepals 35 in long, linear-subulate, with several-celled bright-rufous hairs in the upper half. Corolla 1 in long, tube campanulate from a short linear base. Stamens 4, longer filaments hairy in their lower half, pollen 50 by 30 μ , longitudinally ribbed. Style glabrous, except close to the apex of capsule. Capsule 35 in long, glabrate, with 4 young seeds.

PENANG alt. 2000 ft., Ridley & Curtis 2761. PERAK. *Scortechini*, Ipoh, Curtis.

This species is near *Strobilanthes ananiticus*, O. Kuntze Revisio, I. 498 (1891).

5 *STROBILANTHES RUFO-STROBILATUS*, C B Clarke, n sp Branches rufous-hairy, creeping, rooting at the base Leaves opposite, nearly equal, 4 by 2 in, cuneate at either end, crenate, nearly glabrate on the upper surface, petiole 5 in long Heads strobilate, 2 to 2.5 in long, bracts (floral leaves) prominent even to the top of the head, 7 by 2.5 in, narrowed at either end, bracts 5 in long, linear-spathulate, densely rufous with several-celled hairs Sepals 4 in long, linear, rufous-hairy Corolla 1.25 in long, tube campanulate, curved, lobes "purple" (Scortechini) Stamens 4, filaments hairy Ovary pubescent at the apex, 4-ovulate, pollen 70 by 40 μ longitudinally multi-strate

PERAK Scortechini 225

6 *STROBILANTHES RUFO-CAPITATUS*, C B Clarke, n sp "Shrubby creeper, 6 to 8 ft long" Branches rufous-hairy Leaves subequal or very unequal, up to 8 by 3.5 in, cuneate at either end crenate, upper surface nearly glabrate petioles 3.5 in long Heads sessile or peduncled, 1 to 2 in long, densely clothed with bright rufous several celled long hairs, bracts (floral leaves) 7.5 by 12.5 in, linear, shaggy on the margin, with rufous hairs 12.5 in long, bracts 2.5 to 3.5 in long, rufous-hairy sepals linear, 2.5 in long, rufous hairy "Corolla white"

PERAK alt 2500 to 3000 ft, King's Collector 10935, Scortechini 568

7 *STROBILANTHES RUFO-PAULI* C B Clarke, n sp Slender, procumbent, rooting at the nodes, pubescent Leaves opposite, more or less unequal, up to 2 by 7 in, elliptic lanceolate, crenate, upper surface nearly glabrous petioles 12.5 to 25 in long Heads very small 2 to 3-flowered bracts (floral leaves) 2.5 to 1 in long, very narrowly spatulate, sparingly or obscurely hairy, bracts 2.5 in long, linear, more or less rufous hairy Calyx 2 in long, sepals linear, pubescent, with long several celled straight rufous hairs at the tips Corolla 1 in long, "blue" (Ridley), nearly straight, narrow-funnel shaped Stamens 4 filaments glabrous, pollen 70 by 40 μ longitudinally ribbed Ovary and style glabrous Capsule with 4 hairy seeds

10 STROBILANTHES PACHYHYLLUS C B Clarke, n sp Shrub, up to 4 ft high Leaves opposite, equal, 55 by 2 in, elliptic, obscurely obovate, acute at either end, under surface pubescent ("silvery grey when fresh), densely clothed with raphides, obscurely serrate, remarkably thick, hard in texture petiole 15 in Panicle terminal, long peduncled, 6 by 1 in lateral branches scarcely 25 in long Sepals 5, subequal, 25 in long, linear, glabrous, full of raphides Corolla 125 in long, very narrowly tubular campanulate, light blue Stamens 4 filaments hairy in the lower half, anthers oblong, mucous, pollen exactly globose, 40 μ in diam, 20 ribbed, 2-stopped Style thinly hairy

PERAK hill top, Scortechini 1786, alt 1600 to 2000 ft, King s Collector 7150

The material represents the species imperfectly it appears allied to *S. collinus* Nees, the texture of the leaves is distinctive, and the globose pollen is very unusual in the genus *Strobilanthes*

13 ACANTHOPALE, C B Clarke, n gen

Pollen globose, echinate, without ribs, otherwise as *Strobilanthes* Species 8, in tropical Africa with Madagascar, and many Indian

Among the *Strobilanthes* to be removed to *Acanthopale* are *S. lanceolatus*, Nees, *S. pulneyensis* C B Clarke, *S. Zenkerianus*, T Anders, *S. Arnottianus*, Nees

S. exsertus, C. B. Clarke; *S. iziocephalus*, Benth., *S. Gardnerianus*, T. Anders., *S. vestitus*, Nees, *S. laxus*, T. Anders.; *S. Hookeri*, Nees; *S. Andersonii*, Benth.; *S. bolamputtensis*, Bedd., *S. acrocephalus*, T. Anders., *S. radicans*, T. Anders.; *S. debilis*, Hemsl., *S. divaricatus*, T. Anders., *S. oliganthus*, Miq., *S. japonicus*, Miq.

1 ACANTHOPALE? MALASICA, C. B. Clarke, n. sp. Branch nearly round, glabrate, at the tip sparsely hairy. Leaves opposite, equal, blade 2.5 by 1 to 1.5 in., elliptic-triangular, nearly entire, scarcely pubescent, upper surface with raphides, tip hardly acute, base deltoid, petiole .25 in. long. Flowers in poor, axillary, sessile or short-peduncled spikes, floral leaves caducous, not seen. Bract .5 in. long, linear-ligulate, glabrous, bracteoles (prophylla) .25 in. long, linear, glabrous. Sepals 5 equal, .25 in. long, linear, slightly hairy at the tips. Corolla .75 in. long at least, nearly glabrous. Stamens 4, perfect filaments glabrous, anthers oblong, mucicous, parallel, at equal height, pollen globose, 50 μ in diam., with bluntish spines, not ribbed. Ovary glabrous, style thinly hairy, one branch long, the other suppressed. Capsule .7 in. long, with a long sterile base, seeds 4, crowded in the globose head, hygroscopic shaggy.

KI DAH Lankawi Island Ridley 8298

The doubt as to the genus of this plant arises because the specimen is in such a state that I am not sure that the grain of pollen described may not have been a stray grain.

14 ACANTHUS, Linn.

Harsh glabrous shrubs. Leaves often prickly. Flower showy, spiked, bract ovate, prophylla (bracteoles) 2 or 0. Calyx 4-partite nearly to the base, 2 inner segments much narrower than the 2 outer, subopposite. Corolla strongly 2-lipped, the posterior lip 0, the truncated close to the base, anterior lip 3-lobed, nearly flat, blue or white, the mid-lobe bifid. Stamens 4, subsimilar, filaments glabrous. Anthers 1-celled, oblong, mucicous, conspicuously fringed by white hairs. Pollen ellipsoid, with 3 narrow longitudinal chinks. Ovary with 2 to 4 ovules in each cell. Capsule ellipsoid, woody, large, shining brown, 2- (rarely 4-) seeded. Seeds discoid, without hairs. — DISTRIBUTION Species 8 or 10, extending from South Europe and Africa to Polynesia.

Stiff, erect shrubs —

Corolla 1.25 in. long, blue, prophylla .25 in. long	1 <i>A. ilicifolius</i>
Corolla .75 in. long, white, prophylla 0	.. 2. <i>A. bracteatus</i>

PENANG *Deschamps* —DISTRIB Burma, Cochin China

19 ASYSTASIA, Blume

Herbs or undershrubs. *Leaves* opposite, equal or nearly so. *Racemes* subterminal, unilateral, lax at base, sometimes compound pedicels short (0 to 2 in long), alternate or opposite, in bud and flower suberect, bract and 2 prophylla at base of the pedicel small bristles (hardly 125 in long). *Calyx* 2 to 25 in long, divided very nearly to the base into 5 linear or narrow-oblong segments. *Corolla* short or long, tube inflated upwards or linear, lobes 5, imbricated in the bud. *Stamens* 4, didynamous, all perfect, filaments united in pairs at the base, glabrous or slightly hairy near the base, anther cells 2, oblong, parallel, at equal height, at base mucous or minutely auricled, pollen ellipsoid, longitudinally ribbed in the type species. *Ovary* hairy, style long, glabrous except near the base, stigmatic lobes 2 equal, hemiglobose, ovules in each cell 2. *Capsule* oblong, 4 seeded in the upper part, base contracted, sterile. *Seeds* compressed, round, often tubercled or rough, without hairs. Species 30, in South east Asia, and in Tropical and South Africa.

Flowers alternate inflated part of corolla tube longer than the base

1 *A. coromandiliana*

Flowers mostly opposite corolla tube linear, widened near the top

2 *A. intrusa*

1 *ASYSTASIA COROMANDILIANA*, Nees in Wall Pl As Rm III 89 (1832). A more or less dull pubescent herb, 1 to 4 ft high. *Leaves* from 1 to 3.5 in long, ovate, triangular acute at tip entire, the margin undulate or sometimes obscurely toothed. *Petiole* .25 to .175 in long. *Racemes* 1 to 4 in long, rarely divided (paniculate), on a peduncle 1 to 4 in long. *Sepals* 2 in long, linear, pubescent. *Corolla* varying from lurid pale purple to nearly white. 1 to 1.25 in long (see however, remark on form β below) the contracted cylindric base of the tube much shorter than its inflated upper half. *Pollen* 75 by 45 μ , with 2 stopples, and longitudinal ribs beside each stopple. *Capsule* 1 in long, solid cylindric base .35 in, seeds 2 in in diam, compressed, ovoid, wrinkled or subtubercular. Nees in DC Prodr XI 165 (with syn and var), Miq Fl Ind Bat II 792 Hook f Fl Br Ind IV 493 (with syn), Dyer Fl Trop Afr V 131, Fl Cap V 42. *A. gangetica*, Lindau in Engl & Prantl Pflanzenfam IV 33, 326, fig 131, Prain Beng Plants 813.

PENANG *Deschamps*, Waterfall, King, John, Scott. SINGAPORE *Deschamps*, T. Anderson, Hullett 67. — *DISTRIB* Indian Peninsula, Tropical and South Africa, elsewhere perhaps only a weed of cultivation.

There is no definite line between the examples of this species with small corolla (as John Scott's Penang example, with corolla only 75 in long and small leaves) and the *A. chelonoides*, Nees T Anderson called our present plant *A. gangetica*, while he has twice marked the Java *A. chelonoides* (with subcompound inflorescence) as *A. coromandeliana*.

2 *ASYSTASIA INTRUSA*, Blume Bijdr 796 (1825) (*excl syn*) A slender undershrub, 2 to 5 ft high, sparingly pubescent. Leaves 2 to 3 in long, elliptic lanceolate base obtriangular. Racemes 1 to 2 in long, flowers often opposite. Corolla 7 to 75 in long, dull pink, tube linear, widened only near the top. Capsule 75 in long, seeds 4, tubercular. Stamens, pollen, pistil, nearly as of *A. coromandeliana*. Moritsi Ver. Zoll Pfl 47 Hassk Cat Hort Bogor p 149 (*excl syn*), C B Clarke in Hook f Fl Br Ind IV 493, Ridley in Journ As Soc Straits 121 (Singapore 1900) *A. Blumei*, Nees in DC Prodr XI 167, Miq Fl Ind Bat II 793, Lindau in Engl & Prantl Pflanzenfam IV 3B, 326 *Isochoriste javanica*, Miq Fl Ind Bat II 822, Lindau in Engl & Prantl Pflanzenfam IV 3B 326.

DISTRIB Frequent throughout the Malay Archipelago

Nees altered the name of this plant because he says that there existed an earlier *Asystasia intrusa* of Forskahl. Forskahl's name however was *Luellia intrusa*.

20 PHIALACANTHUS, Benth

Calyx segments united into a tube at the base (very shortly so in *P. minor*). Inflorescence glabrous or very nearly so pedicels spreading, with nodding flowers. Capsule, where known (i.e. in *P. Wrayi*), supported by the hardened elongate calyx tube otherwise as *Friletia* —
DISTRIB Species 4, viz the 3 below, and *P. Griffithii*, Benth, from East Assam

Calyx tube about as long as the teeth Pollen with 12 raised strong longitudinal ribs

1 *P. Wrayi*

Calyx tube shorter than the teeth Pollen with very obscure longitudinal ribs -

Corolla 12 in long

2 *P. major*

Corolla 6 in long

3 *P. minor*

1 *PHIALACANTHUS WRAYI*, C B Clarke, n sp A branched nearly glabrous shrub, 2 to 3 ft high. Leaves opposite, equal, lamina 5 by 2 in, narrowed at either end, subentire tip acuminate, raphides obscure petiole 75 to 1 in long. Panicles 2 to 4 in long, terminal,

sometimes reduced to a simple raceme, bracts scarcely 1 in long, pedicels 0 to 2 in long, in opposite pairs *Calyx* in flower 25 to 35 in long, teeth triangular-lanceolate, acute calyx in fruit hardening, lengthening (up to 5 in and upwards) *Corolla* 1 in long and upwards, pale primrose (Wray) *Stamens* 4 filaments glabrous, united in pairs, anthers sub-equal, the two cells ellipsoid-oblong, at equal height, hardly auricled at the base, pollen 80 by 15 μ , with 2 stopples, and 12 strong raised ribs *Capsule* more than 1 in long, oblong-ellipsoid, smooth, 4-seeded in the upper half, retinacula large

PERAK Gunong Summit, alt 6700 ft, Wray 378

P. Griffithii, Benth., has pollen exactly as of *P. Wrayi*, and is closely allied to it, but has a much more open and compound inflorescence

2 *PHIALACANTHUS MAJOR*, C B Clarke, n sp. A nearly glabrous shrub, 6 to 8 ft high. *Leaves* opposite, equal, the blade up to 8 by 3 in, narrowed at each end, petiole more than 1 in long. *Panicles* 2 to 5 in long, terminal, sometimes reduced to a simple raceme, flowers opposite, pedicels 175 in long, spreading, buds drooping. *Calyx* nearly 35 in long, divided more than half way down, teeth lanceolate. *Corolla* 1.25 in long, waxy yellowish white. *Stamens* nearly as of *P. Wrayi*, but the pollen only obscurely ribbed longitudinally. *Pistil* as of *P. Wrayi*.

PERAK *Scortechini* 249, alt 2500 to 4000 ft, King's Collector 8146, 10929

3 *PHIALACANTHUS MINOR*, C B Clarke, n sp. Very like *P. major*, but smaller in every part. *Leaves* smaller, sometimes only 3 by 7 in. *Calyx* divided nearly to the base, 2 in long, segments linear. *Corolla* 8 in long.

PERAK *Scortechini*

21 *FILLTIA*, Miq

Herbs or small shrubs. *Leaves* opposite, subequal, petioled, entire, with few or no raphides. *Panicle* symmetrically terminal, frequently reduced nearly to a raceme or spike, pedicels largely opposite, bracts small, inconspicuous, except in *F. bracteosa*. *Calyx* 175 to 25 in long, divided nearly to the base into 5 narrow segments. *Corolla tube* linear or cylindric, conspicuously 2-lipped, posticous lip erect, subentire, antecous of 3 oblong lobes. *Stamens* 4, perfect, subsimilar, anthers 2-celled, the cells oblong, muticous, one placed half-way below the other, or nearly at equal height, pollen short ellipsoid, with 2 stopples, and longitudinally striate. *Pistil* glabrous, or hairy in the lower half of the style, ovules 2 in each cell, style shortly 2-fid, or with one

branch obsolete *Capsule* stalked, with 4 smooth, flat seeds in the clavate upper part (where known) — **DISTRIB** Species about 10, being those here described, the type *F. costulata* from Sumatra, *F. africana*, Lindau, and several from Borneo

We have 3 divisions of *Filetia* —

Div 1 EUGILETIA — *Corolla* tube linear 6 in long, palate glabrous Cells of the anthers quadrate, glabrous Pollen with longitudinal lines — *Filetia costulata*, Miq

Div 2 PERAKIA — *Corolla* tube 4 in long, cylindric, palate (usually densely) furred Cells of the anthers oblong or narrow oblong, the upper one fringed with hair Pollen with longitudinal latticed bands — Here belong the 4 species below described and some of Malaya

Div 3 AFROFILETIA — *Corolla* tube 125 to 175 of an inch long palate glabrous Anther cells roundish the lower divaricate — Here belongs *Idetia africana*, Lindau

Panicle spreading Sepals small, acute, pubescent 1 *F. paniculata*

Panicle reduced to a raceme or spike Sepals glabrous, hardly acute —

Bracts ovate larger than the calyx .. 2 *F. bracteosa*

Bracts inconspicuous —

1 flower subsessile Leaves elliptic or subovate 3 1 *Scortechinii*

Flowers pedicelled Leaves oblong 4 1 *Lindleyi*

1 *FILETIA PANICULATA* C B Clarke, n sp Branches (seen) 8 to 12 in long, glabrate, woody below Leaves blade 4.5 by 2 in, elliptic narrowed at either end nearly glabrous nerves 8 to 10 pairs petioles 25 to 35 in long Inflorescence of 3 nearly simple racemes 2 to 4 in long floral leaves at base of inflorescence 5 in long, linear flowers mostly in opposite separate pairs on pedicels 125 in long bract at base of pedicel linear 125 to 175 in long Sepals 175 in long linear pubescent acute Corolla 7 in long yellowish densely hairy down the throat (*Scortechinii*) Pollen 70 by 40 μ , the longitudinal bands latticed Style hairy at base ovary nearly glabrous

PERAK *Scortechinii* 604

Scortechinii marked correctly his *Idetias* as nov. genus next *Ipulagathus*

2 *FILETIA BRACIOSEA* C B Clarke n sp Nearly glabrous Leaves blade up to 9 by 3 to 3.5 in elliptic narrowed at either end, nerves 12 pairs petioles up to 7 in long Inflorescence a dense nearly simple spike 3 by 7 in flowers mostly in opposite pairs, nearly sessile the bract ovate or nearly round 2 in long Sepals 2 in long, linear ligulate, glabrous hardly acute Corolla and stamens nearly as of *F. paniculata* Style hairy in the lower half Capsule 1 in long, with 4 seeds in the upper half (resembling the capsule of *Eranthemum*)

PERAK *Scortechinii* (none of the 4 sheets numbered)

3 *FILETIA SCORTECHINII*, C B Clarke, n sp A much-branching nearly glabrous undershrub *Leaves* blade in the typical collections of *Scortechinii* 2.5 by 1 in., elliptic, rather oblique, nerves 5 to 6 pairs, petioles 0 to 2 in long in Wray 1505 the leaves are 4.5 by 1.75 in., obovate with cuneate base (see also var β below) *Inflorescence* a simple spike 2 to 3 in long, flowers subsessile, in opposite pairs, bract 1.25 to 1.75 in long, oblong *Sepals* 2.5 in long, linear-ligulate, glabrous, hardly acute *Corolla* 7 in long, white or pale yellow, furred in the throat but much less so than in *F. paniculata* *Stamens* and pollen as of *F. paniculata* *Style* slightly hairy at the base

PERAK *Scortechinii*, alt 4500 to 4900 ft, Wray 258, 1505

VAR β *evolutior* *Branches* elongate, with long internodes *Leaves* blade up to 5.5 by 2.25 in nerves 8 pairs, petiole up to 5 in long *Spike* elongate, loose, the lower pairs of flowers are far apart

PERAK *Scortechinii* 306

This may differ specifically, the flowers are exactly as of *F. Scortechinii* type

4 *FILETIA RIDLEYI* C B Clarke, n sp A much branched nearly glabrous undershrub *Leaves* 3 by 7.5 in, oblong, narrowed at each end margins undulate petioles 2.5 to 3.5 in long *Raceme* 2 to 3 in long, rather loose, with opposite pairs of pedicelled flowers, pedicels 1.25 to 1.75 in long bract oblong, shorter than the calyx *Sepals* 2 in long, linear-ligulate, subobtusely, glabrous *Corolla* 7 to 8 in long, white, shaped as of *F. paniculata* *Stamens* as of *F. paniculata*, the anther-cells rather narrower *Style* thinly clothed with long white hairs *Capsule* 1 in long clavate the 4 seeds in the broadly obovate top

PERAK *Ridley* 9771

22 LIPIDAGAPHIS, Willd

Herbs or shrubs *Leaves* entire, undulate or crenate *Inflorescence* of spikes, or of panicles narrowed almost to spikes many flowered bracts secund, usually longer than the sepals, elliptic or narrow lanceolate, acute, prophylla smaller than the bracts *Calyx* divided nearly to the base into narrow lanceolate segments, whereof 2 are often larger 2 are sometimes connate at the base *Corolla* tube cylindric, limb 2 lipped, the 5 segments not very unequal *Stamens* 4, subsimilar, anther cells 2, parallel, oblong, often minutely mucronate at the base, at equal height or one slightly below the other pollen small, ellipsoid, with longitudinal rows of large patches *Stigma*, nearly entire *Capsule* small, 2 or 4 seeded, conic, hairy at top *Seeds* flattened, orbicular, hygroscopically hairy on the margin or nearly glabrate Species 60, in the hotter regions of the Old World, 2 in America

Lindau, in order to get *Lepidagathis* into a Tribe characterized by honeycombed pollen, advances the explanation that in *Lepidagathis* honeycomb bands are indicated by rows of points. I reckon honeycomb pollen to be globose without longitudinal bands and I do not esteem the pollen of *Lepidagathis* as honeycomb pollen.

Flowers 5 in long Spikes rarely up to 3 in long —

Leaves 3 to 5 in long Spikes 5 to 15 in long

1 *L. incurva*

Leaves 6 to 7 in long Spikes 2 to 3 in long .

4 LEPIDAGATHIS MACRANTHA, C B Clarke, n sp. Bracts lanceolate at top, the upper nearly linear, 75 by 125 in. Corolla white, very pubescent without, 1.3 in long, otherwise as *L. longifolia*.

PERAK alt 300 ft, Wray 3385.

This may prove a variety only of *L. longifolia*, Wight, among the abundant collections of *L. longifolia* there is no specimen that matches *L. macrantha*.

23 BARLERIA Linn

Herbs or undershrubs, sometimes prickly. Leaves opposite or whorled, two of a whorl often reduced to spines. Inflorescence a terminal spike (in the Malay Peninsula plants), bract large, prophylla 2 or 0. Calyx large, of 4 distinct segments, 2 inner segments much the smaller. Corolla with a cylindric tube an inch or more long. Stamens 2, perfect, anther cells 2, at equal height, mucous pollen globose, honeycombed. Ovary with 2 to 1 ovules in each cell, stigmas 2, short. Capsule ovoid, seeds 2 to 4, large, shaggy with hygroscopic hairs or nearly glabrate. Species 120, mostly in Africa and Tropical Asia, a few in America.

Leaves with interpetiolar spines. Corolla yellow.
Spineless. Corolla blue.

1 *B. Prionitis*
2 *B. conspicua*

1 BARLERIA PRIONITIS, Linn Sp Pl 636 (1753). Glabrous or nearly so. Stems 1 to 3 ft high. Leaves 2 to 5 by 3 to 1 in, elliptic, narrowed at both ends, mucronate, interpetiolar spines 25 to 75 in long. Inflorescence terminal, lower flowers of the spike often a little distant, flower-bract lanceolate, widened at the base,

posticous sepal nearly 5 in long, elliptic mucronate, anticus calyx-segment similar to the posticous sepal *Corolla* yellow, tube hardly 5 in long, posticous lip of 4 connate segments 7 in long, anticus lip clawed, shorter *Capsule* 5 to 7 in long, 2-seeded C B Clarke in Hook f Fl Br Ind IV 482 (*with syn*), Lindau in Engl & Prantl Pflanzenfam IV 3B, 314, tt 105c, 106B, 125E, Dyer Fl Cap V 46 (*with syn*), Prain Beng Plants 811, 812

MALACCA Griffith Ridley 2696, Harvey, Derry 271 DISTRIB Africa, India

This plant (with closely allied species) is abundant in Africa, and probably wild in Western India. In Eastern India it is cultivated and found near villages. It may not be wild at Malacca.

2 *BALIFRIA CONSPICUA*, Nees in Wull Pl As Rai III 92 (1832) Large, sparingly pubescent, without spines. *Leaves* 8 by 2 in, oblong, acuminate at either end petioles 5 in. *Spikes* 5 by nearly 1 in, loose, nearly continuous bracteoles present, 7 in long, linear oblong, minutely strigose outer sepals 7 in long, lanceolate, one bifid at the top, with some yellow hairs. *Corolla* 1 in long, blue. *Capsule* 75 in long, narrowly oblong glabrate 4 seeded. *Seeds* ultimately nearly glabrate Nees in DC Prodr XI 226 T Anders in Journ Linn Soc IX 493 (1867) C B Clarke in Hook f Fl Br Ind IV 489 *Justicia conspua*, Wull Cat 2460

PENANG Ridley, Deschamps, Curtis 499 MALACCA Cuming 2357 PERAK Scortechini 114, 543, 564, Larut Perak, alt 1000 to 1500 ft, King's Collector 3907

The very slender short tube of the corolla, having an oblong dilatation in the upper third of it, marks this species off from most *Eranthemums*

VAR β *evolutior*, C B Clarke Panicle of numerous elongate spikes with additional spikes from the leaf-axils, corolla-tube up to 7 in long PENANG Waterfall, Curtis 348

3 *ERANTHEMUM BREVIFLOUS*, C B Clarke, n sp A small, woody, crooked-stemmed, branched, nearly glabrous undershrub, 4 to 8 in high *Leaves* 4 by 175 in, elliptic, shortly narrowed at each end, nerves 6 pairs midrib beneath glabrate in the mature leaf, petioles 25 to 75 in long *Inflorescence* a panicle 15 in long, of 6 to 12 flowers, nearly glabrate, on a peduncle 5 in long, pedicels 0 to 175 in long, bracts minute, setaceous *Sepals* 125 in long, linear, when young minutely pubescent *Corolla* "grey", tube 25 in long, cylindric *Stamens* and pollen of *Eranthemum*, glabrous *Capsule* 8 to 9 in long, linear-oblong seeds 4, in the upper part, nearly smooth

PERAK Gopong, King's Collector 518

This plant appears closely allied in habit to *I. album*, the short cylindric corolla tube and linear conic capsule (not suddenly narrowed into a cylindric stalk) with smooth seeds suggest that it may belong to a different genus

4 *ERANTHEMUM CAUDIFOLIUM*, C B Clarke, n sp A shrub, 4 to 5 ft high, branched upwards, sparingly pubescent *Leaves* blade 75 by 25 in, elliptic, acuminate at either end, with a linear caudate tip (in Scortechini n 447), but in other examples leaves are seen narrower with a shorter tip, nerves 7 to 8 pairs, petioles of the lower leaves often 2 to 25 in long, of the upper only 25 in *Inflorescence* a narrow dense panicle 6 by 2 in, with brown pubescence, lateral branches hardly 2 in long, carrying small dense cymes, bracts 35 in long, linear, setaceous *Sepals* 175 to 25 in long, linear, caudate *Corolla* white (Curtis), tube 5 to 6 in long, often curved towards the top segments 2 in long *Stamens* of the genus *Pistil* and style

very thinly hairy. Capsule 1 in long, with 4 seeds in the upper part

PERAK *Scortechini* 447, 1531, *Curtis* 3150, 3341 DINDINGS
Ridley 3066 bis

There are abundant collections and a detailed MS description of this plant by *Scortechini*. It is easily recognized by the small flowers with a large capsule some times more than an inch long

5 *ERANTHEMUM SELANGORENSE*, C B Clarke, n sp. A branched shrub, minutely pubescent. *Leaves* blade 5 to 6 by 2.5 in, elliptic acuminate, base obtuse or rounded. *Panicle* 3 by 1 to 2 in, lower branches sometimes much developed, 1 in long, carrying 3 to 6 flowers. *Sepals* scarcely 175 in long. *Corolla-tube* 6 in long. Otherwise as *E. caudifolium*

SELANGOR Sungu Bulu, *Goodenough* 10547, Kuala Lumpur, *Curtis* 2367

6 *ERANTHEMUM ALBUM*, Nees in DC Prodr XI 455 (1847). A nearly glabrate undershrub, 1 to 3 ft high. *Stem* usually lignescent, with white bark, to the very base of the inflorescence. *Leaves* opposite, subequal, blade 5.5 by 2.5 in, shortly acuminate at either end, often whitened underneath, margins often obscurely undulate, crenulate, nerves 7 pairs, petioles 5 to 1 in long. *Inflorescence* a panicle of many thin spikes, 4 to 8 in long (poor examples with one spike occur), flowers mostly solitary, in distant pairs, the lower 25 in apart or more, bracts linear, 175 in, pedicels 0 to 175 in (i.e., the spike is itself a contracted panicle). *Sepals* 175 in long, linear, minutely pubescent. *Corolla* white tube 1 to 1.3 in long, linear, exactly the same width to the top. *Stamens* and pistil glabrous, pollen subglobose, 30 μ in diam, lightly banded longitudinally. *Capsule* 1 in long, glabrous or scarcely microscopically puberulous, 4-seeded near the top, slightly contracted between the pairs of seeds. *Seeds* corrugated. C B Clarke in Hook f Fl Br Ind IV 498, *Ridley* in Journ As Soc Straits 121 (Singapore 1900), *Prairie Beng Plants* 814. *E. diversifolium*, Miq Fl Ind Bat II 837. *E. crenulatum*, Nees in DC Prodr XI 453. Var α (*partim*), 454, Var γ *angustifolia* (*partim*). *Justicia alba*, Roxb Fl Ind ed Carey & Wall I 117 (1820), Ic Ined 1105 in hb Kew. *J. orbiculata*, Wall Cat 2489b

MALACCA *Griffith* MALAY PENINSULA *Griffith* (K D) 6175 (*partly*)—DISTRIB Chittagong, Pegu, abundant in the Andamans and Nicobars, Malaya

Nees' type example of his *E. Zollingerianum*, viz Zollinger 162 in Java lectus, is in Kew but is not this. In the large examples the panicle has many long curved spikes,

the second flowers all turned to the convex side of the spike. The smaller forms (?), i.e. *J. orbiculata*, Wall., have a single straight spike

7 *ERANTHEMUM MALACCENSE*, C B Clarke in Hook f. Fl Br. Ind IV 498 (1884) (*tab et syn. excl*) *Innovations* pubescent *Stem* up to 4 to 5 ft. high, often branching. *Leaves* blade 5.5 by 1.25 in., lanceolate or narrow, elliptic-lanceolate, acute at either end, nerves 7 pairs, oblique, petioles .175 to .35 in long *Flowers* subsessile, numerous, close together in a spike nearly continuous to its base, mostly solitary, opposite, spikes 2 to 3 in long, one or several at the end of each branch, pedicels rarely up to .075 in long; bracts hardly longer than the pedicels *Sepals* about .075 in. long, narrow, pubescent. *Corolla* of one colour, variously noted as violet, purple, pink, pink-yellow, yellow-green, tube 1.125 in long, linear to the top *Stamens* of the genus *Pistil* with few patent thin hairs or subglabrate *Capsule* (in a Yunnan plant referred here) 7 in long, clavate, 4-seeded, very nearly glabrous Ridley in Trans Linn Soc, ser. 2, III 333 (1893) *E. erectum*, T Anders in Journ Agri-Hort Soc. Ind. new ser 1 286 (1868) *E. crenulatum* var *grandiflora*, T Anders l c *E. Blumei*, T Anders l c (non Nees) *E. crenulatum*, Nees in Wall Pl As Rar III 107 (*in large part*), and in DC Prodr XI 523 (*in part, not of Lindley*) *Pseuderanthemum malaccense*, Lindau in Engl & Prantl Pflanzenfam IV 3B, 330

KEDAH Langkawi Island, *Curtis*, *Ridley* 8335 MALACCA common, fide *Ridley*, *Griffith* (K D) 6175, *Cunning* 2389, *Harvey*, *Goodenough* 1713, *Holmbury* 732, Mt Ophir, *Lobb* PERAK alt 500 ft, *King's Collector* 8567, 8626, 8665. *Curtis* 3327 PEKAN fide *Ridley* JOHORE *Curtis* DISTRIB SUM

This species, abundant in its area, is characterized by the uniform inflorescence, and is always collected in flower *E. palatiferum*, Bot Mag t 5957, of which (in Fl Br Ind IV 498) I referred one piece to *E. malaccense*, is undoubtedly all true *E. palatiferum*, of which it has the characteristic inflorescence, the colour of the flowers varies from pale pink to bluish purple in both species. The name *E. erectum*, T Anders, is older than *E. malaccense*, but was published without one word of description

8 *ERANTHEMUM KINGII*, C. B Clarke, n sp *Branches* elongate, with long internodes *Leaves* elliptic, shortly acuminate at the tip, hardly acuminate at the base, paler beneath when dry. *Spikes* solitary, 2 to 4 in long, dense, the lower axils with 1 to 3 flowers in each axil *Corolla* white, tube 1.125 in. long Otherwise as *E. malaccense*, C B Clarke

JOHORE Jaffaria, *King* SINGAPORE. *Hullett* 810.

The leaves of this species resemble those of *E. album* Nees while the spikes resemble those of *E. malaccense*, but are slightly more pubescent, and the corolla is white

9 *ERANTHEMUM ACUMINATISSIMUM* Miq Fl Ind Bat II 835 (1856) Erect, nearly glabrous *Leaves* blade 8.5 by 2 in., acuminate attenuate at either end, nerves 8 pair oblique raphides on the upper surface numerous, very short, petioles 1 in. *Spikes* 1 to 3, 7 to 10 in long, many flowered, the lower clusters half whorled, 5 to 1 in apart, with 5 to 10 flowers to the whorl, the upper whorls fewer flowered, coalescent bracts 2 in long, lanceolate linear *Sepals* 2 in long, nearly linear, ultimately nearly glabrous *Corolla* white, with one segment purple spotted, tube 1.25 in long, *Stamens* of the genus *Capsule* 1.125 in long, with 4 seeds in the upper part, slightly constricted between the seeds *E. Andersoni*, Masters in Gard Chron 134, 136 (1869) Bot Mag t 5771, C B Clarke in Hook f Fl Br Ind IV 499, Ridley in Trans Linn Soc, ser 2, III 333 (1893), and in Journ As Soc Straits 121 (Singapore 1900) *E. elegans*, Masters in Gard Chron 1234 (1868) (not of R Brown) *E. Blumei*, Hassk Cat Hort Bogor 151 T Anders in Journ Agri Hort Soc Ind new ser I 285 (1868) and in Journ Linn Soc IX 523 (1867) Kunz in Floru III 363 (1870) (not of Miquel) *E. dianthum* Blume Bijdr 793 (not of Roxb) *E. aspersum*, Hook Bot Mag 5711 *Pseudoranthemum Andersoni*, Lindau in Engl & Prantl Pflanzenfam IV 318, 330

SINGAPORE *E. Andersoni* 112 JAVA cult in Hort Bogor (Kunz 379) Ridley, l.c., thinks the Singapore collection was probably a garden escape

The 'type' of *E. acuminatissimum*, Miquel from Utrecht proves identical with the *E. Andersoni*, Masters. It was perhaps, *E. viscidum* β *acuminatissimum*, Hassk Hort Bogor p 151 but not *E. viscidum* β Blume. The *E. Blumei*, Miq (Fl Ind. Bat II 836) is before me and very closely allied to *E. acuminatissimum*, but has (as Miquel says) smaller leaves, smaller bracts and smaller calyx

10 *ERANTHEMUM TEUSMANNI*, T Anders in Journ Agri Hort Soc Ind new ser I 285 (1868) "A shrubby creeper, 8 to 12 ft long" (King's Collector) *Branches* 2.5 in in diam., with numerous secondary branches springing at a right angle *Leaves* blade 6 by 2 in., broad oblong, acuminate, nerves 6 pair, base often rounded or truncate, but on the same branch sometimes cuneate oblique, petioles 2.5 to 1.25 in long *Inflorescence* a narrow, many flowered panicle rarely so much as 6 in long, the lower branches hardly 1.75 in long, carrying small cymes (almost clusters) of flowers. *Calyx* and *corolla* (white tinged blue) as of *E. acuminatissimum*, Miq *E. Blumei*, Hort Buitenzorg viz Miquel *E. crenulatum* 'var', T Anders MS

PERAK: *Scortechini* 1356, Tapa, alt. 2000 to 3000 ft., *Wray* 837; *King's Collector* 2176, Larut, alt. 5000 to 800 ft., *King's Collector* 5489
MALACCA H D. 364

T. Anderson's whole diagnosis of his *E. Teyssmanni* is "a fine species with a straggling habit"; and I have no authentic specimen; the name is disposable. Whether this was the imperfectly known *E. graciliflorum*, Nees (Wall. Pl. As. Rar V. 3, 107), from Penang I cannot say; it is not the *E. graciliflorum* of Madura (Java) distributed from the Buitenzorg Garden. This species resembles much *E. hirtipistillum* (collected at the same locality), but the corolla-tube is here 1.3 to 1.5 in. long.

25 CLINACANTHUS, Nees

A rambling shrub *Flowers* conspicuous, in small drooping cymes at the ends of the branches, bracts and prophylla small, linear *Sepals* 5, equal, linear *Corolla-tube* narrow, funnel-shaped, limb 2-lipped *Stamens* 2, anthers of 1 cell, oblong, nuticous, pollen ellipsoid, with 2 longitudinal bands *Style* very shortly 2-fid *Capsule* stalked, 4-seeded Only 1 species

1 CLINACANTHUS BURMANI, Nees in DC Prodr X 511 (1847)
Stems round *Leaves* glabrate, blade 3 by .5 to 8 in, elliptic-lanceolate or lanceolate, entire or crenate, base obtuse or attenuate, petiole .25 in long *Cymes* pubescent, 5- to many-flowered, bracts 1.25 in long *Sepals* .25 in long, minutely hairy *Corolla* orange-red or dull scarlet, 1.25 in. long, lobed one-third to half-way down *Stamens* glabrous, no rudiments *Style* glabrous Miq. Fl Ind Bat II 854, C B Clarke in Hook. f. Fl Br Ind IV. 524, Lindau in Engl & Prantl Pflanzenfam IV 3 B, 340, Hemsl in Journ. Linn Soc. XXVI 244 (1890) *C. nutans*, Lindau in Engl & Prantl Pflanzenfam IV 3 B, 340. *Justicia nutans*, Burm. Fl Ind 10, t 5, fig. 1 *J. fulgida*, Blume Bijdr. 784 *Belerophon ? fulgida*, Hassk Cat Hort. DISTRIB Siam, Borneo, Hainan

26 JUSTICIA, Linn

Herbs or shrubs *Leaves* opposite, subequal or sometimes pseud-alternate, entire or undulate *Inflorescence* various in the different sections, from strobilate spikes to panicles with the flowers all pedicelled, bracts and prophylla small, linear, sometimes lanceolate, or in the strobilate spikes round, large, imbricate (these large round bracts in many cases cover more than one flower, and are then floral leaves). *Calyx* small, deeply 5-fid (4-fid in Sect. ROSTELLARIA) *Corolla-tube*

shorter (or scarcely longer) than the 2-lipped limb, segments imbricated (not twisted) in the bud Stamens 2, anther-cells 2, one below the other, tailed, pollen ellipsoid, small, longitudinally ribbed beside the stopples Ovary 4-celled, style shortly bifid Capsule regularly dehiscent, 4-seeded (the placentæ not springing elastically from the base of the capsule), stalked with the seeds in the top, or seed-bearing nearly from the base Seeds ovoid, flattened, verrucose, subtubercular, glabrous (except in Sect RHAPHIDOSPORA) — DISTRIBUTION Species 150, widely spread throughout the hot regions of the world

This genus is only artificially separated from several others (as from *Ieda*, *Idhatoda*, *Ptyssiglottis*) by the white tail to the lower anther cell If this character be not regarded as of generic importance, the number of species may be 300, as in the arrangement by Lindau in Engl & Prantl Pflanzenfam

Sect 1 BRACTEATÆ Bracts (floral leaves) round, large, strobilate at least in the young spikes —

Flowers mostly solitary under each bract (floral leaf) —

Corolla glabrous without, except a few hairs at the tip .. 1 *J. ptychostoma*

Corolla hairy without —

Nerves of the leaves 6 to 7 pairs —

Leaves mostly cuneate at the base

2 *J. pubiflora*

Leaves rounded at the base

3 *J. Scottichnus*

Nerves of the leaves 10 to 11 pairs

3 *J. patulmeris*

Flowers 2 to 3 or more clustered under each bract —

Bracts 5 in long, including the petiole

5 *J. subcymosa*

Bracts 6 in long subsessile

6 *J. selangorensis*

Sect 2 CALOCHANOIDÆ Flowers axillary cymose solitary or clustered, without a terminal cyme or panicle Corolla small

Leaves opposite, subequal —

Leaves elliptic

7 *J. quadrijana*

Leaves linear oblong ..

8 *J. Neesiana*

Leaves apparently alternate, i.e. one of each pair 0 or minute, deciduous —

Leaves on the nerves beneath and stem nearly glabrous —

Herb, with long internodes

9 *J. hemisphylla*

Much branched shrub

10 *J. subalternans*

Leaves on the nerves beneath and stem hairy

11 *J. alternifolia*

Leaves one of each pair reduced to a persistent ear

12 *J. otophora*

Sect 3 GENDARUSSA Spikes terminal, and terminal on short axillary branches, bracts mostly narrow, the lowest rarely imbricate —

Leaves narrow oblong or lanceolate —

Spikes dense, flowers clustered

13 *J. Gendarussa*

Spikes lax, flowers mostly solitary

14 *J. Maingayi*

Leaves elliptic, large (5 to 8 in long) —

Peduncles short —

Spikes linear, interrupted

15 *J. vasculosa*

- Spikes dense .. 16 *J. uber*
 Peduncles long, carrying panicles of linear spikes .. 17 *J. sumatrana*
 Sect 4 ROSTIFLUIARIA Spikes cylindric bracts narrow, about as
 long as the calyx Calyx of 4 linear segments, the 5th suppressed —
 Corolla 25 to 35 in long .. 18 *J. procumbens*

Justicia conspicua, Dayd Jack Ind Kew, is a bare name, founded on Wall Cat n 2475 The 'type' of this came from Penang, but Wallich sorted with it, doubt fully, one plant from hb. Wight, another from Silhet. I have not found n 2475

1 JUSTICIA PTYCHOSTOMA, Nees in Wall Pl As Rar III 108 (1832)
 A herb, very sparingly pubescent Stem 1 to 4 ft high, branching, internodes 3 to 6 in long Leaves 6.5 by 2.25 in, elliptic-lanceolate, acuminate at tip, cuneate at base (but see the Varieties below), often undulate or obscurely crenate on the margin, with very small rhaphides on both surfaces, primary nerves 7 to 9 pairs, oblique, petioles 5 to 1.5 in long, opposite pairs of leaves equal or rarely somewhat unequal Peduncles terminal, penultimate, or axillary, 1 to 2 in long, frequently 2 from one axil, spike 1 in long, or lengthening to 1 to 4 in long, bracts round, ovate, green, 3 to 3.5 in long, shortly stalked, very caducous, nearly glabrous, but often with white bristles on the margin, with 1 (rarely 1 to 2) flower under each bract Calyx 1.25 in long, nearly glabrous, segments linear Corolla lurid white yellow marked with purple grey lines corolla before expansion nearly 5 in long, glabrous without, or with a few hairs at the very tip Filaments glabrous anther cells round, one lower than the other with a short conic white tail, pollen small, ellipsoid, 30 μ long, with two stopples and two rows of tubercles (or round patches) on each side of the stopple Pistil glabrous, style very shortly 2-fid Capsule 5 in long, glabrate, 4 seeded Seeds flattened, verrucose, subtubercled T Anders in Journ Linn Soc IX 517 (1867), C B Clarke in Hook f Fl Br Ind 4 534 (emend) *Rhytidoglossa ptychostoma*, Nees in DC Prodr II 337 *R. ptychosperma*, Miq Fl Ind Bat II 825

PERAK *Scortechini* 689, Wray 2046, alt 100 ft, King's Collector 2077 PENANG Porter (Wall Cat 2478) KEDAH Curtis 2117

VAR β *angustifolia*, C B Clarke Leaves lanceolate or linear-lanceolate

PERAK alt 5000 ft, Gunong Inas, Wray 4130

VAR γ *rotundifolia*, C B Clarke Leaves 6 by 3.5 in, rounded at the base

PERAK Rudley 7163

VAR δ *auriculata*, C B Clarke Leaves narrowly, unequally cordate at base, with two ears

PERAK alt 500 ft King's Collector 2062 *Scortechini*

This is a striking var, some of Scortechini's examples show on the same stem leaves acute at base and leaves auricled at base

VAR ϵ *parvibracteata*, C B Clarke Spikes interrupted at base bracts very small, round, long-petioled, spreading, hardly (or not) imbricated

PERAK Ridley 7166, Goping, King's Collector 555

Wallich's (one) type sheet of this is very imperfect, as can be inferred from Nees' description, and my account in Hook f Fl Bt Ind is erroneous both as to the bracts and the synonymy

2 JUSTICIA PUBIFLORA, C B Clarke, n sp Leaves 4 to 6 in long, elliptic lanceolate, cuneate or rounded at the base nerves 6 pairs, rhabdides none (or most obscure) on either surface Peduncles terminal, and a few axillary, bracts (floral leaves) round-ovate green, 35 in long, shortly stalked, pubescent, without white bristles on the margin Calyx pubescent Corolla very hairy without Style at base slightly hairy Anther-cells short-ellipsoid, the lower with a medium ovoid tail pollen ellipsoid, pores 2 one longitudinal row of tubercles on either side of each pore Otherwise resembling *J. pychostoma*, Wall

PERAK alt 4000 ft, King's Collector 3671 Scortechini

3 JUSTICIA PATULINERVIS, C B Clarke, n sp Sparingly pubescent Leaves 6 by 4 in, crenate, truncate at base, very shortly cuneate on the petiole nerves 10 to 11 pairs, spreading at right angles from the midrib Spike dense, bracts nearly glabrate, with some white bristles on the margin Corolla hairy without Otherwise as *J. pubiflora*

PERAK Scortechini

4 JUSTICIA SCORTECHINII, C B Clarke, n sp Leaves 3 to 4 in long, ovate or elliptic acuminate, most of them rounded at the base, crenulate, nerves 6 to 7 pairs, without rhabdides Spikes dense, bracts round-ovate, imbricate, somewhat pubescent, not bristle-ciliate Corolla hairy without Capsule hairy, nearly to the base Otherwise as *J. pubiflora*

PERAK Scortechini 41, 387

The leaves have dried a rich brown in all the nine sheets of Scortechini so that they look very unlike the preceding three species

5. JUSTICIA SUBCYMOSA, C B Clarke, n sp Stem 2 to 5 ft high Leaves ovate-acuminate, up to 9 by 5½ in, mostly obtuse at the base, nerves 11 pairs, petioles 1 to 2 in long Inflorescence up to 9 by 1 in, bracts 5 in long (petiole included), ovate, at first imbricated, in fruit often distant patent, a condensed cyme of 3 to 7 flowers under each floral leaf Sepals hardly 125 in long, pubescent Corolla pale

yellow, 5 in long, hairy without Capsule nearly 7 in long, hairy to the base Stamens and pistil nearly as of *J. ptychostoma*

PENANG (Curtis 1765) PERAK Scortechini, alt 500 to 1000 ft, King's Collector 5766, 10244 SELANGOR, Ridley 7593

A larger plant than the four preceding It has been supposed allied to *J. decussata*, Roxb., but the pseudo spikes do not branch

6 JUSTICIA SELANGORENSIS, C B Clarke, n sp Leaves 9 by $4\frac{1}{2}$ in elliptic, shortly acuminate, rounded or cuneate at the base, dark purple (Ridley), nerves 9 to 10 pairs, oblique, petioles 2 to 4 in long Peduncles 75 in long spikes 4 by 1.25 in, slightly pubescent, bracts ovate or obovate, up to 6 in long, subsessile, glabrate, imbricate, purple (Ridley), with 2 or 3 flowers under each Calyx small, glabrate Corolla white (Ridley) Capsule hardly 35 in long, glabrate

SELANGOR Ridley 7587

I have seen no flowers This may be near the group of *J. burmanica* and *J. Atkinsonii*

7 JUSTICIA QUADRIFARIA, Wall Cat 2479 (1828-49) Branches 2 to 3 ft long, little divided, pubescent Leaves opposite, subequal, somewhat pubescent, at least on the midrib, blade elliptic 2 to 4 in long, acuminate at either end entire, petiole 0 to .35 in long Flowers densely clustered in the axils, sometimes in small heads on short axillary peduncles bracts (rather floral leaves) spatulate, rusty-pubescent, occasionally present Sepals 25 in long, linear, pubescent Corolla 25 to 35 in long white with rose spots Stamens 2, anther coils 2, one below the other, tailed style glabrous Capsule 25 in long, glabrate or minutely pubescent solid pedicel very short, seeds 4, verrucose-tubercular T Anders in Journ Linn Soc IX 514 (1867) C B Clarke in Hook f Fl Br Ind IV 530, Lindau in Engl & Pflanzl Pflanzenfam IV 38, 349, Heinsl in Journ Linn Soc XXVI 246 (1890) *J. PLANG *Deschamps*, *Curtis* 2918 TONGKAL *Curtis* 2964
 MALACCA *Crispith* — DISTRIB Common in the warm parts of Africa and South east Asia

29 LIEDE, C B Clarke [*LEPTOSTACHYA*, Nees, *partim*]

Herbs *Panicle* loose, branches long, linear, with distant flowers solitary or in clusters in the typical form, bracts inconspicuous *Stamens* 2, anther-cells 2, the lower without a tail, at equal height parallel, or one lower somewhat divaricate, pollen ellipsoid, with 2 stopples, the longitudinal rows of patches on either side of each stopple prominent or obsolete Otherwise as *Justicia*, Sect *Gendarussa* —
 DISTRIB Species 12, in South east Asia

The seventy American species, among which stands *Dianthera*, Linn, differ greatly in habit among themselves and from the Indian The genus *Dianthera* is sunk in *Justicia* by Lindau in Engl & Prantl Pflanzenfam IV 3B, 346, which then has three hundred species and is inconveniently large But the Indian *Dianthera* only differs from *Justicia vasculosa*, Wallich, and its neighbours by the absence of a white tail to the lower anther cell

Panicle very open, with long linear branches :—

Leaves rounded or sometimes cordate at base..	1	<i>L. subcordata</i> .
Leaves obovate, attenuate at base..	2	<i>L. obovata</i> .
Panicle almost dense, oblong, hardly 1 in broad	3	<i>L. densiflora</i>
Panicle reduced to two or three flowers	4	<i>L. radicans</i>
Terminal spikes simple, flowers solitary	5	<i>L. andrographioides</i> .

1 LEDA SUBCORDATA, C B Clarke, n sp Nearly glabrous, the innovations and inflorescence minutely pubescent Stem 1 to 2 ft long, divided, rambling, sometimes decumbent and rooting at the lower nodes (then with smaller leaves) Leaves opposite, subequal, blade 3·5 by 1·5 in, elliptic, acuminate, entire, base rounded or slightly cordate, petioles 1 in. long Panicles terminal on the slender branches, and with few distant subsolitary flowers, bracts and prophylla minute Sepals 125 in long, linear. Corolla white, 5 in long, tube straight, narrowly funnel-shaped Stamens 2, anther-cells 2, parallel, at equal height, rounded at base, pollen 45 by 30 μ , with 2 stopples and 2 longitudinal bands on either side each stopple Style glabrate

PERAK King's Collector 970, Scortechini 95, Curtis 3153

This species is close to the Kharia *L. debilis*, C B Clarke sub *Dianthera*, in which the flowers are in approximate, sessile, opposite pairs, forming long linear spikes

2 LEDA OBOVATA, C. B. Clarke, n sp Nearly glabrous, the inflorescence minutely pubescent Stem 1 foot or more Leaves opposite, subequal, blade 5·5 by 2·25 in obovate, with a very short acumination, entire, with many raphides, long decurrent at base, petiole hardly ·5 in. long Panicle terminal, long-peduncled, with few long linear branches, bracts and prophylla minute, the branches very narrow thinly flowered racemes, pedicels 0·6 in long, or occasionally 2 to 3 flowers clustered. Sepals 125 in long, linear, acute Corolla ("yellow" in Ridley's example) 5 in. long, tube straight, narrowly funnel-shaped Stamens 2, anther-cells 2, parallel, one placed at one-third of its length below the other, rounded at base, pollen ellipsoid with longitudinal bands. Capsule (young) 7 in long, with a linear stalk, pubescent

PERAK Scortechini (type of species). SELANGOR Ridley 7592 (an imperfect specimen, appears to match).

This species is near *Dianthera leptostachya*, Benth.

3. LEDA (?) DENSIFLORA, C B Clarke, n. sp Glabrous Stems 8 in long, decumbent at base. Leaves opposite, equal, some 5 by 1 in, lanceolate, some 5 by 1·5 in, elliptic-lanceolate, nerves 7 to 8 pair, patent, raphides many, small on both surfaces, margin undulate, base cuneate to a petiole 25 in long Inflorescence terminal, peduncle ·5 in long,

panicle 2 by 1 in, many-flowered, pedicels 0 to 1 in long, bracts and prophylla minute or 0. *Sepals* 0.6 in long, lanceolate, glabrous. *Corolla* 5 in long, yellow, straight, funnel-shaped, deeply 2-lipped. *Stamens* 2, filaments long, glabrous, anther-cells 2, oblong, parallel at equal height, obtuse at base, microscopically hairy, pollen ellipsoid, with 2 pores and 2 longitudinal lines of patches beside each stopple. *Capsule* 7.5 in long, slender, glabrous, with 4 seeds in the upper half.

PERAK Ridley 7165

This plant satisfies the technical characters of *Leda*, but the habit and inflorescence are those of *Fraxanthum*.

4. *LEDA RADICANS*, C. B. Clarke, n. sp. Creeping, rooting. *Stems* 10 in long, divided, minutely pubescent. *Leaves* opposite, equal, blade ovate, 1.5 in long, subentire, with many small rhaphides, rhomboid or nearly rounded at the base. *Petioles* 2.5 to 5 in long. *Inflorescence* terminal, depauperated, of 2 to 3 distant flowers. *Sepals* 1.25 to 1.75 in long, linear, somewhat pubescent. *Corolla* nearly 5 in long, as of *Dianthera*. *Stamens* 2, filaments glabrous, anther-cells 2, nearly at equal height, mucous, pollen short-ellipsoid, 25 μ long, with 2 stopples, obscurely marked longitudinally. *Pistil* glabrous.

PERAK Ulu Salami, Scottichini 129

The material for this plant is scanty, and the genus doubtful.

5. *LEDA ANDROGRAPHIOIDES*, C. B. Clarke. Nearly glabrous. *Stems* about 1 ft high, weak. *Leaves* 3 in long, elliptic, acuminate, *petioles* 2.5 to 5 in long. *Spikes* 2 to 3 in long, terminal, solitary, flowers solitary, opposite, in distant pairs. *Bracts* inconspicuous. *Sepals* 1.25 in long, linear lanceolate, nearly glabrous. *Corolla* 5 in long or rather more, tube cylindric, straight, lips short. One anther-cell below the other, with a minute callus at the base, hardly tailed. *Justicia andrographioides*, C. B. Clarke in Hook. f. Fl. Br. Ind. IV 534, Ridley in Journ. As. Soc. Straits 121 (Singapore 1900).

SINGAPORE vide Ridley. DISTRIB. Tenasserim.

30. *POLYTREMA*, C. B. Clarke, n. gen.

Slender undershrubs. Opposite pairs of *leaves* equal or unequal. *Inflorescence* in small, few-flowered, axillary cymes, *bracts* inconspicuous. *Calyx*-lobes 5, linear. *Corolla* small, 2-lipped. *Stamens* 2, anther-cells 2, oblong, standing a little apart, one slightly below the other, having its base mucous or sometimes acute, not tailed. *Pollen* globose or obscurely trigonous-globose, without (or with very obscure) longitudinal bands, surface smooth or most minutely uniformly granu-

lar, stopples 4 in the typical species, possibly 4 to 3 in other species. *Capsule* stalked, with 4 seeds — *DISTRIB* Species the 3 here described and 1 in the Philippines

A group of species resembling in habit some of the Malay plants referred to *Ptysiglottis* by Hallier f in Nova Acta Leop Carol Acad 70 (1897) (as *P lan ceolata*, Hallier f l c 221, t 15, fig 1, or *P frutescens* Hallier f l c 222 t 16 fig 2), which have ellipsoid pollen longitudinally banded and anther cells approximated. The type *Ptysiglottis* from Ceylon is remote in habit and has approximated anther-cells.

Leaves of opposite pairs (many of them) very unequal — •

Leaves entire, sepals 35 in long

1 *P vulgare*

Leaves finely crenulate, sepals 2 in long

2 *P crenulatum*

Leaves of opposite pairs equal or very nearly so

3 *P isophyllum*

1 *POLYTREMA VULGARE*, C B Clarke, n sp. Nearly glabrous branches round, somewhat zigzag. *Leaves* opposite, one reduced to an ovate auricle 25 to 5 in long, the other elliptic or broadly elliptic, 4 to 6 in long, entire, covered with small raphides. tip acuminate. base rhomboid not rounded, primary nerves 10 to 11 pair, petiole 0 to 175 in long. *Cymes* few-flowered, small, sessile or very nearly so in the axils, bracts and prophylla hardly any. *Sepals* 35 in long, setaceous, minutely pubescent or nearly glabrous. *Corolla* 7 in long, tube inflated in the upper half. *Stamens* 2, anther cells 2, mucicous, distant, one rather the lower. *Style* glabrous. *Capsule* 7 in long, glabrate, with 4 seeds in the upper part.

PERAK *Ridley* 7164, 9445, 9768 *Wray* 3591 (partly, Goping, King's Collector 486. SFLANGOR *Ridley* 8545

2 *POLYTREMA CRENULATUM*, C B Clarke, n sp. Branches 6 to 8 in long, decumbent, much divided. *Leaves* up to 25 by 1 in subsessile, elliptic acuminate, margin finely crenulate. *Cymes* closely axillary 1 to 3 flowered. *Sepals* 2 in long, linear setaceous, nearly glabrous. *Corolla* 35 in long. Otherwise as *P vulgare*.

PERAK *Scootchini* (two collections without number)

This is possibly only a starved form of *P vulgare*, but it is considerably smaller in every part.

3 *POLYTREMA ISOPHYLLUM*, C B Clarke, n sp. Herb, 1 to 2 ft high, nearly glabrous. *Leaves* opposite, equal, yellow when dry, blade 4.5 by 1.75 in, elliptic-acuminate, base cuneate, entire, covered with raphides, primary nerves 7 to 8 pair, petioles 5 to 1 in long. *Cymes* small, few-flowered, closely axillary. *Sepals* 35 in long, setaceous, minutely pubescent. *Corolla* white, more than 5 in long. *Stamens* 2, filaments glabrous, anther-cells rather long, not tailed,

distant but nearly parallel, one (for one-third its length) below the other *Pistil* glabrous.

PERAK *Scortechini* 224

31 *ECBOLIUM*, Kunt

Spikes strobilate, bracts imbricate, enclosing the calyx *Corolla*-tube linear *Stamens* 2, without rudiments, anther-cells 2, narrowly oblong, at equal height, muticous, pollen globose, with meridional bands *Capsule* stalked, with 4 large flat seeds in the round head Otherwise as *Justicia*—*DISTRIB* Species 12 in the warm parts of Africa, Madagascar, Arabia, and India

This genus resembles the section *Bracteata* of *Justicia*, which has similar strobilate spikes it differs in having the anther cells at equal height and without tails It is difficult to say by what character it differs from some of the American species of *Dianthera*, but the Malay *Dianthera* (*Leda*) have all very small bracts

1 *ECBOLIUM* LINNFANUM, Kunt in Journ As Soc Bong XL ii 75 (1871). A small shrub, glabrate, the inflorescence somewhat pubescent *Leaves* opposite, equal, elliptic or obovate, acute, 3 to 6 in long base cuneate petiole 5 to 15 in *Spikes* strobilate 2 to 6 in long, terminal and on axillary peduncles, bracts ovate, 5 in long, green varying in their margin, which is sometimes serrate sometimes quite entire, rounded at the tip, prophylla 2, minute *Sepals* 2 in long narrow *Corolla* green blue, tube 75 to 1 in long, linear to the top lips 35 to 5 in long *Capsule* 75 in long, stalk narrowly cylindric head round, flat, 3 in in diam, containing 2 large, round, thin, rough seeds Boiss Fl Orient IV 526, Lindau in Engl & Prantl Pflanzenfam IV 3B, 338, C B Clarke in Hook f Fl Br Ind IV 544, and in Dyer Fl Trop Afr V 236 (*with syn*), Prain Beng Plants 816

PIRANG *King's Collector* 1671 MALACCA *Mairay* (H D) 1172 SINGAPORE *Deschamps* *DISTRIB* Common in warm Africa and India not yet known from the Malay Archipelago

Recognized by its green blue corolla, or by the broad head to the capsule

32 *GRAPTOPHYLLUM*, Nees

Glabrous shrubs *Leaves* equal, opposite, entire *Panicles* terminal, dense, oblong, bracts and prophylla very small *Corolla* large, red tube narrowly funnel-shaped, curved, otherwise nearly as *Ecobolium*—*DISTRIB* Species 3, whereof 1 is widely spread in the warm regions of the Old World, and 2 in Australia

The red corolla has a much broader tube than that of *Ecobolium* The much cultivated species here described is not confounded with *Ecobolium*, but is marked

sometimes *Justicia*, from which it differs by the anther-cells at equal height, not tailed.

1 GRAPTOPHYLLUM HORTENSE, Nees in Wall Pl As Rar III 102 (1832) Attains 6 to 8 ft in height *Leaves* broadly elliptic, 5 to 9 in. long, cuneate at either end, petiole hardly 25 in *Panicle* narrowed nearly to a raceme, terminal, subsessile, 10- to 40-flowered, bracts and prophylla inconspicuous *Sepals* .175 in long *Corolla* red, tube .75 in long, lips 5 in long Hassk. Cat Hort. Bogor 150, Moritz Verz. Zoll. Pfl. 47, Miq. Fl Ind Bat. II 824, C. B. Clarke in Hook f. Fl. Br. Ind IV 545, and in Dyer Fl Trop Afr V 241 (*with syn*) *G. pictum*, Griff. Notul IV. 139; Lindau in Engl & Prantl Pflanzenfam IV 3 B, 327.

PERAK *Scortechini* 1545 KEDAH *King's Collector* 1765. Wild probably in the Malay Archipelago, where it is plentiful Frequent in India, also in Guinea, where it is almost certainly introduced

33 PERISTROPHE, Nees

Erect branched herbs *Leaves* opposite, subequal, petioled *Flowers* 1 to 4 together, and of these one or more often imperfect, clustered between 2 floral leaves, the flower-clusters often peduncled, axillary or terminal, bract and prophylla to each flower small or 0. *Calyx* small, deeply lobed into 5 subequal lanceolate teeth *Corolla* rose or purple, tube slender, limb 2-lipped, upper lip subentire, lower subequally 3-lobed *Stamens* 2, filaments pubescent below, anther-cells 2, mucicous, narrow, curved, one half its length above the other, pollen short-ellipsoid, longitudinally banded. *Ovary* 4-ovulate, style filiform, minutely bifid *Capsule* ellipsoid, stalked, minutely pubescent, placentæ not rising elastically from the base, seeds granular, subtubercular.—
DISTRIB. Species 25, but several very close together, extending from Africa to Japan and New Caledonia.

Floral leaves ovate triangular, 5 in. broad; corolla 1.25 in. long 1. *P. tinctoria*
Floral leaves broadly lanceolate, .175 in. broad, corolla .75 in long 3 *P. salicifolia*.
Floral leaves linear-ligulate, .06 to .09 in. broad, corolla .75 to
1 in long 2 *P. acuminata*

These three species are very closely allied, as are all species admitted of this group by Nees and Miquel *P. montana*, Nees, *P. angustifolia*, Nees, *P. salicifolia*, Blume, *P. commutata*, Nees, are not improbably natives of the Malay Peninsula, but are included between *P. tinctoria* and *P. acuminata*

1 PERISTROPHE TINCTORIA, Nees in Wall. Pl As Rar. III 113 (1832) Often 3 to 4 ft high *Leaves* 3.5 by 1.75 in, cuneate at either end, entire, sparingly pubescent, petioles .25 to 1 in long *Peduncles*

25 to 1 in long, several often approximated, subpanicle, often glabrate *Floral leaves* ovate triangular, large, up to 1 by 5 in, margins not ciliate, but (more or less) minutely scabrid *Calyx* 175 to 2 in long, grey, hairy teeth lanceolate *Corolla* 125 in long *Anthers* 175 in long *Capsule* 6 in long C B Clarke in Hook f Fl Br Ind IV 556, Hemsl in Journ Linn Soc XXVI 248 (1890), Prain Beng Plants 820 *P pallida*, Nees in DC Prodr XI 494, Miq Fl Ind Bat II 846 Ridley in Trans Linn Soc ser 2, III 334 (1893)

JOHORL Ridley KRIAN *Scortechini* 1373 SINGAPORE *Scortechini* 370, 816 —DISTRIB Cultivated much in South east Asia

P fera C B Clarke in Hook f Fl Br Ind IV 556 is possibly the wild form of *P tinctoria* and hardly differs from it but by having the floral leaves ciliate on the margins This plant is (partly) described as *P tinctoria* by Nees and Miquel I have seen no example of it from the Malay Peninsula

2 *PIRISTROPHUM ACUMINATA* Nees in Wall Pl As Ru III 113 (1832) Smaller than *P tinctoria* Nees in all its parts *Floral leaves* 1 by 06 to 09 in broad glabrous *Corolla* 75 to 1 in long *Capsule* 5 in long Nees in DC Prodr XI 496 T Anders in Journ Linn Soc LX 521 (1867) C B Clarke in Hook f Fl Br Ind IV 555 Lindau in Engl & Pflanzl Pflanzenfam IV 3B, 331 Ridley in Trans Linn Soc ser 2 III 334 (1893) and in Journ As Soc Straits 122 (Singapore 1900) *P Blumeana* Hassk Cit Hort Bogor 152, Nees in DC Prodr XI 495 Miq Fl Ind Bat II 848 *Justicia Rozburghiana*, Blume Bijdr 786, fide Miquel

3 *PIRISTROPHUM SALICIFOLIA* Miq Fl Ind Bat II 847 (1856) *Leaves* oblong lanceolate, often 3 by 5 in, rarely elliptic lanceolate often long acuminate *Floral leaves* 6 by 175 in (or broader) *Corolla* 75 in long *Capsule* 5 in long *Justicia salicifolia*, Blume Bijdr 787 *Hypoestes salicifolia*, O Kuntze Revisio I 491 (1891)

PINANG *Deschamps*, King's Collector, Ridley 9375 PERAK *Scortechini*, Wray 847 —DISTRIB Java

This species is separated here from *P acuminata* by the sole character of broader bracts, and I doubt its specific distinctness It is a curious coincidence that O Kuntze should have named his plant (which is at Kew) *salicifolia*, as he did not intend it to be Blume's *Justicia salicifolia*

34 HYPOESTES, R BROWN

Erect branched herbs or shrubs. *Leaves* opposite, subequal, petioled. *Flowers* paired, one of these often imperfect or wanting the two bracts connate (in the Malay species) into an obconic or cylindric involucre, prophylla to the lower bract inside the involucre usually longer than the calyx prophylla to the upper bract often 0, involucre often numerous, in heads, dense panicles or racemes. *Calyx* shorter than the involucre, deeply lobed, teeth 5, lanceolate. *Corolla* rose-purple tube linear, lips 2, narrow. *Stamens* 2, anthers of 1 cell, mucous, pollen ellipsoid, longitudinally striate. *Ovary* 4 ovulate style glabrate upwards, shortly bifid. *Capsule* oblong or ellipsoid, stalked, 4 seeded, placentæ not rising elastically from the base of the capsule, seeds glabrous, tuberculate-granular.—*DISTRIB* Species 40, mostly in Africa and Mascarenia, 8 species are described by Miquel from Malaya, but these 8 are so closely allied that they might be described as 2.

The genus *Hypoestes* abounds in the Malay Archipelago and the quantity of material from thence is very large. In India again, *Hypoestes* is frequent. But from the Malay Peninsula I have only seen one collection viz. Mangay 1176, here described.

1 *HYPOESTES MALACENSIS*, Wight Ic 1555 (before 1850). Pubescent, branched, 1 to 2 ft high. *Leaves* up to 3 by 8 in elliptic lanceolate, narrowed at either end, entire, petiole 5 in long. *Involucres* in axillary and terminal ovoid clusters 1 in long, involucre 8 in long, shortly conic at base, with 2 linear teeth. *Calyx* 25 in long, minutely thinly hairy. *Corolla* 75 in long. *Pollen* with 3 stopples. T Andors in Journ Linn Soc IX 522 (1867). C B Clarke in Hook f Fl Br Ind IV 558, Lindau in Engl & Plantl Pflanzentam IV 311, 333. *H. rosea*, Dene in Nouv Ann Mus III 381 (Paris 1834) (*non* Beauv.)

MALACCA (Griffith, Capt 1 C Wight Mangay (K D) 1176)
DISTRIB Malay Islands

With this is united (in Fl Br Ind IV 558) the Malay Archipelago species *H. Decaisniana*, Nees, and *H. lariflora*, Nees, which differ very little.

35 RUNGIA, Nees

Small undershrubs or herbs. *Leaves* opposite, equal. *Flowers* in peduncled spikes, floral leaves sometimes stipulate, including two bracts, lower bract longer than the calyx, upper smaller, sterile, nearly always empty. *Sepals* 5, nearly separate, linear. *Corolla* small, 2-lipped, tube oblong, short, lobes imbricated in the bud. *Stamens* 2.

1 anther-cell below the other usually appendaged, pollen ellipsoid, longitudinally banded Ovary 4-ovulate, style at tip emarginate Capsule small, with 4 or 2 seeds, placentæ rising elastically with the seeds, from the base of the capsule, seeds glabrous, minutely tuberculate—DISTRIB Species 35, mainly in India, extending to China, Australia, and Africa

This genus can be separated from the small species of *Justicia* by the fruit

1 RUNGIA LAXIFLORA, C B Clarke Suberect, 3 ft high, nearly glabrous Leaves lamina 3.5 by 1.25 in, elliptic, narrowed at either end, petioles .25 to 1 in long Spikes 2 to 4 in long, linear, flexuose, very lax, the outer bracts often scarcely imbricated Bract (floral leaf) 9 mm long, narrow lanceolate, with scarious margins, the two prophylla lanceolate with scarious margins, the lower 3 in long, the upper sterile, smaller Sepals .275 in long, linear, glabrous Corolla 6 in long, "pale yellow, striped with light grey" (Collector's note) Stamens 2 lower anther cell smaller than the upper, with a white spur pollen 50 μ long, with 3 stopples Style glabrous, minutely hairy near the base Capsule .35 in long minutely hairy, placentæ rising elastically, seeds minutely tubercled ? *Justicia laxiflora*, Blume Bijdr 789

PLRAK Scortechini, Larút, alt 3000 ft, King's Collector 3676, alt 100 ft, King's Collector 1815 —DISTRIB Java (?)

Justicia laxiflora, Blume, has the filament "anther barbata" and could hardly be this It was Zollinger, n 1539 *pl. Monit. Veit Zoll Pl 47*, which I have not got But I believe I got the name *Rungia laxiflora* from a Java plant marked *Justicia laxiflora*, which passed through my hands

2 RUNGIA MINUIFLORA, C B Clarke, n sp Suberect, a branched herb, 9 in high Leaves blade 2 by .75 in, ovate-lanceolate, tip obtuse, nearly glabrous, attenuated at base petiole up to .5 in long Spikes linear, 1 to 1.25 in long, very lax, interrupted at base, flower-bract 1.25 in long, elliptic-obtuse, green, microscopically brown-hairy Corolla .2 in long Stamens 2, one anther cell a little below the other distinctly tailed Capsule .15 to .175 in long placentæ rising elastically from the valves, seeds brown, minutely tuberculated

KRDAH Lankawi Island, Curtis 3689

Family XCI —LABIATÆ.

[By D PRAIN]

Herbs, less often shrubs, usually beset with oil-glands. *Stem* usually 4-angled. *Leaves* opposite or whorled, exstipulate. *Flowers* irregular, solitary, 2-nate or fascicled, axillary or in centrifugal spicate cymes which by union in pairs form false whorls. *Calyx* persistent, nearly regular, or variously 4- to 5-cleft, or 2-lipped. *Corolla* gamopetalous, hypogynous, limb 4- to 5-lobed, or 2-lipped and personate, the lobes imbricate in bud. *Stamens* attached to the corolla-tube, usually 4 didynamous, sometimes the upper pair imperfect, anther-cells divaricate or parallel, sometimes disjoined, sometimes confluent. *Disk* usually prominent, regular or irregular. *Ovary* free, composed of two 2-celled carpels, the cells of which are also free, style simple, inserted between the lobes of the ovary, the stigma usually 2-lobed, its arms often unequal, ovules in each cell solitary, erect, anatropous. *Fruit* of 4 dry or rarely fleshy 1-seeded nutlets, rarely one or more of these abortive, situated at the base of the calyx, scar of attachment usually basal, small, occasionally lateral or sublateral and larger. *Seeds* small, erect, without albumen, or albumen very scanty, radicle inferior.—**DISTRIB** Species about 2800, mainly in North Temperate regions

Stamens 4, declinate —

Lowest corolla-lobe patent, flat or slightly concave, wide-based, calyx-limb 2-lipped, upper tooth much wider than the others; filaments free.—

Corolla-tube very short, not or slightly exserted, stigma

2-lobed 1. OCIMUM

Corolla-tube long, usually far exserted, stigma entire or subentire 2. ORTHOSIPHON.

Lowest corolla-lobe deflexed, saccate or cymbiform, narrow-based —

Calyx-limb uniform, teeth 5, subequal, lowest corolla-lobe thick-edged, deeply saccate, not much longer than the others, filaments free 3. HARTIA.

Calyx-limb 2-lipped, upper tooth often (not always) wider than the others, lowest corolla-lobe cymbiform, much longer than the others, its margin not thickened —

Filaments free beyond point of insertion on corolla-tube 4. PLECTRANTHUS

Filaments connate in a sheath round the style .. 5. COLPUS

Stamens not declinate, filaments free —

Stamens 4, erect or spreading, equal or subequal, calyx-limb uniform, teeth 5, subequal; corolla-lobes 4, flat, subequal —

Antthers 1 celled, filaments bearded —

Whorls glomerulate in stout, lax, usually interrupted spikes ..

6 *POGOSTEMON*

Whorls aggregated in slender, dense, continuous spikes ..

7 *DYSOPHYLLA*.

Antthers 2 celled, cells parallel, filaments not bearded;

whorls sometimes terminal, usually axillary ..

8 *MENTHA*

Stamens ascending under upper lip of corolla, usually 4 didynamous, the anterior pair the longer, sometimes 2, one pair being imperfect, corolla 2 lipped —

Calyx limb distinctly 2 lipped —

Calyx-throat remaining open after flowering; tube without dorsal appendage, undivided in fruit and persistent. —

Stamens two pairs upper calyx lip 3 toothed ..

9 *CALAMINTHA*

Stamens one pair, with remote anther cells, upper calyx lip 3 toothed or entire

10. *SALVIA*

Calyx throat occluded after flowering, tube with a dorsal plate or pouch, 2 partite, the upper segment deciduous in fruit

11 *SCUTELLARIA*

Calyx limb uniform, or, if oblique, not 2 lipped, the teeth subequal —

Antthers dimorphic, cells of anterior longer pair dimidiate, 1 locular, of posterior shorter pair 2 locular, upper corolla lip short, flattish pubescent externally but not woolly, flowers medium, purplish, calyx teeth 5, subequal ..

12 *ANISOMALLIS*

Antthers uniform, upper corolla lip arched or hooded over stamens —

Calyx teeth 6 to 10, limb often oblique, upper corolla lip densely woolly externally —

Lower corolla lip shorter than upper flowers large yellow

13 *LEONOTIS*

Lower corolla lip longer than upper, flowers medium or small, white ..

14 *LEUCAS*

Calyx teeth 5, subequal limb uniform, upper corolla lip pubescent externally but not woolly —

Nutlets with a small basal or subbasal scar —

Nutlets dry, flowers medium —

Calyx teeth spinescent, flowers purplish, leaves deeply incised

15 *LEONURUS*

Calyx teeth herbaceous, flowers white or yellow, leaves not incised

16 *PARAPHLOMIS*

Nutlets fleshy flowers large, yellow or white ..

17 *GOMPHOSTEMMA*

Nutlets with a large lateral scar, flowers very small, yellow

18 *CYMARIA*

1 *OCIMUM*, Linn

Strongly scented herbs or undershrubs *Flowers* small, in 6- to 10-flowered whorls, spicate or racemose, pedicels recurved under the calyx, bracts small, caducous *Calyx* ovoid or campanulate, in fruit

deflexed, 2-lipped, upper lip broad, flat, decurrent lower usually with 4 slender teeth, the central pair exceeding the lateral *Corolla tube* short, not annulate within limb 2 lipped, lower lip declinate, entire, flat or nearly so, upper rather shorter than lower, subequally 4 fid *Stamens* 4, declinate, didynamous, exserted filaments free on the lower pair connate below, naked or the upper toothed or hairy below anther cells confluent *Disk* entire or 3 to 4-lobed *Style* 2 fid lobes subulate or flattened *Nutlets* smooth or subrugose, mucilaginous when moistened —**DISTRIB** Species about 60, throughout the Tropics

Pedicels equalling or exceeding the calyx, two lower calyx teeth

longer than the upper lip

..

1 *O. sanctum*

Pedicels much shorter than the calyx -

Lower calyx teeth longer than the upper lip

2 *O. Basilicum*

Lower calyx teeth shorter than the upper lip

3 *O. gratissimum*

1 *OCTUUM SANCTUM*, Linn Mant 85 (1767) An erect softly hairy, much branched herb 1 to 2 ft high *Stems* and branches usually purplish, often woody at the base *Leaves* opposite membranous, pubescent on both surfaces especially on the nerves and principally beneath elliptic oblong obtuse or acute base cuneate or truncate, entire the margin elsewhere entire or serrate 1 to 2 in long, 6 to 12 in wide petiole 5 to 1 in long slender pubescent *Flowers* in slender racemes or panicles, 6 to 8 in long of rather close whorls *Ovules* ovate acuminate, 12 in long, ciliate *Calyx* 12 in (in fruit 2 in) long pedicels longer than the calyx slender, 25 in long, pubescent lower lip of calyx longer than upper, its 4 teeth lanceolate similar below the central pair with long, slenderawn like upcurved tips, which project beyond the upper lip the lateral pair with short straight tips, upper lip wide obovate or suborbicular, reflexed, shortly apiculate *Corolla* 15 in long, purplish pink upper lip pubescent on the back *Filaments* exserted, slender the upper ones with a small boarded basal appendage *Nutlets* 05 in long wide ellipsoid, smooth, yellow with black markings Roxb Fl Ind III 14 Wall Cat 2716 Benth in DC Prodr XII 38, Miq Fl Ind Bat II 939 Hook f Fl Br Ind IV 609, Prain Beng Plants 843 *O. monachorum*, Linn Mant 85 *O. tenuiflorum*, Linn Sp Pl I 597 Benth in DC Prodr XII 39 *O. odoratum*, Burm Thes Zeylan 175, t 80, f 2

In most of the provinces, in waste places — **DISTRIB** South-east Asia from Arabia eastwards Australia Pacific Islands

This, the Sacred Tulsi of India, is no doubt an introduced plant in our area, where it is indigenous is uncertain

2 *OCIMUM BASILICUM*, Linn Sp Pl 597 (1753) An erect branching herb, 2 to 3 ft high. *Stems* and branches usually green, sometimes purplish, glabrous or more or less hispidly hairy. *Leaves* opposite, membranous, green or purplish, variously pubescent, in extreme forms quite glabrous, in others strongly hispidly hairy, ovate-acute, base cuneate, entire, margin elsewhere entire or toothed or occasionally (in cultivated forms) deeply lobed, 1 to 2 in long, 6 to 12 in wide, occasionally, in cultivated varieties, larger, petiole 5 to 1 in long. *Flowers* in rather dense racemes of whorls, the terminal raceme ultimately 6 to 8 in long, much exceeding the lateral, rarely (var *thyrsoides*) with all the racemes subequal, forming a terminal thyrse, bracts ovate acute, petiolate. *Calyx* 2 in (in fruit 35 in) long, pedicels very short, lower lip with central pair of teeth longer than the upper lip, which is orbicular, longer than the campanulate tube. *Corolla* 35 to 5 in long, variously white or pink or purplish, nearly or quite glabrous to pubescent or (var *ciliata*) hispidulous. *Filaments* shortly exserted, the upper ones with a tooth above the base. *Nutlets* 07 in long, ellipsoid, pitted. Wall Cat 2713, Hook f Fl Br Ind IV 608.

PERAK *Wayah*! PENANG *Walluh*! MALACCA Perhaps only cultivated in our area.—DISTRIBUTION Throughout Tropics of Eastern Hemisphere and Polynesia.

The presence of this species in Malacca is recorded by Sir J. D. Hooker (Fl Br Ind I c), but there are not now any Malacca specimens at Kew. In Penang it has only been collected by Wallich. His plant is a glabrous form never met with in India save in gardens. No complete specimens have been sent from Perak but Wayah records the species, under the name 'Ruku,' as an adulterant of Patchouli.

'Ruku' is however, the Malay name for *Hyptis graveolens*, which is one of the usual adulterants of Patchouli leaves, though the writer finds that samples of "Ruku" do contain, mixed with the leaves and calyxes of *Hyptis graveolens*, calyxes of *O. Basilicum*. The particular variety met with in these samples being var *pilosum*, there is just a possibility that in Perak this may sometimes occur as an escape from cultivation.

3 *OCIMUM GRATISSIMUM*, Linn Sp Pl 1197 (1753) A shrubby, much branched perennial, 4 to 6 ft high, woody at the base. *Stems* glabrous, young branches pubescent. *Leaves* opposite, chartaceous, pubescent, elliptic-lanceolate, acute, base cuneate, entire, margin elsewhere coarsely crenate-serrate, 25 to 5 in long, 15 to 225 in wide, petiole 1 to 25 in long, slender, pubescent. *Flowers* in simple or branched, strict, slender racemes, whorls rather close, rachis softly pubescent, bracts sessile, acuminate from a wide ovate base, exceeding the calyx, decussate and squarrose in young racemes. *Calyx* 12 in (in fruit 25 in) long, pubescent, glandular, pedicels very short, softly

pubescent, lower lip with central pair of teeth minute and much shorter than the upper lip, which is rounded and recurved. *Corolla* 17 in long, yellowish- or greenish-white, externally pubescent. *Filaments* distinctly exserted, upper pair with a bearded tooth at the base. *Nutlets* 0.6 in long, subglobose, rugose, brown. Roxb Fl Ind III 17, Wall Cat 2720, Hook f Fl Bt Ind IV 608.

PENANG. *Wallich*. Almost certainly only cultivated in our area —
DISTRIB. Tropics generally, but doubtfully indigenous in America.

The only record of this species from our area is that of Wallich who collected specimens in Penang in 1822. Seeing that no one has sent it since from any of the provinces, it may almost certainly be concluded that Wallich's specimens came from cultivated plants or from casual escapes that have not become permanently established.

2 ORTHOSIPHON, Benth

Herbs, undershrubs, or shrubs. *Flowers* in 6 or fewer-flowered racemously arranged whorls, bracts small. *Calyx* 2 lipped, ovoid or campanulate tubular deflexed in fruit. lower lip 4 toothed, the central and lateral teeth distinct or shortly connate, usually subulate. upper lip broad, membranous, the margins decurrent. *Corolla* 2 lipped, tube often slender straight or incurved. lower lip entire, concave. upper lip 3 to 4 fid. *Stamens* 4, declinate, didynamous, included or exserted. filaments free, not appendaged at base. anther cells confluent. *Disk* usually gibbous. *Style* with a small capitate or clavate, entire or notched stigma. *Nutlets* dry, ovoid or globose, smooth or nearly so. — DISTRIB. Species about 60, in Tropics of the Old World.

ORTHOSIPHON SIAMENSIS, Benth in Wall Pl As. Rar. II 15 (1831). A slender glabrous or pubescent herb, 1 to 2 ft high, stems distinctly quadrangular. *Leaves* opposite, membranous, usually puberulous to pubescent on the nerves on both surfaces, otherwise glabrous, rather dark green above, ovate acuminate, with long entire cuneate base. margin elsewhere coarsely wide serrate, 2 to 4 in long, 7.5 to 1.5 in wide, petiole 2.5 to 4 in long, puberulous or pubescent. *Flowers* in rather distant whorls, 6 in apart below, these arranged in lax terminal racemes 4 to 8 in long, 1.5 in across, not including the far-exserted filaments. *Calyx* 1.5 in (in fruit 2.5 in) long, campanulate, puberulous on the nerves, gland-dotted between, the two central teeth of lower lip subulate. *Corolla* uniformly finely puberulous, 1 in long, purplish or white, tube slender, straight, thrice as long as calyx, lower lip straight, 2 in long, upper lip refracted, 2 in long. *Filaments* glabrous, capillary, projecting 1.2 in beyond corolla-limb. *Nutlets* wide-oblong compressed, rugulose. Benth Lab. Gen. & Sp. 29, and in DC Prodr. XII.

MALACCA *Graffith* 3961! PENANG *King*! SINGAPORE *Kunstler*! PERAK *Scortechini*! ANDAMANS at Port Blair, *King*!—DISTRIB America, from Brazil to Mexico, Tropical Africa and the Malay Archipelago, introduced

Hyptis capitata, Jacq, a species in habit resembling *H brevipes*, is frequently met with in gardens in S E Asia It sometimes occurs spontaneously in waste places in India and appears to have become established in the Philippines and in Formosa The

possibility of its occurrence in our area should therefore be kept in mind. It is readily distinguished from *H. brevipes* by its much larger capitula, which reach 75 mm across, and by its calyx teeth being shorter than the tube. There is nothing in the description of the mysterious *Leucas globulifera* (Hassk. Cat Hort Bogor alt. 133), which finds a place in various works of reference and which is obviously not a *Leuca*, to prevent it from having been *Hyptis capitata* in cultivation, as Hasskail says, at Buitenzorg. Hasskail's small 2 fid upper lip may stand for the two upper corolla lobes, the lateral lobes of the lower lip being the two lateral corolla lobes, the concave mid lobe, largest of the three in what Hasskail terms the lower lip explains itself. Every other character agrees with *Hyptis capitata*, and the combination of characters will fit no other Labiate known to the writer as likely to be in cultivation in Java when Hasskail wrote.

2 *HYPTIS SUAVEOLENS*, Poit. Ann. Mus. Par. VII 472, t. 29, f. 2 (1806). A rigid, branching, annual herb, 2 to 4 ft high. Stems hirsute. Leaves opposite, firmly herbaceous, dark green, pilose above, puberulent beneath, rather wide ovate, subacute, base rounded, truncate or slightly cuneate, rarely subcordate, margin sinuate and serrulate. 75 to 3 mm long, 6 to 2 mm wide, petiole slender, 35 to 75 mm long, sparingly pubescent. Flowers in lax, few-flowered, secund heads, 5 mm long, arranged racemously towards ends of branches in the axils of smaller leaves on pubescent peduncles 5 mm long, bracts minute, setaceous. Calyx campanulate, 2 mm (in fruit 35 mm) long, strongly ribbed, mouth villous, teeth erect, subulate, shorter than tube. Corolla blue, 3 mm long, tube slender. Nutlets narrowly oblong, brown, faintly rugose. Benth in DC. Prodr. XII 126. Miq. Fl. Ind. Bat. II 959. Hook. f. Fl. Bor. Ind. IV 630. *Ballota suaveolens*, Linn. Sp. PERAK Wray! PENANG Wallich! Curtis! Cultivated only, in our area - DISTRIB Philippines, where, according to Lohr, it occurs only in gardens

This plant seems to flower not infrequently in the Philippines, there are specimens from thence at Kew collected both by Vidal and by Lohr So far as is known, it has flowered only three times in Europe once in France, recorded by Pelletier (1844), once in Italy, recorded by Tenore (1847), once in England, recorded by Sir W J Hooker (1849) Hooker's plant was obtained from Tenore No flowering specimen has ever been communicated from our area where according to Wray and Curtis, it is extensively cultivated by Chinese settlers In the Royal Botanic Garden at Calcutta the plant has been in continuous cultivation since 1834, when Wallich first obtained it from Penang, at Saharanpur, whence it was distributed from the Calcutta Garden, it has also been long in cultivation At Calcutta and at Saharanpur all attempts to induce the plant to flower have consistently failed

This, which may be termed the Malayan, as opposed to the original or Indian Patchouli, is not known to be cultivated anywhere in India except in botanical gardens

There are indications that a third kind of Patchouli plant the Chinese Patchouli (*Microtoena cymosa* Prain), had at one time been introduced not improbably by Chinese settlers to Java But its cultivation has not persisted in the Malayan Archipelago and there is no indication that it was ever introduced to the Peninsula The Chinese Patchouli seems at one time to have been cultivated to a considerable extent in North eastern India and to have competed in the Calcutta market with the Indian Patchouli (*Pogostemon Heyneanus*) Now however the Malayan Patchouli, the product of *Pogostemon Cablin* appears to have so completely supplanted both the others that neither are offered for sale, and the cultivation of *Pogostemon Heyneanus* is restricted to native gardens in the Indian Peninsula while that of *Microtoena cymosa* only lingers in a few native gardens in the Khasia Hills

In commercial samples of the leaves of *Pogostemon Cablin*, various extraneous leaves are to be met with The chief of these are leaves of *Hyptis suaveolens*, Poit, in our area known as "Ruku," also leaves of *Urena lobata*, Linn, known in our area as "Peipulut" With *Hyptis suaveolens*, and under the same name "Ruku," are associated the leaves of *Ocimum Basilicum* Linn, var *pilosum* These, how ever, are in much smaller quantity than those of the *Hyptis* *

Strongly scented perennial herbs with creeping rootstocks *Flowers* small, in usually many-flowered terminal spikes or axillary whorls, bracts small or large *Calyx* tubular or campanulate, 10-ribbed, 5 toothed, teeth subequal (*Corolla* tube infundibuliform, short, lobes 4, the uppermost rather wider than the other three, emarginate) (*Stamens* 4, usually dimorphic, subequal, filaments free, erect, distant, anthers 2 celled cells parallel) (*Disk* entire, uniform) (*Style-arm* short, subequal) (*Nutlets* ovoid, smooth or reticulate) **DISTRIB** Species variously estimated—perhaps not more than 30 in reality—mainly in North Temperate regions, but some now widely dispersed in all parts of the world

MENTHA JAVANICA, Blume Bijdr 826 (1826) A prostrate herb, rooting

below. *Stems* 1 to 2 ft long, pubescent with reflexed adpressed hairs. *Leaves* opposite, membranous, harshly hairy above, glabrous beneath, rather wide lanceolate, acute, base long-cuneate, entire, margin elsewhere serrate, 1 to 2 in long, 25 to 35 in wide, petiole 25 in long or shorter, floral leaves like those on the stem below the whorls. *Flowers* in axillary capitate distant whorls, bracts acute, shorter than the flowers. *Calyx* 1 in long, tubular-campanulate, adpressed-pubescent, teeth lanceolate, acute, longer than the tube. *Corolla* 15 in long, pubescent. Benth in DC Prodr XII 173. *M. satua*, Roxb Fl Ind III 6 (*hardly of Linn*). *M. arvensis*, Thw Enum Pl Zeyl 239 Trin Fl Ceyl III 381 (*hardly of Linn*). *M. arvensis* var *javanica*, Hook f Fl Br Ind IV 648.

MALACCA (*Griffith*)—DISTRIB Ceylon, Java, Philippines

Apparently rare and possibly an introduced plant in our area seeing that it has never been reported since Griffith met with it. As Sir J D Hooker remarks this which is Roxburgh's *M. satua*, may really be a form of *M. satua*, Linn and if so, may only be a state of *M. arvensis* Linn to which Boissier refers *M. satua*, and to which Thwaites refers the present plant. For the purposes of a local flora however it seems better to keep this form which is easily recognized apart as a distinct species.

9. CALAMINTHA MENCH

Herbs or shrubs. *Flowers* small or medium in dense axillary or loose spicate or racemose or pumpled whorls. *Calyx* 13 nerved, 2 lipped lower lip 2 toothed teeth narrow upper lip 3 toothed, teeth wider and more highly connate throat naked or villous. *Corolla* tube straight, throat villous lower lip spreading, 3 lobed upper lip erect, flattish. *Stamens* 4, didynamous ascending under upper lip, the upper pair sometimes imperfect, anther cells parallel or divaricate. *Disk* uniform, entire. *Style lobes* equal or the upper smaller. *Nutlets* minute, subglobose, smooth.—DISTRIB Species about 40, in North Temperate regions.

CALAMINTHA GRACILIS, Benth in DC Prodr XII 232 (1848). A slender prostrate herb. *Stems* 8 to 12 in, faintly puberulous, rooting below. *Leaves* opposite, membranous, glabrous on both sides, dark green above, pale beneath, ovate-subacute, base rounded or shortly cuneate, entire, margin elsewhere serrate, 4 to 6 in long, 3 to 5 in wide, petiole 25 in long, puberulous. *Flowers* in lax many flowered whorls in axils of uppermost leaves, and there remote or aggregated in racemose or subcapitate terminal racemes, with rachis sparsely pubescent, bracteoles subulate, finely puberulous, half as long as slender pedicels. *Calyx* 12 in (in fruit 17 in) long, tube slightly inflated below, lower teeth subulate, ciliate incurved upper lip shortly 3-toothed, recurved, teeth

ovate pedicels 12 in long, puberulous Corolla 2 in long Nutlets 02 in, pale-brown, smooth

PERAK Taiping, Ridley 11912!—DISTRIB Java, Assam

This species is not included in the 'Flora of British India' It was obtained by the late Mr C B Clarke, at Dibrugarh in Upper Assam, subsequent to the appearance of the account of the Indian species of this family by Sir Joseph Hooker

10 SALVIA, Linn

Herbs, undershrubs or shrubs Flowers small, medium, or large and showy, whorls usually in racemes or spikes, bracts small or large, sometimes coloured Calyx campanulate or tubular, 2 lipped, mouth naked, upper lip entire or 3 toothed, lower lip 2-fid Corolla 2-lipped tube naked or annulate within lower lip 3 lobed, the central lobe usually wider than the lateral, entire or emarginate upper lip erect Stamens 2, the upper pair imperfect represented by small staminodes or obsolete filaments short, articulating with a slender connective, and sometimes produced beyond the joint connective linear, transverse with an upper ascending arm which bears a linear fertile anther cell, and a lower straight or deflexed arm bearing a cell which may be empty or fertile or bearing no cell Disk usually enlarged anteriorly Style shortly 2 fid the lobes usually subulate, equal or the lower larger sometimes flattened Nutlets ovoid somewhat triquetrous smooth DISTRIB Species about 450, cosmopolitan

Though described by Benth, and by Hooker *l.c.*, as not annulate the corolla tube of this species is distinctly annulate within. The annulus is slightly oblique rather higher anteriorly and is slightly imperfect there being a small hiatus behind where the style comes in contact with the corolla tube.

16. PARAPHLOMIS, Prain

Herbs or shrubs. *Leaves* membranous. *Flowers* medium, yellow or whitish, in dense axillary, many flowered whorls. bracteoles numerous, filiform. *Calyx* 10 nerved, equally 5 toothed, tube slightly incurved. *Corolla* tube annulate within, upper lip erect, pubescent externally, quite glabrous within, lower lip spreading, 3-lobed. *Stamens* 4, ascending under upper lip, lower pair longer, all filaments without basal appendages, anthers connivent, cells divaricate. *Disk* uniform, entire. *Style* 2 fid, lobes subequal or the upper shorter than lower. *Nutlets* obovoid, triquetrous below, rounded above, glabrous. — **DISTRIB** Species 3, two Malayan, one extending from the Eastern Himalaya to the Philippines.

PARAPHLOMIS RUGOSA, Prain in Ann Roy Bot Gard Calcut IX : 60 (1901). A coarse shrubby plant, 2 to 3 ft high. *Stems* stout or slender, minutely hirsute with deflexed hairs. *Leaves* opposite, membranous, dark-green above, paler beneath, glabrous or with minute scattered hairs on the upper surface, elliptic or oblong-ovate, acuminate, base cuneate or truncate, entire, margin elsewhere shortly toothed, 6 to 8 in long, 3 to 4 in wide, petiole slender, 2 to 4 in long. *Flowers* in small distant or rather approximate whorls, axillary and

also often many on the stem below the leaves, 75 to 125 in across, bracteoles filiform, glabrescent, rather shorter than the calyx, 3 in long. *Calyx* 4 in (in fruit 5 in) long, obconic campanulate, tube slightly curved forwards, glabrous upwards where thickly membranous, usually hispid towards the coriaceous base. *teeth* 5 slender, lanceolate, from a triangular membranous base, two thirds the length of the tube, glabrous. *Corolla* pale yellow or white, 1 in long with a distinct annulus within both lips pubescent externally. lower 3 lobed with oblong mid lobe and lanceolate lateral lobes. upper narrow, rounded at apex, half the length of the tube, glabrous within. *Filaments* all devoid of basal appendages. *Style arms* subequal. *Nutlets* 25 in long obovoid acute below and triquetrous, rounded above, glabrous. *Phlomis rugosa*, Benth in Wall Cat 2067, in Wall Pl As Rar I 63, in Lab Gen & Sp 634 and in DC Prodr XII 545. Hook f Fl Br Ind IV 693. Planch Ann Roy Bot Gard Calc III 231. IX 1 60. *Gomphostemma membranifolium* Miq Pl Ind Bat II 988.

PIRAK Kintu, on limestone rocks, *King's Collector (Kunstler)* 7095. *Scortechini*. **DISTRIBUTION** Eastern Himalaya Indo China Malay Archipelago Philippines.

The specific name applied to this plant by Mr Bentham is as Sir Joseph Hooker remarks wholly inapplicable. Its characters are so different from those of the genus *Phlomis* and its habit so unlike that of any member of that genus that it is necessary to consider it the type of a distinct genus.

17 GOMPHOSTEMMA, Wall

Coarse, stellately pubescent or tomentose perennial herbs or shrubs. *Roots* sometimes tuberous. *Flowers* large or medium, in 6 to 24 flowered whorls, sessile and densely or peduncled and laxly cymose. bracteoles lanceolate or linear. *Calyx* campanulate, 10 nerved subequally 5 toothed. *Corolla tube* slender throat inflated limb 2 lipped lower lip spreading, broadly 3 lobed. upper lip galeate, entire or emarginate. *Stamens* 4, pubescent, the lower longer, all ascending, anthers connivent in pairs, 2 locular, cells transverse, parallel. *Disk* subequal or gibbous behind. *Style* 2 fid, the lobes subulate, the anterior slightly the longer. *Nutlets* drupaceous, glabrous or pubescent, the pericarp usually fleshy and white, with a broad hilum, rarely all developed. **DISTRIBUTION** Species 26, South eastern Asiatic.

Corolla with almost straight tube and narrow throat, calyx tube hispidly hairy within, ovary glabrous, nutlets solitary glabrous (§ STENOSOMA) —

- Calyx-teeth triangular, much shorter than the tube; whorls few-flowered, densely congested; flowers yellow .. 1. *G. microcalyx*
 Calyx-teeth linear-subulate, longer than the tube; whorls many-flowered, laxly cymose; flowers yellow .. 2. *G. crinitum*.
 Corolla with distinctly incurved tube and wide-campanulate throat; nutlets 4 (§ EUGOMPHOSTEMMA) —
 Calyx-tube hirsute within, ribbed, green; ovary villous; nutlets hispid at apex —
 Corolla yellow; style hirsute; calyx-teeth longer than tube .. 3. *G. Scortechinii*
 Corolla white; style usually glabrous; calyx-teeth not longer than tube .. 4. *G. oblongum*
 Calyx-tube glabrous within, not ribbed, reddish, corolla white, nutlets quite glabrous, punctulate .. 5. *G. Curtisi*.

Sect 1. STENOSTOMA, Prain *Corolla-tube* straight, glabrous within, longer than the calyx, the limb narrow, the lips small. *Nutlets* usually solitary, smooth.

1. GOMPHOSTEMMA MICROCALYX, Prain Journ As Soc. Beng LIX. ii 316 (1890). A coarse perennial herb, 3 to 5 ft high *Stems* stout, erect, sulcate, woody, hoary-pubescent or scabrid *Leaves* opposite, herbaceous, dark-green above, hoary beneath, finely closely stellate-pubescent on both surfaces, oblong-ovate, acute, base cuneate, entire, margin elsewhere entire or widely and minutely toothed, 4·5 to 6 in. long, 3 to 3·5 in wide, petiole of lower leaves 1·5 to 2 in., of upper leaves ·5 in long, scabrid. *Flowers* in dense, few-flowered whorls in the axils of the lower leaves and on the bare stem below the leaves, bracts ovate-lanceolate, entire, ·25 in. long, ·12 in wide. *Calyx* 3 in long, teeth short, triangular, less than half as long as the tube *Corolla* yellow, 1·25 in long, slightly puberulous externally, the throat very narrow *Style* and ovary glabrous *Nutlets* smooth, glabrous. Ann. Roy. Bot. Gard Calo III 251.

DISTRIB Indo-China

Very closely related to *G. oblongum*, Wall., of which it appears to be the representative in the Malayan Peninsula. It extends northwards to Tenasserim, and its area thus to some extent overlaps that of *G. oblongum*.

4 *GOMPHOSTEMMA OBLONGUM*, Wall Cat 2154 (1828) A coarse perennial herb, 3 to 5 ft high. *Stems* stout, erect, woody, somewhat 4-angled densely tomentose. *Leaves* opposite, herbaceous, dark green, hispidly hairy above, densely pubescent beneath, elliptic-oblong acute, base rather abruptly cuneate or subtruncate, margin crenate or crenate-serrate, 6 to 12 in long, 2 to 3.5 in wide, petiole .35 to 1 in long, densely tomentose. *Flowers* in rather dense few-flowered axillary whorls, bracts ovate-lanceolate .25 in long. *Calyx* .5 in long, prominently ribbed, hirsute within, teeth lanceolate, not longer than the tube. *Corolla* white, 1.75 in long, distinctly incurved, tomentose externally except on the mid-lobe of the lower lip. *Limb* .35 in wide. *Style* glabrous or, when young, sparingly hirsute. *Ovary* villous. *Nutlets* white, smooth, hispid at the apex. Benth in Wall Pl As Rai II 12, in Lab Gen & Sp 648, and in DC Prodr XII 551 (*partly*), Miq Fl Ind Bat II 986 (*partly*), Hook f Fl Br Ind IV 697. Plain Ann Roy Bot Gard Calc III 261.

ANDAMANS Port Blair, not uncommon.—DISTRIB Indo-China

This species is very closely related to *G. Scortechinii*, from which it differs mainly in its rather smaller white flowers and its less hirsute or quite glabrous style. It has not yet been collected in any of the Malayan provinces, but having regard to the fact that *G. Scortechinii* extends northwards to Tenasserim, where *G. oblongum* is common, and thus invades the area in which *G. oblongum* occurs, it is not impossible that this species may yet be met with in the northern part of the Malayan Peninsula, it seems therefore advisable to give it a place in these *Materials*.

5 *GOMPHOSTEMMA CURTISII*, Plain Journ As Soc Beng LIX ii 315 (1890) A coarse perennial herb, 3 to 4 ft high. *Stems* rather weak, flexuous, ascending, scabrid. *Leaves* opposite, the pairs rather remote, herbaceous, dark green, hirsute above, adpressed tomentose beneath, oblong-ovate, acute, base very shortly cuneate, margin denticulate, 3 to 5 in long, 2 to 2.75 in wide, petiole 1.25 to 4.5 in long, adpressed-tomentose. *Flowers* in many-flowered lax axillary cymes, bracts narrow ovate, long-acuminate, entire, reddish, 4 to 6 in long. *Calyx* .5 in long, smooth, glabrous within, reddish, teeth lanceolate-subulate from a short wide base, longer than the tube. *Corolla* white, 1 in long, distinctly incurved, puberulous externally, limb 3 in

wide *Style* glabrous, ovary glabrous. *Nutlets* white, glabrous, punctulate Ann Roy Bot Gard Calc III 266

VOL. LXXIV, PART II—Extra Number, 1908

Materials for a Flora of the Malayan Peninsula—By SIR GEORGE KING, K C I E, LL D F R S, late Superintendent of the Royal Botanic Garden Calcutta and J SYKES GAMBLE, C I E, F R S, late of the Indian Forest Department

No 21

THIS Part contains two Families, No 86 *Gesneriaceæ* and No 90 *Verbenaceæ*, and completes the account of the Gamopetalæ. The account of the *Gesneriaceæ* was prepared by Mr H N Ridley, F R S, Director of the Botanic Garden at Singapore, and was published in the 'Journal of the Straits Branch of the Royal Asiatic Society for 1905'. The material used by him was that of the Herbaria of Singapore and Penang, together with that belonging to the Royal Botanic Garden of Calcutta, and chiefly got together by collectors employed by Sir George King, lent to Mr Ridley for the purpose. The account in the 'Straits Journal' not being quite in the form used in the 'Materials', published under the auspices of the Asiatic Society of Bengal, has been edited by Mr Gamble, with the kind help of Lt-Col Prain, of Kew, but he has been careful to make no more formal alterations than could be helped so that the work is one for which Mr Ridley alone is responsible. Only numbers personally verified or quoted by Mr Ridley have been entered under the different species. Mr Ridley, who has sanctioned what has been done, has himself furnished a few notes and additions, among them being descriptions of 3 new species, one of them the representative of a new genus. The number of species of *Gesneriaceæ* herein described is 131, belonging to 20 genera, 1 genus and 2 species being new, besides 1 Sumatran species newly described.

The *Verbenaceæ* have been done by Mr Gamble. It comprises 15 genera and 72 species, of which 16 species are new to science. Two Malay Islands species are also described.

In accordance with the Rules adopted at the Vienna Conference, Latin diagnoses are appended to the new genus and the 3 new species of *Gesneraceæ*, those for *Verbenaceæ* have been published in the Kew Bulletin.

Family LXXXVI—GESNERACEÆ

Herbs or shrubs, usually pubescent. *Leaves* opposite or apparently alternate, one of each pair being much reduced, simple entire or lobed. *Inflorescence* axillary, cymose or racemose or paniced, bracts small or large. *Calyx* of 5 sepals, often connate. *Corolla* tubular or campanulate, more or less distinctly bilabiate 5 lobed, lobes oblong or rounded. *Stamens* 4 or 2 rudimentary or absent, didynamous when four, filaments linear or filiform, or short and thick, anthers linear or oblong, or scutiform connivent in pairs, 2 celled cells splitting on the inner face. *Disk* cylindric or annular or absent. *Ovary* cylindric or oblong, style slender, simple stigma capitate, cordate or bilobed. *Fruit* a capsule linear, cylindric, fusiform or oblong, splitting dorsally. *Seeds* very numerous, minute, plumed in epiphytic species, elliptic and not plumed in terrestrial species or a fleshy berry (*Cyrtandra*).—DISTRIBUTION. Species about 600, all tropical with a few in subtropical climates.

8 *DIDISSANDRA VIOLACEA*, Ridley in Journ Str B. R. As Soc No 43, 23 (1905) *Stem* woody, about 6 in high *Leaves* tufted at the top of the stem, thin, oblanceolate, subfalcate, narrowed at the base into the petiole, acuminate at apex, margins sinuate, upper surface glabrous, midrib and petiole covered with red multicellular hairs 4 to 7 in long, 1 to 2 in broad *Flower* peduncles numerous, erect, 2 to 3 in long, sparingly red hairy, 1-flowered, bracts linear lanceolate, narrow, 2.5 to 5 in long, closely appressed to the calyx *Calyx* lobes linear lanceolate, glabrous, 2.5 to 5 in long *Corolla* violet, 1 to 1.5 in long, tube rather narrow, gradually dilated upwards, sparingly pubescent, lobes unequal, the lower lip the longer *Stamens* in 2 pairs, the longer pair scarcely one fourth longer than the shorter *Ovary* glabrous, rather short, stigma broad *Capsule* 1.5 in long, moderately thick, splitting along the upper edge

PERAK summit of Gunong Batu Patih, at 6700 ft, *Wray* 383, *Scortechini* 389

This species comes near to *D. Wrayi*, but has smaller flowers

9 *DIDISSANDRA ATROPURPUREA*, Ridley in Journ Linn Soc XXXII 504 (1895) *Stem* woody, 2 in long *Leaves* lanceolate or obovate, narrowed at the base, the bases unequal, margin obscurely crenate, upper surface glabrous, lower hairy on the raised nerves, 4 in long, 1.5 in broad, petiole 1 to 1.5 in long. *Flowers* nearly sessile, in pairs on erect, glabrous, purple peduncles 3 to 5 in. long, bracts 2, ovate, 2.5 to 5 in. long, 1.25 in wide, purple *Calyx*-lobes nearly free to the base, lanceolate, acute, 2.5 to 3.5 in long, glabrous *Corolla* deep purple, 2 in long, 5 in broad, narrowed at the base, widely dilated

above, lobes short, rounded, the lower ones the longer *Stamens* in 2 pairs, filaments straight, anthers oblong appressed *Style* thick glabrous, stigma clavate *Capsule* thick, 2 in long, narrowed at the tip Ridley in Journ Str Br R As Soc No 43, 23

PERAK on rocks at Hermitage Hill, *Ridley*, at Gunong Inas, *Scortechin* 1327

Wray 3903, from Gunong Bubu, 5000 ft, "flowers mauve five white stripes in tube," may be this or a new species near it but the flowers are solitary on the peduncles

10 *DIDISSANDRA WRAYI*, Ridley in Journ Sti Br R As Soc No 43 24 (1905) *Stem* woody, bare below *Leaves* alternate, lanceolate, oblique, acuminate at apex, narrowed at the base into the petiole, dentate on the margin, glabrous on the upper, whitish on the lower surface, 4 to 6 in long, 1.5 to 2 in broad, main nerves 16 pairs, raised on both surfaces, midrib and nerves beneath covered with coarse reddish trichomes, petiole 5 in long, covered with rough multicellular trichomes *Flowers* solitary, on 3 to 4 in long slender peduncles from the upper axils, their bases covered with red multicellular hairs bracts 2, ovate, broad, glabrous, appressed to the calyx, 25 in long *Calyx* lobes broadly lanceolate, obtuse, glabrous, 5 in long, white *Corolla* white pencilled with violet, 1.25 to 1.5 in long, tube thick, over 25 in through, lobes broad, rounded *Stamens* 4, didynamous, anthers rounded *Style* short *Capsule* slender, 1.5 to 2 in long, glabrous

PERAK summit of Gunong Batu Putih, 6700 ft, *Wray* 334, 353 *King's Collector* 8036

11 *DIDISSANDRA QUERCIFOLIA*, Ridley in Journ Linn Soc XXXIII 504 (1895) *Stem* woody, hairy, 6 in long or less *Leaves* crowded above, lanceolate runcinate, base narrowed, upper surface deep green, glabrous, lower glaucous with the midrib and nerves covered with brown hairs, 2 to 8 in long, 1 to 2 in broad, petiole 1 in long or less, hairy *Flowers* large, 1 to 2 on 6 in long sparsely hairy peduncles, bracts lanceolate, broad, hispid *Calyx* lobes broadly lanceolate, obtuse, green, glabrous *Corolla* lemon-yellow, glabrous, 2 in long tube dilated, cylindric from a narrow base, lobes short, rounded *Ovary* cylindric, stigma clavate *Capsule* 3 in long, glabrous, cylindric Ridley in Journ Str Br R As Soc No 43, 26

PERAK Bukit Rengas, *Fox* 10683, Maxwell's Hill, 3000 ft, *Scortechin* 292, 300, *Curtis* 2041, *Ridley* 2910

King's Collector 2171, from Larut Hills, 3000 to 3500 ft seems to be this, but is much larger, the stem whitish corky, nearly 12 in long, the peduncles up to 4-flowered

12 *DIDISSANDRA GLABRESCENS*, Ridley in Journ Str Br R As Soc No 43, 24 (1905) *Stem* woody *Leaves* elliptic-lanceolate or oblanceolate margins coarsely serrate upper surface glabrous, lower dotted, glabrous except on the red hairy midrib and nerves, 4 to 7 in long, 1 to 2.5 in broad, petiole 1 in long, hairy *Flowers* solitary on 4 to 5 in long hairy peduncles, bracts 1 to 2, lanceolate, oblong, 12.5 to 25 in long *Calyx*-lobes linear-lanceolate, obtuse, hairy, 2.5 to 5 in long *Corolla* mauve (*Wray*), deep blue (*King's Collector*), 1.5 in long, tube gradually dilated upwards, lobes rounded, pubescent *Anthers* subglobose *Stigma* capitate, broad *Capsule* 1.5 to 2.5 in long, cylindric, slender

PERAK summit of Gunong Batu Putih, 6700 ft, *Wray* 384, do, 2000 to 3000 ft, *King's Collector* 8055, Kinta at 3000 to 3500 ft, *King's Collector* 7191

13 *DIDISSANDRA FILICINA*, Ridley in Journ Str Br R As Soc No 43 27 (1905) *Stem* woody, pale, rather slender *Leaves* lanceolate deeply lobed with oblong rounded lobes about 13 on each side, glabrous above, paler beneath, with red appressed hairs on the midrib, 3 to 5 in long, 1 to 1.5 in broad petiole .5 in long with red appressed hairs *Flower* 1 on a slender, red, hairy peduncle 1.5 in long, bracts very small, ovate, about 1 in long, pedicel 2.5 in long *Calyx* lobes elliptic, rounded, dark red, sparingly hairy, 1 to 2 in long *Corolla* 1.5 in long, tube with narrow base, dilated upwards, trumpet shaped, sparingly pubescent at the base, purple, paler below outside, inside dark purple, with 6 white lines down the base, lower lip longer than the upper, lobes rounded *Stamens* 4, in 2 pairs, the connective prolonged in a triangular horizontal horn *Disk* annular *Capsule* subfollicular, 1.5 in long, glabrous

PERAK at Gunong Chabang, on rocks overhanging a creek, *Scortechini* 14

4 DIDYMOCARPUS, Wall

Herbs or usually small shrubs, stems simple or branched, erect or prostrate *Leaves* herbaceous, opposite or the alternate ones reduced, seldom wanting, ovate or lanceolate, usually pubescent or hairy, petioled *Peduncles* axillary, bearing one or more flowers in a cyme *Calyx*-lobes 5, short, free to the base or nearly so *Corolla* infundibuliform, bilabiate, lobes equal or the lower ones longer than the upper *Stamens* 2 complete, filaments filiform, rising from about halfway down the tube, anthers reniform, connivent by the edges *stamens* 2, short, hooked *Ovary* cylindric, passing into the style, stigma capitate or ovate, entire *Disk* annular or absent *Capsule* cylindric,

narrow, usually splitting along the upper edge. Seeds numerous, minute, ellipsoid, not plumed — **DISTRIB** Species about one hundred, in India and Malaya

Sect I ELATA —

Stem tall, branched shrubby leaves in distant pairs

unequal, bract 1, cupshaped 1 *D. cochinchinensis*

Stem long and weak, bracts 2, ovate 2 *D. sulphurea*

Stem weak —

Bracts ovate, amplexicaul, flowers yellow 3 *D. citrina*

Bracts oblong, glabrous, flowers claret colour 4 *D. purpurea*

Sect II DIMORPHUS —

Stem erect herbaceous, leaves in distant pairs —

Flowers very small, 25 in long, axillary 5 *D. parviflora*

Flowers medium sized

Flowers yellow —

Leaves lanceolate acute 6 *D. flata*

Leaves ovate acuminate 7 *D. ramosa*

Leaves unequal narrowly lanceolate 8 *D. flaccuens*

Flowers white —

Leaves opposite equal hairy ovate —

Edges pubescent 9 *D. hispida*

Edges conspicuously red hairy 10 *D. hirta*

Leaves lanceolate, thinly pubescent 11 *D. viscida*

Leaves subglabrous, equal long petioled 12 *D. albina*

Leaves glabrous, unequal —

Flowers solitary on short peduncles 13 *D. alternans*

Flowers in pairs on long peduncles from upper axils 14 *D. glabrata*

Stem erect herbaceous little branched, flowers yellow

corolla cylindric trumpet shaped —

Leaves petioled silky in distant pairs

Corolla 2 in long 15 *D. malayana*

Corolla 1 in long 16 *D. albomarginata*

Leaves crowded above hairy —

Stem slender, flowers small, congested 17 *D. flavobrunnea*

Stem woody —

Leaves glabrous congested at the top, not petioled, flowers yellow 18 *D. longipes*

Leaves alternate lanceolate, inequilateral, flowers blue 19 *D. inequalis*

Leaves crowded or distant, elliptic, petioled flowers white 20 *D. alba*

Sect III REPTANS Prostrate or creeping herbs Leaves in distant pairs, equal or unequal, hairy or pubescent —

Flowers blue or white, sometimes with yellow streaks —

Leaves hairy, rarely glabrous, flower in uppermost axil peduncle short 21 *D. reptans*

- Leaves velvety, elliptic —
- Flowers solitary, terminal 22 *D. ophurenensis*
- Flowers numerous, on slender pedicels .. 23 *D. pulchella*
- Flowers orange yellow —
- Calyx lobes hairy . . . 24 *D. crocea*
- Calyx lobes narrow, subglabrous .. 25 *D. ascendens*
- Sect IV *HETTEREIA* Stems woody, usually short, with the leaves crowded towards the top, more or less hairy above, and little or not branched. Leaves hairy, silky or rarely glabrous, lanceolate, serrate, narrowed at the base into a winged petiole, alternate. Peduncles slender, axillary in the upper axils, 1 rarely 2 flowered. Bracts usually small, solitary linear. Corolla large, showy, white crimson or blue rarely yellow. Filaments long slender. Capsule narrow, cylindrical —
- Flowers solitary, bracts very small —
- Leaves glabrous wrinkled 26 *D. rugosa*
- Leaves tessellate, not wrinkled, obovate glabrous or with scattered hairs with swollen bases —
- Capsule over 2 in long .. 27 *D. platypus*
- Capsule shorter 1 in long 28 *D. komprobera*
- Leaves not tessellate hairy or pubescent
- Leaves broad, covered with close short hairs —
- Flowers white, tipped with crimson 29 *D. quinquevulnera*
- Flowers deep crimson 30 *D. atrosanguinea*
- Leaves narrow lanceolate, densely hairy, distant, flowers yellow . 31 *D. hirsuta*
- Leaves silky pubescent on both surfaces, flowers white tinged with pink or blue 32 *D. bambucina*
- Leaves crowded, thickly appressed, hairy, flowers white or blue .. 33 *D. crinita*
- Leaves crowded covered with short scattered hairs above, deep green with central white bar, flowers white . 34 *D. fasciata*
- Flowers in pairs on a long peduncle, bracts very broad 35 *D. venusta*
- Sect V *SALICINÆ* Small shrubby plants with narrow leaves crowded at top. Flowers small —
- Leaves entire 36 *D. densifolia*
- Leaves serrate —
- Flowers 125 in long, pink 37 *D. salicina*
- Flowers 75 in long, white with purple outside, yellow in mouth .. 38 *D. seriatifolia*
- Leaves deeply cut, pinnate 39 *D. pectinata*
- Sect VI *ACUTIES* Stemless or nearly so, leaves crowded —
- Flowers panicled, lips very unequal 40 *D. violacea*
- Flowers 1 2 racemose —
- Flowers large, blue .. 41 *D. lacunosa*
- Flowers small —
- Leaves elliptic, peltate 42 *D. peltata*

Leaves obovate, crenulate —	
Capsule very short and broad	. 43 <i>D. puncticulata</i>
Capsule linear, narrow	.. 44 <i>D. heterophylla</i>
Leaves small, entire, sulky	. 45 <i>D. pumila</i>
<i>Affinity doubtful</i>	
Stem tall, leaves alternate, distant Panicles small, adnate to petioles	46 <i>D. lilacina</i>

Sect I ELATÆ

1 *DIDYMOCARPUS CORCHORIFOLIA*, R Br in Benn Pl. Jav Rar 119 (1840) A shrub, 4 to 6 ft high, much branched, with a stout woody stem. *Leaves* opposite but unequal, ovate, subacute, inæquilateral, rounded at base, margins serrate, both surfaces, but especially the under, covered with soft, short, felted hair, 3 to 9 in long, 1.5 to 5 in broad, petiole 1 to 3 in long. *Panicles* lax, axillary, 2 to 3 in long, peduncles short, pubescent, flowers numerous, bracts cupshaped. *Calyx* cupshaped, 2.5 in long, shortly 5 toothed. *Corolla* 7.5 in long, white applegreen in the throat or often purplish white, tube straight, thick, lobes rounded, the upper lip recurved, the base appressed to the broad decurved lower lip which is much longer. *Capsule* cylindric, 1 to 2.5 in long, pubescent, splitting to near the tip. Ann Sc Nat 2, XIII 164, Wall Cat 792, DC Prodr IX 265, Miq Fl Ind Bat II 726, Clarke in DC Monog Phan V 1 85, and in Hook f Fl Br Ind IV 351, Ridley in Journ Bot XXVIII 68 (1890), and in Journ Str Br R As Soc No 43, 31.

SELANGOR above the Gap on the road to the Sempang mine, 3000 to 4000 ft, *Curtis*—a single specimen

A very distinct plant of a weedy habit, with solitary flowers of the type of *P. cordata*

3 *PARABEA SCORTECHINII*, Ridley in Journ Str Br R As Soc No 43, 66 (1905) *Stem* herbaceous, glabrous *Leaves* opposite, ovate acuminate base rounded, inequilateral, margins crenate, quite glabrous, nerves 8 pairs 3 to 3.5 in long, 1 to 2.5 in wide, petiole 5 in long *Peduncle* slender, erect, subterminal, 3 in long, glabrous, branches dichotomous, few, 1 in long flowers solitary on the ends of the branches *Calyx* lobes free almost to the base, oblong obtuse, 12.5 in long, glabrous, fleshy *Corolla* campanulate, 5 in long, glabrous, lobes rounded *Anthers* broad, elliptic, filaments very short

PERAK *Scortechini* (no number or locality)

A single incomplete specimen The plant is allied to *P. cordata* of which it has quite the flowers, but is quite glabrous

4 *PARABEA CÆRULEA*, Ridley in Journ Str Br R As Soc No 43, 66 (1905) *Stem* woody, 3 to 4 in long, 12.5 in through *Leaves* crowded at the top, narrowly lanceolate, linear acuminate, narrowed gradually to the base, 4 to 5 in long, 2.5 in wide, above dark green, nearly glabrous midrib prominent, beneath pale cinnamon colour, nerves about 30 pairs joined at the tips *Peduncles* slender, axillary, 4 in long pubescent 1 to 2 flowered *Calyx* lobes linear, 12.5 in long, obtuse *Corolla* campanulate, 5 in long and nearly as wide at the base, pubescent, base pale, lobes deep blue, rounded *Stamens* 2, filaments very short, sigmoid anthers broad, rounded, oblong *Style* fairly stout stigma heart shaped *Capsule* very narrow, cylindric, 1 in long

TRINGGANU Bundi, *E. Hostado* The upper part of the stem among the leaves is covered with silvery hairs

5 *PARABEA PYROLIFLORA*, Ridley in Journ Str Br R As Soc No 43, 67 (1905) *Stem* woody, 3 in tall or more, pubescent *Leaves* alternate, ovate or ovate lanceolate, acuminate at both ends, 3 to 4 in long, 1.5 in wide, entire, bright green, silky pubescent above beneath paler, petiole over 1 in long, pubescent *Peduncles* several from the upper axils, erect, 3 to 4 in long, shortly hairy *Calyx* lobes lanceolate, short pubescent *Corolla* campanulate funnel shaped, white, 4 in

long, lobes short, rounded *Stamens* 2, filaments short and thick, anthers large, elliptic *Style* thick, curved upwards, longer than the corolla, stigma very small, capitate *Capsule* spreading, 1 in long, terete, terminated by rather a long style, glabrous *Didymocarpus pyroloflora*, Ridley in Trans Linn Soc Ser 2, III 330

PAHANG Tahan river woods, Ridley 2164

6 *PARABETIA CAPITATA*, Ridley in Journ Str Br R As Soc No 43, 67 (1905) Stemless or with a stout rootstock *Leaves* in a rosette orbicular, base rounded, subpeltate, 6 in long, 5 in wide bright green, glabrous above, ochre yellow beneath, tomentose, nerves raised reticulate, petiole stout, 2 in long *Peduncle* slender, 8 in tall, flowers numerous in an umbel on the top with 2 broad, blunt, oblong bracts, 25 in long, below *Pedicels* 5 in long *Calyx* campanulate, lobes linear, oblong obtuse, 3 in long, green, hairy *Corolla* 5 in across lobes subequal, rounded, white *Filaments* very short straight anthers reniform *Style* curved up, longer than corolla, white *Capsule* spreading, linear, straight, beaked, 1.5 in long

PERAK Buong Malacca, Curtis 3215, Kamuning, Machado On limestone rocks

VAR *oblongiflora*, Ridley *Leaves* oblong, narrowed at the base

PERAK Kuala Dipang and Sungai Siput, Curtis 3107, Tambun Ridley 9832, Batu Kuran, *Scortechini* 1581, Goping, King's Collector 456, 4325

7 *PARABETIA FERRUGINEA*, Ridley in Journ Str Br R As Soc No 43, 68 (1905) Stemless or nearly so *Leaves* in a rosette, ovate cordate, obtuse, crenulate above covered with scattered hairs, below tomentose with longer hairs, paler, nerves elevated 3 in long, 2.5 in wide, petiole 1.5 to 2 in long *Peduncles* 3 in long, ferruginous tomentose, cyme compact, scorpioid, ferruginous hispid *Calyx* lobes as long as the corolla, green, ferruginous hispid lanceolate *Corolla* tube very short limb explanate, not bilabiate lobes broad, obovate obtuse, subequal and similar, white or tinted with rose *Stamens* 2, short, filaments broad, spatulate, thick, apex 3 toothed anthers conic, connate by the tips *Ovary* conic, stigma rounded, entire, discoid

KEDAH Lankawi, on damp rocks, Curtis 2566

8 *PARABETIA REGULARIS*, Ridley in Journ Str Br R As Soc No 43, 68 (1905) Stem woody, 1.5 in long *Leaves* crowded at the top, very unequal, oblong-lanceolate, obtuse, base cuneate, inaequalateral margins crenulate, dark green, glabrous above, purple, minutely tomentose beneath, with elevated nerves, 3 in long, 1.5 in wide, petiole 1.5 in long, tomentose *Peduncles* slender, pubescent, 1 in long, branches

very short and slender, 25 in long, umbelled, brown-tomentose, bracts lanceolate, obtuse, flowers few, very small, very shortly pedicelled. *Calyx* lobes lanceolate, brown-tomentose, as long as the corolla-tube *Corolla* hardly 25 in across, white, lobes oblong, obtuse, equal, not bilabiate *Stamens* 2, filaments sigmoid, thick, anthers rounded, ovoid *Style* longer than stamens, stigma capitate *Capsule* 5 in long, cylindric, scabrid, rather thick, straight *Didymocarpus regularis*, Ridley in Journ Linn Soc XXXII 515

KRDAH Lankawi Islands, *Curtis*

9 *PARABCEA POLITA*, Ridley in Journ Str Br R As Soc No 43, 69 (1905) Stemless *Leaves* in a rosette, ovate, crenate, obtuse, base rounded, above deep shining green, beneath ochreous tomentose, with nerves and nervules reticulate, 1 to 8 in long, 4 to 4.5 in wide, petiole 4 in long *Peduncle* over 1 ft long, slender, with brown ochreous fur, branches few, 3 in long, umbellate, bracts linear, oblong obtuse, brown woolly, pedicels 25 in long *Calyx*-lobes linear, green, 125 in long *Corolla* sub bilobed, 5 in across, white, back tinted pink, lobes rounded *Stamens* 2, filaments thickened at the base, anthers orange, reniform *Style* stout, pink at base, white above, stigma capitate

PERAK Bujong Malacca, *Curtis* 3214 part

Ridley thinks it is perhaps a hybrid between *P. capitata* and *P. vulpina*

10 *PARABCEA VULPINA*, Ridley in Journ Str Br R As Soc No 43, 69 (1905) *Stem* 2 in long, thick, covered with red wool *Leaves* elliptic, rounded at each end, crenulate, above sprinkled with pale multicellular hairs, beneath covered densely with branched rufous hairs arranged stellately nerves beneath strongly elevated 6 pairs reticulations elevated, 1.5 to 3 in long, 1 to 2 in wide, petiole 1 to 3 in long, densely red-woolly *Peduncles* slender, 6 to 8 in long, red, with a few branched hairs branches slender, 1 to 3 in long, trichotomous, bracts very small, linear, obtuse, glabrous *Calyx* lobes narrow, linear, glabrous *Corolla* white, 25 in across, lobes rounded, subequal *Stamens* 2, anthers very large, reniform *Style* short, thick *Capsule* cylindric, narrow, glabrous

PERAK Bujong Malacca *Curtis* 3214, Hot Springs, Ipoh, *Curtis* 3132 On limestone rocks

11 *PARABCEA LAXA*, Ridley in Journ Str Br R As Soc No 43, 70 (1905) *Stem* very short, woody, thickly brown-tomentose *Leaves* obovate, coarsely crenate-serrate, narrowed at the base into the winged petiole, 3 to 7 in long, 2 to 3 in wide, dull green, densely hairy, tomentose on both surfaces *Peduncle* slender, 5 to 6 in long, terminated by a much-branched umbel of slender branches 3 in long, pedicels

slender, 125 in long, flowers numerous, bracts very small *Calyx* shortly 5-cleft, lobes lanceolate, short, green *Corolla* 125 in across, white or tinted rosy, upper lobes broad, oblong, recurved, lower lip shortly trifid, central lobe broadest *Filaments* short, swollen in the middle, anthers yellow, reniform *Style* longer than stamens *Capsule* linear, cylindric, straight, 5 in long, tipped with the elongate style

KFDAH Lankawi at Kwah, *Curtis* 2571

12 *PARABOLIA CURTISII*, Ridley in Journ Str Br R As Soc No 43, 70 (1905) Stemless *Leaves* oblong, elliptic, crenate, obtuse, 6 in long, 25 in wide, above sprinkled with hairs, petiole rufous-hairy, 15 in long *Scapes* 10 in long, rufous tomentose, bearing an umbel of 4 or 5 branches at the top about 2 in long, bracts at base of umbel oblong, obtuse, 25 in long, pedicels short, rufous tomentose *Calyx*-lobes linear, oblong, obtuse, hairy, 125 in long *Corolla* 5 in across, white, buds tinted pink, tube very short limb bilobed, upper lobes short, rounded lower lobes larger *Stamens* filaments very short, thick, curved, anthers reniform, triangular *Style* much longer than stamens, bent *Ovary* cylindric, stigma wide, discoid *Capsule* (unripe) cylindric, acuminate, straight

PERAK Bujong Malacca, *Curtis* 3214

13 *PARABOLIA OBOVATA* Ridley in Journ Str Br R As Soc No 43, 71 (1905) *Stem* short *Leaves* crowded at the top, thin, obovate, blunt, base cuneate 3 in long, 15 in wide, thinly arachnoid on both surfaces, beneath yellowish, petiole 25 in long *Peduncle* slender, 3 to 6 in long, glabrous branches few, terminal bracts narrowly oblong, obtuse *Calyx* lobes oblong, obtuse, glabrous *Corolla* 25 in across, lower lip longer than upper one lobes oblong, rounded *Stamens* 2, anthers reniform filaments short and thick *Style* short and thick, stigma capitate

KFDAH Lankawi, Gunong Chinchang, *Curtis* One specimen only seen

9 BFA, Commers

Herbs or shrublets with a woody stem *Leaves* opposite or whorled, generally on the back *Peduncles* axillary, usually elongate, laxly or compactly cymose or paniced, bracts small, flowers large or small, blue or white *Calyx* of 5 narrow sepals *Corolla* widely campanulate, with a short tube usually distinctly 2 lipped, lobes ovate, obtuse *Stamens* 2, perfect, with short curved thick filaments, anthers ovoid, coherent, cells ovoid *Disk* absent *Ovary* sessile, style as long, glabrous above, stigma small, capitate *Capsule* slender, cylindric or

fusiform-cylindric, when ripe spirally twisted *Seeds* minute — **DISTRIB**

7 B^{CEA} DIVARICATA, Ridley in Journ. Str. Br. R. As. Soc. No. 43, 75 (1905) *Stem* about 4 in tall, thick and woody *Leaves* in a rosette on the top, oblanceolate, crenulate, obtuse, narrowed into a winged petiole, nerves and nervules beneath elevated, 15 pairs, above glabrous, beneath covered with a thin brownish tomentum, 7 in. long, 2.5 in. wide. *Peduncles* rather stout, terete, smooth, 7 to 16 in tall, branches umbellate, decomposed, 1 ft or more long, pedicels of flowers .2 in. long, covered with brown fur *Calyx*-lobes lanceolate, acute, green, glabrous, shorter than the corolla-tube *Corolla* .25 in across, pale lilac, tube short, dilated, limb bilabiate, lobes rounded *Stamens* anthers connate, rounded with acute bases, filaments thick, sigmoid *Style* slender, stigma horseshoe-shaped *Capsule* cylindric, strongly twisted, 1 in long

KEDAH Langkawi, Ayer Hangat, *Curtis* 3683

8 B^{CEA} SUFFRUTICOSA, Ridley in Journ. Linn. Soc. XXXII 518 (1895) A branching shrub, 1 to 2 ft tall, with rather slender branches .125 in through, angled, slightly arachnoid *Leaves* scattered, lanceolate, subacute, narrowed at the base, 3 in long, .5 in. wide, above nearly glabrous, punctate, beneath covered with brownish tomentum, nerves conspicuous, petiole .25 to .5 in. long. *Panicles* axillary, dense, 1 in long, with short branches brownish-woolly, buds brown-woolly. *Calyx* longer than the corolla-tube, lobes linear, lanceolate, thick, tomentose outside *Corolla* .25 to .35 in across, white, lobes short, oblong, rounded *Anthers* oblong, obtuse. *Capsule* fusiform, very thick, .25 in. long, tipped with the long style. Ridley in Journ. Str. Br. R. As. Soc. No. 43, 76.

KEDAH Langkawi, on a small island north of Kwah, *Curtis* 3682, 2565

9 B^{CEA} PARVIFLORA, Ridley in Journ. Str. Br. R. As. Soc. No. 43,

76 (1905). *Stem* slender, shrubby, branching, covered with ferruginous tomentum. *Leaves* lanceolate, acuminate, base cuneate, unequal, 4 in long, 1 to 1.25 in wide, above glabrous, beneath covered with rusty wool, nerves elevated, 11 pair. *Peduncle* 6 in long, slender, glabrous, panicle umbellate, of 6 slender branches in a terminal whorl, branchlets glabrous, numerous, slender, bracts very narrow, linear, flowers very small, numerous, white, pedicels slender, 1.25 in. *Calyx* lobes lanceolate, glabrous, 5. *Corolla* very small, white, tube very short, upper lobes subacute, lower ones oblong. *Anthers* large, reniform. *Style* shorter than anthers. *Capsule* very slender, cylindric, 2.5 in long, terminated by the slender style.

PERAK Hot Springs, at Ipoh and Sungai Siput, not common, *Curtis* 3134, Kinta, *King's Collector* 7108. On limestone rocks.

DOUBTFUL SPECIES

10 *BŒA PATENS*, Ridley in Journ Linn Soc XXXII 520 (1895). Almost stemless. *Leaves* rosulate, oblong, obtuse, serrulate crenulate, inæquilateral, 4 to 6 in long, 2 to 3 in broad, upper surface softly pubescent, lower pale ferruginous tomentose. *Petiole* 1 in long. *Peduncle* stout, terete 18 in long, softly ferruginous lanate, branches long, divaricate, 2 forked, primary bracts oblong, 2.5 in long, secondary smaller, cymules scorpioid, few flowered. *Flowers* small, white, 1.25 in broad. *Pedicels* .06 in long. *Calyx* lobes free to the base, short, lanceolate, acute, glabrous. *Corolla* campanulate, glabrous, lobes 2 oblong obtuse, 3 ovate obtuse, shorter and broader. *Stamens* with short slender curved filaments as long as tube, *anthers* large, oblong. *Pistil* glabrous, ovary cylindric, attenuated into a slender little exsert style. *stigma* small, scarcely dilated. *Capsule* 5 in long, glabrous, very slender.

SIAMSF STATES Pungah, *Curtis*

11 *BŒA GLABRA*, Ridley in Journ Linn Soc XXXII 521 (1895). A succulent, glabrous herb. *Stem* short, 1 to 2 in long. *Leaves* undulate, ovate-rotundate, inæquilateral, 6 in long, 3.5 in broad or broader, *petiole* 1 to 2 in long thick, upper leaves smaller, opposite. *Peduncles* subterminal, 3 to 4 in long, thick. *cymes* terminal, congested, scorpioid, 5 in long, *pedicels* short. *Calyx* tube short, conical, lobes 5, equal, obcuneate, truncate, 1.25 in long. *Corolla* white, 5 in broad, lobes rounded, obtuse. *Stamens* 2, filaments sigmoid, broad at the base, attenuate above, *anthers* oblong, acute on both sides, rather large. *Style* cylindric, thick, glabrous, curved; *stigma* scarcely thickened, obliquely ovate.

SIAMESE STATES Pungah, *Curtis* 3039

12 *Bœa ferruginea*, Ridley in Journ Linn Soc XXXII. 521 (1895) Stemless or with a short thick stem, roots large and thick. *Leaves* many, congested, spreading, ovate, cordate, obtuse, crenulate, upper surface clothed with sparse hairs, lower green, paler, tomentose, the raised nerves clothed with long hairs, when dry somewhat black above, ferruginous-tomentose beneath, blade 3 in long, 2.5 in broad, petiole 1.5 to 2 in long. *Peduncles* 3 in long, ferruginous-tomentose, cyme scorpioid, ferruginous hispid. *Calyx*-lobes linear lanceolate, as long as the corolla, green, ferruginous-hispid. *Corolla* 3 to 5 in broad, white or pink, spreading, lobes broad, equal, obovate-obtuse, tube very short. *Stamens* 2, short, filaments broad, spatulate, 3-toothed at apex, anthers yellow, conical, cuneate at the tips. *Ovary* conical, attenuate in a short, curved, cylindric, narrowed style, stigma rather broader, flat, entire.

KLDAH Langkawi Island, on damp rocks, *Curtis* 2566

Ridley remarks that, not having seen the fruit, he is uncertain as to the genus

10 *Phyllobœa*, Benth

Herbs or half shrubby plants. *Leaves* opposite, petioled. *Cymes* pedunculata, many flowered, bracts large, conspicuous, flowers large, pink or blue. *Calyx* large, 2 lipped, one lip 2 lobed, the other 3-lobed or of 3 large connate sepals. *Corolla* broadly campanulate, 2-lipped, 3- to 5 lobed. *Stamens* 2, short, anthers large, rounded. *Capsule* lanceolate, at length twisted.—*DISTRIB* Species 2, one Burmese, one Malayan.

Phyllobœa speciosa Ridley in Journ Linn Soc XXXII 522 (1895) A shrub, 1 or 2 ft tall, stems white tomentose. *Leaves* in distant pairs, lanceolate acuminate, 6 in long, 1.5 in wide, above glabrous, beneath white arachnoid. *Petiole* 1 in long. *Peduncle* stout, lateral, erect, nearly a foot tall, flowers sessile, scattered. *Bracts* ovate, lanceolate, 5 in long, white arachnoid. *Calyx* of 3 sepals, connate, ovate, oblong, woolly, 4 in long. *Corolla* 1 in long, blue, tube broad, lobes 3, two oblong truncate, the third much broader. *Stamens* short, not longer than the ovary. *Style* long, woolly. *Capsule* 1 in long, lanceolate, cylindric, acuminate, woolly.

KLDAH Langkawi, common on limestone rocks on the small islands, *Curtis* 2564

11 *Bœica*, Clarke

Herbs or half shrubby plants with the habit of *Bœa*. *Leaves* oblong, elliptic or lanceolate, more or less tomentose or hairy. *Inflorescence* racemose or panicle, axillary, flowers small, lilac or white. *Calyx* 5-rid. *Corolla*-tube very short, lobes subequal, rounded. *Sta-*

mens 4, filaments very short, anthers rounded, connivent *Style* curved, larger than the stamens *Capsule* linear cylindric — **DISTRIB** Species 4 or 5, in Assam, Burma, and the Malay Peninsula

Ridley says "Most of the few described species are based on flowerless specimens, and are all very similar and closely resemble *Bea diaricata* in habit, but the capsule is straight and not twisted. The type species, however (*B. filiformis*, Clarke), has 4 stamens instead of 2. The Malayan one described below differs from these in habit, and I have seen no fruit, but there is no other genus to which it can be referred on account of its 4 very short stamens arranged in a circle round the pistil. The only other genus allied to it is *Platystemma*, a Himalayan plant with distinctly 2-lipped flowers."

BÆICA BRACHYANDRA, Ridley in Journ Str Br R As Soc No 43, 78 (1905) Stemless *Leaves* obovate, serrate, hairy, dark green, obtuse 3 in long by 1.5 in wide, nerves 6 or 7 pair, covered beneath with long red hairs back of leaf punctate *Scapæ* short few flowered about 3 in long, hairy, unbranched *Calyx* lobes free nearly to base, linear, hairy, green, nearly as long as corolla-lobes *Corolla* tube very short, lobes broad rounded, oblong, explanate, subequal, pale lilac, about 5 in across *Stamens* 4, filaments very short, anthers broad, waxy, subglobose, connivent round the pistil *Style* longer than stamens, slender, curved, white *Capsule* cylindric, narrow, 1 in long, scabrid, straight, on pedicels elongated to 5 in

KEDAH Langkawi, Gunong Chinchang, at Kwala Malacca, *Curtis*

Ridley says this plant was found quite dried up in February, 1899, but was brought in alive and flowered in the Botanic Gardens, Penang

12 ORCHADOCARPA, Ridley

Herb or shrublet, with opposite unequal leaves *Flowers* small, blue, racemose or cymose, pedicelled *Calyx* lobes free to base, narrow-lanceolate *Corolla* tube short limb 2-lipped unequally *Stamens* 2, filaments short, exsert, sinuate glabrous, anthers bilobed, reniform, connivent by their edges *Ovary* hairy, oblong, style short, stigma capitate *Capsule* oblong, hairy, enclosed in the sepals — **DISTRIB** One species, Malayan

ORCHADOCARPA LILACINA, Ridley in Journ Str Br R As Soc No 43, 78 (1905) *Stem* short to 4 in long, stout, woody *Leaves* crowded at the top, long petioled, thin, ovate or ovate lanceolate, acute, strongly serrate, covered with closely felted short hairs, base broad, in æqualateral, 3 to 7 in long, 1.5 to 3 in wide, petiole slender, 3 to 6 in long *Peduncle* 3 to 4 in long, pubescent, villous, bearing a terminal, pubescent, umbelliform panicle, or simply racemose *Calyx* lobes linear, pubescent, 1 to .2 in long *Corolla* pale lilac-blue, tube very short, limb dis-

tinctly bilabiate, upper lip smaller lobes short rounded, lower lip longer, trifold, median lobe longer than the others, oblong-obtuse, pubescent across *Stamens* 2, filaments from the mouth of the corolla tube, thick, twisted at the top, anthers large, reniform *Ovary* oblong, pubescent, style distinct, stigma very small, capitate *Capsule* short, oblong, hairy, enclosed in the calyx, beaked

PERAK *Scortechini* 406, Gunong Batu Putih, *Wray* 298, 302

13 LEPADANTHUS, Ridley, n gen

Herb with fistular stem *Leaves* opposite, petioled, ovate, toothed *Flowers* in axillary or terminal, flexuose, distichous racemes *Calyx*-lobes free nearly to the base, ovate acute *Corolla* as long as calyx, bilabiate, upper lobe much the shorter *Stamens* 2 fertile, anthers elliptic *Ovary* elliptic, style long, stigma oblique, entire *Capsule* as long as calyx lobes, loculicidal, placentæ thick, elevated *Seeds* very minute, warted —**DISTRIB** One species

The plant on which the genus is founded has the habit of *Rhyncotecom*, but the fruit is capsular

[LEPADANTHUS, Ridley, gen nov Herbacea, caule fistuloso *folia* opposita petiolata ovata dentata *flores* distichi in racemis axillaribus vel terminalibus flexuosis (*calycis* lobi fere ad basin liberi, ovati acuti *Corolla* calyci aequalis, bilabata labio superiore multo brevior *Stamina* 2 fertilia, anthera elliptica *Ovarium* ellipticum stylo longo, stigmate obliquo integro (*capsula* calycis lobis æquilonga, loculicida placentis crassis elevatis *Semina* minutissima, verrucosa)]

LEPADANTHUS FLEXUOSA, Ridley, n sp A herb, reaching 18 in in height stem hairy, fistular *Leaves* very thin when dry ovate, sub acute, rounded and slightly unequal at base, strongly toothed, 5 in long, 4 in wide nerves about 8 to 10 pair, hairy, petiole slender, 3 to 4 in long *Racemes* several, pubescent, 3 to 4 in long, including the 1 to 1.5 in long peduncle, rachis flexuose with distant alternate flowers on capillary secund pedicels 5 in long, bracts in pairs, linear, deflexed, 12.5 in long *Calyx* lobes 5, ovate, acuminate, pubescent, 3 nerved *Corolla* small, tube short, thick, upper lip bifid, much shorter than the lower, glabrous *Stamens* 2, filaments extremely short, adnate to the corolla tube, anthers elliptic *Ovary* elliptic, style pubescent, as long as calyx lobes or longer, stigma clavate, oblique *Capsule* 25 in long, oblong, glabrous *Seeds* elliptic, dark red

KEDAH inside the caves, Gunong Grenong, *Fox* 3811 (a poor specimen only)

Tribe I VERBENACEAE

1 LANTANA, Linn

Erect or subscandent, often rambling, pubescent or scabrous shrubs, rarely herbs, branches usually tetragonal sometimes prickly *Leaves* simple, opposite or ternate, petiolate incise crenate, more or less rugose *Flowers* in dense pedunculate spikes from the axils of the leaves, variable in colour, the spikes capitate, ovoid or cylindrical, bracts conspicuous, persistent ovate or lanceolate bracteoles none *Calyx* small, membranous, campanulate, truncate or 4 to 5 toothed *Corolla* hypocrateriform tube slender, cylindrical lobes 4 to 5, spreading, orbicular *Stamens* 4 didynamous, included in the corolla tube and inserted at its middle anthers broadly oblong with parallel cells *Ovary* 2 celled, ovule solitary in each cell, erect from the base or laterally attached close to the base, style short stigma oblique or sublateral, thickened *Fruit* a drupe with more or less fleshy mesocarp, endocarp hard, separating when ripe into two 1 celled, 1 seeded pyrenes *Seed* exalbuminous, testa reticulate, radicle inferior — **DISTRIB** Species about 50, tropical or subtropical, mostly American, a few African or Asiatic

Bracts lanceolate; without prickles 1. *L. salverfolia*.
 Bracts ovate, acuminate; with recurved prickles 2. *L. aculeata*.

1 LANTANA SALVERFOLIA, Jacq Hort Schoenbr III 18, t 285 (1798) An erect branching shrub, reaching 3 to 8 ft in height, stems rough, without prickles, branchlets quadrangular, strigosely hispid, yellowish-brown. Leaves opposite or in whorls of 3, membranous when dry, ovate-lanceolate, acute at apex, suddenly narrowed and then decurrent at base, both surfaces rugose, the upper strigosely hispid, the lower villous and pale, margins crenate-serrate, 2 to 5 in long, 1 to 2 in broad, main nerves 8 to 12 pairs, the lowest pair opposite and more oblique than the others, all curving to the margin, reticulations prominent, petiole 2 to 4 in long, winged by the decurrent margins of the blade. Spikes globose to oblong, 5 to 1 and even 15 in long, gradually elongating as the fruit ripens, peduncles angular, hispid, 1 to 3 in long, bracts ovate, caudate-acuminate, strigosely villous, 25 in long. Calyx minute, truncate, densely villous. Corolla tube curved, slightly inflated opposite the stamens, villous without, 2 in long, lobes spreading, rounded, the uppermost slightly acute. Filaments short, anther-cells equal. Drupe oblong, purple, exocarp thin, hispid, mesocarp fleshy, endocarp rugose, the 2 pyriform pyrenes of which it is composed closely adherent. Seed elliptic, testa reticulate, cotyledons thin. Baker in Dyer Fl Trop Afr V 276, Schauer in DC Prodr XI 605. *L. indica*, Roxb Hort Beng 46 (1814), and Fl Ind III 89, Wall Cat 1823 A,B, Wight Ill t 173 b, fig 3, and Ic t 1464, Trimen Fl Ceyl III 346, Clarke in Hook f Fl Br Ind IV 562, Cooke Fl Bomb II 418, Prain Beng Plants 825. *L. dubia*, Wall Cat 1821, 2 and c, not 1, Royle Ill 300 t 73, fig 2. *L. collina*, Dene in Jacquem Voy Bot 136, t 141. *L. alba*, Schauer l c 606, Dalz & Gibs Bomb Fl 198, Brandis For Fl 369. The following Borneo species seems to be undescribed —

GLANDIA HAVITANII *King & Gamble* in Kew Bull 105 (1908). A tree (?), branches inflorescence, and under surface of leaves densely tomentose; blade pubescent and strigosely hairy. *Leaves* opposite ovate or ovate-oblong shortly acuminate and mucronate at apex acute or cuneate at base, upper surface strigosely scabrous hispid on the upper surface especially on the midrib, lower surface rugose, stellate pubescent and studded with peltate glands, margins rather distinctly denticulate, 2.5 to 6 in long 1 to 2.5 in broad, midrib stout prominent main nerves 9 to 11 pairs, prominent beneath, gently curving upwards to anastomose near the margin joined by conspicuous transverse nervelets, reticulations netted, petiole stout tawny hispid, 3 to 7 in long. *Cymes* axillary, few flowered, subsessile, scarcely longer than the petiole, bracts very small, subulate, pedicels slender, short. *Calyx* campanulate, glabrous within, without very strigosely hispid, teeth 5, minute in bud afterwards elongating to 0.5 in long. *Corolla* campanulate, nearly glabrous except for peltate shining glands, tube 1 in long, lobes 5, ovate, rounded, about 0.75 in long, recurved in flower. *Stamens* exserted, filaments slender glabrous, anthers 1 in long, oblong, prominently yellow glandular on the back. *Ovary* thickly glandular, depressed, style slender, 2 in long, stigma shortly 5 lobed. *Drupa* reddish black when dry, 1.5 in in diam, top depressed, dividing into 5 pyrenes, fruiting calyx flattened.

BORNEO at Sarawak, *Beccari* 3240, *Haviland* 3549 k and l near Kuching *Haviland* 889.

We are a little in doubt whether this is the *G. Beccariana*, Briquet in Engl. & Prantl Nat. Pflanzenfam. IV. 3 and 165, of which we can find no description. We think, however, that Briquet's *G. Beccariana* is Beccari 2759, a beautiful species from Sarawak with long tawny hair.

5 *CALLICARPA*, Linn.

Trees or shrubs, more or less clothed with stellate or farinose tomentum, with or without glandular scales, rarely quite glabrous. *Leaves* opposite, rarely ternately whorled, crenulate serrulate or rarely entire, in one species lobed. *Flowers* small, white red or purple, in axillary sessile or pedunculate, usually many-flowered, cymes, bracts linear, inconspicuous. *Calyx* very small, shortly campanulate, truncate or minutely 4-lobed, unaltered in fruit. *Corolla* small, campanulate or tubular, tube twice as long as the calyx or less, lobes 4, oblong, erect or spreading. *Stamens* 4 equal, inserted at about the middle of the tube or lower, sometimes at the base, filaments slender, exsert, anthers ovate or oblong, dorsifixed, the cells parallel, both sides usually prominently glandular. *Ovary* imperfectly 2-celled, cells 2-ovuled, style elongate, stigma dilated, shortly and obscurely bifid, ovules attached at the middle of the cell or higher. *Fruit* a small globose drupe, supported by the persistent calyx, exocarp thin, mesocarp fleshy, endocarp bony, of 4 or fewer pyrenes, convex on the back, flattened on the sides. *Seeds* small, oblong, testa membranous, albumen none or evanescent, cotyledons fleshy, radicle inferior. — **DISTRIB.** About 30 species, of Tropical and Subtropical Asia, to Japan, Australia and Polynesia, also in Central America and the West Indies

Lower surface of leaves covered with dense stellate tomentum, without or with very few glandular dots, margins of leaves entire or nearly so —

Leaves broad, more or less elliptic; cymes long, many-flowered —

Leaves long acuminate, tomentum thick, cymes dense; corolla-tube only about .075 in long, merely puberulous 1 *C. arborea*.

Leaves obtuse or very shortly acuminate, tomentum thin, cymes spreading; corolla tube 1 in. long, stellate-pubescent 2 *C. Mangayi*.

Leaves narrow, lanceolate, cymes short, few-flowered, corolla-tube 15 in. long, stellate-pubescent . 3 *C. angustifolia*

Lower surface of leaves densely grey stellate-flocculose, with many glandular dots on both surfaces; margins of leaves serrate —

Cymes spreading, reaching 3 to 4 in in diam, upper surface of leaves glabrate, lower densely grey-flocculose . 4. *C. Reevesii*

Cymes dense, rounded, rarely 1 to 2 in in diam. —

Upper surface of leaves glabrate, lower whitish-grey, stellately tomentose

5 *C. cana*

Upper surface of leaves hispid puberulous, lower thinly grey stellate tomentose	6. <i>C. pedunculata</i>
Lower surface of leaves sparsely stellate hairy, with many glandular dots, margins of leaves serrulate, cymes rounded, up to 2 in broad	7. <i>C. longifolia</i>

1 *CALLICARPA ARBOREA*, Roxb Hort Beng 10 (1814), and Fl Ind I 390 (1832) A tree reaching 10 ft in height, with thick trunk and round head branches stout branchlets thick, obtusely quadrangular, covered with dense grey-tawny, forked, stellate or mealy tomentum, as are the young leaves and inflorescence *Leaves* coriaceous, ovate or elliptic-ovate, acuminate at apex, long acute or cuneate at base upper surface when young with mealy soft stellate-tomentum, afterwards glabrous, lower closely tawny stellate tomentose, margins entire or sometimes distally denticulate, 6 to 12 in long, 2 to 5 in broad, midrib very stout much raised beneath main nerves stout, 8 to 11 pairs, raised beneath and joined by fairly regular transverse raised nervules, the main nerves starting at an angle of about 55° with the midrib and curving gently to the margin, where they anastomose petiole stout, 1 to 2.5 in long, channelled above *Cymes* very many flowered, widely dichotomously branched many times, reaching 6 in in length and about 5 in in breadth, peduncles 1 to 3 in long, bracts linear subulate, 2.5 in long or less pedicels very short, flowers red or purple *Calyx* 0.5 in long truncate and minutely 4 toothed at mouth glabrous within *Corolla* tube 0.75 in long, puberulous without lobes 4, reflexed, subquadrate as long as tube, villous without *Stamens* long, exsert, anthers glandular punctate on the back *Ovary* villous, style much exsert, bent outwards, enlarged upwards, stigma peltate at first, then broadly funnel shaped *Drupe* 1.5 to 2 in in diam, succulent, purple, ultimately black, pyrenes 4 or less Wall Cat 1826 chiefly Schauer in DC Prodr XI 641, Brandis For Fl 368, Kurz For Fl II 274, Clarke in Hook f Fl Br Ind IV 567, Plain Beng Plants 827 *C. uctonifolia*, Wall Cat 1827

VAR *villosa*, Roxb Hort Beng 10 (species) *Leaves* 6 to 8 in long, 3.5 to 4.5 in. broad, ovate, caudate-acuminate at apex, rounded and then slightly decurrent at base Tomentum of branchlets, young leaves, and inflorescence very thick and pale, chiefly consisting of

branched hairs This var resembles *C lanata*, Linn , of Southern India and Ceylon in its leaves, but the flowers are those of *C. arborea*

PERAK *Scortechini*

2 *CALLICARPA* MAINGAYI, King & Gamble in Kew Bull 106 (1908)
A tree, young branches, inflorescence, and leaves beneath covered with minute golden-brown stellate tomentum, branchlets stout, obtusely quadrangular. *Leaves* coriaceous, elliptic or obovate, rounded and very shortly acute or acuminate at apex, rounded and then somewhat cuneate at base, the two sides often unequal, upper surface glabrous except the midrib and main nerves of young leaves, lower surface rugose and very minutely appressed stellate-pubescent, margins entire or undulate with minute denticulations at the ends of the nerves, 6 to 12 in long, 3 to 6 in broad, nerves all impressed on the upper surface, sharply and strongly raised on the lower, the midrib stout, main nerves 10 to 12 pairs, starting at about 75° with the midrib and curving upwards to anastomose near the margin, the pairs joined by fairly regular transverse nervules, and these again by the netted reticulations, petiole 1.5 to 2 in long, stout, channelled above. *Cymes* many-flowered, rounded, reaching 3.5 in long and 6 in broad, widely dichotomous, peduncle stout, flattened, 1 to 1.5 in long, further branch-peduncles also flattened when dry, bracts linear-subulate, very small, pedicels .05 to 1 in long, slender. *Calyx* hemispherical, .05 in long, tawny stellate pubescent without, glabrous within, with 4 minute teeth. *Corolla*-tube nearly cylindric, 1 in long, densely and closely grey-stellate tomentose without nearly glabrous within, lobes short, rounded, erect or slightly recurved, .04 in long, villous within. *Stamens* inserted at .04 in from base of tube, filaments .175 in long, anthers oblong, .075 in long, glandular punctate on the back. *Ovary* villous, style slender, bent, stigma broad, peltate. *Drupe* small, black, .06 in in diam (immature)

SILANGOR Ridley 2787 MALACCA Maingay (K D) 1192 at Hulu Chembong, Derry 1005, Vern "*Tampang Besi*"

In Kew Herbarium, Maingay's specimen has been placed under *C arborea*, but the species differs in many respects. The venation of the leaves is very different as is the tomentum of much smaller stellate hairs, the leaves are nearly blunt, the tube of the corolla much longer, and its lobes much shorter, and we have no hesitation in describing it as a new species.

3 *CALLICARPA* ANGUSTIFOLIA, King & Gamble in Kew Bull 106 (1908) A shrub, reaching 8 to 9 ft in height, branchlets, inflorescence, and leaves beneath (also young ones above) clothed with appressed grey or ferruginous stellate tomentum, branchlets obscurely quadrang-

gular. *Leaves* subcoriaceous lanceolate, attenuately acute at apex, long attenuate at base and decurrent, upper surface dark, glabrous except when young, lower densely tomentose, grey-tawny or silvery, margins entire or rarely obscurely denticulate, slightly recurved 4 to 7 in long, 75 to 15 in broad, midrib stout, impressed above, prominent beneath; main nerves 9 to 15 pairs, rather irregular, starting at from 60° to 70° with the midrib and at once curving upwards to and along the margin, joined by subparallel transverse nervules; petiole 5 to 75 in long, the bases of the opposite leaves joined by a well marked ridge. *Cymes* few flowered, 5 to 75 in long and about 75 in broad, widely dichotomous; peduncles 25 to 35 in long; bracts linear subulate; pedicels very short jointed; flowers bluish pink. *Calyx* campanulate, 075 in long, densely stellate tomentose without glabrous within; teeth mucronulate. *Corolla* about twice as long as calyx, densely stellate tomentose without glabrous within; lobes rounded erect. *Stamens* inserted at or very near the base of the corolla tube; filaments slender, 15 in long scarcely or not exsert; anthers 06 in long oblong, much glandular dotted on both sides. *Ovary* villous; style slender, exsert; stigma capitate. *Drupe* glabrous globose, 1 in in diam, dark blue when ripe; pyrenes 4.

KEDAH on Langkawi Island, Ridley 8330. PERAK at Ipoh Curtis 3197, at Batu Kuran, Scortechini 1596 on the top of limestone hills 600 to 1000 ft., King's collector 7036, 8236.

The Kedah specimens have narrower leaves than the rest, with more slender branchlets. The species comes near to *C. angusta*, Schauer from the Philippines but differs in the almost quite entire leaves and larger flowers and fruit.

4. *CALLICARPA RLEVFSII*, Wall Cat 1830 (1828). A shrub the branches, petioles, under surface of leaves, and inflorescence covered with a soft, whitish grey or pale tawny, mealy tomentum of branched or stellate hairs. *Leaves* coriaceous lanceolate or elliptic lanceolate long acute at apex, attenuate at base and often slightly unequal, not decurrent; upper surface dark when dry, glabrous except the nerves, lower tomentose, margins entire for the lower third, above that shortly dentate serrate, 5 to 8 in long 2 to 3 in broad, midrib stout; main nerves 13 to 15 pairs, nearly regular, starting at an angle of 45° to 60° with the midrib and curving gently to the margin, each pair joined by rather obscure transverse nervelets, all slightly impressed above; petiole 75 in long. *Cymes* axillary, rounded, many flowered, widely dichotomous, reaching 4 in long and about 3 in broad, peduncles 15 to 2 in long, bracts linear subulate, 1 in long; pedicels short, slender, nearly glabrous, 05 to 1 in long, flowers purple? *Calyx* very

short, nearly glabrous but with a few stellate hairs and minutely glandular-punctate, very shortly 4-toothed *Corolla* twice as long as calyx, 1 in, lobes rounded, sparsely stellate-pubescent and glandular-punctate *Stamens* long exsert, filaments slender, anthers small, the connective glandular punctate *Ovary* rounded, very glandular, style very long, twisted, stigma peltate, large *Drupe* purple, small, 0.75 to 1 in in diam, nearly globose, pyrenes 4 Schauer in DC Prodr XI 641, Benth Fl Hongk 270, Clarke in Hook f Fl Br Ind IV 568 *C nudiflora*, Hook and Arn Bot Beech Voy 206, t 46

KEDAH near sea level, *Kunstler* (*King's Collector*) 1737 PERAK on the coast at Matong, *Wray* 2493, near sea-level, *Kunstler* (*King's Collector*) 1016 JOHORE at Batu Pahat, *Ridley* 11137 SINGAPORE cult, *Ridley* 6893 — DISTRIBUTION Java (*Koorders* 20179 β , *Zollinger* 2740), Borneo (*Haviland & Hose* 3394, &c)

We follow *Koorders & Valetton* in putting *P opulifolia*, Miq, under *P fatida*, Reinw. But our specimens agree better with the description of *P opulifolia* than with those of *P fatida*. As pointed out by *Koorders & Valetton*, the description of the calyx given for *P fatida* as 'obsolete sub 4 dentatus, vulgo 3 denticulatus quarto dente abortivo' is abnormal. That given for *P opulifolia* is quite correct.

6 *PREMNA DIVARICATA*, Wall Cat 1781 (1828) A climbing shrub, branchlets slender, terete, nearly black when dry, with sparse rounded or oblong lenticels. *Leaves* membranous when young, chartaceous when older, ovate or elliptic, briefly acute or bluntly acuminate at apex rounded or attenuate sometimes subcordate at base, upper surface slightly shining, glabrous except the nerves, lower dull, glabrous except for villous hairs along the midrib and in the axils of the main nerves, obscurely dotted, entire 3 to 5 in long, 2 to 3.5 in broad, midrib slender, slightly impressed above, main nerves 5 to 6 pairs, at an angle of 40 to 60 with the midrib, the lowest 1 to 2 pairs from near the base, curved upwards to join in loops near the margin, transverse nervules few, irregular, inconspicuous, as are the finely netted reticulations, petiole 5 to 1.5 in long, channelled above. *Corymbs* divaricate, many flowered, slightly puberulous, terminal, reaching in fruit 5 in in diam, sessile or on peduncles 1 to 2 in long, 3-chotomous below, 2-chotomous above, bracts linear lanceolate, small, the lowest sometimes leafy, pedicels very short, flowers greenish white. *Calyx* cup-shaped, prominently 2-lipped, the upper lip much longer than the lower, with 2 rounded 0.3 in long lobes, the lower entire or shortly 3-toothed, tube rugose without and glandular-dotted. *Corolla* tube cylindric, 0.75 in long, puberulous without, white villous within on the upper half, limb 2-lipped, upper lip short, retuse, broad, lower lip 3-lobed, the midlobe longest, up to 0.75 in. *Stamens* inserted near the mouth of the corolla-tube, slightly exsert, anther-cells divaricate.

Ovary rounded, style as long as stamens, stigma very shortly bifid. *Drupe* ovoid, .25 in. long, epicarp smooth; pericarp fleshy, endocarp ribbed, pyrenes 3- to 4-celled. Schauer in DC. Prodr. XI. 681; Clarke in Hook f. Fl. Br. Ind. IV. 575 *P. lucidula*, Kurz For. Fl. II. 263, not of Miq

8 *PREMNA PERAKENSIS*, King & Gamble in Kew Bull 107 (1908)

A shrubby climber branches brown, sparsely lenticellate glabrous, smooth. *Leaves* chartaceo-coriaceous, elliptic oblong or lanceolate, sometimes obovate, shortly and bluntly acute at apex narrowed or cuneate at base both surfaces glabrous, even the nerves slightly rugose margins entire, slightly recurved 3 to 5 in long 1.5 to 2.25 in broad, midrib stout, impressed above, raised beneath main nerves 5 to 6 pairs also impressed above and raised beneath the lowest pair opposite and from close to the base starting at from 25 to 40 with the midrib and nearly straight, curving only near the margin where they form a looped intramarginal nerve transverse nervules many inconspicuous petiole 5 to 7.5 in long glabrous, channelled above. *Corymbs* spreading tawny puberulous, reaching 3 in in length and in diam, 3-chotomous, afterwards 2-chotomous, sessile or on stout peduncles 2 to 3 in long bracts ovate lanceolate, those of lower divisions leafy pedicels 0, flowers pale green with white stamens. *Calyx* obscurely quadrangular pubescent nerved, the nerves prominent in fruiting examples, 0.6 in long 2-lobed, the upper lip 2-lobed, the lower entire or obscurely 2-lobed. *Corolla* funnel shaped the tube 1.25 in long, densely white villous in the upper half limb subequally 4-lobed the lobes recurved ciliate. *Stamens* inserted at the mouth of the corolla tube, long exsert filaments somewhat flattened anther cells nearly globose, didymous, opening by circular pores connective glandular. *Ovary* glabrous style long exsert stigma divaricately 2-fid. *Drupe* smooth pyriform, one cell only fertile. *Seed* ovate oblong flattened testa membranous.

PERAK in rocky places in forest, at 800 to 1000 ft King's Collector 7247, 10738. *Scottichum* 516.

This species comes very near to *I. trichostoma* but has several important points of difference such as the narrower thicker leaves with glabrous nerves the darker branches the markedly nervose fruiting calyx the large bracts and the round openings of the anther cells so that we have preferred to describe it as a species instead of as a variety. In the corolla it nearly agrees, as also it does in the absence of pedicels and the one seeded pyriform drupe.

9. *PRIMNA PUNCTULATA*, Clarke in Hook f Fl Br Ind IV 575 (1885). A shrub or small tree, branchlets dark brown terete lenticellate. *Leaves* chartaceous broadly elliptic, suddenly shortly acuminate at apex, rounded at base upper surface glabrous shining lower surface paler, reddish, punctulate, pubescent on the nerves margins entire, 4 to 6 in long, 2 to 3 in broad, midrib prominent, main nerves 4 to 5 pairs the lowest pair very small, close to the base, the next pair a little above the rest more distant, all curving upwards to

anastomose near the margin, transverse nervules very prominent, as is the netted reticulation, petiole 1 in long, slender, channelled above. *Corymbs* many-flowered, terminal, paniculate, pubescent, 4 to 5 in. in diam, lower bracts 5 in long, linear-oblong, pedicels very short or none. *Calyx* 0.6 in long, minutely grey-pubescent and glandular, 2-lipped, upper lip 2-toothed, lower lip also 2-toothed or subentire. *Corolla* tubular, 1 in long, villous at the throat within, glabrous below, lobes short, rounded. *Stamens* included, filaments inserted in the middle of the tube, short, anthers reniform, cells slightly divergent. *Ovary* glabrous, style rather short, stigmatic lobes slender, recurved. *Drupe* not known

MALACCA *Maingay* (K D) 1200

10 *PREMNA CORDIFOLIA*, Roxb Fl Ind III 78 (1832) A shrub, reaching 8 to 12 ft in height, with dark brown bark on the old wood, branchlets light brown, darker when dry, the size of a crow-quill, glabrous, terete. *Leaves* membranous, ovate or ovate-cordate, acuminate at apex, rounded or cordate at base, upper surface shining, bullate, drying brown, glabrous except on the midrib and main nerves, lower surface also nearly glabrous, yellowish-brown when dry, margins entire, slightly recurved, 3 to 7 in long, 2 to 3 in broad, midrib slender, but strongly raised beneath, main nerves 5 to 6 pairs, at about 50° with the midrib, at first nearly straight and then curving to join in a looped intramarginal nerve, each pair on the same side joined by few (4 to 5) irregular transverse nervules and lesser reticulations, petiole slender, 5 to 1 in long, upper side tawny-puberulous. *Corymbs* many-flowered, dense, terminal, tawny-puberulous, about 3 in long, and the same or rather more in diam, peduncles 1 to 3 in long, with tawny-puberulous leaf-like bracts, bracts of corymb small, lanceolate, acute, branches at first decussate, then dichotomous, pedicels very short, rather thick, flowers greyish-white. *Calyx* 1 in long, 2-lipped, upper lip 2-lobed, lower entire, lips short, broad, rounded. *Corolla*-tube 2 in long, funnel-shaped, densely villous within, limb 2-lipped, anther-cells shortly divergent. *Ovary* glabrous, style as long as corolla-tube. *Drupe* obovoid, slightly depressed at top, exocarp thin, shining, black, mesocarp fleshy, endocarp hard, pitted, 3- to 4-celled, one cell usually only fertile. *Seed* ovoid acute, cotyledons flat, orbicular, 1.25 in in diam. 13 PREMNA RIDLEYI, King & Gamble in Kew Bull 109 (1908) A climbing shrub, branches stout, with grey shining bark, branchlets slender, terete, brown *Leaves* chartaceous, opposite or sometimes one of each pair rather higher than the other, ovate, ovate oblong or slightly obovate, rounded or very shortly acute at apex, rounded or attenuate often unequally at base both surfaces glabrous and dull, margins entire, 15 to 3 in long, 75 to 15 in broad, midrib slender, main nerves 6 to 7 pairs, the lowest 1 or 2 pairs from the base, at an angle of 30° to 40° with the midrib, straight at first, then gently curved to and along the margin, transverse nervules and reticulations faint, petiole slender, 25 to 5 in long *Corymbs* terminal, 15 to 5 in long, and 2 to 5 in broad, many flowered, tawny-puberulous, peduncles 75 to 2 in long, branches at first 3- afterwards 2-chotomous, bracts linear lanceolate, small, pedicels none or minute, flowers greenish-white *Calyx* campanulate, subquadrangular, 2-lipped, each lip 2-lobed, with minute teeth, tube 06 in long, puberulous *Corolla* tube somewhat tubular, slender, 1 in long, puberulous in the lower half within, long white villous in the upper, lobes 4, equal, oblong, rounded at tip, 05 to 075 in long, incurved at length *Stamens* inserted, 2 upper at the top of the throat of the corolla tube, 2 lower lower down, filaments slightly flattened, long exsert, anthers small, cells rounded, slightly

divaricate, connective glandular on the back. *Ovary* rounded, glabrous, style as long as stamens, .2 in., stigma bifid, the lobes .025 in. long, usually recurved. *Drupe* not seen.

PERAK. *Scortechini* 455. SINGAPORE garden jungle, *Ridley* 6826.

14. *PREMNA KUNSTLERI*, King & Gamble in Kew Bull 109 (1908) A large shrub or small tree, nearly quite glabrous, sometimes climbing, branches stout, thick, purplish-brown, branchlets the size of a quill, terete, glabrous, sparsely lenticellate. *Leaves* coriaceous, elliptic, sometimes elliptic-oblong or obovate, obtuse at tip with a short blunt abrupt acumination, rounded or subcordate at base, both surfaces glabrous, more or less shining when dry, margins entire, slightly recurved, 4 to 7 in. long, 2.5 to 4 in. broad, midrib very stout, impressed above, raised prominently beneath, main nerves 5 to 7 pairs at from 50° to 60° with the midrib, the lowest pair small, from the base, the second from close above it, the rest more distant, all curved upwards to join in a looped intramarginal nerve and joined by four irregular transverse veinlets, reticulations minutely netted, forming a prominent network on the upper surface when dry, petiole .75 to 1.25 in. long, smooth but channelled above. *Corymbs* terminal, spreading, long-branched, 3-chotomous below, 2-chotomous above, glabrous except for very minute sparse tawny pubescence on the upper branches and calyx-tube, sessile or pedunculate, the peduncle or primary branches 3 to 4 in. long, the whole corymb reaching 7 in. in length and 5 in. in breadth, bracts linear or linear-lanceolate, the lower ones leafy, pedicels very short, less than .05 in. to the joint under the calyx-tube, flowers pale greenish-white. *Calyx* cup-shaped, .075 in. long, truncate or very obscurely 2-lipped, in fruit very shallow and almost quite entire. *Corolla*-tube tubular, .125 in. long, the lower half glabrous and almost hyaline, the upper shortly white-villous, limb 2-lipped, lower lip 3-lobed, the midlobe longest, the two others and the upper lip equal, all erect or incurved. *Stamens* shortly exsert, attached just below the mouth of the corolla-tube, anther-cells rounded, slightly divaricate, pores elliptic. *Ovary* glabrous, depressed, 4-celled, style as long as stamens, stigma very shortly bifid. *Drupe* obovoid, faintly ribbed, .25 in. long, epicarp smooth, waxy-white (*Kunstler*), pyrenes 4-celled, one or more cells fertile. *Seeds* obovate, plano-convex, .15 to .2 in. long, testa white, corky, cotyledons flat, fleshy, .15 in. long, .1 in. broad, retuse at tip, radicle minute.

PERAK. on low ground, under 500 ft. in alt. *King's Collector* 938, 4723, 5949. MALACCA at Sungai Udang, *Goodenough* 1350.

To this species we also refer *Forbes'* No. 1124 from the Lampongs, Sumatra, but the leaves reach over 8 in. in length and 5 in. in breadth with slightly attenuate bases, and the fruiting calyx is rather more 2-lipped.

15. *PREMNA PYRAMIDATA*, Wall. Cat 1779 (1827). A small or medium-sized tree (a large tree—*Wallich*), reaching 40 to 50 ft. in height, and up to 5 ft. in girth; bark light greyish-brown; branches stout, pale brown; branchlets obscurely quadrangular, stellately tomentose with tawny tomentum. *Leaves* chartaceous; ovate, acuminate at apex, cordate or rounded sometimes attenuate at base, both surfaces brown when dry, the upper dark glabrous except on the nerves, the lower pale glabrescent, margins entire, 6 to 14 in. long, 3 to 8 in. broad; midrib stout, stellate-tomentose on both surfaces. main nerves 7 to 10 pairs, the lowest two pairs from near the base, the rest distant at an angle of about 60° with the midrib, curving gently upwards and joined by many regular transverse nervules very prominent on the under surface, petiole 1 to 4 in. long, channelled above, stellately scurfy-pubescent. *Cymes* in large terminal stellately-pubescent pyramidal panicles or corymbs, reaching 12 in in length, and 6 to 9 in in breadth, common peduncle 1 to 3 in. long, branches at first 3- afterwards 2-chotomous, usually ascending, bracts many, linear, reaching .5 in. long, flowers crowded at the ends of the branches on very short pedicels, greenish-white. *Calyx* campanulate, glabrous within, stellately-pubescent without, tube .075 in. long, teeth 5, subequal, about .025 in. long, the posterior three thickened, the two anterior shorter and more slender. *Corolla* bilabiate, .15 to .2 in. long, upper lip broad, lower lip 3-lobed, the midlobe the longest and spreading, the side lobes shorter and more obtuse, usually incurved, tube with a ring of retrorse stiff hairs at the throat, otherwise glabrous. *Stamens* 4, included, anther-cells elliptic, slightly divaricate, filaments stout. *Ovary* glabrous, depressed, style thickened with very shortly bifid stigma. *Drupe* globose or obovoid, glabrous, depressed at top, .2 to .25 in in diam., pericarp fleshy, pyrene rugose, very hard, 4-celled. *Seed* usually 1 only, oblong. Schauer in DC Prodr. XI 633, Miq Fl. Ind. Bat II 897, Hook f. Fl. Br Ind IV. 576. *P. tomentosa*, Kurz For. Fl. II. 260.

PERAK: Wray 3691, *Scortechini*, at Kwala Dipang, Ridley 9699, King's Collector 923, 2039, 2667, 6851, 10298. SELANGOR. Ridley 7596.—DISTRIB. Burma (*Wallich* 1779), Java (*Teysmann* 14), Timor (*Forbes* 3892). &c.

We have identified *Teysmann's* Java specimens as belonging to *P. pyramidata*, but we are not sure if *Koorders & Valetton* (*Bydr.* VII. 179) considered them to belong to their *P. tomentosa*, which, judging by *Koorders' own* specimens 9714 β in the Calcutta Herbarium, is not *P. pyramidata*. We have, therefore, not quoted *Koorders & Valetton*. We agree with Sir D Brandis ('*Indian Trees*,' 511) in thinking that *P. bengalensis*, Clarke, is probably only a narrow-leaved form of *P. pyramidata*.

A specimen bearing Father Scoortechini's ticket but without number and without any note of locality, appears to be *Premna acuminata*, R Br Prod Nov Holl 512, Benth & Muell Fl Aust V 60, a North Australian species with long petioled, cordate ovate, deltoid, poplar like leaves, and very loose panicles. It may very likely have been collected in a Botanic Garden.

A specimen collected by R Derry at Bukit Borwang, Malacca, is too incomplete for identification. It may belong to *P leucostoma* Miq Fl Ind Bat II 899.

8 GMELINA, Linn

Trees or shrubs, unarmed or armed with axillary divaricate spines (abortive branchlets). *Leaves* opposite, entire or more or less lobed. *Flowers* large, yellow or brownish yellow, often tomentose, in dense or lax sessile or pedunculate cymes along the branches of a terminal panicle, bracts usually small, sometimes large, leafy and coloured. *Calyx* campanulate, 4 to 5 toothed or subentire persistent and unaltered in fruit. *Corolla* obliquely campanulate or funnel shaped, tube slender below, much dilated above, limb spreading, oblique, 4 to 5-lobed. *Stamens* 4 didynamous, inserted below the throat of the corolla, included, anthers pendulous, with oblong sub separate cells. *Ovary* 4-celled, the cells 1 ovuled. style slender, stigma shortly 2 fid, ovules laterally attached to the septum at their middle or higher. *Fruit* a succulent drupe, endocarp bony, 2 to 4 celled, usually with a conical hollow in the middle open on one side. *Seeds* oblong, testa thin, with a corky layer outside. albumen none, cotyledons fleshy, radicle inferior. —DISTRIB. Species about 11, in India, Malaya, China and Australia.

Leaves glaucescent beneath with minute glands, usually 3 or more lobed.

1 *G asiatica*

Leaves fulvous tomentose beneath, rarely lobed.

2 *G villosa*

G Hystrix, Schultes ex Kurz in Journ As Soc XXXIX ii 81 (1870) and I or Fl II 265 is a large spinous scandent shrub with very large coloured bracts a native of Siam and the Philippines also, according to Kurz, Tenasserim. It is probably only a garden escape in Singapore (Garden road, Ridley 3944).

1 *GMELINA ASIATICA*, Linn Sp Pl 626 (1753). A much-branched spinous straggling shrub, bark yellowish white. branchlets horizontal, rigid, puberulous, the smaller ones often becoming spines at their ends. *Leaves* membranous, ovate or elliptic or obovate, often 3- or more lobed, the midlobe the longest, upper surface glabrous, lower surface glaucescent from a coating of minute round glands, and villous on the nerves, margins entire except for the 3 or sometimes more lobes which point upwards, 75 to 15 in long, 5 to 1 in broad, midrib slender, main nerves 2 to 3 pairs, reticulations few, petiole very

slender, up to 5 in long *Racemes* fulvous-tomentose, terminal, 1 to 2 in long, cymules very short, bracts small, caducous, pedicels very short flowers bright yellow *Calyx* 15 to 2 in long, tube with large flattened glands, otherwise pubescent, teeth 4, very small, triangular, acute *Corolla* 2 lipped, obliquely funnel shaped, puberulous without, nearly 2 in in length, tube slender below, gradually inflated above, lobes 4, ovate, more or less rounded, the lowest the longest *Stamens* curved, slightly exsert, filaments thickened, pubescent, anther-cells opening in a horseshoe, connective flattened, all 4 similar *Ovary* depressed, glabrous, style slender, exsert, stigma 2 lobed *Drupe* obovoid, yellow when ripe, 75 in long, pyrene pyriform with a basal cavity, bony *Seeds* usually 1 or 2 only, oblong at base, testa membranous with a corky covering albumen fleshy Roxb Fl Ind III 87 Lamk Ill t 542 Wall Cat 1818 (*in part*) Schauer in DC Prodr XI 679, Wight Ill t 174 Bedd Fl Sylv CXXXII, Brandis For Fl 365 Blume Bijdr 814 Miq Fl Ind Bat II 866, Clarke in Hook f Fl B. 9 CLIFRODENDRON, Linn

Trees or shrubs, sometimes straggling or climbing *Leaves* opposite or rarely verticillate simple, entire or dentate or angularly-lobed *Flowers* small or large, of various colours, in axillary cymes or terminal panicles, often leafy below, bracts conspicuous or small, bracteoles 0 or very small *Calyx* campanulate, rarely tubular, truncate, 5-toothed or almost 5 partite, persistent, often accrescent, often coloured in fruit *Corolla* hypocrateriform or infundibular, tube usually long, slender, limb usually oblique, more or less 2 lipped, 5 lobed, the lobes spreading *Stamens* 4 didynamous, long exserted filaments filiform, involute in the bud, anthers ovate or oblong, more or less uniform, cells parallel, adherent above, separate below, filaments attached at the notch *Ovary* imperfectly 4 celled, the cells 1-ovuled, style filiform, stigma shortly bifid *Fruit* a globose, succulent or rarely dry drupe, 4-grooved or 4-lobed, separating into 4 pyrenes, of which 1 to 3 are sometimes suppressed, exocarp usually fleshy, endocarp bony or crustaceous *Seeds* oblong or pyriform, albumen 0, cotyledons thick, fleshy, radicle very small, inferior —DISTRIB 100 to 120 species, in the warm regions of both hemispheres, but chiefly in the eastern

Corolla hypocrateriform, the tube rarely more than 1 in in length (Subgenus 1 EUCLIFRODENDRON) —

Cymes axillary —

Cymes few flowered from most axils, leaves small, calyx teeth very short

. 1 *C nervifolium*

- Cymes in deflexed pedunculate close panicles, from upper axis, leaves large calyx lobes linear lanceolate, over 2 in long 2 *C. deflexum*
- Cymes in leafy panicles, the lower branches appearing axillary —
- Leaves and inflorescence glabrous or only slightly puberulous, leaves usually over 1 in broad, long acuminate, membranous 8 *C. disparifolium*
- Leaves and inflorescence scabrous hispid more or less pubescent, leaves under 1 in broad, acute, chartaceous 4 *C. lankauensis*
- Cymes in terminal panicles —
- Leaves oblong or lanceolate —
- Panicles more or less pendulous, long pedunculate —
- Leaves 1 to 3 in broad, calyx lobes lanceolate, acute 5 *C. penduliflorum*
- Leaves 2 to 6 in broad, calyx lobes ovate cuspidate 6 *C. umbritile*
- Panicles erect short pedunculate or sessile —
- Leaves entire, calyx cleft nearly to the base, stems fistular —
- Leaves glabrous, main nerves distant, calyx lobes acuminate with incurved tips 7 *C. myrmecophyllum*
- Leaves puberulous, main nerves rather close, calyx lobes acute glandular 8 *C. (urtica)*
- Leaves serrate rarely entire, calyx truncate, teeth minute 9 *C. seriatum*
- Leaves ovate, usually cordate at base — var *Halluchi*
- Panicles pyramidal thyrsoid, leaves hairy —
- Corolla tube over 5 in long, leaf margins dentate 10 *C. infortunatum*
- Corolla tube under 3 in long leaf margins entire 11 *C. villosum*
- Panicles corymbose, leaves glabrous, corolla tube over 7 in long 12 *C. (olcibookianum)*
- Leaves usually 3 to 7 lobed under surface prominently glandular 13 *C. paniculatum*
- Corolla infundibuliform the tube more than 1 in in length (Subgenus 2 SIPHONANTHUS) —
- Leaves usually verticillate, lanceolate, panicle very long many flowered, drupe blue 14 *C. Siphonanthus*
- Leaves opposite elliptic or ovate, panicle short few flowered, drupe red 15 *C. Ridleyi*

The following species are found in cultivation or as escapes from cultivation —

CLERODENDRON FRAGRANS, R Br in Ait Hort Kew ed 2, IV 63 (1812) A double flowered shrub with large leaves of unpleasant odour, the flowers white merging into dark purple and fragrant — SINGAPORE Deschamps, King's Collector 304

C CALAMITOSUM, Linn Mant 90 (1767) A slender white-flowered shrub, native of Java and often found in gardens In the Fl Br Ind it has been described as a Malacca species on the authority of Maingay's specimen, but Mr Ridley informs us that in his opinion the plant is not indigenous and that Maingay's specimen came, in all probability from a garden escape

C THOMSONÆ, Balf f in Trans Bot Soc Edinb VII 265, t 7, and 580, t 16 (1863) A climbing shrub, native of Tropical Africa, with opposite ovate leaves and terminal lax cymes of flowers with a white calyx and crimson corolla —PENANG Curtis 124 SINGAPORE Deschamps

C SQUAMATUM, Vahl Symb II 74 (1791) An erect shrub, native of India, China, and Sumatra, with ovate cordate leaves and scarlet flowers in large panicles —SINGAPORE Ridley 9209

1 CLEODENDRON NERIIFOLIUM, Wall Cat 1789 (1828) A straggling shrub, branches ashy grey, lenticellate, branchlets slender, greyish brown Leaves membranous, ternate or opposite, elliptic, acute or rounded often slightly emarginate at apex, shortly attenuate at base, glabrous or, when young, sparsely pubescent on both surfaces, margins entire, 1.5 to 3.5 in long, .75 to 1.75 in broad, midrib slender, main nerves about 5 pairs, straight or branched to meet in an obscure looped intramarginal nerve, reticulations finely netted, petiole slender, .25 to .5 in long Cymes axillary, umbellate, sometimes in a 7 flowered dichasium, often only 3 flowered, peduncle 1 to 1.5 in long, bracts linear, setaceous, bracteoles similar but smaller, pedicels .15 to .25 in long flowers white, purplish-pink (Forbes) Calyx tube 5-mercampanulate, enlarged in fruit and then cup shaped, tube 1.5 in long, pubescent and gland-dotted without, teeth 5, minute Corolla tube very slender, .75 to 1 in long, gland dotted without, villous within, lobes 5, spreading, unequal, somewhat oblong, about .25 in long Stamens red, long-exserted, anther cells oblong, parallel Ovary cylindric, obtuse, style very slender, stigma shortly bifid Drupe obovoid, .5 in long, .4 in in diameter, top depressed, exocarp spongy, pyrenes 4 readily separating, endocarp crustaceous Seed obovoid, testa thin cotyledons oblong, thick, fleshy, radicle very short, thick Schauer in DC Prodr XI 660, Miq Fl Ind Bat II 839, Clarke in Hook f Fl Br Ind IV 589 Plain Beng Plants 835 C. merme, Benth Fl Hongk 271, and Fl Austral V 61, Schauer l c (in part), Wall Cat 1788, Sheet 1 on A C. merme var nerifolia, Kurz For Fl II 266 Volkameria nerifolia, Roxb Fl Ind III 64 "Jasminum litoreum," Rumph Herb Amb V t 46

6 CLEODINDRON UMBRAILE, King & Gamble in Kew Bull 110 (1908) A shrub or small tree reaching 8 to 15 ft in height branchlets pale brown, smooth, fistular *Leaves* membranous variable in shape usually oblong or obovate or oblanceolate the broadest part about two thirds up or even higher long and rather suddenly acuminate at apex, usually rounded but sometimes attenuate at base glabrous on both surfaces entire, 8 to 16 in long, 2 to 6 in broad midrib rather slender, main nerves 8 to 12 pairs, slender, the lowest pair usually from the base at an acute angle with the midrib, the rest at a wider angle curving upwards, the upper ones joining in a looped intramarginal nerve, transverse nervules irregular reticulations netted petiole 1 to 3 in long, flaccid *Panicles* from the uppermost axils, elongate, lax, somewhat curving, glabrous, usually 4 to 6 in long and about 3 in broad, on slender peduncles 4 to 7 in long branches divaricate, usually at right angles, with few flowered cymes rachis flattened and slightly winged, bracts leafy, lanceolate, up to 1 in long, bracteoles many, linear setaceous, pedicels slender, puberulous, 1 to 5 in long, buds spatulate, curved, 1 in long flowers rather large, white tinged with pink, the calyx white or pale green turning red in fruit *Calyx* large glo

bosc or slightly puberulous, deeply divided nearly to the base, lobes ovate acuminate, cuspidate, about 6 in long by 2.5 in broad, enlarging in fruit to 1.5 in in diam, and then spreading. *Corolla*-tube slender, cylindric, 4 to 6 in long, lobes spathulate, rounded at top, as long as tube. *Stamens* exsert, filaments glabrous, anthers 1 in long, cells parallel. *Ovary* rounded, obtuse, style very slender, stigmas 2, short. *Drupe* black, smooth, fleshy, globose, 5 in in diam, pyrenes 4 or less, triangular-convex, endocarp crustaceous. *Seeds* rounded, 2.5 in in diam, testa membranous, cotyledons fleshy, radicle minute.

PERAK at Kapayong Kinta, Wray 167, in dense jungle up to 3500 ft, King's Collector 722, 6959, 8268, *Scortechini* 2198, on Larut Hills, 3000 ft, and in Thaping Hills, Derry 3704 (Curtis), 10712, at Kwala Dipang, Curtis 3116, at Bujong Malacca, Ridley 9700 — DISTRIB Sumatra (in deep shade of forest at Gienoeng Trang and Kotta Djawa, Lampongs, Forbes 1333, 1585)

Ridley's No 7594 from Ginting Bidai Selangor appears to be this species but the leaves are rather narrower than usual and reach 12 in long by 2.5 in broad. The specimen is in fruit, which Ridley describes as black with a red calyx.

7 *CLERODENDRON MYRMECOPHILUM*, Ridley in Journ Bot XXXIII 42 (1895). A sparingly branched shrub, about 3 ft high, stem stout, terete, glabrous, fistular, the bark white, internodes swollen hollow. *Leaves* opposite or alternate, membranous when dry, oblong, elliptic-oblong or -oblanceolate, acute or obtuse at apex, acute obtuse or cordate at base, both surfaces glabrous, dull, margins entire, 6 to 12 in long, 2 to 4 in broad, midrib stout, broad, pale on the upper surface, main nerves 10 to 13 pairs, curving very gently upwards to meet in a looped intramarginal nerve, transverse nervules very few, irregular, reticulations not visible, petiole 7.5 to 2.5 in long, fistular. *Panicle* a terminal, shortly peduncled, pubescent, pyramidal thyrsum reaching 10 in long and 3 to 4 in broad, branches usually opposite, spreading, of rather few flowered loose reddish brown cymes, bracts and bracteoles linear subulate, caducous reddish-brown, pedicels 1.5 to 2 in long, buds clavate, curved, flowers ochreous red. *Calyx* puberulous, about 3 in long, cleft nearly to the base, lobes erect, lanceolate acuminate with incurved tips, fruiting calyx enlarged to about 1 in in diam, lobes triangular acuminate, reflexed, red. *Corolla* tube cylindric, about 5 in long, puberulous without, lobes as long as tube, obovate oblong, the tips rounded. *Stamens* long exsert, filaments very slender, red, anthers oblong-reniform, 0.5 in long, cells parallel. *Ovary* glabrous, obtuse, style as long as stamens, red, stigmatic branches slender. *Drupe*

globose, black, 5 in in diam, with 4 to 1 pyrenes, pyrenes convex on back, nearly plane on the face, 3-ribbed, 3 to 4 in long. Seed conform with the pyrenes, testa membranous, cotyledons thick, fleshy, unequal, radicle minute. Bot Mag t 7887, Gard Chron XXXIII Ser 3, 196 (1903), and XXXV Ser 3, 237, t 98 (1904)

JOHORE at Jaffaria, *G King* SINGAPORE in dense wet woods at Choa Chu kang, Ridley

The hollow stems are swollen at the internodes and there form nests for ants belonging to the genus *Pheidole*, Fabricius. The same phenomenon occurs in *C fistulosum*, Becc, of Borneo, in *C formicarum* Gurke, a native of Tropical Africa (Hook f in Bot Mag t c), and in the next species here described

8 CLERODENDRON CURTISII, H H W Pearson in Kew Bull 142 (1901)
A small shrub, usually 2 to 3 ft, sometimes reaching 6 ft high. Stem thick, fistular, striate, minutely puberulous. Leaves opposite, membranous, elliptic, elliptic-oblong or obovate, acuminate at apex, broadly cuneate rounded or sometimes slightly cordate at base, both surfaces somewhat puberulous, upper glabrescent when old. Margins entire or undulate denticulate. 4 to 12 in long, 3 to 6 in broad. Midrib stout, pubescent, main nerves 9 to 12 pairs, curving upwards to and along the margin where they anastomose. Transverse nervules fairly regular and prominent, reticulations inconspicuous. Petiole thick, striate, puberulous, 1 to 1.5 in long. Panicles terminal, thyrsoid, pubescent. Much-branched, reaching 6 to 8 in long and 4 to 5 in broad, the rachis and branches angular. Branches opposite, with peduncles .75 to 1 in long and corymbose cymes of many flowers, bracts leafy, the lower large, the upper obovoid or spatulate, bracteoles small, subulate. Pedicels slender 1.5 in long, buds clavate, 5 to 7.5 in long, flowers bright yellow, tinged with red, the calyx crimson. Calyx cleft three quarters down, lobes lanceolate, acute, 3 nerved, pubescent ciliate, .25 in long, 1 in broad, with usually several rather obscure peltate glands. Corolla tube cylindric, slender, 5 to 7 in long, puberulous, glandular, lobes obovate or elliptic, narrow at the base, 2 to 3 in long. Stamens long exsert, filaments glabrous, anthers reniform, under .05 in long, cells parallel. Ovary glabrous, obtuse, style very slender, stigmatic branches short. Drupe not seen.

PERAK at Kota, Wray 3246, Lamjibus, Scottichini 1555, on Larut Hills, 3000 ft, Lerry (Curtis) 3704, in low swampy places at Larut, King's Collector (Kunstler) 1966, 2507. DINDINGS Buaas, in damp places, Curtis 3441. SILLANGOR Klang, Ridley 10198

Mr Ridley informs us that this is the same plant as *Clerodendron breviflorum* Ridley in Journ Bot XXXII 43 (1895), which was described from specimens

collected at Kampong Chin Chin, Ula Batu Pahat, Johore, by Lake & Kelsall in 1892. Unfortunately, there are no specimens in the herbaria at Kew or Calcutta, so we hesitate to alter the name. If the identification proves correct, it is Ridley's name that must take precedence. This is one of the species whose fistular stems contain ants' nests. *C. macrophyllum*, Hook MS in Herb Kew, a large leaved, handsome species from Java and Borneo is very closely allied to this species.

VAR *Wallichii*, C B Clarke in Hook f Fl Br Ind IV 592. A shrub, reaching 8 to 10 ft in height (*Kunstler*), branches somewhat herbaceous, smooth, fistular, branchlets smooth, angled and with raised lines decurrent from the nodes. Leaves opposite, almost membranous when dry, obovate lanceolate or oblanceolate, shortly acuminate at apex, acuminate narrowed at base, both surfaces glabrous, margins distantly serrate or denticulate, sometimes entire, 4 to 8 in long, 1.5 to 3 in broad, midrib strong, prominent beneath, main nerves 6 to 10 pairs, at first straight, then curving upwards to and along the margin, reticulations irregular, petiole up to about 6 in long or none when bordered by the decurrent margins of the blade. Panicle terminal, erect, elongate, minutely pubescent, reaching 10 to 12 in in length and 2 to 2.5 in in breadth, the branches many, divaricate, subdichotomous, many flowered. Bracts foliaceous, large, ovate or obovate, acuminate or obtuse and apiculate, bracteoles many, lanceolate or finally linear. Pedicels slender, about 1 in long, buds spatulate, curved, flowers greyish-white to blue, the lower lobe darker than the rest. Calyx campanulate, lobes extremely short, rounded, minutely apiculate, the fruiting calyx cup-shaped, almost truncate, not enlarged. Corolla-tube cylindric, slightly narrowed below the oblique throat, 2 to 2.5 in long, glabrous without, villous within, lips 2, upper of 2 oblong, flat, obtuse lobes, lower of 3 lobes, the side ones similar to the upper, the midlobe spatulate, concave, emarginate, all about 2.5 in long. Stamens very long-exsert, much curved, filaments villous at the base and

thickened, anthers oblong, 0.75 in long, cells parallel. *Ovary* glabrous, truncate at top, style very long, slender, stigmas 2, rather long. *Drupe* purple, succulent, when dry 2.5 in long, and as much broad at top, with 4 (or less) well-marked pyrenes, pyrenes obovoid, plane or concave on inner faces, endocarp crustaceous. *Seeds* obovoid, 1.5 to 2 in long, concave on the inner, convex on the outer face, which is wrinkled, testa thin, cotyledons fleshy, unequal, one convex, the other concave, radicle minute. *C. farinosum*, Wall Cat 1810 (not *Volkameria farinosa*, Roxb.) *C. divaricatum*, Jack in Mal Misc I 2, and in Hook Bot Misc II 89, Schauer in DC Prodr XI 674.

PLAK *Wray* 1871, at Ipoh, *Curtis* 3198, 3328 at Ipoh and Baton Gajah, *Deschamps*, near Taiping, *Scortechini* 507 at Gopeng, *King's Collector (Kunstler)* 480. SILLANGOR *Goodenough* 10478. *Cecil C. Smith*. — DI-TRIB India (Sikkim, Assam and Burma), Sumatra, Java, Celebes, Cambodia.

We have not followed Clarke in quoting *C. javanicum* Walp Rep IV 118, as we consider the description therein given does not sufficiently fit our specimens.

10 *CLIBODENDRON INOBLUNATUM*, Linn Sp Pl 637 (1753). A shrub, usually about 3 to 8 ft high, occasionally a small tree, gregarious, branchlets obtusely quadrangular, slightly furrowed, clothed with yellowish pubescence. *Leaves* somewhat coriaceous, ovate, acuminate at apex, rounded or cordate at base, both surfaces roughly strigosely hairy, lower sometimes with small obscure round glands, margins dentate or denticulate, rarely entire, 4 to 10 in long, 3 to 8 in broad, midrib prominent, main nerves also prominent, about 8 pairs, the lowest two pairs near the base spreading, the rest gradually curving upwards, all joined by prominent transverse nervules which branch and anastomose, reticulations netted, petiole 1 to 4 in long, densely pubescent. *Panicle* terminal, pyramidal, spreading, 6 to 12 in long and broad, densely tawny pubescent, the branches trichotomous, ending in many flowered cymes, bracts leafy, ovate-lanceolate, deciduous, bracteoles lanceolate, also deciduous, pedicels slender, 2.5 to 5 in long, buds clavate, rounded at top, flowers white, tinged with pink, the calyx red at the base (Ic Roxb). *Calyx* cleft nearly to the base, silky pubescent, often with scattered, large, round, peltate glands, the lobes lanceolate, acute, suberect, 3 to 4 in long, fruiting calyx enlarged, crimson, reaching 1.5 in in diam when spread out. *Corolla* densely pubescent without, tube cylindric, slender, 5 to 7.5 in long, lobes spreading, as long as the tube, the 2 upper somewhat spatulate, the 3 lower ovate, oblong, rounded. *Stamens* long-exsert, filaments glabrous, anthers oblong, the cells parallel. *Ovary* rounded, glabrous,

style slender, stigmas 2, short *Drupe* nearly globose, shining, black, 3 in in diam, with 4 to 1 pyrenes, pyrenes convex without, the endocarp crustaceous *Seeds* conform to the drupe, testa membranous, cotyledons fleshy Gaertn Fruct I 271, t 57, fig 1, Lamk III t 544, Wall Cat 1796, Schauer in DC Prodr XI 667, Dalz & Gibs Bomb Fl 200, Wight Ic t 1471 (?), Bedd Fl Sylv CLXXIII, and Anal XXII fig 1, Brandis For Fl 363, Kurz For Fl II 267, Miq Fl Ind Bat II 876, Trimen Fl Ceyl III 361, Clarke in Hook f, Fl Br Ind IV 594, Cooke Fl Bomb II 432, Prain Beng Plants 835 *C viscosum*, Vent Jard Malin t 25, Bot Mag t 1805, Bot Reg t 629 *C cordatum*, Don Prodr Fl Nep 103, Schauer l c 674 *Volkameria infortunata*, Roxb Fl Ind III 59 *Clerodendron*, Linn. CLEODENDRON LOBBII C. B. Clarke in Hook f Fl Br Ind IV 510 (1885) is a climbing shrub which in all probability does not belong to this genus. Mr Ridley informs us that it is very common in Borneo and that he thinks Lobb's specimen must have been collected at Kuching and not in Penang. It is a very handsome striking plant and has been cultivated. It has the upper leaves of the spray bright red flowers of a light salmon red and a horn shaped fruit about 2 in long. There is a good picture of it in Miss North's Gallery at Kew to which Mr Ridley has drawn our attention.

10. VITEX LIN

Trees or shrubs. *Leaves* opposite digitately 3 to 7 foliolate sometimes 1 foliolate leaflets usually entire sometimes dentate generally petiolulate. *Inflorescences* blue white or yellow in sessile or pedunculate cymes forming terminal or axillary or both terminal and axillary panicles or corymbs bracts usually small often caducous. *Calyx* campanulate or tubular funnel shaped usually truncate or shortly 5 toothed sometimes bilabiate with 3 to 5 teeth. *Corolla* small 2 lipped tube long or short upper lip usually of 2 lower of 3 lobes the central lobe of the lower lip much the longest. *Stamens* 4 didynamous usually exerted anther cells various always attached at the tip only generally parallel at first afterwards divaricate. *Ovary* 2 to 4 celled 4 ovuled style filiform stigma bifid. *Fruit* a globose or ovoid or obovoid drupe supported by the more or less enlarged calyx in occupying generally fleshy endocarp bony pyrene normally 4 celled and 4 seeded but often with some of the cells suppressed the base of the pyrene sometimes hollowed in a cavity. *Seeds* obovate or oblong albumen 0 cotyledons usually fleshy radicle inferior. **DISTRIBUTION** About 120 species in all tropical and warm temperate regions.

Inflorescence terminal with occasional additional branches in the axils of uppermost leaves —

Leaves without wings to the petioles

Shrubs or small trees leaves membranous grey pubescent beneath

Leaves 1 to 3 foliolate margins entire petiole under 1 in long, calyx under 1 in long

1 *V. trifolia*

Leaves 3 to 5 foliolate margins sometimes crenate petiole over 1 in long calyx over 1 in long

2 *V. Negundo*

Trees leaves chartaceous or coriaceous not grey pubescent beneath —

Leaves 1 foliolate coriaceous —

Leaves 1 to 4 5 in broad, with a prominent intra marginal nerve, panicle branches spicate

3 *V. holophylla*

- Leaves 2 to 3 in broad no prominent intramarginal nerve, panicle branches racemose 4 *V. Clarkeana*
- Leaves 3 foliolate leaflets petiolulate —
- Leaves coriaceous inflorescence of stout panicles up to 8 in long, the flowers clustered 5 *V. coriacea*
- Leaves chartaceous, inflorescence of slender panicles the flowers not clustered 6 *V. siamca*
- Leaves 3 to 5 foliolate chartaceous or coriaceous —
- Leaflets sessile or subsessile inflorescence densely tawny pubescent, bracts large conspicuous 7 *V. pubescens*
- Leaflets petiolulate, inflorescence thinly cinereous tomentose bracts very small or none —
- Leaflets long acuminate panicle branches slender with few flowered cymules, corolla tube without a ring of hairs within 8 *V. heterophylla*
- Leaflets short acuminate panicle branches stout with many flowered cymules corolla tube with a ring of hairs within 9 *V. sumatrana*
var *unicolata*
- Leaves with winged petioles the wings broad
- Leaflets long lanceolate, scabrous dotted under 2.5 in broad 10 *V. pteropoda*
- Leaflets elliptic or elliptic obovate over 3 in broad not scabrous dotted 11 *V. peralata*
- Inflorescence axillary —
- Leaves 3 to 5 foliolate glabrate, cymes peduncled reaching 4 to 5 in long 12 *V. glabrata*
- Leaves 3 foliolate, cymes sessile under 1.5 in long
- Leaves and cymes densely tawny pubescent drupe with a hard ridged pyrene having 3 to 4 seed bearing cells above and an empty cavity below —
- Calyx lobes oblong lanceolate 2.5 in long conspicuous bracts large conspicuous, leaves large 13 *V. longisepala*
- Calyx lobes short acute inconspicuous, bracts minute, caducous leaves small 14 *V. vestita*
- Leaves glabrate, cymes sparingly fulvous hairy calyx 2-hipped 15 *V. gamosepala*

We have not maintained Clarke's subgenus *Glossocalyx* because the species *V. gamosepala* for which it was established is so very nearly allied to *V. longisepala* and *V. vestita* that if any subgenus were necessary it ought to be one which would include these three so different in inflorescence and fruit from the rest of the genus and closely allied to *Premna* and *Gmelina*.

1 *VITEX TRIFOLIA*, Linn Sp Pl 638 (1753) A shrub or small tree bark smooth, pale grey, branchlets quadrangular, covered with an appressed hairy tomentum. Leaves membranous, 1 to 3 foliolate the terminal leaflets sessile or very shortly petiolulate, the lateral leaflets sessile leaflets elliptic or obovate, or almost orbicular (speci

ally when 1-foliate), obtuse or acute at apex, rounded or cuneate (especially the terminal, if 3) at base, upper surface glabrous, lower densely white-tomentose, margins entire, end leaflet 1 to 3 in long, .5 to 1.25 in broad, lateral leaflets smaller, main nerves 8 to 12 pairs, inconspicuous, petiole slender, .5 to 1 in long. *Panicles* terminal, oblong, white-tomentose, reaching 1 to 5 in in length, the rachis sub-quadrangular, cymes opposite up to 1 in long, brachiate, bracts linear, minute, flowers lavender to blue. *Calyx* sessile, campanulate, .075 to 1 in long, tube ribbed from the teeth, white-tomentose, teeth 5, regular, acute, very small. *Corolla* 25 to 35 in long, tube scaly-pubescent without, villous within at the insertion of the stamens, upper lip of 2 short rounded lobes, lower of 3 lobes, the lateral lobes .06 in long, the midlobe longest, 1.25 in long, villous, hairy within and usually incurved. *Stamens* exsert, filaments hairy-villous near the base, anther-cells curved. *Ovary* rounded, depressed, glandular-dotted. *Drupe* ellipsoid, depressed at top, 2 in in diam, slightly ribbed, glandular-dotted, half-enclosed in the somewhat enlarged calyx. VAR *urceolata*, King & Gamble A tree, reaching 40 to 60 ft in height and 2 ft in diam of stem, branchlets quadrangular, channelled

at the sides from raised lines descending from the sides of the petiole, glabrous or very slightly puberulous. *Leaves* chartaceous, 3- to 5-foliate, the middle leaflet longest, the next pair not much smaller, the lowest pair a good deal smaller, all petiolulate or the lowest pair sessile, leaflets entire, obovate or oblong obovate, shortly suddenly acuminate at apex, rounded often unequally at base, upper surface glabrous, except on the nerves, olivaceous brown, shining, rough, minutely white-gland-dotted lower surface glabrous, paler than the upper, with minute yellow glands, middle leaflet 4 to 6 in long, 2.5 to 3 in broad, rest gradually smaller but similar midrib strong, impressed above, main nerves about 10 pairs, irregular, curving upwards to and along the margin and joined by rather irregular transverse nervules, petiole 1.5 to 4 in long, quadrangular but not winged petiolule of middle leaflet about 1 in long, of next pair about .5 in long, of the lowest pair 0 to .25 in long. *Panicles* terminal, thinly cinereous tomentose, thyrsoïd, usually sessile, reaching 8 in in length and 5 in in diam, branches elongate, cylindric bearing interrupted whorls of pairs of many-flowered cymes about 5 in long branch-peduncles 1 to 2 in long, bracts linear 1 to 1.5 in long recurved, deciduous buds large, reaching .25 in long. *Calyx* tubular campanulate, 1.5 in long, flattened in fruit and enlarged, tube tawny pubescent and glandular without, glabrous within, teeth short, acute, rounded in fruit. *Corolla* tube curved, contracted at the throat .25 in long, pubescent without except at the base, quite glabrous within 2-lipped, upper lip of 2 erect crenate lobes 1 in long lower of 3 lobes, midlobe broad, crenate, obtuse, .2 in long, side lobes shorter, reflexed, all pubescent without, glabrous within. *Stamens* curved exsert filaments glabrous, anther cells attached only at one point, curving to nearly erect. *Ovary* conical with a few glands on its top style thickened, sigmoid below, glabrous, stigma shortly 2-lobed. *Drupe* globose, depressed, 3 to 5 in long, shortly apiculate, wrinkled when dry, pyrene very hard. *Seeds* flattened, oblong, testa thin, spongy. *V. urceolata*, Clarke in Hook f Fl Br Ind IV 585 (1885) *V. heterophylla*, Schauer in DC Prodr XI 686 partly *V. Loureuxii*, Herb Wight, not of Hook & Arn.

PERAK in Upper Perak, at 300 ft, Wray 3653, *Scortechini* 61, in dense mixed jungle, at 400 to 600 ft, King's Collector 10406 MALACCA Griffith (K D) 6064, Marney (K D) 1205, 1207

As pointed out by Clarke, this variety differs in the glabrescent foliage, larger flowers and larger drupes *V. heterophylla*, Roxb, with which Koorders & Valetton would combine *V. urceolata*, has different leaves and inflorescence and a corolla villous within

10 *VITEX PTEROPODA*, Miq Fl Ind Bat Suppl 567 (1862) A tree, reaching 40 to 60 ft in height and a considerable diameter of stem, branchlets stout, pale brown, obscurely quadriangular. Leaves coriaceous, 5 to 7 foliolate, only the lowest pair much smaller than the others, petiole prominently and very broadly winged leaflets long, lanceolate or oblong-lanceolate or oblanceolate, acuminate at apex, cuneate at base, both surfaces glabrous, minutely dotted and so scabrid to the touch, margins recurved 4 to 20 in long, 1 to 2.5 in broad, midrib stout, main nerves 12 to 16 pairs prominent on the lower surface, at first somewhat straight and then curving to and along the margin till they meet, joined by prominent transverse nervules and reticulations petiole 4 to 7 in long broadly winged, the wings broadest (1 to 1.5 in on either side) at a short distance from the base, sometimes narrowed only near the top, sometimes earlier and then curving upwards, often cordate or auricled at both ends petiolules 5 to 1 in long, bordered by the decurrent margins of the leaflet blades Panicles terminal or partly axillary to uppermost leaves, subsessile, glabrous, reaching 1 ft in length and about 8 in in diam rachises slender, angular, striate or channelled peduncles of all classes, primary secondary and tertiary, long, ending in few sparse few flowered short cymes scarcely 2.5 in long, bracts linear, acuminate, 1 to 1.5 in long, persistent bracteoles under the calyx similar but shorter pedicels 0 or very short flowers white with a pink tinge Calyx urceolate, glabrous, 1 in long teeth 5 acute Corolla tube short .075 to 1 in long, puberulous without glabrous or very slightly villous within near the base lobes short, obtuse Stamens scarcely exsert filaments villous, anther cells ellipsoid, nearly parallel Ovary globose, much depressed, glabrous style slender, stigma shortly 2 forked Drupe ovoid oblong, .75 to 1 in long, .5 in in diam, smooth scabrid on the spreading, much enlarged calyx, pericarp very thick seed 1

PERAK *Scortechini*, in dense jungle or low ground near Larut, King's Collector 5249, 6668 — DISTRIBUTION Sumatra (*Teysmann*)

It is unfortunate that we could only find in all the specimens available one broken and imperfect corolla. The tree is a remarkable one, and is clearly very nearly allied to *V. per-alata*, King, but differs in the long narrow leaflets with scabrid points the glabrous, usually terminal sparsely flowered panicles short corolla tube and smaller drupes. The broad wings to the petioles are much the same in both. The specimen of *Teysmann* at Kew consists only of a couple of leaflets about 20 in long.

11 *VITEX PER-ALATA*, King MS in Herb Calc, Kew Bull 112 (1908) A spreading tree, reaching 80 ft in height and 2 ft in diam of stem, branchlets very thick, angular, striate, dark brown. Leaves

coriaceous, 5- to 7-foliolate, only the lowest pair much smaller than the others, petiole prominently and very broadly winged, leaflets elliptic or elliptic-obovate, acute at apex, long-attenuate at base, both surfaces glabrous, margins recurved, middle lobe 6 to 20 in long, 3 to 6 in. broad, the rest smaller in proportion, midrib stout, impressed above, raised beneath, main nerves 10 to 14 pairs, prominently raised beneath, curving upwards to and along the margin, joined by a conspicuous (on upper surface) network of reticulations, petiole 3 to 6 in long, the wings broad below and almost cordate, the breadth (the broadest at 1 to 2 in above the base) reaching 1.5 to 2 in on either side at widest, curving upwards rather abruptly or gradually to the top, and veined like the leaves petiolules often 0, when present scarcely reaching 25 in. long. *Panicles* terminal or sometimes axillary to the uppermost leaves, sessile or peduncled, puberulous, reaching 2 ft in length and about 1 ft in diam, rachises angular, channelled, peduncles up to 8 in long, very stout, somewhat flattened, secondary peduncles of branches in whorls of 4 around the main rachis, up to 5 in long, flowers in short opposite or alternate many-flowered cymes, about 5 in long, along the branches bracts linear lanceolate, 1 to 2 in long, persistent, pedicels 0 or very short, flowers light blue with brown markings. *Calyx* pink, shortly urceolate, tawny-pubescent, 1 to 1.5 in long, teeth short, acute, in fruit slightly enlarged and recurved. *Corolla*-tube campanulate, 2.5 in long, pubescent without, villous within around the point of insertion of the stamens and up to the midlobe of the lower lip, upper lip of 2 ovate acute lobes 1 in long, the lobes reflexed, lower lip of 3 lobes, side lobes oblong, rounded, 1.5 in long, reflexed, midlobe broad, obtuse, 2 in long, all puberulous. *Stamens* exsert, filaments flattened at base, villous hairy, anther-cells ellipsoid, rather short, slightly divaricate. *Ovary* rounded, depressed, villous at top, glabrous below, style slender, slightly longer than the stamens, stigma shortly 2 forked. *Drupe* ovoid-conoidal, smooth, longitudinally ribbed, 1.5 in long by 1 to 1.25 in broad, pericarp very thick, pyrene with rather soft shell. *Seed* 1, testa membranous, cotyledons orbicular, flat.

PERAK at Simpang, Wray 2029, 2254, 2305, in dense jungle on low wet ground near Larut, King's Collector 2064, 6187, 6874, 8299.

This must be a splendid tree and worthy of cultivation for ornamental purposes. The large fruit, resembling that of the walnut, and the broad wings to the leaf petioles are very characteristic.

12 VITEX GLABRATA, Br Prodr Fl Nov Holl 512 (1810) A large tree, branchlets pale brown, obscurely quadrangular, innovations

fulvous-tomentose *Leaves* chartaceous, digitately 3- to 5-foliate, the lowest pair rather smaller than the others, the middle leaflet slightly larger, leaflets entire, petiolulate, obovate elliptic or elliptic-oblan-ceolate, acuminate at apex often obtusely, attenuate or cuneate at base, both surfaces grey-pubescent when young, afterwards glabrate or with scattered appressed hairs and a few glands beneath, the nerves beneath pubescent and with tufts of hair in the axils, 2 to 6 in long, 1.5 to 2.5 in broad, midrib slender, impressed above, raised beneath, main nerves 10 to 20 pairs, regular, slender, the uppermost ones obscure, slightly curved to the margin, transverse nervules and reticulations obscure, petiole 3 to 6 in long, angular, channelled above, end petioles 7.5 to 1 in long, rest 2.5 to 5 in long, angled and channelled *Cymes* axillary corymbose, peduncled, puberulous, reaching 4 to 5 in in length and 2 to 3 in in diam peduncles slender, angular, up to 2 in long, branches markedly dichotomous, spreading, bracts linear, pubescent, caducous, pedicels slender, 0 to 1 in long, flowers white, the lip blue purple *Calyx* campanulate, .05 to 1 in long, pubescent without, enlarged in fruit teeth 5 very short, acute *Corolla* tube broadly cylindric, 2 in long, pubescent without, glabrous within except a ring of villous hairs at the insertion of the stamens, the hairs extending up the midlobe of the lower lip, upper lip with 2 obtuse recurved lobes 1.5 in long, lower lip 3-lobed, the side lobes recurved, 1.5 in long, the midlobe spreading, .25 in long, densely villous *Stamens* much exsert, filaments villous anther-cells short, ellipsoid, divaricate *Ovary* globose, pubescent at top, style slender, as long as stamens, stigma spreading *Drupa* ovoid or obovoid, succulent, 3 to 5 in in diam, smooth Schauer in DC Prodr XI 695, Benth Fl Austral V 68 Clarke in Hook f Fl Br Ind IV 588, Koord & Val Bijdr VII 208, Prain Beng Plants 833 f *Cunninghamia*, Schauer l c 691 *V. leucorylon*, Schauer l c 692 in part, Kurz For Fl II 273, Miq Fl Ind Bat II 864, not of Linn f *V. bombacifolia*, Wall Cat 1749, Walp Rep IV 86 *V. pallida*, Wall Cat 1751

Branchlets, leaves and inflorescence sparingly pubescent or glabrate, calyx nearly glabrous

4 *S. pentandra*

1 SPHENODESME FERRUGINEA, Biquet in Engl & Prantl Pflanzenfam IV 3A, 181 (1894) A shrub, probably climbing, branchlets and inflorescence rusty stellate-tomentose, branchlets obscurely quadrangular. *Leaves* chartaceous, ovate or elliptic, acute at apex, cuneate or obtuse at base, sparsely hispid pubescent on the upper surface, especially on the nervos, softly ferruginous tomentose on the lower, 3 to 5.5 in long, 2 to 3.5 in broad, midrib stout, main nervos 5 to 6 pairs, the lowest pair from close to the base, the next about 2 in above it, both nearly straight to the margin and then along it, the rest curved to meet in a looped intramarginal nerve, transverse nervules irregular, petiole stout, 2.5 in to 5 in long. *Panicles* axillary or terminal, spreading, leafy, densely covered with tawny-yellow tomentum, the whole forming a thyrse 12 in or more in length and about as broad, peduncles 2 to 3 in long, 3 or 5 dichotomous, the two lower branchlets short peduncled with each a pair of capitate heads, the two upper long peduncled and again branching, heads 7 flowered supported by 6 spatulate bracts 7.5 in long and 2.5 in broad buds obovoid, flowers sessile. *Calyx* tubular, densely stellate tomentose without, whitish villous within, 2.5 in long, 2 lipped, the lips variably lobed, usually the upper 2 lobed rather deeply cleft, the lower very minutely 3 toothed. *Corolla* tube funnel shaped, slightly curved, 3 in long, tomentose without densely villous within, lobes 5-6 or 7, 2 in long, linear or ligulate, twisted. *Stamens* included, inserted low down on the corolla-tube usually somewhat irregularly but generally in 2 to 3 rows, if 3 rows, and 7 stamens the upper row 3, the middle 2 the lower 2 these latter close to the base, filaments slender glabrous, about 1 in long anthers reniform. *Ovary* columnar, glabrous, style extremely short stigma very shortly bifid. *Fruit* not known. *S. microstylis*, Clarke in Hook f Fl Br Ind IV 600. *Brachynema ferruginea*, Griff Notul IV 176.

SIAMSF SIATESF Pungah, abundant! (Curtis 2963, Tongka, fide Curtis) —DISTRIB Burma (Moulmein & Mong Hsat, Griffith (K D) 6007, in part, Tavoy, Parish), Siam (Morton 62)

The curious arrangement of the stamens inside the corolla tube and the very short style are such well marked characters that it would almost seem advisable to reconstitute the genus *Brachynema*, or else to bring together into one genus of 4 sections *Sphenodesme* with *Symphorema* and *Congea*. We are inclined to consider the latter the best course, but it should be done in discussing a Monograph of the tribe rather than the few species found in a limited area.

2 SPHENODESME TRIFLORA, Wight Ic t 1478 (1850) A climbing (sometimes erect, *Kunstler*) shrub, branchlets dark brown, terete, rough with many small lenticels, a slight ring at the nodes. *Leaves*

chartaceous, lanceolate, bluntly acuminate at apex, cuneate at base, glabrous on both surfaces or the younger ones slightly velutinous, 3 to 5 in long, 1 to 2 in broad, midrib prominent beneath, main nerves 5 to 6 pairs, the lowest pair very inconspicuous, close to the margin, the next at about 25 in from the base and 40° with the midrib, curving up to and along the margin, but not meeting the remaining 3 to 4 which curve at about 50' and meet in intramarginal loops, transverse nervules arched, reticulations netted, petiole 25 to 5 in long, curved *Panicles* very long, grey-pubescent, the lower branches leafy with ordinary leaves, the upper ones with gradually smaller leaves becoming bract-like, the branches very long, up to 2 ft, slender, scarcely 1 in broad, bearing distant opposite pairs of 3-flowered capitate cymes each supported by a pair of reduced leaves and furnished with 6 spatulate bracts usually longer than the flowers and enlarging in fruit, flowers sessile, the corollas dark purple, the calyx and bracts dull red *Calyx* tubular, 10 nerved, velutinous pubescent without, densely villous within 1 to 15 in long, lobes 5, triangular, short *Corolla* puberulous, tube cylindric, with a ring of hairs near the mouth within, 25 in long, lobes 5, subequal, rounded *Stamens* shortly exsert, filaments slender, anthers reniform, the cells somewhat divergent *Ovary* pyriform, glabrous style slender *Drupe* ovoid or obovoid, sometimes constricted above, included in the enlarged prominently ribbed calyx, and supported by the 6 oblong spatulate glabrescent enlarged bracts, which reach 5 to 75 in long and 15 to 3 in broad, and have 3 prominent nerves joined by transverse nervules, exocarp leathery *Seed* 1, globose, completely filling the lower part of the cavity of the drupe, the upper part empty, cotyledons 1 in in diam, including between them the remains of the placenta Griff Notul IV 182, Miq Fl Ind Bat II 910, Clarke in Hook f Fl Br Ind IV 61 *Congea Jackiana*, Wall Cat 1735, partly

14. CONGEA, Roxb.

Large climbing shrubs, usually tomentose with mixed simple and stellate hairs. *Leaves* opposite, entire. *Inflorescence* of pedunculate, capitate, 3- to 9-flowered, involucrate cymes in large terminal panicles; the bracts at the base of the peduncles leaf-like, often white or coloured; the involucre of 3 or 4 elliptic or oblong or spathulate bracts connate at the base. *Calyx* tubular, funnel-shaped, slightly accrescent, 5-toothed. *Corolla*-tube slender, widening upwards, glabrate without,

usually villous within, 2 lipped, the upper lip of 2 lobes, the lower of 3, those of the upper lip the largest. *Stamens* 4 didynamous, inserted in the throat of the corolla, exsert, anthers oblong, the cells parallel. *Ovary* imperfectly 2 celled, 4 ovuled, ovules pendulous from the apex of the central placenta, style filiform, shortly bifid. *Drupe* small, obovoid, nearly dry, 1-seeded. *Seeds* conform to the drupe, testa membranous, cotyledons fleshy, unequal, enclosing the remains of part of the placenta, radicle very small, inferior. —*DISTRIB* Four species, of Burma and Malaya.

Clarke in Fl Br Ind says the drupes are 4 seeded, but every specimen we have examined affords one seed only, accompanied by the remains of the placenta and of 3 abortive ovules.

Involucral bracts reaching 1.5 in. by .75 in. white tomentose, leaves beneath and inflorescence more or less ferruginous villous, and with about 5 to 6 pairs of main nerves. 1 *C. testata*

Involucral bracts reaching 1.25 in. by .3 to .4 in. pale lilac tomentose, leaves beneath and inflorescence softly tomentose and with about 4 pairs of main nerves. 2 *C. tomentosa*

1 *CONGOLA VESPERTINA*, Griff. Notul. IV 174 and Ic Pl Asiat. t. 458, fig. 21 (1854). A large climbing shrub, branchlets patently fulvous, hirsute, striate. *Leaves* submembranous, ovate or elliptic sharply acute at apex obtuse or shortly cordate at base, upper surface scabrous pubescent, ferruginous villous on the nerves, lower villous and grey tomentose. 3 to 7 in. long, 1.5 to 3 in. broad, midrib slightly impressed above, main nerves about 5 to 6 pairs, curving upwards to and along the margin, transverse nervules many, but, like the reticulations, obscure, petiole .25 to .5 in. long, with long tawny hispid hairs. *Panicles* very large, bracts leaf-like, whitened, involucral bracts 4, very slightly connate at base, elliptic-obovate often bifid at apex, reaching 1.5 in. long by .75 in. broad, densely white tomentose, with prominent reticulations and 3 pairs of main nerves, flowers rose-coloured. *Calyx* funnel-shaped, ribbed, .25 to .35 in. long, densely white-villous without and within, teeth 5, triangular, acuminate. *Corolla* tube slender below, gradually widening upwards, .3 to .35 in. long, glabrous without, also within except a thick villous ring below the throat, upper lip of 2 ovate-oblong erect or recurved lobes, lower of 3 lobes half as long as the upper, the side lobes erect, the third lobe decurved, all thin, glabrous, with brown nervules. *Ovary* oblong-obovoid, glabrous except a few glands at the tip. *Drupe* nearly dry, obovoid. Clarke in Hook. f. Fl Br Ind IV 603.

SOUTH WEST SIAM at Poongah, Curtis 2903, 2962.—DISTRIB India (Chittagong), Burma, Siam Often cultivated

The involucrial bracts of our specimens do not agree very well with those figured in the Coromandel Plants, but they agree better with the authentic specimens. We have not been able to make quite sure whether our specimens belong to type *tomentosa* or to the var. *azulica* (C. *azulica*, Wall Cat 1733), but we think to the latter.

The following species seems worthy of description here, as possibly also occurring in the Peninsula

CONGLA FORRESTII, King & Gamble in Kew Bull 114 (1908). A large climber, spreading over great forest trees, branchlets rather slender, hoary pubescent. Leaves chartaceous, oblong or oblong lanceolate, shortly acuminate at apex, rounded and slightly cordate at base, upper surface shining, glabrous except the puberulous nerves, lower surface softly pubescent, reddish brown when dry, 3 to 5 in long, 1 to 1.5 in broad, midrib strong, impressed above, as are the 5 to 6 pairs of main nerves which start at about 30° with the midrib and curve upwards to and along the margin, transverse nervules many, horizontal, reticulations netted, petiole 2 in long, tawny pubescent. Panicles terminal, tawny pubescent racemose reaching about 12 in in

length and 6 in in breadth, main branches usually 1 pair only, with slender 1 to 1.5 in peduncles, heads in pairs on short (2 to 3 in long) peduncles, the pairs 1 to 2 in apart along the raceme bracts leafy, coloured, involucre bracts 4 grey tomentose oblong spatulate, 1 to 1.5 in long, 4 in broad within them a pair of linear setaceous bracteoles about 3 in long, flowers light purple. *Calyx* tubular funnel shaped, densely villous on both sides but especially within 3 in long, teeth triangular 0.75 in long, acute. *Corolla* tube cylindric slender, 3 in long glabrous except the ring of villous hairs at the mouth within, 2 lipped the upper lip of 2 lobes longer than the 3 lobes of the lower margins of the lobes crenulate. *Ovary* obovoid glabrous except a few glandular dots at top, style very slender. *Drupe* obovoid dry, exocarp crustaceous smooth tipped with the persistent base of the style. *Seed* 1 with the remains of the placenta and 3 abortive ovules testa extremely thin membranous, cotyledons unequal one concave the other convex, fleshy 12.5 in in diam the apex depressed radicle very small.

P 725, l 24, at beginning, insert "PAHANG at Pulau Tawai, Ridley 2148, also at Kuala Tanbeling," and lines 26 to 31, omit "It has *Materials*" and add "Ridley has also collected in Johore at Bukit Saga (No 11130) a plant, also with white flowers, which agrees with *G oblongum* in every character except in having calyx-teeth much shorter than the tube"

P 726, l 3, after "1310" insert "gathered in Botanic Garden, from a plant sent from Waterloo, Perak, Curtis 2166"

P 727, after line 4, the end of LABIATÆ, insert the following —

19 ACRYMIA, Prain in Kew Bull for 1908, 114 (1908)

Undershrubs Flowers small, in lax, many-flowered, peduncled, raceme-like, axillary cymes Calyx erect, 10-nerved, the intermediate nerves weaker than the other 5, equally 5-toothed, the tube in fruit urceolate, throat within naked Corolla-tube slightly enlarged upwards, shortly exserted, limb 2-lipped, lower lip 3-lobed, spreading, the mid-lobe larger than the lateral, upper lip suberect, 2-fid, not arched

Stamens 4, exserted, didynamous, the upper pair shorter; anthers 1-celled *Disk* small, equal, entire. *Style-arms* unequal, the upper very short *Nutlets* obovoid, rugosely pitted, hilum very large, lateral—*DISTRIB.* Species 1, endemic

The genus *ACRYMIA* is closely allied to *Cymaria*, with which it agrees as regards inflorescence and fruit, but from which it differs in having a 2-lobed upper lip that does not conceal the 1-celled anthers. Though much smaller, the corolla of *Acrymia* resembles rather closely the corolla of *Ajuga*, a genus in which the anther-cells, though usually discrete, are sometimes at length confluent. In habit, however, *Acrymia* is unlike either of the genera to which it is so closely allied, and recalls that met with in an Indian group of species belonging to the genus *Gomphostemma*, which includes *G. ovatum*, Wall., and *G. Mastersii*, Benth.

ACRYMIA AJUGIFLORA, Prain in Kew Bull. 115 (1908). A dwarf undershrub *Stems* woody, prostrate and rooting below, 2-3 in. long, densely leafy above *Leaves* opposite, petioled, elliptic, obtuse, crenate except the sometimes unequally cuneate, or occasionally subtruncate base, dark green above, paler beneath, fulvous-strigose on both sides, especially along the 5-7 pairs of main nerves and the secondary reticulate veins, 4.5-8 in. long, 2-3.5 in. wide, petiole .75-2 in. long, fulvous-strigose. *Cymes* dichotomously branching, with terminal flowers, flowers on the branches secundly arranged, main-peduncles strigose, slender, .75-1.25 in. long, bracteoles subulate, shorter than pedicels. *Calyx* in flower campanulate, .08 in. long, in fruit urceolate, .15 in. long, strigose on the nerves externally, teeth 5, equal triangular as long as the portion of tube above the constriction, pedicels slender, strigose, .07-1 in. long. *Corolla* white, .25 in. long, glabrous, tube shortly exserted; lower lip spreading, 3-lobed, mid-lobe obovate, upper lip suberect, 2-lobed, lobes oblong, hardly exceeding lateral lobes of lower lip. *Filaments* exserted, hirsute at base, glabrous elsewhere, anthers 1-celled. *Nutlets* obovoid, .02 in. long, wide-reticulate, at first sparsely pubescent, at length glabrescent.

PERAK: On limestone rocks, in dense jungle, 500-800 ft., *Kunstler (King's Collector)* 10709!

PART No. 21 (1908)

1905, 1. 8, for "SPHENODESMA." insert "SPHENODESME."

NOTE.—Since the completion of the Families of the Gamopetalæ, a paper has been read before the Linnean Society by Mr. H. N. Ridley, F.R.S., on a "Collection of Plants made by Messrs. H. C. Robinson and L. Wray on Gunong Tahan, Pahang." It describes a number of new species, and should be consulted by all workers who may make use of the 'Materials for the Flora of the Malay Peninsula.' It was published in Linn. Soc. Journ. Bot. XXXVIII. 301 *et seq.* (1908).
